NEW YORK

"KODAK"

Is our Registered and common-law Trade-Mark and cannot be rightfully applied except to goods of our manufacture.

If a dealer tries to sell you, under the Kodak name, a camera or films, or other goods not of our manufacture, you can be sure that he has an inferior article that he is trying to market on the Kodak reputation.

If it isn't an Eastman,
it isn't a Kodak.

EASTMAN KODAK COMPANY,
ROCHESTER, N. Y., *The Kodak City.*

The Independent

Founded 1848

HARPER'S WEEKLY

Founded 1857

Incorporated with The Independent May 22, 1916

THE CHAUTAUQUAN

Founded 1880

Incorporated with The Independent June 1, 1914

JUST A WORD

How quickly former foes become friends when a common cause brings them together is shown by the banquet given by Parliament to General Smuts, the leader of the Boer army against the British. He was introduced as "a great commander and a great statesman" by Field Marshal Lord French, who was fighting him only sixteen years ago. In his reply General Smuts said:

Your words tonight and the great compliment you have paid me by presiding at this gathering recall to my mind many an incident of the stirring times to which you have referred when we were opposing commanders in the last year of the Boer War.

On one occasion, I remember, I was surrounded in a very nasty block of mountains by Lord French. (Laughter.) I was face to face practically with disaster. Nothing was left me but the most diligent scouting to find a way out. I did some of the scouting myself, with a small party. I ventured into a place which looked promising, and which bore the appropriate name of "Murderer's Gap." (Laughter.) I am sorry to say I was the only man who came out alive from that gap. In an account which I saw subsequently of this incident I saw the remark made that one Boer escaped—(laughter and cheers)—but he probably had so many bullets in him that he would be no further danger. (Laughter.)

Well, Lord French, I have survived to be your guest this evening. I was in a very tight corner there. I did get out, and two days afterward I did break thru—blest word in these times. (Cheers.) At night I came out of those mountains to the railway. It was a very dark night, and my small force was just on the point of crossing the railway when we heard that a train was coming. The train passed, and we stood alongside and looked on. You can imagine what my feelings were when I heard some time afterward that the only freight on this train was Lord French (cheers) who was moving from one part of his front to the other to find out how I broke thru. If I had not missed that chance, Lord French would have been on that occasion my guest. (Laughter.) No doubt a very welcome, tho a somewhat embarrassing guest! Now tonight I am his guest. I hope I am not embarrassing, tho I am very much embarrassed.

INDEPENDENT OPINIONS

Allow us to express our appreciation of your editorial, "The Effeminate West," in your issue of June 23. Not that we want to gloat over the East, but we appreciate your recognition of the efforts of the West and Middle West.

Our little town of 950 people has sent to the front forty-seven men, three of whom are now in England and will be in France within two weeks with the 223d Canadians. We have raised $500 for a local relief association, our allotment of the Liberty Bond was $30,000, we subscribed $37,000, the women have all organized themselves into an association for the purpose of knitting needful articles for the soldiers. Yesterday was the first day of our campaign for the Red Cross, and we raised in the town alone $1764, and will make it at least $2000, but the real pleasure of the campaign was the spirit of loyalty shown by the entire population. I believe we are also raising on vacant lots and back lots, including a part of a park of 11 acres, all the vegetables, including potatoes, that will be needed for the town's consumption. This is just what one little town in the Middle West is doing.

BJORN B. GISLASON.

Minneota, Minnesota

REMARKABLE REMARKS

MAXIM GORKY—Russia is not lost.

BILLY SUNDAY—I put five states dry.

SECRETARY LANE—Woodrow Wilson is inflexible.

JOHN D. ROCKEFELLER, JR.—Oh, the country's going dry.

EX-KING CONSTANTINE—The Greek people love their king.

HERBERT C. HOOVER—Our consumption must be reduced.

SIR HARRY JOHNSTON—Germany must be punished to the full.

CHARLES FERGUSON—The working class is running down rapidly.

EDWARD BOK—Our dolls and playthings must be put aside.

CHARLIE CHAPLIN—My employers had their money back some time ago.

DR. HENRY VAN DYKE—America must join in ending the Potsdam gang.

PRES. W. A. SHANKLIN—Our civilization has ceased to be God-conscious.

MAXIMILIAN HARDEN—Hundreds of thousands live today more lavishly than in peace times.

JOSEPH REINACH—Americans have traversed in three weeks the stages which took England two years.

PRESIDENT HADLEY—A great teacher is rare, a great leader is rare, a great organizer is perhaps rarer still.

ALEXANDER RIBOT, Premier of France—The nations now in arms will constitute The Society of Nations.

LAWRENCE TERRY—Contrary to general belief curious freaks are not tolerated by any reputable show man.

THEODORE ROOSEVELT—We must bring to the solution of every problem an intense and fervid Americanism.

JEANNETTE RANKIN—Any city of 12,000 or more that has no woman on its police force is considered archaic.

KING GEORGE—It has been the dream of my life to see the two great English speaking nations more closely united.

LAYTON CRIPPEN—I believe the detestable manners of the English will lead to the destruction of the British Empire.

DUDLEY GLASS—What has become of the old-fashioned receipt which began: take six eggs and half a pound of butter.

PREMIER ZAIMIS—The pain of the Greek people at parting from King Constantine and Queen Sophie was indescribable.

ISRAEL ZANGWILL—If only nations would find their missions, not in making other people miserable but in making their own people happy!

G. LOWES DICKINSON—The future of civilization depends largely on the attitude adopted by the United States in the immediate future.

HELEN ROWLAND—A widow knows it is vastly easier to sit up for one man to come home than to sit up and wait for a lot of men to go home.

EDMUND GOSSE—I fancy that at least for a generation no intellectual relations will be possible between France and England on the one hand, and Germany on the other.

ED. HOWE—Members of Congress who levied the war tax receive more than $8000 a year. Would not $4000 a year be sufficient during our period of economy and deprivation?

HON. ARTHUR J. BALFOUR—Our Mission to the United States has been the occasion of the most significant development of international relations in the history of the world.

GERARD HAUPTMANN—The epithet "Hun" is coined by people who, themselves Huns, find themselves disappointed in their criminal attempts on the life of a sound and valorous race because this race knows how to parry a fearful blow with still more fearful force.

A MENTAL AND MORAL HOUSECLEANING

THE war is clarifying ideas and stimulating the moral sincerities. These reactions are generally recognized. What is quite as important, it is disposing for good and all of a lot of useless mental baggage, a great store of hypocrisies, and a multitude of presumptions and policies which we knew or suspected were rubbish or worse, but which, in the easy years of peace, we did not bestir ourselves to do away with.

A war brings us to a right apprehension of these things, as "moving" brings us to a right appraisal of household accumulations which we are too lazy or too sentimental to assort sanely under ordinary circumstances.

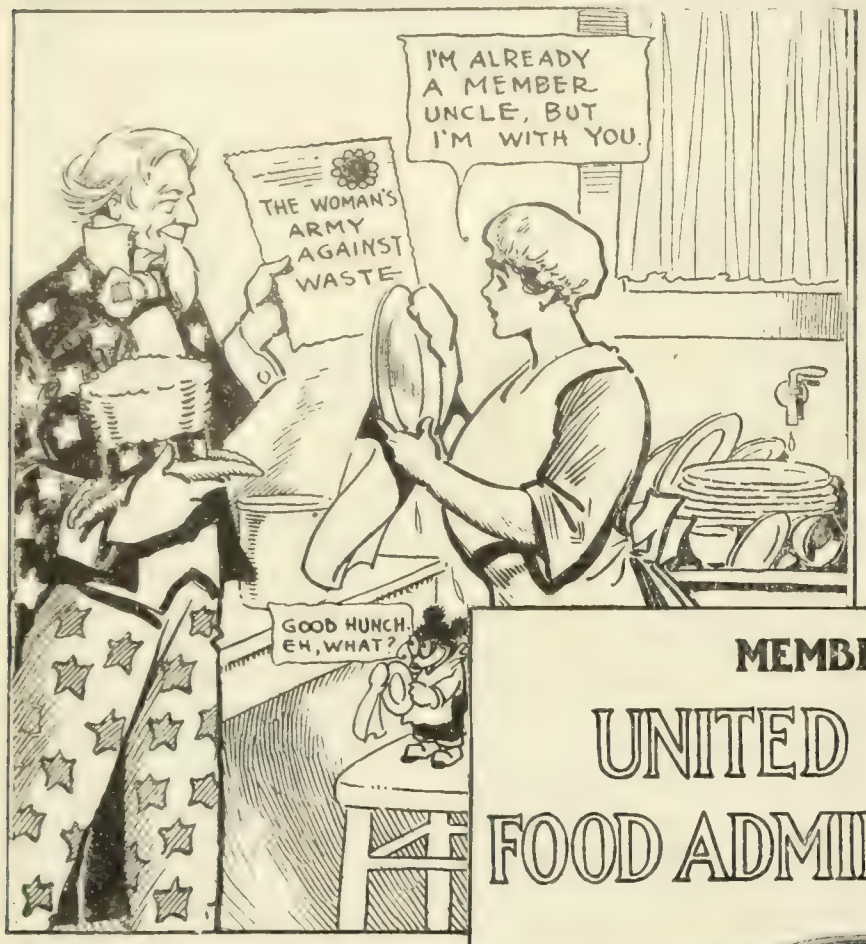
With few exceptions the presumptions and humbugs that we are discarding are certain extreme claims, privileges and immunities that are related to the so-called class struggle. Great Britain has discovered that the Empire can survive a mighty curtailment of the ancient rights of landlords and peers, and an almost staggering curtailment of the profits of industry and commerce. It has discovered that laissez-faire is not the last word in economics or in politics, and that a highly organized governmental control of business may turn out to be an excellent thing for business itself. But the discoveries and innovations are not all so one-sided. The further discovery has been made that the venerable idiocies which trade unionism and industrial democracy have clung to as tenaciously as to ideas that are sound and claims that are just can be sat on and "swatted," and that they must be. The intolerable folly of opposing inventions and improvements, of making work by waste, of protecting dishonest and incompetent workmen, and of penalizing superior ability, has been endured as long as the world can stand it.

Other nations less rapidly but surely are undergoing a like housecleaning in thought and practise. France has taken the experience quietly but resolutely. The United States is taking it more quietly and more resolutely than could have been predicted. Indeed, outstanding facts of our war-time activity to date are the firmness with which Federal and state Governments have laid the heavy hand upon obstructive foolishness which has attempted to interfere with the new expediences, and the common-sense attitude of the business classes in backing up the Governments. Russia is for the moment in the critical and chaotic stage. But Russia has gifted intellectuals, patriotic men and women a-plenty, and a population that is, all in all, probably as common-sensible as mankind in the average. She probably will organize her energies as wisely and as efficiently as other nations will.

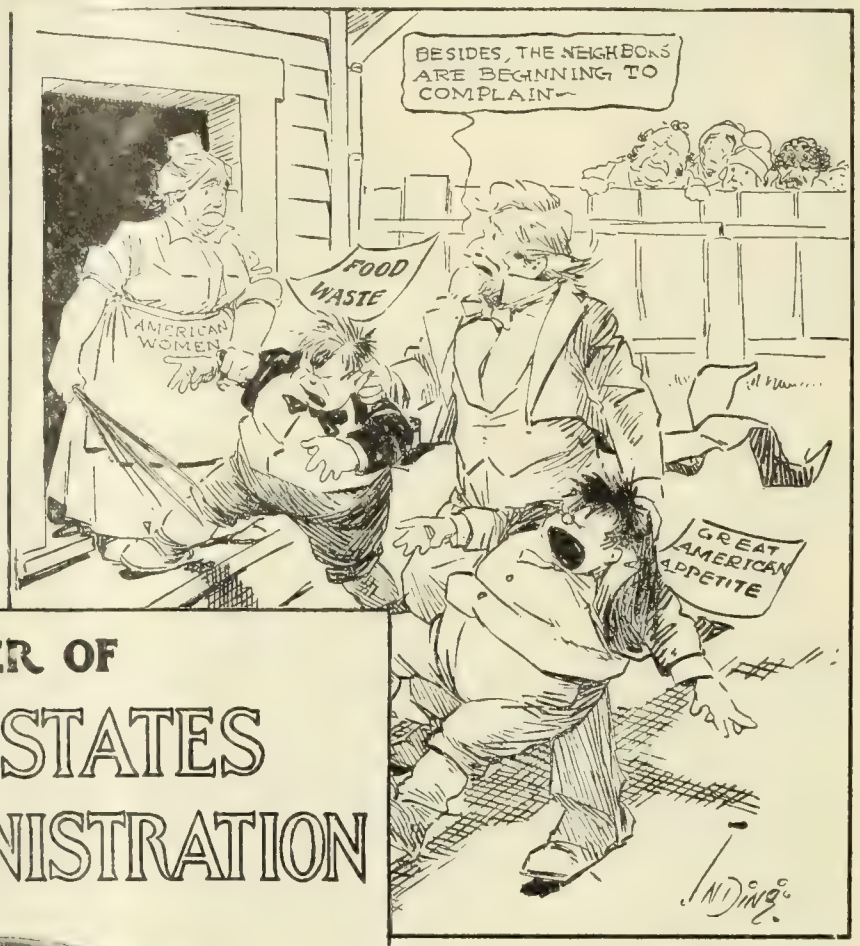
There are more pretentious matters also, for the most part vagaries, that are getting their overhauling and will get it thoroly before the world is thru with them. One of them is international socialism. A majority of the socialists in each country has been loyal to its government, and patriotic. At present and for a long time to come the nation will continue to be the group to which of necessity men must give their supreme allegiance. On the other hand, a purely selfish, exclusive, and aggressive nationalism has been brought into universal discredit and abhorrence by German folly and brutality. A new and better internationalism is being created by the coöperation of the allied nations. It will be founded in a supreme devotion to civilization and in reverence for law and the sacredness of obligations. Isms and agitations which attack these foundations will get nothing but contempt henceforth from the sane-minded, and short shrift from national governments.

Organized society after this war will be a more intelligent affair and a much more sincere affair, as well as a far more effective machine for promoting human well-being, than it has been hitherto. Privilege will have to go. Excess profits will have to go. Individualism that disregards the rights and interests of fellow-men will have to go. Slacking, wasting and obstructing will have to go. Anarchism and a systematic protection of malefactors will have to go. The world will be neither nationalistic only nor internationalistic only. It will be neither socialistic only nor individualistic only. It will be a practical, relatively sincere and relatively intelligent world, pretty carefully scrutinizing every proposition and trying out plans on their merits.

BEER TOO!



IT looks as tho we were to have prohibition in some form or other. A prohibition amendment to the Food Control bill has passed the House, and another somewhat different amendment has been recommended by a committee of the Senate.

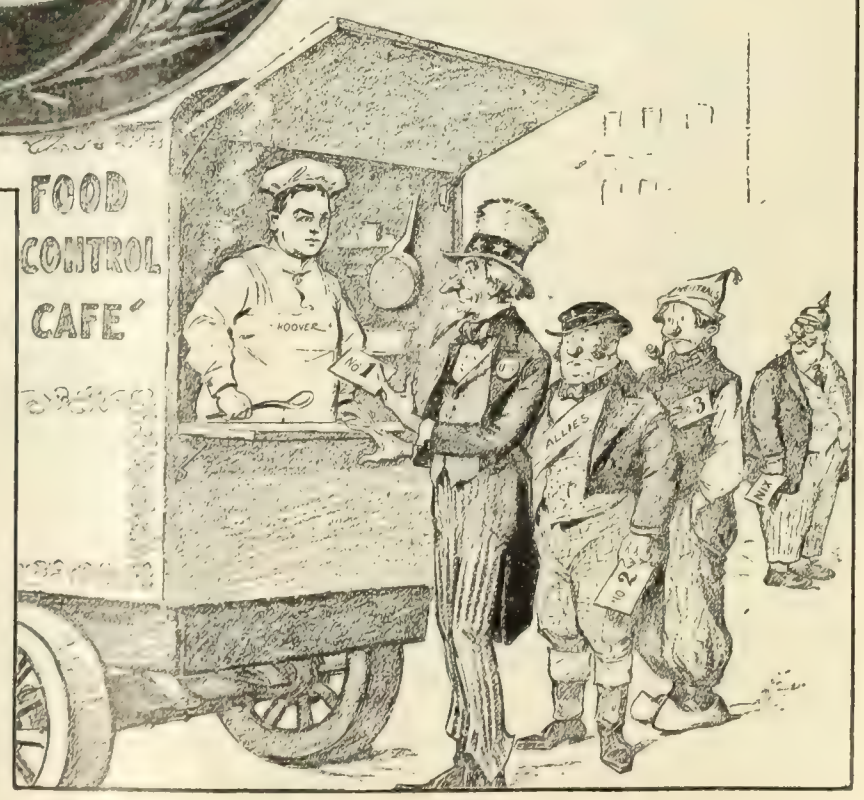


Unfortunately, however, the President has felt constrained to throw the weight of his influence in favor of a partial prohibition bill rather than a complete one. The President proposes that the distillation of whiskey and similar liquors shall be prohibited, but that the manufacture of beer and wine shall not be prohibited.

It is exceedingly regrettable that the President has felt obliged to take this attitude in the matter. It is true that if he shall succeed in assisting in disposing of whiskey for the period of the war he will have done a big thing. But to do that, he must not only influence the passage of the prohibition amendment, but thereafter avail himself of the power there given him to commandeer the distillers' stocks of whiskey for redistillation into alcohol for industrial purposes. But that thing is small in comparison with what he might have done if he had been willing to use the full extent of his power and influence on behalf of total prohibition.

CARTOON COMMENT

IS THERE A FOOD CARD IN YOUR HOME?



MEMBER OF

UNITED STATES FOOD ADMINISTRATION

This is the week for food card[illegible] The campaign is on to label every patriotic home thruout the country with the badge of membership in the Food Administration. Probably your window already has its U. S. shield surrounded by wheat stalks, but if it hasn't, join up now—and keep the pledge! The barometer of popular interest—cartoon comment—indicates national enthusiasm for food conservation. At the top of this page, left, is Satterfield's drawing in the Harrisburg *Patriot*, "Fully Prepared." "It's Up to Mother to Tend to 'Em," says Ding in the New York *Tribune*. Rehse in the New York *World* (below) points out "The Order of Service" in the international bread line. And Pease in the Newark *Evening News* (left lower corner) suggests that it might help if Congress would only "Hurry Up With That Hoop!"

There are two reasons why beer should be disposed of as well as whiskey. The first is the food reason; the second is the human reason.

Last year sixty-eight and a half million bushels of foodstuff were used in the manufacture of fermented liquors. These are the official figures, accepted even by the liquor manufacturers. As a matter of fact, the brewers have announced that the figures are slightly higher than this. The brewers have publicly asserted that thirty-five per cent of the material used in the brewing of beer "is returned to the farmers as a better milk producing food than in its original state." The validity of the use of the adjective "better" in this statement is highly debatable. For ourselves we do not believe that it is true. Accepting, however, for the moment the contention of the brewers, this leaves forty-six million bushels of foodstuff "actually consumed in beer," as the brewers say.

At a time like this can the people of the United States afford to use this great quantity of potential food in this way? Can they afford to drink it rather than eat it?

Of course, it will be contended immediately that barley, from which beer is chiefly made, is not a satisfactory human food. It is true that barley does not make good bread. But it does make good soup. What is more, the land upon which it is grown can be used next year, if we put a stop to brewing this year, for growing other grain and products more useful for human food. In addition, barley is a good cattle food.

It is perfectly clear then from the statement of the brewers themselves that the continued manufacture of beer during the war will subtract from the possible food supply of the American people each year the equivalent of forty-six million bushels of grain. Is the preservation of the individual liberty of the American citizen to drink beer for his own gratification not too high a price to pay for this depreciation in the necessaries of life?

Now to come to the second ground for the prohibition of the manufacture and sale of beer. The drinking of beer never did anyone any positive good. The infinitesimal number of exceptions to this broad statement, where beer has been drunk by invalids or others on medical advice, creates no valid flaw in this assertion. It is perfectly true that the drinking of beer has and does give pleasure of a sort to many. But wartime is no time to put pleasure above efficiency.

In the days when we did not feel it improper or immoral to admire things German, we used to point to Germany as the place where the people did not brutalize themselves with whiskey, but cultivated *gemüthlichkeit* on beer. But expert evidence has come in recent years from Germany itself that beer drinking is something other than one of the domestic virtues. Here is some of the testimony of German scientists:

Professor von Struempell, a well-known physiologist, says: "Nothing is more erroneous from the physicians' standpoint than to think of diminishing the destructive effects of alcoholism by substituting beer for other alcoholic drinks, or that the victims of drink are found only in those countries where whiskey helps the people of a low grade of culture to forget their poverty and misery."

Prof. Emil Kräpelin declares that "In the production of alcoholism in Germany, beer undoubtedly plays the chief rôle. It must be conceded that beer is capable of producing typical delirium tremens."

Prof. Gustav von Bunge has written that "No other drink [referring to beer] is so insidious. It has been in Germany worse than the whiskey pest because more apt to lead to immoderate drinking."

Professor Möbius of Leipsic says: "I know little of whiskey and wine drinkers. With us it is beer that ruins the people."

This is the evidence from the country of beer-drinkers and efficiency. Shall we not heed it?

Unquestionably, at the present moment, the advocates of prohibition must heed the request of the President not to urge upon Congress, for fear of impeding the passage of the Food Control bill, the prohibition of beer brewing. But this cannot be the end of the matter. Beer must ultimately follow whiskey, if America is to be made efficient in the highest degree for war.

CAN WE?

A CORRESPONDENT sends us on a postal card this illuminating incident:

"If my husband would give me the $3 a week he now spends on liquor we could buy three $100 bonds at once," explained a woman eager (but unable) to patronize the Liberty Loan.

Can the people of the United States afford, in this time of national need, to go on spending money for drink?

BACK TO ARISTOTLE

THE word "economy," which is now so unpleasantly familiar to us all, meant to the ancient Greeks, from whom we derive the term, nothing but "household management." This is what it means, or ought to mean, today. Two false ideas have crept into the common use of the word, and if they can be eradicated half the battle for sound economy is won. To some economy suggests cutting down expenses by doing without comforts. To others economy is a newspaper term for an unknown something that Mr. Hoover or President Wilson or Wall Street ought to do to reduce the cost of living. Nothing of the sort. It means that you balance your home budget as carefully as if it were the budget of your firm; that you buy no food that you do not need; that you permit no food to become spoiled or be wasted; that you vary your diet so that you get enough of every kind of food; that you buy with reference to times and seasons and relative costs and that you keep an eye open for good advice from any source, whether from the Department of Agriculture, a farmers' weekly, your state agricultural college, or the hired girl in the kitchen.

CULINARY ADVENTURES

"BEEF, mutton and pork," said the soldier, "pork, mutton and beef! I wish they would invent some new kind of animal." The most evident silver lining to the present shortage in staple foods is that it compels us to break the old habits of eating which have become second nature to us and experiment with "some new kind of animal." If you are tired of bread and meat let Europe get half of what you are now eating and invest the rest of your appetite in something you have never tried before. If you can't think of any new dishes yourself, your Congressman can put you in touch with a lot of bulletins prepared by the Government on foods which are pleasant to the taste and pocketbook and which are not now needed abroad.

COLLEGES IN WARTIME

PRESIDENT WILSON'S telegram to the president of Indiana University, in which he says: "I see no necessity whatever for suspending the sessions of the colleges and universities and think such a suspension would be very much against the public interest," ought to put a stop to this unwise movement. Truth to tell the colleges have not shown in this crisis that poise and historic sense that we had a right to expect from learned institutions. In their haste to prove themselves patriotic and to be of service to the nation classwork was pretty nearly abandoned in some places immediately upon the declaration of war. Leaves of absence and degrees were recklessly promised to almost any student who could say that he proposed to seek for an opportunity of doing any kind of useful work, and the readiness shown in presenting and accepting such substitutions showed that neither students nor faculty placed a

very high valuation upon the usefulness of the work they had been doing. Age, sex and physical condition were little considered in such exemptions, nor was it sufficiently remembered that the student, by reason of the training that the college had given him, might be more profitably employed elsewhere than in trench or furrow.

That the colleges will have a hard time during the war is obvious. Incomes will be cut down, expenses increased and a considerable proportion of the older students and younger instructors will be called to the colors. But there is no reason why the women and most of the undergraduate men should not as a rule continue their studies. They are doing so generally even in the countries most closely involved in the war. They did so during the Civil War, which put more of a strain upon our national life than this war is like to. Not only so, but twenty new American colleges and universities were opened during our Civil War. The University of Leiden was founded while Holland was in a life-and-death struggle with Spain. The University of Berlin was founded in the midst of the Napoleonic Wars, and since the Great War began Germany has opened a new university at Frankfort. There are certain forms of college activities, the most conspicuous of them, that might well be suspended during the war and might better not be resumed after the war, but those activities for which the colleges were established are never more needed than now.

BUY FROM THE HOME FOLKS

IF you can't raise your own food—and we admit that not every one can grow a wheatfield in a window-box—the next best thing is to buy from your neighbor. If you compare what the farmer gets for his goods in the market with what you pay after they have been carried by several tons of coal over several thousand miles of perishable track in costly freight cars and handled and rehandled by a regiment of draymen, wholesalers, retailers, railroad men and so forth, you will realize that half the cost of food is in taking it from one place and putting it in another. Of course you shouldn't restrict your diet to what can be grown near your home, but when there is a choice let the railroads reserve their rolling stock for our heavy export trade in foodstuffs, munitions of war, and soldiers.

CATCHING UP WITH THE WORLD

THE revolution has knocked Russia into the middle of next month. Thirteen days have been lost in the scuffle, but no reward is offered for they are not wanted. The Russians, determined as they are to get ahead of the rest of the world, were unwilling even to seem to be behind it according to the calendar, so they simply decided that the thirty-first of May should not be followed by the first of June as had been customary, but by the fourteenth; or rather, in that strange anarchistic way of theirs, each person, paper or place made a similar shift at any convenient time. It is like the daylight saving movement, only the trick is played on the calendar instead of the clock.

It was thru ecclesiastical conservatism that Russia got left so far behind. The length of the year as established by Julius Caesar was eleven minutes and fourteen seconds too long. The errors accumulated in the course of time until Pope Gregory XIII saw that something must be done about it, so in 1582 he ordered ten days dropt out and introduced leap years, apparently a feminist movement, for it gives the ladies their innings one time in four.

But the Protestants and the Eastern Orthodox who denied the temporal power of the Pope refused to follow him in this reform. To repeat the old Roman joke—doubtless several centuries old, but this is the last time it can be used in connection with current events—they preferred to disagree with the solar system rather than agree with the Pope. England held out till 1750, and when it was finally decided to abandon the Julian calendar the English populace was greatly excited and mobs went about shouting: "Give us back our eleven days!" We have not heard of any such riotous demonstrations in Russia, so it seems that the Russian people are more civilized than the English in the eighteenth century.

Bulgaria reformed her calendar when she joined the Central Powers. So also did Turkey, which had hitherto used the Mohammedan calendar. The Mohammedan year consists of twelve lunar months and is therefore shorter than the solar year by about ten days. This has the inconvenience that the holidays go chasing around the year three times in a century. Think how awkward it would be to celebrate Christmas this year in the winter, a few years later in midsummer and then in the spring.

But now all of us, Catholics, Protestants, Orthodox, and Mohammedans, have come to agree upon the Gregorian calendar, which only gets a day wrong in 3323 years. Old Style and New Style will no longer bother us unless we study history.

OF STYLE

JOHN GALSWORTHY has been unable to resist the eternal temptation to define the indefinable. He says, "To use words so true and simple that they oppose no obstacle to the flow of thought and feeling from mind to mind, and yet by juxtaposition of word-sounds set up in the recipient, continuing emotional gratification—this is the essence of style."

Is it? That is a large question, open to extended debate. But one thing, at least, is sure. Any one who can use words in the way that Mr. Galsworthy here sets forth—which is precisely the way Mr. Galsworthy uses them himself—need not worry about seeking style. He has it.

A TIMELY EDITORIAL A HUNDRED YEARS OLD

WE had intended to write something here on American participation with England in the present war. But why should we when what we wish to say has been so much better said nearly a century ago by one who can add the weight of his authority to the force of the argument? Accordingly we quote:

> Great Britain is the nation which can do us the most harm of any one, or all on earth; and with her on our side we need not fear the whole world. With her then, we should most sedulously cherish a cordial friendship; and nothing would tend more to knit our affections than to be fighting once more, side by side, in the same cause. Not that I would purchase even her amity at the price of taking part in her wars. But the war in which the present proposition might engage us, should that be its consequence, is not her war, but ours. Its object is to introduce and establish the American system, of keeping out of our land all foreign powers, of never permitting those of Europe to intermeddle with the affairs of our nations. It is to maintain our own principle, not to depart from it. And if, to facilitate this, we can effect a division in the body of the European powers, and draw over to our side its most powerful member, surely we should do it. . . . Nor is the occasion to be slighted which this proposition offers, of declaring our protest against the atrocious violations of the rights of nations, by the interference of any one in the internal affairs of another.

This was the reply that Thomas Jefferson sent in 1823 when President Monroe consulted him about the advisability of fighting on the side of the country which the United States had been fighting against ten years before. The question was, as Jefferson said, "the most momentous which has ever been offered to my contemplation since that of Independence. That made us a nation, this sets our compass and points out the course which we are to steer thru the ocean of time opening on us. And never could we embark on it under circumstances more auspicious."

Since we can republish this without change of a word in support of the present Government it is evident that President Wilson cannot justly be accused of departing from the principles of the founder of his party.

THE STORY OF THE WEEK

Prohibition and the President

The Food Control bill which is now being considered by the Senate left the House of Representatives with a stringent clause prohibiting the use of any foodstuffs in the manufacture of alcoholic drinks. This provision has created more discussion in the Senate than any other section of the bill. Senators disliked to assume the responsibility of opposing prohibition in the face of the strong sentiment in the House and in the country at large, but many of them thought that the measure presented to them was altogether too drastic and others, who sympathized with its provisions, feared that prolonged discussion over so controversial a matter would delay the entire scheme of food control. An attempt was made to evade responsibility by giving President Wilson power to exempt the manufacture of beer and wine from the operation of the act. A later amendment limited the discretionary power of the President to wine only. Senator Lodge led the opposition to the ban on beer, pointing out the saving in foodstuffs which would result from prohibiting the manufacture of beer would be more than counterbalanced by the loss of such by-products as brewers' grain for cattle feed and yeast for bread making and by throwing men engaged in the brewing industry out of employment.

President Wilson, anxious to secure early enactment of the food control legislation, requested advocates of prohibition to cease their agitation for stopping the manufacture of beer and wines. The Senate seems disposed to agree to the compromise suggested by the President. The prohibition of the manufacture of distilled liquors will remain in the bill, but the fight against beer and wine may be postponed to some future occasion. Senator Chamberlain has drafted a new prohibitory clause in accordance with the President's recommendations.

President Picks Export Council

Under the authority granted him by the embargo clauses of the Espionage Act, President Wilson has nominated a council on exports which will consist of Secretary Lansing, of the Department of State, Secretary of Agriculture Houston, Secretary of Commerce Redfield, and Food Administrator Hoover. The council will have no power to impose regulations on foreign trade, but will act as an advisory body to the President. After making the appointments, President Wilson explained what policies would guide the administration in the matter of export control. There will be no general embargo directed against neutral powers and as little interference as may be with the normal course of trade. Control will be exercised thru a system of export licenses issued by the Bureau of Foreign and Domestic Commerce. Where it appears that an American product is being reëxported to Germany from its place of destination or substituted for other commodities which are thus released for export to Germany, the required license may be withheld.

War Tax Bill Reported

The Senate Finance Committee has at last completed its long task of revising the $1,800,000,000 war tar bill which it had received from the House of Representatives. The estimated yield of the war taxes authorized in the report of the committee is only $1,652,000,000; which is considerably less than the probable cost of the war for the year aside from what has been provided for by bond issues. The Senate does not, however, intend to make up the deficit by a new bond issue during the present session since there will be plenty of time to float an emergency loan when Congress meets again after its summer holiday. Many of the small taxes on consumption have been reduced or dropt from the bill altogether in committee; the general ten per cent tariff levy on all imports is replaced by special taxes on sugar, coffee, tea and cocoa; the special munitions tax and the retroactive income tax are omitted, and the supertax on the highest incomes reduced. The most productive tax under the amended bill will be the excess profits tax, taking from twelve to forty per cent of the profits of corporations, partnerships and individuals in excess of the earnings for the years 1911, 1912 and 1913. Publishers must pay an additional five per cent tax on profits over four thousand dollars and an increase of a quarter of a cent a pound in the postage rates on second-class mail matter. Letter postage remains at the three-cent rate approved by the House.

American Troops in France

The assembling and embarking of the first contingents of American troops was carried out so quietly that the American people hardly realized that they had gone before the news came of their landing. The press for the most part kept the "gentlemen's agreement" as to silence, and some editors carried it so far as to keep up their criticism of the President for not sending aid to France long after they knew that such aid had been sent. The order was issued to General Pershing on May 18, and within a month the troops had been brought from the Mexican border and other parts of the country and the necessary transports put into commission. Not a man or an animal was lost or injured.

Early in the morning of June 26 the Americans were disembarked at the

© *International Film*

WHEN PERSHING AND HIS TROOPS REACHED FRANCE

A French Seaport, June —: American troops arrived and disembarked this morning amid the frantic cheers of the people, who had gathered for hours before in anticipation of the event. It was the first time since the imprint of war had become so cruel that a great French crowd has shown such animation

French seaport which has been assigned to the Americans for this purpose. A large fleet of warships convoyed the transports, but no submarines were encountered on the way. They brought with them supplies for weeks in advance, so they will not be a burden upon the country they were sent to deliver. The American encampment is established near the city on high ground, and is piped for water and lighted by electricity. A Y. M. C. A. tent was already up in waiting. The contingent is under the command of Major General William L. Sibert, who was a member of the Panama Canal Commission, and as engineer of the Atlantic division had charge of the construction of the Gatun locks.

Lloyd George's Glasgow Speech

A characteristically frank and eloquent speech was made by the Prime Minister of Great Britain in St. Andrew's Hall, Glasgow, June 29, on the occasion of receiving the freedom of the city by its Burgesses. It was the psychological moment for the greatest effectiveness. The American troops had just arrived in France. The British Minister of Munitions had reported that the supplies had not been depleted by the recent offensive. The Russians had declared against a separate peace and had started to fighting again. The pro-German King of the Greeks had been deposed. And the British were closing in on Lens. The Premier very candidly admitted that the Russian revolution had interfered with the plan of campaign, but with equal candor he confest that many hearts which had been filled with anxiety at the prospect of a peace conference whereat the most reactionary autocracy in the world should be present were now relieved by the thought that free Russia would be there represented.

As to the military situation, there is no doubt that the startling developments in Russia have modified the military situation this year temporarily to our disadvantage, but permanently for the better. What happened on the western front showed what could have been accomplished this year if all the Allied forces had been ready to bring all-round pressure to bear.

The Russian revolution, beneficent as it undoubtedly is, great as will be its results both this year and even more hereafter, undoubtedly has had the effect of postponing complete victory. But Russia will regain her strength with a bound, and become mightier and more formidable than ever.

Altho these distractions had the effect of postponing complete victory, they made victory more sure than ever, more complete than ever, and, what is more important, they made surer than ever the quality of victory.

In regard to the submarine menace the Premier was reassuring:

Victory is assured under two conditions. The first was that the German submarine attacks must be defeated or kept within reasonable bounds. The losses are heavy. They may, and probably will, drive us to further restrictions in some trades and perhaps to hardships. Our losses during May and June were heavy, but they were hundreds of thousands of tons beneath the Admiralty forecast. I have no hesitation in saying that if we all do our part the German submarines will be almost as great a failure as the German Zeppelins.

THE GREAT WAR

June 25—Twenty-eight British vessels sunk in past week. United States cruiser "Olympia," Dewey's flagship at Manila, runs aground on Block Island.

June 26—Martial law in Spain. Venizelos becomes Premier of Greece. United States sailing vessel "Galena" sunk.

June 27—American troops arrive in France. French cruiser "Kleber" sunk by mine; thirty-eight men lost.

June 28—Brazil revokes neutrality. Heavy British attack on Lens.

June 29—Austrians expel Italians from Agnello Pass on Asiago Plateau. Premier Lloyd George speaks on Allies' aims at Glasgow.

June 30—Spain closes ports to all belligerent submarines. Russians open new offensive in Galicia.

July 1—Russians attack on eighteen mile front. Germans renew assault on Verdun.

Turning to the question of peace terms the Premier pointed out that the rumors that Germany was willing to renounce annexations and indemnities had not been confirmed by any German statesman. He repudiated the charge that England entered the war to get the German colonies and the greater part of Turkey, for to get them, he said, it would not have been necessary to raise three or four million men and send them to France.

But the most significant part of this historic address was that which showed that Premier Lloyd George, like President Wilson, wished to draw a distinction between the Kaiser and his people and to offer better peace terms to a democratic Germany.

Peace must be framed on so equitable a basis that the nations would not wish to disturb it. It must be guaranteed by destruction of Prussian military power, so that the confidence of the German people shall be put in the equity of their cause and not in the might of their armies. A better guarantee than either would be democratization of the German Government.

No one wishes to dictate to the German people the form of Government under which they should choose to live. But it is right that we should say that we will enter into negotiations with a free Government of Germany with a different attitude of mind and a different temper and different spirit and with less suspicion and more confidence than we should with a Government whom we feel today to be dominated by the aggressive and arrogant spirit of Prussian militarism. All the Allied governments will, in my judgment, be acting wisely, if they draw that distinction in their general attitude toward the discussion of peace terms.

COMMANDING THE ADVANCE GUARD IN FRANCE

Major General William L. Sibert, who commands the first contingent of American troops fighting in France, is an army officer of over thirty years' experience, chiefly with the engineers. He was in charge of the construction of the Gatun locks and dam and the channel from Gatun to the Atlantic in the Panama Canal

Closing in on Lens

Last week we called attention to the curious fact that Lens, which the Germans were preparing to evacuate early in April when the British struck their blow in this direction, had remained undisturbed ever since. Now, it seems, the British are ready to resume, three months later, their efforts to take the town. Altho the battle of Loos in September, 1915, was miscalculated and cost the British heavy sacrifices in men, it brought them to Hill 70, only a couple of miles north of Lens. Their attack in April, well planned and less costly, brought them to within the same distance of Lens on the west and south. The new attack is again from the west and south and has brought them within a mile of the town. Here as before the Canadians distinguished themselves by the skill and courage with which they fought their way forward thru the tangle, the slag heaps, mine-heads, embankments and ruined mills and houses. Within twenty-four hours they were in possession of the two mining villages, Avion and la Coulatte, nearest to Lens on the south.

But between them and Lens runs the Souchez, which, tho a small river, has been dammed so that its waters cover more than half a mile of the low land south of the town. The Germans, following the same tactics as in their former retreats, exploded mines at the crossroads and lopped trees over the highways so as to impede the advance of artillery. But the capture of Lens seems inevitable now that it is closely enclosed on three sides and its recovery, even tho the mines may have been flooded or blocked up, will ultimately relieve the coal scarcity from which France has suffered ever since this region was taken by the Germans three years ago.

On the French front the Germans continue to make desultory and apparently disconnected attacks at various points on the long line from Laon to Verdun, but nowhere developing a decided offensive. The French have lost more than 200,000 men in the last two months.

Greece Breaks With Germany

Venizelos, the Cretan, who was thrown out of power by King Constantine because he tried to bring Greece into the war on the side of the Allies, is Premier once more and taking up his work where he left off when dismissed. He is back in Athens forming a new cabinet at the request of the new King Alexander. A pro-German demonstration in the capital brought the Russian and French troops up from the Piraeus for his protection. They arrived within four hours and are now encamped near the Acropolis, where last year they had a fight with the royalist troops.

The first act of Premier Venizelos was to recall the Greek envoys at the courts of Berlin, Vienna, Sofia and Constantinople. The army that Venizelos organized for the purpose of aiding the Allies will be enlarged, but it is hardly probable that he will attempt a mandatory mobilization of all the Greek forces because a large part of the army is pro-German.

It is understood that Venizelos has insisted that Greece receive as the price of her entering the war the southern part of Albania, inhabited by Greeks and known as the Epirus. This is within the territory over which in June the Italian Government declared a protectorate. The action of the Italian Foreign Minister, Baron Sonnino, precipitated a crisis in the cabinet, and the Socialist ministers threatened to resign at this reckless manifestation of imperialistic aims. They also were displeased at the selection of the Italian mission to the United States. On what terms the difficulty was patched up is not known.

Russian Chaos

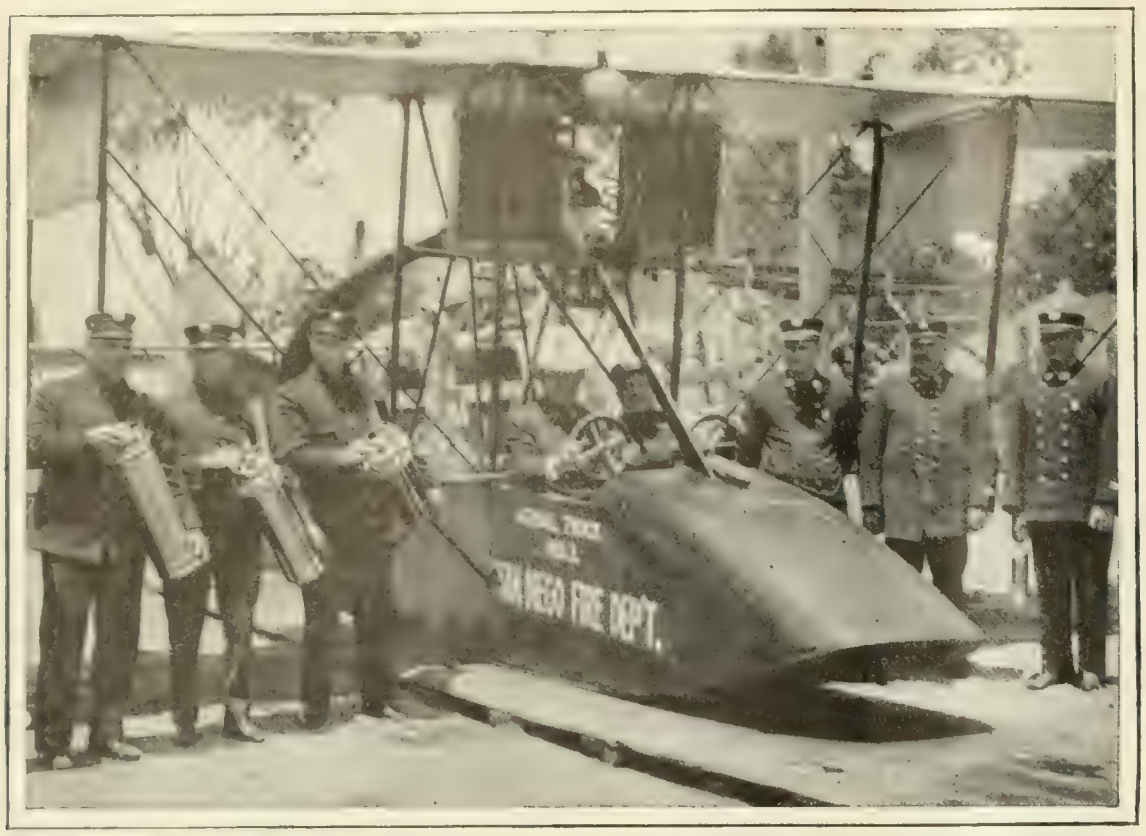
The first effect of the overthrow of autocracy in Russia was general disintegration. The various nationalities that have composed the Russian empire seized the opportunity to claim their independence and the various classes of Russian society asserted their rights without regard to others. The Poles, Finns, Lithuanians, Ukrainians and Georgians have declared for autonomy and even separate communes and cities like Kronstadt have set up as independent republics. From strict regulation and enforced subordination the Russian people passed in a day to unrestricted liberty, and the wonder is that it has not been more generally abused. The omnipresent police were abolished from the first. The palaces of the Czars and nobility have been thrown open to the public, yet there has been little looting in Petrograd and all visitors remark upon the good behavior of the crowds. In remoter parts of Russia, where the disorderly elements took advantage of their opportunity. they have been put down by community action, sometimes with terrible severity. North of Odessa the peasants organized a vigilance committee and hunted down the horse thieves that had infested the region, burning twenty of them alive when they had been captured. One of the first acts of

E. T. Reed in Passing Show, London
THERE'S NO ACCOUNTING FOR TASTE

the revolutionists was to release in mass the prisoners of Siberia, but this led to such wholesale robbery and murder that martial law was proclaimed in Tomsk, and after a pitched battle in which twenty were killed the anarchists were overcome and two thousand of them put back into prison.

Upon the overthrow of the autocracy and bureaucracy the power passed into the hands of the Duma, or congress, which delegated it to a Provisional Government composed of prominent men of their own membership. But the socialists and labor unionists forming the Council of Workmen's and Soldiers' Delegates proved to be a stronger force and the Provisional Government was able to remain in power only by coming to terms with the Council and taking in a number of its members in place of some of the more moderate ministers, such as Professor Milukov.

Now the anarchists are in revolt against the Socialists and the Workmen and Soldier's Council is denounced as reactionary and capitalistic. Bands of armed anarchists parade the streets calling for the abolition of the Council, as the Council a few days before had declared the Duma abolished. Local centers of anarchy have been established in various palaces. Lenine, the anarchist whom the German Government shipt back from Switzerland, took up his residence in the palace that Emperor Nicholas built for his mistress, the dancer Kshesinska, who has brought suit against the Government for a million dollars damages on account of it. Another group of ninety anarchists have seized the country house of General Durnovo in the Viborg suburb of Petrograd and defy the Government to eject them. Fifteen of these anarchists are from America, but they say they will never go back there because the American police are so severe. On account of the strikes and impossible demands of the workingmen many of the manufactories, including munition works, are closed and forty thousand men have been thus thrown out of employment in Petrograd. In these disorders German agents have been active and it is also suspected that they are instigating a counter-revolution.



The Russian Peace Movement

The Duma in a secret session on June 17 past a resolution calling for "an immediate offensive in close coöperation with Russia's Allies," but the Duma has been declared abolished by the Council of Workmen's and Soldiers' Delegates, so it is rather to them that we must turn for a more authoritative statement of Russia's intentions. Their attitude is exprest in a resolution past on June 26 by their All Russian Congress at Petrograd as follows:

> The Congress recognizes, first, that ending the war by means of the defeat of one of the belligerents would constitute the point of departure for fresh wars, increase dissensions among the nations and lead them to complete exhaustion, famine and ruin; second, that a separate peace would strengthen one of the belligerents and give it the possibility of gaining a decisive victory over the others, would strengthen aspirations toward usurpation by the ruling classes, and, while liberating Russia from the grip of world-wide imperialism, would hinder international unification of workers. Consequently the Congress categorically rejects every policy tending in fact to the conclusion of a separate peace or to its prelude, a separate armistice.

This is reassuring as to a separate peace but does not offer much hope for an effective resumption of military operations against Germany from the eastern side this summer. From speeches and press it seems that the leaders of revolutionary Russia still hope to be able to convince the Allies of the advisability of relinquishing their schemes of conquest and of making an immediate peace upon the basis of no annexation and no indemnities. They view the war as a general calamity rather than a particular crime, and they propose to repair its ravages by an international fund, collected from the more wealthy nations and distributed to the more needy. Questions of disputed territory they would have settled so far as possible by a referendum of the inhabitants.

It is obvious that the various messages of congratulation sent to Russia by England, France and the United States did not make a favorable impression in Russia, for they showed a disposition to continue the war until Germany, Austria-Hungary and Turkey should be deprived of the greater part of their territory. The Russians, having exprest a willingness to part with Poland and to relinquish their historic ambition to possess Constantinople, looked to their Allies for similar renunciations and were disappointed at not meeting with such a response. On the contrary both the British and French Governments have taken occasion since the Russian revolution to express more definitely than before their determination to correct historic injustices and to cripple the Central Powers. In the British Parliament it was stated that Germany must be forced to relinquish Alsace-Lorraine and the Polish provinces, Austria-Hun-

HERE'S THE LATEST METHOD OF FIRE-FIGHTING

San Diego, California, is the first city to add aeroplanes to its fire department. It has purchased two 100-horsepower machines, equipt with powerful chemical fire extinguishers. They are to be tried out chiefly for fires along the water front

gary to relinquish territory inhabited by Italians, Czechs, Slovaks, and other Slavs, and Turkey to relinquish Armenia, Arabia, Syria and Constantinople. President Wilson's note and recent utterances are not liked because he seemed to the Russians to have repudiated his former opinion that "peace without victory" was preferable. The Russians wonder why he should insist upon getting Poland and Constantinople away from the enemy while they, for whose benefit these demands were put into the list of the aims of the Allies, are willing to give them up for the sake of peace.

The German War on Shipping

Norway has suffered almost as much as any of the belligerents. It is estimated that almost one-third of the Norwegian shipping has already been sunk and now the Germans are making every effort to cut off the exportation of fish, nickel and other necessities to Great Britain. In this effort they have resorted to the same unscrupulous tactics as in America and are making illegal use of the embassy in their nefarious schemes. Last February a trunk was brought to Christiania by Baron von Rautenfels, a courier of the German Foreign Office. He was arrested by the Norwegian authorities on charge of a conspiracy to blow up ships and his trunk was seized in spite of the protests of the German Embassy, to whom it was addrest. When opened it was found full of explosives concealed in various articles such as fountain pens, pencils and cigarets. A ton of other explosives were discovered hidden in artificial lumps of coal and designed, it is said, to be put with the coal on ships bound for America. A secret German wireless station has been discovered on an island off the Norwegian coast. On account of these revelations Norway asked the recall of the German Minister Michaelis, and he has been succeeded by Admiral Paul von Hintze, former Minister to Mexico and China.

The report of the British Admiralty for last week is more favorable than it has been for a fortnight, but still is above the average. Twenty-one vessels of over 1600 tons and seven under that were lost during the week. Probably the largest vessel lost was the Peninsular and Oriental liner "Mongolia" of 9505 tons, which was sunk on June 23 by striking a mine off Bombay. It is also rumored that the "Haverford," an American liner of 7493 tons under British registry, the "Ultonia" and "Manistee" of the Cunard line and the "Buffalo" of the Wilson line are among the week's victims. The French lost five steamers, two of them over 1600 tons.

The American barkentine "Galena" was sunk off the French coast by a bomb. No lives lost. When the Elder-Dempster steamship "Addah" was torpedoed on June 15 the submarine fired on the boats in which the crew were trying to escape. One shell struck the master's boat and took off its stern, killing eight men.

Brazil Belligerent

On June 28 Brazil revoked her decree of neutrality in the war between the Entente Allies and Germany, and thus practically became a belligerent power. As the Brazilian Congress had already authorized the revocation of the declaration of neutrality as between the United States and Germany, sanctioned the seizure of German ships in Brazilian ports, and permitted the warships of the Entente Allies to make use of Brazilian waters, this act was but the culmination of a long series of steps from neutrality to open war. Even yet it is not certain whether Brazil's part in the Great War will be purely diplomatic and naval, or whether Brazilian forces will be sent to European battlefields. A special war mission will be sent to the United States by the Brazilian Government for the purpose of harmonizing the war plans of the two republics.

Admiral Caperton, commander in chief of the Pacific fleet of the United States Navy, has arrived at Rio de Janeiro with several ships of his command, and it is believed that he will undertake patrol work in the South Atlantic, possibly with the assistance of the Brazilian navy. Brazil tendered the Americans a formal official welcome, and the people received the visit with the greatest enthusiasm. A committee of citizens of Uruguay has invited the American fleet to spend the Fourth of July in that republic in spite of the fact that Uruguay is still nominally neutral.

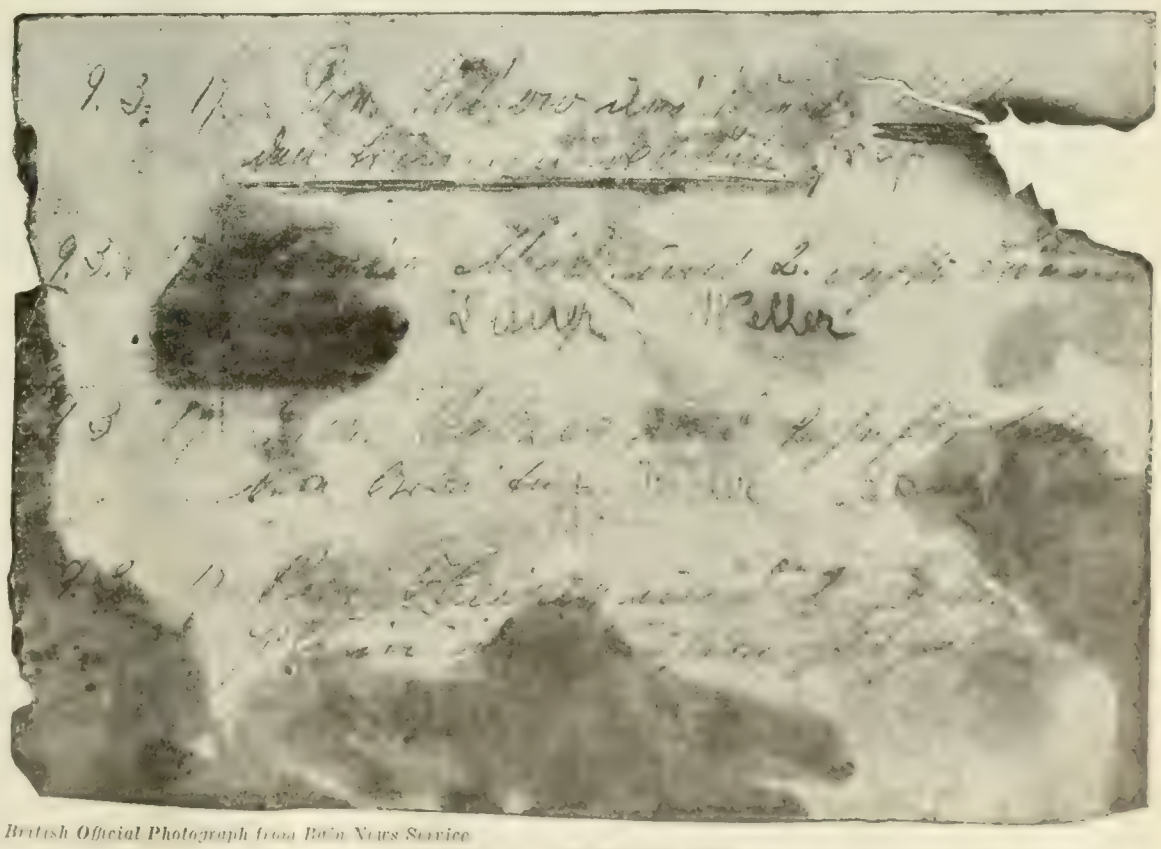
Canadian Politics

The Canadian Government is determined to force thru Parliament its universal military service bill in spite of sinister rumors of opposition from many quarters. As an accompaniment of this conscription of men Premier Borden will probably agree to the Liberal demand for conscription of wealth in the form of a drastic income tax, and measures for the regulation of important industries by the Government. Sir Wilfrid Laurier, leader of the opposition, offered an amendment to the compulsory service bill providing that it should not go into effect until approved by a popular referendum. If this were done he agreed to support the measure, but he announced that he would never enter or support a ministry which tried to force conscription on the people against their will. Supporters of compulsory service charge that French-Canadians have been intimidated into opposing the bill by threatening letters, that the Catholic clergy of Quebec were conducting a disloyal propaganda, and that most of the so-called peace organizations in both the United States and Canada are financed and controlled by German agents. Labor is almost as hostile to conscription as the French-Canadian peasantry.

Entente Missions Welcomed by Congress

Both the Russian and the Belgian missions have had recent opportunity to speak before Congress in the name of their respective nations. On June 22 Baron Moncheur, head of the Belgian war mission, addrest the Senate, and on June 27 the House of Representatives. Reversing this order, Ambassador Bakhmetieff spoke first before the House, on June 23, and three days later before the Senate. Altho the Belgian commissioners received a tremendous ovation, interest chiefly centered in the words of the representatives of Russia because of the general uncertainty in this country as to the military situation of the great republic and the prob-

able stability of its present government. It was with marked relief that Congress heard the assurances of Ambassador Bakhmetieff that when he left Russia a few days ago the provisional government had the situation well in hand, that with individual exceptions all classes supported it, and that Russia would never consent to a separate peace. General Roop, the chief military member of the commission, explained the disorder that had existed in the Russian army during the first days of the revolution as due to the inability of the common soldiers to see how political liberty could be reconciled with strict military discipline. He thought that conditions in the army were now improving.



After a visit to New York, the Prince of Udine and most of the members of the Italian commission went to Boston to carry the greetings of Italy to the people of New England. The Italian residents of Boston, together with many of their compatriots from neighboring towns, gave a rapturous welcome to the commissioners and the colors of Italy mingled with the American in many parts of the city. Senator Marconi, who was detained in New York on business, explained Italy's pressing need for coal to keep alive the industries of the country, and unveiled a little known incident of diplomatic history. He declared that the prompt assurance sent by the Italian Government to the French Prime Minister at the very opening of the Great War that Italy would in no case join its old allies, Germany and Austria, against France enabled the French to concentrate all their forces on the northeastern frontier, reserving none to watch the Italian border, and so bring together an army large enough to win the battle of the Marne and save Paris from capture.

Planning the Air Navy Secretary Daniels of the Navy has announced that altho 10,000 men have already applied for the aviation service many more are needed. A number of new training fields have already been acquired in anticipation of the $600,000,000 appropriation bill which the administration hopes to obtain from Congress. Several colleges and universities are now instructing cadets in the study of aeroplane engines, the theory and practice of flight, meteorology, map reading and aerial photography, wireless telegraphy and the handling of the machine gun. Within a year the Government hopes to manufacture some 30,000 aircraft of all types, including 12,000 training machines. Rear Admiral Fiske suggests that if enough torpedo planes are built and enough men trained to use them the Allies could make a general attack upon the German fleet in the Kiel Canal using their own fleet stationed in the North Sea as a temporary base for the aeroplanes. General Goethals vigorously advocated before a Senate committee the creation of a new position in the cabinet to have absolute control over the air service of the nation and which would be in no way subordinate to the army or navy. When Representative Kitchin, Democratic leader in the House of Representatives, was asked whether the aviation appropriation bill would be passed before the adjournment of Congress he replied with characteristic cynicism: "It will not take the House more than half a day to pass the aviation bill. It will carry only $600,000,000, and of course we can put that thru quickly, tho a $6,000,000 appropriation might take a week or two."

Red Cross Fund Oversubscribed The voluntary contributions of American citizens to the Red Cross in the one week campaign realized more than $115,000,000, altho the sum to be raised had originally been placed at only a hundred millions. Some twenty states and more than a thousand cities exceeded their allotment. Of the large cities, Cleveland, Ohio, made the greatest per capita contribution, but Cleveland had many close rivals. San Francisco reported the large sum raised in that city with the comment that the contribution was "in recognition of the aid given by the National Red Cross to a stricken city in 1906." Unexpectedly large as was the fund, Red Cross officials declare that with the utmost economy the needs of the war will require it all in about half a year. This may not be the last call upon the generosity of the American people.

The ruling of our Government, in conformity with the war policy of the Entente Allies, that persons native to countries with which we are at war will not be given passports to the Red Cross hospitals of Europe has provoked much resentment. Ex-president Roosevelt urged the American Government to impose no such restriction since it would be a wanton insult to discriminate against any loyal citizen because of his birthplace or parentage. In a public letter on the subject he declared that if he had been permitted to raise a volunteer army, as Congress had authorized, he would have selected many persons of German descent as his officers. Henry P. Davison, Chairman of the Red Cross War Council, supported this plea. "It may be," he said, "that by some chance a disloyal man or woman may enlist, but I had rather take that chance than to take the chance of having any of our people dispirited and disheartened when they are really trying to help." A conference of representatives from sixty different war relief organizations has decided to open negotiations with the Red Cross with a view to the efficient adjustment of their efforts. Most of the members of the conference were willing to coöperate with the Red Cross but unwilling to merge their organizations with it altogether.

Cutting Coal Prices A convention of four hundren operators representing the coal industry responded enthusiastically to a stirring appeal from Secretary Lane of the Department of the Interior to coöperate with the Council of National Defense in keeping coal prices at a moderate level during the war. Congress has before it several measures for federal regulation of the coal industry, but the representatives of the mine owners and managers did not wait for the enactment of drastic legislation. The conference unanimously agreed to price reductions to take effect in July which will save the consumer about $180,000,000 a year, according to the estimate of Director Smith of the Geological Survey. Bituminous coal which now sells for as much as five and a half dollars a ton

British Official Photograph from Bain News Service

OFFICIAL RUTHLESSNESS

This German document dated March 9, 1917, gives instructions for the procedure preliminary to the German withdrawal on the British front. It specifically assigns to certain officers and to subalterns the tasks of polluting the wells, cutting down the trees and carrying out the general work of devastation

at the mine will hereafter be priced at three or three and a half dollars and special reductions will be made for coal purchased by the Government. In addition to placing prices upon coal at the mines the commissions of brokers, retailers and commission men are limited to twenty-five cents a ton. These prices, effective for all mines east of the Mississippi River, may be still further modified after an investigation of the coal situation by agencies of the Government. Chairman Peabody, of the coal committee of the Council of National Defense, thanked the operators for the patriotic spirit they had shown in consenting to the sacrifice of the war profits which they might have extorted from the necessities of the nation.

Liberty Loan Distributed The final tabulation of Liberty Loan subscriptions shows that more than four million persons bought bonds to the aggregate amount of $3,035,226,850, an oversubscription of nearly fifty-two per cent. Secretary McAdoo of the Treasury Department announces that those who subscribed for ten thousand dollars worth of bonds or less will receive in full the amount they applied for, but, since the administration had resolved not to exceed the two billion dollar bond issue authorized by Congress, large subscribers will have to be content with a part of their subscription. This paring down process is in several stages from a sixty per cent allotment to persons who applied for over ten thousand but less than a hundred thousand dollars worth of bonds to a little more than twenty per cent for the highest subscription of more than twenty-five millions. This method of distribution insures the holding of sixty-five per cent of the Liberty Loan by the small subscribers who did not apply for more than ten thousand dollars worth of bonds and thus places the loan on an extremely popular and democratic basis.

The federal reserve banks have begun the redistribution of Liberty Loan funds as they are paid in among the national and state banks and trust companies which have themselves subscribed to the loan. Here the money will be held on deposit to be withdrawn as it is needed. More than a billion dollars have already been loaned to our European allies, of which Great Britain has received $550,000,000 and France $210,000,000. Most of this money has been raised by the sale of treasury certificates thru the federal reserve banks.

Big Dam Breaks in Utah On the afternoon of June 24 a break in the mammoth concrete dam of the Price River Irrigation Company reservoir twelve miles from Fairview, San Pete County, flooded the farm land of the region and compelled the temporary abandonment of four villages. The pressure of the water on the reservoir was suddenly increased by the inflow of melted snow until it carried away a section of the concrete core of the dam fifty feet wide and five feet high. When once a breach was made much of the rest of the dam crumbled or was eaten away by the rush of the water. Officials of the irrigation company and Government experts stationed at the reservoir soon discovered that it was hopeless to attempt to repair the damaged structure and concentrated their efforts in the work of clearing the threatened neighborhood. Loss of life was prevented by the sending of early warning to homes and farms in the path of the flood.

The Texas University Controversy Governor Ferguson, of Texas, recently surprized the State by vetoing the appropriations for the State university, but the Attorney General soon sprang a bigger surprize by showing in an elaborate legal opinion that the attempt to veto the university budget was not valid, because the Governor indicated by special marks the items of the bill which he disapproved. This, in the view of the Attorney General, left the grand total of the appropriation unaffected and made it lawful for the regents to use the entire available funds of the university for its support; the veto having had no other effect than to make the individual items objected to part of a general and unspecified appropriation. Governor Ferguson and his supporters denounced this ingenious line of argument as a mere legal quibble.

The Governor, who has worked actively for the rural schools of the State, made several speeches denying that he was in any way a foe of education. The origin of the controversy appears to have been a quarrel between Governor Ferguson and President Vinson, of the university, over the refusal to the latter to dismiss members of the faculty to whom the Governor objected.

GENERAL PERSHING AND HIS STAFF

"You have been very happy in your choice of a commander" is the French War Minister's praise of General Pershing and the work that he is doing

Central News

THEY WERE DETERMINED—AND NOT A LITTLE EAGER, TOO

THE FIRST TROOPS OVERSEAS

BY DONALD WILHELM

"SOMEWHERE" on the Atlantic Coast the "first ten thousand" were ready to start for "somewhere in Europe."

On board one of the transports, a great ocean liner, I went over to a private standing alone by the rail—a thoughtful, dark-haired fellow staring into the distance, past intervening miles, I imagined, clear away to a little farmer mother standing in a doorway, thinking of him. "Are you downhearted?" I asked him.

"I'm just looking," he smiled.

"Where?" I smiled back at him.

"Oh, somewhere," he laughed.

And then, suddenly: "Hell, I got a girl."

Nearly every one of them had girls, I judge. Nearly all had mothers. And some had wives. And many were soldiers of fortune with neither girls nor mothers nor wives. And here they were, all together, bound on the Great Adventure, and if there were any tears shed, neither the ocean nor the officers were any the wiser.

There may have been tears shed, yet mothers who are in dread of embarkations these days should be assured that these thousands were full of fight and of fun, and they went to sea with the soldier "bands" playing. Certainly on one ship the only sign of nervousness I made out was that displayed by a lieutenant, who came up from the ranks by examination, clear up to the point where now he was, with some other officers, on what he called "the roof" of the ship!

He was a little nervous, and a bashful boy, too—one of those condemned to suffer solitude tho thousands are all about him. He fretted. He moved round in circles—for him very small circles. He was accustomed, like many a diffident young officer, to the western fields, I know. He had never before smelled the sea, I am sure. And he was, I think, so intent on appearing self-composed that he forgot, as the big vessel turned her engines, and strolled out upon the canvas covering of the top deck—strolled out, and then strolled right back again, very, very quickly!

He laughed at his own nervousness—a queer little laugh. The others laughed. And a moment later he stole off, to be alone, no doubt—alone with "the girl" thousands of miles away. I thought then that he was the kind of impulsive boy who would some day steal off, quite unaided, over the parapet and across "No Man's Land," and do perhaps as Sergeant Leary did—kill half a score of Germans, capture a couple more, a machine gun and the "V. C." all in one hour of a busy day.

"What's the difference," mused one of the remaining officers—one young enough to talk quite frankly. "If I get shot my uncle will pay all my bills. And if I don't get shot he says he will pay 'em any way if I bring him a German helmet. So I'll send him two German helmets—C. O. D. Well, what if you do get shot—if there isn't any hereafter for a soldier fighting, who's got one coming to him, then?"

A little later, as the hawsers were being cast off, one of the others, a laughing, ruddy boy with life running gay nearly always before him, said good-bye. He shook hands earnestly. "So long," he said.

"Good luck," I told him.

He laughed. He seemed to consider that his duty was to show no sterner emotion. Then he laughed again—a little late.

"That," said one of the others, "is his Eddie Boy laugh. It's worth a nickel!"

Eddie Boy was a little serious, however. He looked out to sea, then toward land again. Then he observed I was watching him. So he laughed again, and drawled maturely: "It's a big ocean, but that's because we're all so little, eh Bill?"

Bill—scion of a famous fighting family—smiled approval. "All I'm wondering right now," he said, "is whether they'll keep on giving us good chow. I liked the roast duckling."

The ship's whistle snorted. The Only Civilian made for the head of the gangplank.

There, at the head of the gangplank, was a little group of soldiers—a couple of wistful boys, an older sergeant, three others. They were near the hatch that led down to their quarters—down to the big space full of bunks, three atop one another, all freshly painted and scrupulously clean.

"Now," said the sergeant, winking, "the funny thing about a torpedo going off under you is that you never know what happened until you feel yourself coming down!"

They laughed. I began to realize that after all these men took the whole situation philosophically, even now, in the first unrushed moment since they had come marching out of the distances that constitute America. Almost all situations in life offer some satisfactions, —and this one did likewise.

And then the boat moved a little—the tension was off its hawsers.

I got ashore.

"I envy you—I wish I were in your place," I called to one of the men at the rail.

"Perhaps you won't three months from now," he laughed. And then, from the same man: "Give my regard to all the girls——"

"——to Broadway, too," called another.

And then another punned on something about Broadway with its skyline of stars, even when it's stormy!

© International Film

"I WISH I WERE IN YOUR PLACE!"

The next moment the boat had cleared, all except two hawsers. I glanced at my watch. There was a minute left till schedule. She waited that minute out. There was that minute's pause, a curt order from the bridge and almost instantly the big craft was moving slowly but surely out toward the sea.

Then there was music. Some boy with a cheerful heart started it with "Tipperary," and the next moment a soldier band had caught up the tune, then turned it to the music that promises to be the marching song that will heal forever the wounds between North and South—"Dixie"!

On the decks, too, were not a few bluejackets—men assigned to man—or shall we say "mother?"—the plentiful guns fore and aft.

"What are those guns for?" I asked a "jackie."

He laughed. "Just for sociability's sake," he said.

"Regards to Fritz—boom!" suggested a private.

The jackie shook his head dolefully. "*You* fellows are the ones that will see something doing," he said.

"Well, Skinny," retorted the private, "*you'll* see something doing when you get this bunch of landlubbers out on the briny!"

This, no doubt, proved to be truth. But there is solace, nevertheless, for the privates—so the jackies intimated—in knowing that the jackies will be enjoying themselves even if the landlubbers arn't! And, after all, seasickness leaves hardly any sting!

All of which suggests something important—that this trip will constitute an event in the annals of American traditions because it has been very seldom that soldiers and sailors have crost the ocean together, and of course they have never crost on a mission like this one. There are men from Army and Navy and from the Marine Corps, too, on this first contingent—men from all ranks of our various services. America was represented in those first ten thousands, represented fore and aft and in the lookouts atop decks, in cabins and under hatches, all of America—typical soldiers from whom one can extract nothing in the way of information about themselves; men from the North and the South, from the East and the West—from all the levels high and low of America. There were men with distinguished names, just like the other privates—Lees, for instance—a few men of wealth, and not a few sons of men celebrated in our down-to-the-date American life.

IT was startling in its psychological effect—the sudden appearance, right on scheduled minute, of these columns. They came marching up out of all the reaches of America—marching four abreast, in line upon line, till their faces made a passing sweep that played on one's emotions like the flutter of an American flag. They came marching up, into the lighted space, and then flashed on into the shadows, to pause, take a look about and a moment's rest, then file up the gangplanks, down the hatches and up to the upper decks, and pile themselves into bunks—for they were tired, every one of them.

They were tired; yet they came marching up out of the depths symbolically, with a vigor that was astounding, marching with full equipment ready to stay in Europe till the Germans burn out and freeze themselves under. They came, thousand after thousand of them, in order that the Imperial German Government would have deemed impossible here, at an embarkation. There was no confusion. They came and there were no consequences—just a few low and quiet commands, a few wheelings and swift and direct execution of movements desired. They came in long columns and went aboard, and the strange, quizzical idea that persisted in me, past all the envy that came to this poor civilian at these fellows who are to have their chance, was this, that it was somehow curious that they were going to the other side of the world and taking nothing but their rifles!

Of course on board there was much more merely than rifles. Of course there was aboard that great armada of men and materials much more—very much more—somewhere!

Yet here were all these men, gathered from far and wide, from all the levels high and low of a country as wide and deep as America, bound to the other side of the world, taking nothing but rifles! Of course this is a crazy idea, and yet it persisted, and it still persists. It seemed to this civilian that it was as if a shoemaker were going to Egypt and taking not an awl but merely a hammer. So I said so to one of the officers. He smiled indulgently. "They're going over to use their rifles," he explained. "And you know," he laughed more and more amused, "they've got their bayonets, too!"

He did not even add—this vigorous, much amused officer—that old adage among the military to the effect that a soldier's life is for his family, his death for his country, and his discomforts for himself.

But they weren't thinking of things like that—not these men. The older soldiers, with the love of a fight that is part of their nature, looked forward to action of a kind past all anticipation. And the young ones with the old were full of wonderment, perhaps, yet they took their cues from the old ones. I had spent hours with them. They were cheerful, full of fight and of fun. They were comfortable. And intelligent, too—that is, they looked at the situation as they found it, knew its dangers and enjoyed them. They were not downhearted, taken altogether. They were determined, and it may be guessed that before their journey was over they were not a little eager, too.

CHAUTAUQUA'S CHANCE TO-DAY

BY ARTHUR E. BESTOR

AN educational institution like an organism may outlive its usefulness. It may have done valiant service but may be unable to adjust itself to new conditions. In this time of stress every public organization is compelled to answer the question as to whether it has any vital task to perform in the crisis that confronts the nation. Chautauqua has been a center of geniuinely patriotic education, an experiment station for new ideas, a great national influence making for intelligence, religious tolerance, and democracy. It has built itself into two generations of American life and has had a significant part in making the public opinion which rules the country today. But has it a part to play in this time of national need, and a message to the people of a democracy engaged in a life struggle?

An answer may be made in terms of personalities. The boys and young men who have lived here summer after summer, and who regard this as their second home are now in the ambulance service on the French front and in every training camp from Plattsburg and Madison Barracks to Fort Sheridan and the Presidio. Every department of the institution has been called on to yield some effective and valued member of its organization for national service. The chancellor of the institution, as the head of the greatest instrumentality outside the Government for public tasks, is able to exercize an influence of world-wide importance. The head of our School of Physical Education is on the Government commission working out the whole problem of the recreative side of the Government training camps. The president of the institution has become chairman of a committee of the Y. M. C. A. War Board in charge of educational work among those recruits who, to the number of two million, will probably be in our thirty-one training camps by January 1. The president of the Chautauqua Woman's Club and other women prominent in it are members of state councils of defense and leaders in Red Cross and other organizations. Men and women who have found their inspiration and gained much of their breadth of intellectual outlook at Chautauqua have found positions everywhere where they can put to the best use this training and ability. As time goes on, more and more of our leading spirits will be called into patriotic service.

An answer to such a fundamental inquiry may be found also in the program of the coming summer. Nowhere in the country will there be so many important problems discussed as upon this platform. Our program has during four decades reflected national life and development and records the names of presidents, statesmen, university men, preachers, leaders in social and political reform, in fact, it is a record of the effective leadership of America since 1874. It is not surprizing, therefore, that men and women who could not be induced to speak elsewhere this summer should welcome the opportunity of speaking at Chautauqua and addressing themselves to those problems which are now uppermost in the public mind. The season opens with the stirring story of trench warfare by an English officer who first came home because of the shock of shell fire and is now again recuperating from the effects of poisonous gas. On the third day "Doing Our Bit" is the subject of an address by one of the leading members of the Woman's Committee of the Council of National Defense. The first full week of the season under the inspiring title of "Our Country" is given up to the Speakers' Training Camp on Education in Patriotic Service and the Conference of Organizations engaged in Patriotic Education. Cabinet ministers, chairmen of the expert commissions of the Council of National Defense, members of the United States Senate, educators, publicists, representatives of state councils of defense, clergymen, authors, leaders of public opinion, united in the belief that the duty of the present hour is to arouse the American people to the meaning of the war and the importance of personal service, will make Chautauqua the dynamo of the country in this great patriotic propaganda. This will be the dominant thought of our entire summer. All courses which are offered anywhere under the auspices of the Red Cross will be offered by the Chautauqua Chapter and in the Chautauqua Summer Schools. Military training for men and women has for the first time been introduced. The whole program and the entire life of the institution have been planned for under a patriotic impulse and with a definitely patriotic design.

The Chautauqua Conference on Patriotic Education, held during the week of the Fourth of July to plan a national campaign of patriotic propaganda, brought together many of the leading lecturers and educators in this country. The President of Chautauqua Institution, Arthur E. Bestor, who is also Secretary of the Committee on Patriotism Thru Education of the National Security League, made the following article his opening address. Ida M. Tarbell's address on "Fear of Efficiency," which we publish on another page, was one of the chief features of the Conference.—THE EDITOR.

MR. BESTOR AT CHAUTAUQUA

The Y. M. C. A. War Council has just chosen the president of Chautauqua Institution as head of the committee on entertainment at army camps thruout the country. Mr. Bestor plans to organize the committee at Chautauqua this summer and to enlist the volunteer services of famous lecturers, entertainers and musicians

A background of knowledge is the first requisite of an understanding of our part in the world today. It is possible that Chautauqua has a more significant function touching the issues of the present struggle than immediately appears. Since 1878 the readers of the Chautauqua Literary and Scientific Circle have had in every four year cycle a Modern European, an English, and an American year besides one devoted to more ancient times. Three-quarters of a million people have largely secured their historical orientation in this study. A book like that of Dr. H. H. Powers, "What Men Fight For," written for the Chautauqua course, has been of incalculable value in giving these readers and many outside the Chautauqua circles an understanding of what the war is all about. Nowhere in the world is there a forum as influential as this Chautauqua platform, where many of the important problems of modern history have here been discussed by experts.

The ability of Chautauqua to enter sympathetically into world movements is perhaps best illustrated by what happened in late July, 1914. On twenty-four hours' notice a symposium on the impending war was arranged. The German point of view was presented by a

member of the Chautauqua faculty who had served his time in the German army; the French by a member of the faculty who had served his time in the French navy; the English by a member of our medical staff who had been with Kitchener on the way to Khartoum; and the general European situation was presented by an assistant in the Program Department who had spent his winters for many years in Europe and who said on the afternoon of Franz Ferdinand's assassination, that that was the opening event in the European war. A little later a Cambridge professor, James Hope Moulton, who has since lost his life by exposure on a ship torpedoed in the Mediterranean on its way back from India, gave his interpretation of England's entrance into the war. During the last week of the season there were addresses by religious leaders who were on their way to the Church Peace Congress in Constance when the war broke out. What was true of the season of 1914 has been true of each successive season.

IT is perhaps not too much to say that the progress of thought and feeling with respect to the war has been more clearly reflected at Chautauqua than anywhere else. Our constituency had come to believe that wars were a thing of the past and the dawn of universal peace was at hand. In amazement, therefore, during that first season we questioned those ideals and institutions which we believed had been created to make war impossible. We discussed the responsibility of the leaders of Christianity and asked why eighteen centuries after the message of the Prince of Peace we Christians had not been able to create the mind and the machinery for the settlement of international difficulties. We asked why the financial leaders of the world who had been claiming that the interdependence of industrial and commercial life had made wars obsolete had been unable to prevent the struggle. We arraigned before the bar of our public opinion the Socialist movement, because the workers of the world had not by a general strike made recourse to arms impossible. We were distrest to find that all these had proved inadequate to prevent or defer the war.

Then came the period in which we tried to find in the person of a single individual the cause of the war. According to our prejudices, it was either the Kaiser or the Czar or Sir Edward Grey or Poincaré or Sazonoff who was responsible. But no such struggle as this can be explained in terms of mere personality. We began to realize that each of the nations of the war had what seemed to them a legitimate reason for entrance into it; that each put forth what seemed a valid claim to a place in the sun. We came to explain Germany's state of mind in terms of geography and economics. Here was the most efficient empire of the modern world, with a territory the size of Texas, and a population which in peace times grew at the rate of 800,000 people a year, with Russia on her eastern boundary in possession of one-seventh of the land area of the globe and a population growing at the rate of two millions a year. What was true of Germany was also true of the other nations in the struggle, and so we excused our own detachment by insisting that this was a war for markets and for selfish ends.

AS time went on, we Americans came more and more to the belief that the contention of the English and French that they were fighting the battle of civilization was at least entitled to consideration. The violation of the neutrality of Belgium came so suddenly that American public opinion would perhaps not have backed up that vigorous protest which we all now see ought to have been made then and there. Germany's attitude of mind, her ruthlessness of spirit, her contention that treaties were mere scraps of paper, her violations of international law and her unwillingness to abide by any of the rules of civilized warfare where they conflicted with her own needs and desires finally made it evident that this is our struggle quite as much as that of any nation in the world. And the revolution in Russia has finally brought about an alliance of the democracies of the world against the four central empires, which represent the theory of the Divine Right of Kings, that Might makes Right, and that the state is above all considerations of ordinary morality. It may be natural and inevitable that every people should struggle for the enlargement of its own ideals and institutions; but in so admitting we may still contend that it makes a profound and an infinite difference which ideals and institutions prevail. As between Kultur and Democracy, despite all the faltering of the latter, our part lies forever on the side of Democracy. The cause of the Allies is our cause.

This is the background of knowledge and feeling about the national crisis which is characteristic of intelligent Americans and which is clearly appreciated at Chautauqua. Is there also a real understanding among us of the national needs? Certainly Chautauqua has made no larger contribution than to patriotic nationalism. Founded only nine years after the Civil War, it has always been a meeting place of the North and the South. Men and women from all parts of the country, with widely varying economic, religious, social, and political beliefs, have been brought together here under ideal conditions of common living. They have been brought here each by some dominant interest, but they have all been fused together as a social group. Living together under such conditions offers opportunity for working out some of the problems of life, which in the bustle of our existence has otherwise become almost impossible. In this great community, people have worked out their intellectual and religious salvation in terms of intercourse with one another and have gained new ideals of national unity and the need of patriotic solidarity.

Chautauqua has also enabled leaders of communities in all parts of the country to study under competent educators the newer conceptions of the state, and to hear discussions of the various movements of government control by the administrators themselves. We have always attempted to discuss upon this platform those problems in which the country was to be interested the next day and the day after tomorrow. A list of the symposia conducted here and the weeks of discussions will reveal the fact that Chautauqua has always been a little in advance of the public opinion of the country with respect to these new plans of social amelioration, religious tolerance, and the socialization of the state.

Certainly one could not spend his summers in an intellectual and social atmosphere like this without understanding some of the problems of political and social organization so characteristic of the present crisis. In America we liked to believe that democracy was coming into its own around the world until we faced suddenly the challenge as to whether democracy after all is the most effective government in the world. Governments responsive to public opinion are being tested today as never before as to whether they can maintain themselves.

Besides a background of knowledge and an appreciation of national needs a time like this demands a moral and spiritual dynamic. It is quite possible for educated men and women to know the past and to appreciate the present, but not to have that leadership and initiative which enables them to make their knowledge count toward accomplishment. Chautauqua, which has had so useful a career in formulating these problems, in giving an intellectual appreciation of them, has set itself now with all its powers, to the creation of moral impetus.

"TELL the people" is the slogan of the Committee on Patriotism Thru Education of the National Security League, with which we are coöperating. It has always been the slogan of every great leader from Moses to Lincoln. Every commander must have his couriers and his watchmen upon the walls to let the people know. To let the people know is a peculiar function of Chautauqua from its beginning. This function was never more immediately and urgently needed than now. Whatever might have been thought before the war began, whatever may be thought after peace is declared, surely while the nation is at war, Chautauqua must not be silent. The President and his advisers clearly are of such a mind. If they were not so minded, some of the distinguished speakers at our Training Camp would not leave their important duties to come. Chautauqua is to go on, of course, but not as usual. It will go on as the wisest council may direct it so as best to help in making up the mind and actuating the effort of the nation.

MISS TARBELL AT HER DESK

FEAR OF EFFICIENCY

BY IDA M. TARBELL

ONE of the most unpopular words in use today is the word efficiency. From having been something which we were inclined to call the American need it has become the great American alarm. It has meant until recently doing a thing in a clean, competent fashion without unnecessary fuss or waste. It is coming to mean doing a thing in machine fashion and in disregard of all human factors. What has brought about this change in our notion of the word efficiency?

It has come out of an attempt to create in industrial life a science of efficiency. In the last twenty years there has been developed in the industry of this country a new type of management. From being more or less haphazard and personal industrial management is now being harnessed to fixed principles. These principles have been worked out with mathematical exactness and their soundness is capable of proof. Many men have been interested in their development, but to one man above all others is due the credit of their present scientific form. That man is Frederick Winslow Taylor.

About thirty years ago Mr. Taylor found himself at the head of a shop which was not turning out nearly so much product as he was confident it ought. Gradually he worked out a plan for getting out of his machines and men all that there was in them. He did this by completely revolutionizing shop management. He instituted a system of handling tools and supplies so exact that each worker had put into his hands at the proper moment the thing he needed. It is safe to say that in many shops each worker gained upward of an hour a day by this reform. Mr. Taylor devised a planning system by which each man knew in advance exactly what work was waiting for him and his machine. Each operation in a job was routed so that it fitted into the operation which had preceded and the one which followed. That is, operations followed in their proper sequence so that they flowed together finally instead of being scattered over a shop and time being lost in bringing them together.

Mr. Taylor studied each machine in his plant to know exactly how fast it ought to be run to give the maximum product. Not infrequently he found that time was being lost because machines were run too fast.

Each of these steps made it easier for a man to do his work and consequently made it possible for him to do more work. Time which he had lost because of delays and friction for which he was in no way responsible was now his.

It was after these matters had been settled that Mr. Taylor first turned his attention to the workman himself. He studied the way he was doing his task. Often he found that his productivity was lessened because of his position at the machine or of an awkward way of handling a tool. The easiest and the quickest way of performing each task was worked out. When this had been fixed the worker was instructed in the new method. The result inevitably was that the man turned out more work.

Under the old management it had been the habit whatever a man's product never to pay him more than the average daily wage. That is, he never had an incentive to turn out all that he could do. Mr. Taylor made it a rule of his system that a man's pay should increase with the amount of his product. He never allowed the rate per piece to be cut. The result was that workmen under this new science of management earn from fifty to one hundred per cent more than formerly.

In spite of the fact that the intelligent application of these principles results in a large increase in product, in

It was as associate editor of "The Chautauquan," nearly thirty years ago, that Miss Tarbell first took a prominent part in Chautauqua work. Since then, in spite of the increased scope of her activities, she has always continued her interest and her work for Chautauqua. Miss Tarbell is one of the speakers who will take part in the country-wide campaign this summer under the Committee on Patriotism Thru Education. She is the author of "History of the Standard Oil Co.," "The Tariff in Our Times," "The Life of Abraham Lincoln" and numerous magazine articles and stories.—THE EDITOR.

profits and in wages, there have been many people to decry them. Labor particularly has fought them. We have even had bills in Congress aimed at making it a crime for the Government to use in its plants the tools of the science of management. Why should there be this fear of industrial efficiency? Possibly fifty per cent of the reason lies in the natural human attitude toward anything that is new. Men fear this science because they are ignorant of what it really means and does and they do not take the trouble seriously to investigate. Here is the reason of much of labor's opposition to scientific management. Again men fear it because it demands a change and none of us like too well to give up or correct our ways of doing things. Scientific management cuts out ruthlessly all of the privileges which grow in a carelessly managed undertaking. It demands time, close attention, discipline, and the average worker or manager objects to this.

BUT these are only the human objections to anything new. The fear of efficiency in this country lies in something much more serious. It has been enormously increased in the last three years by the development of the Great War. The most conspicuous exhibit of efficiency with which the world is familiar is that of Germany. In Germany efficiency means fitting every man into a task which has been prescribed for him by a superior. In a country where militarism rules men must do and be what the government orders. The system requires training for a special service. It leaves little room for spontaneous individual choice. That is, an individual is not supposed to know what he ought to do. That is the business of his government.

Whatever a man may lose by this method there is no question but he gains in the safety and orderliness of his life. Provisions are made for his old age, for sickness and unemployment. He may sacrifice for the government, but the government looks out for him. The man attains, too, almost invariably a high degree of productivity in the thing at which he is set. He is an efficient man in an efficient machine. Why should we Americans revolt at this way of handling men? Why should it seem monstrous and fearful to us?

The democratic ideal in which we have been brought up breaks at every point with the German system. We believe that unless men are allowed to find for themselves the thing which they can best do, that unless they are free to follow their inner call the best that they have to give to the world will be sacrificed. Instead of forcing a training on the man we invite him to experiment. Above all, we feel that not only the good of the man but the good of society demands that his initiative and spontaneity be preserved.

If the suppression of the individual and his natural bent is inherent in the science of efficiency, then for this country it is doomed. In spite of all our bungling, there is no conviction stronger than that the most precious thing there is in a man is his native talent. Is the science of efficiency as developed in our industrial life hostile to the spirit of democracy and to this inner need of men to work out their natural bent? Does the Taylor system make no allowance for this human need? To argue the negative is utterly to misunderstand the meaning of this new science. Mr. Taylor himself loved to call it a science of making men and when properly applied that is exactly what it is.

One of the most terrible features of our present day industrial life is the amount of unskilled menial work that is thrown upon men and women. The Taylor system boldly asserts that there should be no such thing as unskilled work in the world. It says that every task that is necessary should be studied and the best way of doing it found and taught. Great bodies of men and women have had their work dignified in this country and have consequently been themselves elevated by the application of scientific management to work which hitherto has been despised.

Wherever scientific management is intelligently applied one of the tasks which it sets for itself is the encouragement of individual talent. Every device is employed to encourage workers of all grades to exercize their ingenuity by suggestions and by experiments. Scores of valuable improvements are being contributed annually to our industrial life today thru the encouragement that this new system of management is giving to individuals to let themselves loose in their work to see what they can do in the way of improving things.

THE deep seated fear that the science of efficiency is inherently in conflict with democracy is not justified by the intelligent application of the Taylor system. On the contrary this science has come as a sympathetic handmaid of democracy, showing her how she can help men to develop themselves along the line of their inner call. This system at every point gives the lie to the old contention that if things are to be done well in the world there must be dictators at every point.

Moreover, wherever there has been an attempt to apply the science of management autocratically, where a manager has not believed with Mr. Taylor that the best results of the system are possible only when you consider first the individual man and his good, there has been failure. The same thing has happened that we have seen happening with the German conception of military efficiency; in overlooking, even denying, the part that the human factor plays in the world, it in the long run defeats itself. A system of efficiency which makes no allowance for ethical and intellectual considerations whether that system be applied to an army or to a factory surely fails in the long run.

Chautauqua, New York

ENTERTAINING TWO MILLION MEN

CHAUTAUQUA AND THE WAR CAMPS

DURING the past three weeks we have seen Americans subscribe approximately four billion dollars in the Liberty Loan campaign and give over one hundred million dollars in the Red Cross campaign. There has been a noble response from our citizenry. We have answered the call promptly, and there have been few laggers or slackers. But during this same period we have not been content merely with giving money. Several organizations thruout the nation have been actively engaged in making plans to transport to the front those things which are usually not counted as available for the soldier—little conveniences and marks of thoughtfulness which tend to make the soldier feel that he is more than a cog in a wheel of a military machine. The Y. M. C. A. stands out preëminently in this work, because it knows what it means to be a soldier in camp or in the trenches. Days of hardship followed by days of idleness, temptation constantly besetting the soldier, the aching, maddening lonesomeness—all these the Y. M. C. A. proposes to counteract.

For this war relief work the War Council of the Y. M. C. A. has just raised $4,000,000. It is proposed to erect at the various military camps Y. M. C. A. huts for each brigade, which means 6002 men. These Y. M. C. A. headquarters will be organized with a general secretary in charge assisted by a religious secretary, a physical secretary and two assistants. Each camp will contain at least 28,000 men, so that in every one of the camps there will be at least five Y. M. C. A. huts with a corps of five secretaries, each unit costing approximately $20,000 a year. In each camp it is further proposed that there shall be a Y. M. C. A. auditorium to hold 3000 men. It is possible that the War Commission on Training Camp Activities, of which Mr. Raymond Fosdick is chairman and Dr. Joseph E. Raycroft, director of the Chautauqua School of Physical Education, is a member, will also have an auditorium in each camp to hold 5000 men. By September there will be at least 1,000,000 men in mobilized camps and by January this army will probably have grown to 2,000,000.

The War Council of the Y. M. C. A. has asked President Arthur E. Bestor of Chautauqua Institution to become chairman of the committee of twenty-five men to have supervision of all of

the lectures, entertainments, and concerts which are to be supplied by the Y. M. C. A. for the sixteen conscription and fifteen militia camps thruout the country The task which will devolve upon this committee will be the organization of a bureau to furnish lecturers, entertainers, musicians and companies who will give at least a week of their time free.

Lest anyone should be skeptical of the value of the work which the Y. M. C. A. proposes to do, we quote the following letter:

Camp Pershing, El Paso, Texas,
October, 1916.

DEAR PAL—It's raining tonight; a good night to write letters. I have written to everybody back home, and I feel as if you ought to know something about the work of this life saver, the Young Men's Christian Association. You will find it wherever there are men, and there are men here on the border tonight. The "Y" is here good and strong with a big comfortable shack for every brigade.

Since our shack opened, the Mesa bar and Bill's place are pretty well deserted. Mother gets more letters, and the United States Government gets more efficiency. If you have loved ones at home, you can't resist the open ink bottles and the pens and the paper. It makes you ashamed to think that the "Y" is more interested in your loved ones than you are.

It hands you out religion in doses a man can take. It tightens up the halter that gets loose when a man gets away from home. It assures you that someone is interested in you, no matter who or where you are. Who pays? I don't know, but whoever it is, God bless them! They are the fathers of thousands of boys. JOE.

This is the spirit which the Y. M. C. A. proposes to create in the great army of two million American men and boys. The task of the committee which will be organized at Chautauqua this summer is a very large and significant one. The committee will give the lyceum and Chautauqua people of the country an opportunity for doing a bit of patriotic service of far reaching importance from every point of view. As Mr. Bestor is a member of the Committee on Patriotism Thru Education of the National Security League, the work of patriotic education thruout the country will be carefully unified.

WHAT'S WHAT AT CHAUTAUQUA

BY IDA B. COLE

SECRETARY OF THE C. L. S. C.

CHAUTAUQUA is unlike any other place on the continent. It is a community of people all devoted to an abstraction which they term the Chautauqua idea. It might be called a city in the woods, only that it has neither mayor, nor council, nor aldermen. It nestles among wonderful old trees which stood guard when only the mocassined foot trod in and out among them and on the banks of a lake down which the French explorers canoed in search of a southern waterway.

The natural beauties of this region alone would make it famous—the inviting roads winding over hills and thru ravines, the wild flowers that bloom in variety, the rich forestation and the brooks gliding down to the lake. Lake Chautauqua is twenty miles long and is one of the most beautiful small lakes in the world. One day it is quiet and gray as a Japanese print and another it is like a small ocean with its white caps and waves lashing the banks in truly angry mood. The artist loves it for its varying tints, the fisherman for its finny tribes of which the muscallonge is king. It is gay with bathers along the beach and craft of many kinds dot its surface.

If you love nature Chautauqua has ten thousand trees of seventy varieties, eighty kinds of birds, and many wild flowers for your study. If you love human nature it has generally twenty thousand people of varying types, but all of the friendly-folk variety.

"Check your brains with your wraps" was the advice of a New York dramatic critic last winter to the attendants of musical comedy. The opposite rule applies to Chautauqua. It is a community founded upon the principles of democracy, simplicity and Christian culture. The summer boarder who sits on the veranda and boasts of material possessions and pedigree will not be happy at Chautauqua, for here diamonds are not a substitute for worth, and people are expected to equal in personal merit the ancestors about whom they boast. A woman once said "Chautauqua cured me of being a snob, for I found that my waitress was a senior in a college, the chambermaid had specialized in Greek, the porter taught languages in a high school and the bell boy to whom I had been giving nickel tips was the son of a wealthy family in my own state who wanted a 'job' to prove his prowess."

If you want preparation for certain lines of education or religious work Chautauqua offers unequaled opportunities in a unique environment. If you have no definite aim for study but just want a happy summer in a spot blest by nature and in a community full of pleasant friendships and influences which make for mental uplift, you will find it all at Chautauqua more abundantly than you dream. If you cannot come for a whole season you will probably determine your visit by your interest in the topics which dominate certain "Weeks." This year there are weeks devoted to Our Country, Arts and Letters, Business Efficiency for America, Music, The Great War, Church and Missions, and Recognition, the graduation ceremonies of the Chautauqua Literary and Scientific Circles.

ON your arrival at Chautauqua register at the Information Office in the Museum Building, on the south side of the Plaza, giving your local address. Telegrams are often sent simply to Chautauqua. With thousands of people in the boarding houses and cottages it is exceedingly difficult to find persons who are not properly registered.

After registering, step over to the office of the *Chautauquan Daily* and leave your subscription. You will want to read it every morning as soon as you have said your prayers. There are about forty events going on at the same time. You cannot attend them all, and the *Daily* will be your guide. You will want to preserve each copy as a record of the summer and you will value it for the excellent reports of meetings and lectures you were unable to attend.

The week's program is a unit, consisting of a series of lectures on historic, literary, art, social, or economic topics, interpretative and dramatic readings, music recitals, sermons, addresses of ethical and religious nature. You can, if you desire, attend a meeting of some kind nearly every hour from eight a. m. to eight p. m. If you are ambitious you will be tempted to undertake too much. It is best to study the programs of the Assembly and Summer Schools and decide exactly what you want, then devote yourself to that choice.

If you intend to enter the Summer Schools report to the registrar's office in the Museum Building, south side of the Plaza, for information and registration. Should you desire to hear some of the class lectures but not to enroll as a student, a Visitor's Ticket obtained of the registrar will admit you. There are fourteen schools in the group, with two hundred classes, one hundred twenty-five instructors, and an average of about thirty-five hundred students.

The music lover finds many rare advantages in the musical atmosphere. Any one who can read music is eligible to the big Chautauqua Choir; application should be made at the office of the music director, rear of Amphitheater Building at nine a. m. This summer the Russian Symphony, under Modest Altshuler, will give two concerts daily during the week of July 23-28. During the other weeks there are three concerts in the Amphitheater, music recitals in Higgins Hall by well known musicians, organ recitals every Tuesday and Thursday, an organ interlude of an hour Sunday afternoons, and a great community song service every Sunday night.

If you are a member of the Chautauqua Literary and Scientific Circle, generally called the C. L. S. C., inscribe your name in your class register

in the C. L. S. C. office, second floor Colonnade Building. Watch the official program in the *Daily* and the bulletin boards at the entrance to the Colonnade Building and on the C. L. S. C. Veranda adjoining the Bookstore for notices of councils, Round Tables, and the many class meetings and functions which take place daily. Read the C. L. S. C. column in the *Daily*. If you are not a member watch the C. L. S. C. announcements, for you will be cordially welcomed to all its functions except the class meetings. This is important advice since the C. L. S. C. is the center of so many of the social activities. The Hall of Philosophy is the center of C. L. S. C. life. On one side is the famous Golden Gate, thru which so many thousands of its readers have passed since the organization of the Circle nearly forty years ago. Across the little park from the Hall of Philosophy is Alumni Hall, built and maintained by the C. L. S. C. graduates and where the classes have their headquarters and the Monday receptions are held. After a season at Chautauqua you will naturally want to crystallize the upward impulses and carry the Chautauqua spirit back home, therefore you will enroll in the year-round Chautauqua, the C. L. S. C., which pursues a course of study intended for busy people who want to make their spare moments count for mental efficiency.

CHAUTAUQUA recognizes the fact that "all work and no play" is a poor rule. The young men have their Athletic Club, with its bowling alleys, pool and billiard tables, shower baths, reading and writing rooms, and other club privileges. The Men's Club offers the genial companionship of clubbable men, and their chess tournaments are famous. The Women's Club meets daily at nine a. m. in the Hall of Philosophy, and the Young Women have an attractive club home in one of the C. L. S. C. cottages.

Chautauqua stresses the outdoor life with its Golf Club, Roque Club, tennis, sailing, bathing, rowing, quoits, fishing, and steamboat trips on the lake.

There are nine denominational houses at Chautauqua, and if yours is among them you will, of course, call there early in your stay. Sunday is a peculiarly restful day. No automobiles honk under your windows, no carriages rattle down the street, no cars steam into the station with loads of noisy tourists—but all is quiet and peaceful.

Every one attends the great community service in the Amphitheater at ten a. m., besides which each group has its own denominational meeting addrest by some noted preacher or some returned missionary home on furlough. The famous Vesper Service is held in the Hall of Philosophy at five o'clock p. m., and later there is a lakeside service whose impressiveness is enhanced by the beauty of the lake setting.

You will find unique interest in the celebration of Old First Night, in which many people participate who have been at Chautauqua since its start. One of the most significant exercizes is the Recognition Day procession, a pretty pageant in which the C. L. S. C. classes, bearing their banners and led by little girls with flower laden baskets, follow the graduating class under the famous arches to the Hall of Philosophy. Then you will realize how true is the saying that you are not a real Chautauquan until you have become a member of the Chautauqua Literary and Scientific Circle.

Chautauqua, New York

CHAUTAUQUA'S MOTHER SUPERIOR

BY FRANK CHAPIN BRAY

MEMBER OF THE CHAUTAUQUA EDUCATIONAL COUNCIL

IN the Chautauqua Reading Circle branch of the Chautauqua movement the name of Kate F. Kimball stands second only to that of the founder, John. H. Vincent. Miss Kimball gave the unselfish devotion of a lifetime to this worldwide educational work. Graduating from the High School of Plainfield, New Jersey, she became executive secretary of the Chautauqua Literary and Scientific Circle (C. L. S. C.), established in 1878. Nearly 70,000 graduates of the four-years course and three-quarters of a million enrolled readers since that time cherish the personal contact which she supplied for Chautauqua Institution.

In this work she developed an endowment of rare qualities, and thousands who were never able to visit Chautauqua itself none the less thru her personality conveyed by pen and print experienced the sense of personal relation to an alma mater.

In season and out of season she stood for the "soul" of the Chautauqua movement with its ideals of enriching the home lives of "the many, not the few."

To the discouraged reader or Circle of readers she was able to send just the right inspiring word of sympathy and encouragement. She had the teaching instinct.

Among her official associates her interpretation of the needs of those whom Chautauqua seeks to serve became a guide and an inspiration.

To the work of preparing or selecting study materials and adapting conventional educational methods, she contributed no less than to the lasting "class spirit" of members whom she organized into class groups each year.

Many will always think of her as a kind of Chautauqua Mother Superior. The details of the work of an executive secretary are not transcribable—year after year of multifarious drudgeries which defy analysis. During thirty-five active years she made them the means of transmitting a great idea as a dynamic force, vital to hundreds of thousands of men and women the world around. To have done this is the mark of Miss Kimball's high service.

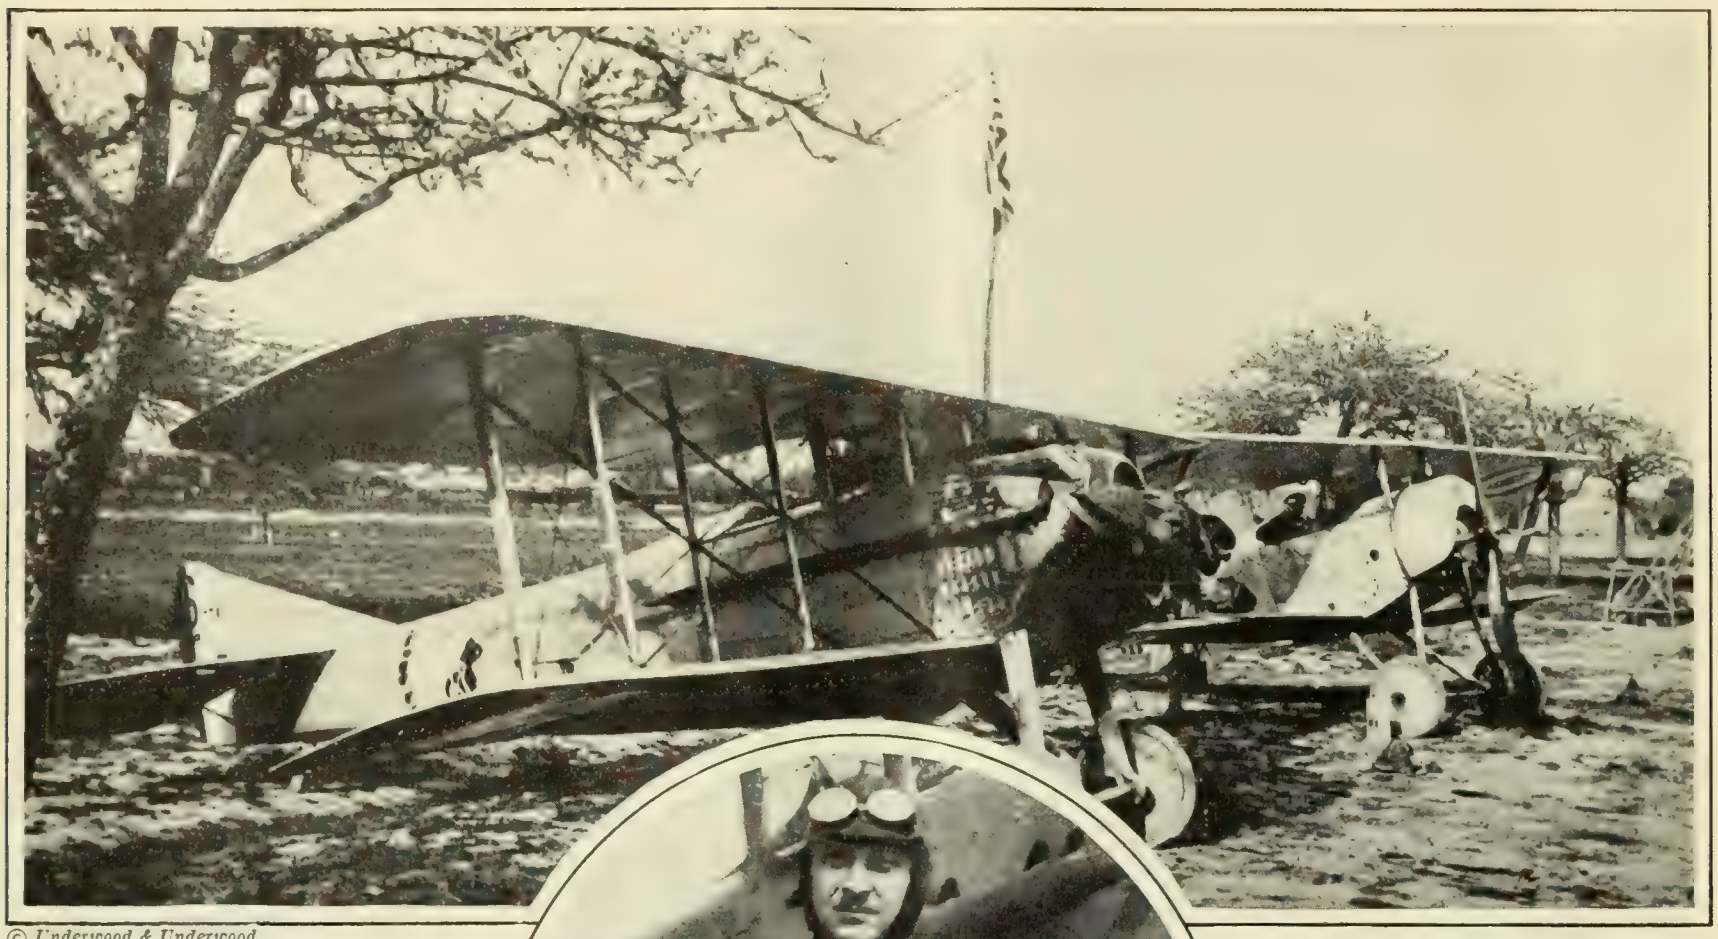
KATE KIMBALL

Besides her writings in connection with the Chautauqua movement, she contributed many features to *The Chautauquan*, wrote for other publications, and was the author of "An English Cathedral Journey," published in 1913.

After a slight stroke of paralysis in 1909 she never fully recovered, and her death occurred January 17, 1917, in her fifty-seventh year. Miss Kimball was born in Orange, New Jersey, and was a daughter of Dr. Horace Kimball of New York. Four brothers, Dr. Charles O. Kimball of New York, Alfred R. Kimball, treasurer of the Federal Council of the Churches of Christ in America; Prof. Arthur L. Kimball of Amherst College, James Everett Kimball of Plainfield, New Jersey, and one sister, Miss Mary W. Kimball of New York, survived her. Chautauqua Institution sent official representatives to the funeral services at Rose Hill Crematory, Linden, New Jersey, and memoralizes her remarkable career. She was one of those rare spirits who find their own best realization and highest enjoyment in work for other people. She embodied the Chautauqua spirit at its best.

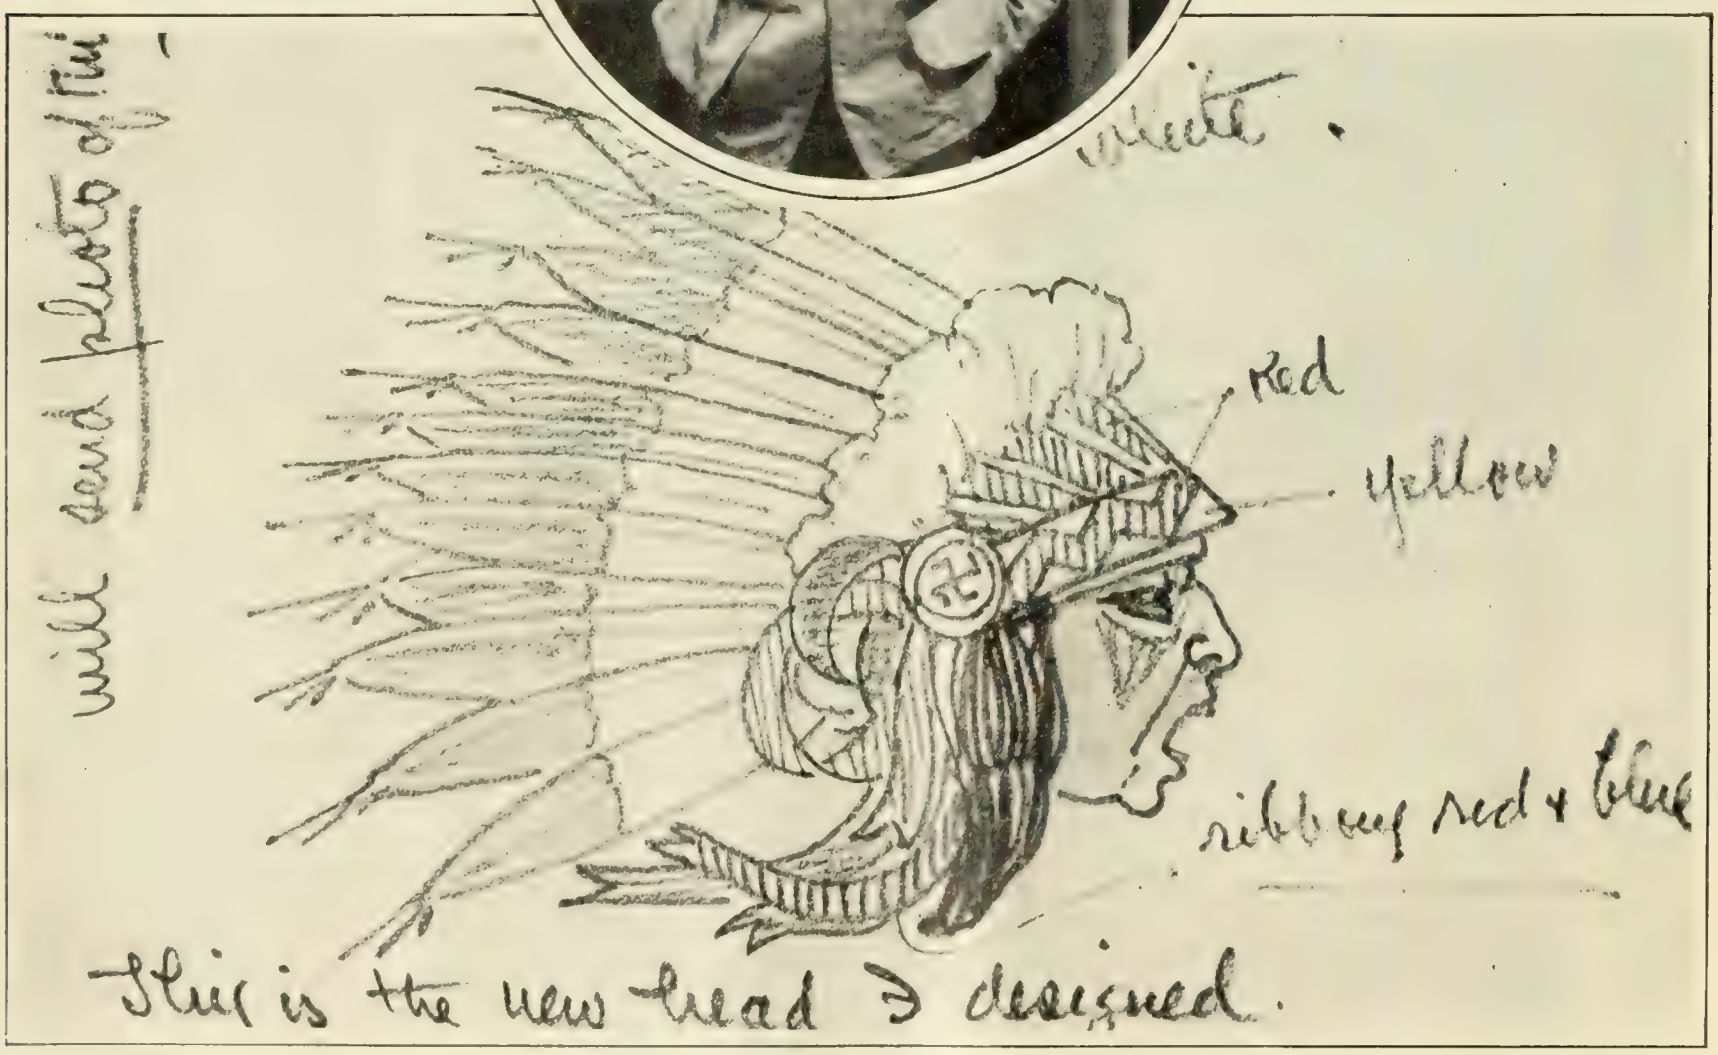
Chautauqua, New York

The Independent-Harper's Weekly
NEWS-PICTORIAL



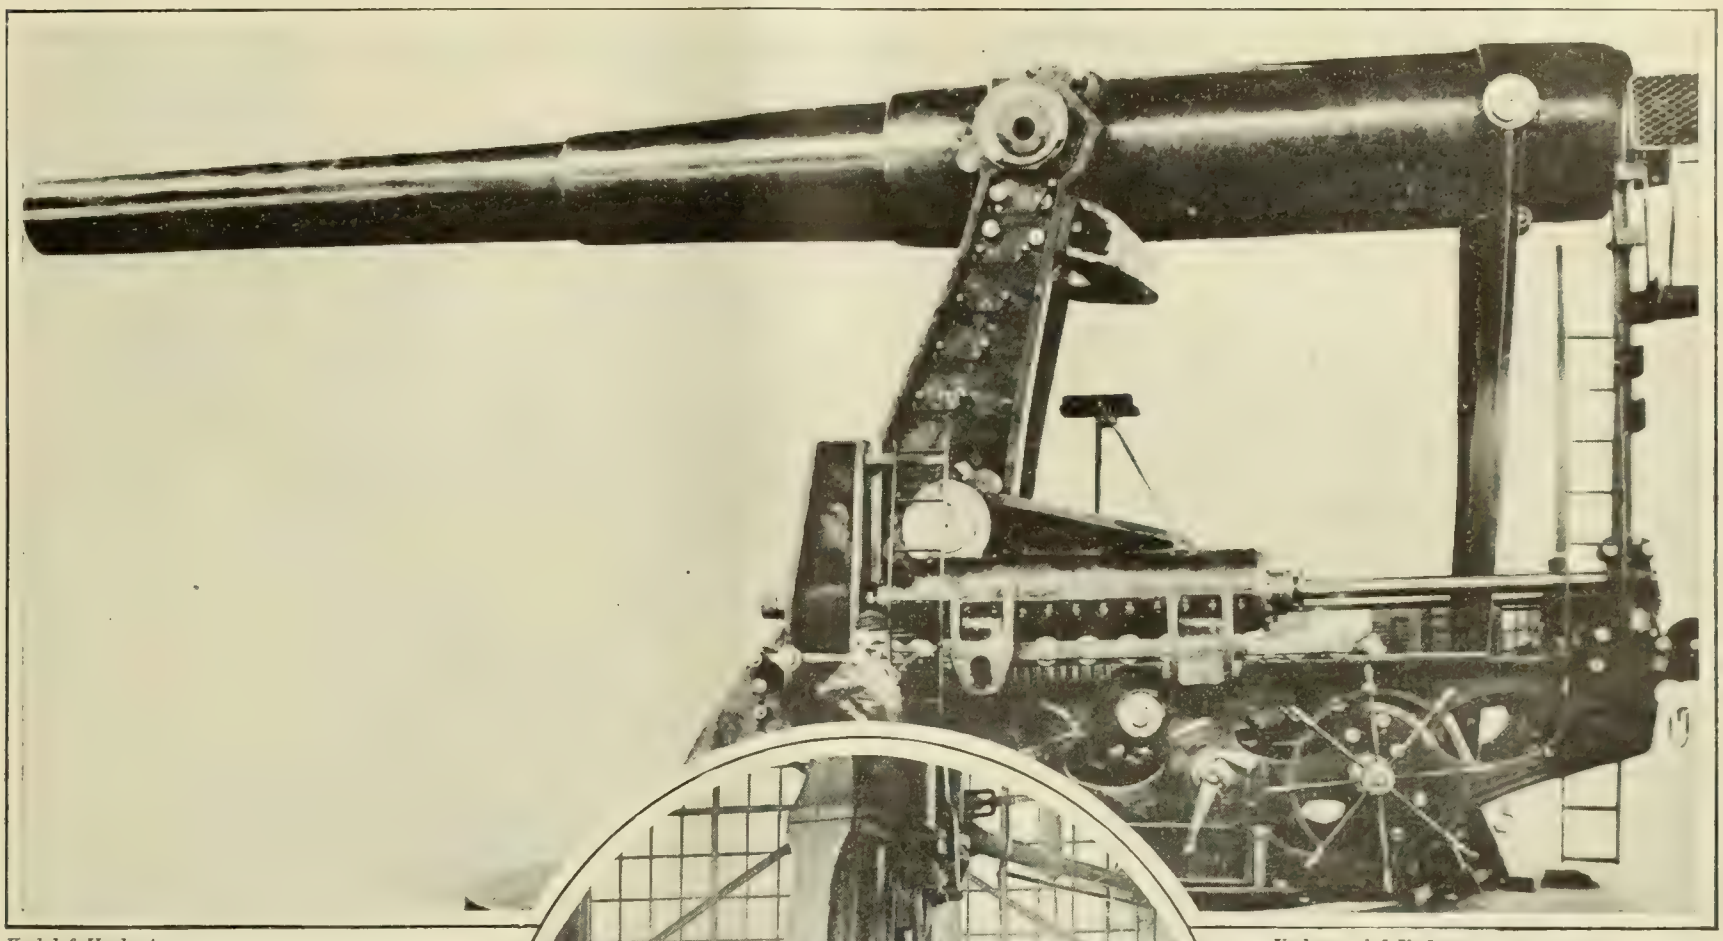
Once more the United States Marines have made good their slogan "First to Fight"; a regiment commanded by Colonel Charles A. Doyen is now with the Pershing troops somewhere in France. These photographs of the Marines embarking in June have been held pending the news of their safe arrival. A lieutenant of Marines describes the leave-taking: "No colors were unfurled. No drums or bugles sounded. The column of soldiers in heavy marching order swung into the brick-paved street, stepping along so briskly that the sound of their shoes upon the pavement was more like a crackle than a tread. A sergeant of Marines in khaki came

© *International Film*



trotting across the parade grounds, set up a motion picture camera and began to crank. In front of Major General Barnett the column halted, and for half a minute the corps' commandant addrest them. Then with a snap, rifles jumped to shoulders, squads swung into column formation, and the line passed swiftly on down the street and boarded a train of day-coaches for a nearby port. The sun-browned fighting men, all veterans of campaigning in Haiti and Santo Domingo, waved their hats from the windows to a handful of civilians watching the train pull out, but neither they nor their friends indulged in any cheering"

© Underwood & Underwood



American troops are fighting in France. The aviators are making that fact just as obvious as possible. Corporal Edward F. Hinkle, of the Lafayette Escadrille, formerly of Cincinnati, was the first man to carry the American flag over the French lines. He designed the Indian head, below, which the Escadrille has adopted as its symbol. Above are two American planes in full war paint. The Indian head is on the sides of each machine, the rudders are decorated with red, white and blue stripes, and on the upper surface of the planes is the red, white and blue circle, field and star. Their nationality is plain

What does the name of "Bethlehem Steel" mean to you—a vague image of enormous factories—or perhaps the memory of fabulous stories of the Stock Market in the earlier part of the war? In either case you've lots to learn, for Bethlehem, as much as Plattsburg, is one of the great factors on which we depend now to win this war. The photograph above shows one of Bethlehem's "finest," a twelve-inch disappearing gun in firing position. The huge mechanical hammer, in the center of the page, saves several hundred man-power, and works both day and night

Boring a big steel ingot, one of the preliminary processes—and, at the right, bins full of shrapnel ready to ship

PLATTSBURG "SOUNDING OFF"

BY HERBERT REED

Beginning with his story of "The First Ten Thousand" published in The Independent of June 9, Mr. Reed has reported weekly to Independent readers the progress Uncle Sam is making in the training of officers for "The New Army." In this article he makes some new points in the discussion of military requirements.—THE EDITOR.

THERE was a second coming of "glad, confident morning" in the student-officers' training camp at Plattsburg Barracks in the fifth week of preparation in classroom and afield. It came in the form of an announcement from "'way up topside" that, barring some unforeseen backsliding, every survivor of the five weeks' preliminary work would be commissioned in the New Army, which title, in the hearts of the men who have the making of it in hand, I believe will endure by right of priority in despite of any official designation, such, for instance as the "National Army." General Orders No.—— will never supplant the designation, by common consent, of the men who serve. It is so with titles, with slogans, and with songs. And, incidently, it is more than a possibility that not even the new officers' endorsement of a marching song or a fighting song will "make it go" with the men of the draft. All of which leads, naturally enough, to some consideration of the voice-power of these new officers.

The Plattsburg camp has not lacked muscle-power and brain-power, but it *has* lacked voice-power. And voice-power just now is all-important. It is one of the great fundamental equipments for command. It will determine, in the long run, the assignments of many of the new officers. Without it a man is next to useless in command of line troops, the more so now that the fighting units have grown so in size, and with the prospect that they are still likely to grow.

In the West Point vernacular the giving of commands is called "sounding off." It is the nearest possible attainment to the magic of brass music, from which, of course, the term is derived. Your football quarterback has it, your crew coxwain has it, your effective coach in any branch of sport has it, and the ideal army officer has it.

IN these days of forums of all sorts, of debates, soap-box and otherwise, why is it so rare? Why have the instructors here been unable to teach it to a greater extent? Why is it that so few of the new officers-to-be have it? Partly, I think, because of stage-fright, a natural enough sensation, and partly because of lack of practise in using the voice in brand new surroundings in a brand new situation. There is also the natural decent respect of the best type of American citizen—numerically strong here—for the criticism of his fellows. This added to a fundamental and patriotic fear of being wrong just at this critical time. The thing is natural, intensely human, and, I like to believe, quite "American-human," if I may be permitted to coin that hyphenate.

Yet it is vital that this thing be overcome. It is vital, too, I think, that the new officers make a special effort to overcome the—in many cases—life-long habit of accent. The Bostonian, the New Yorker and the Southerner are in the same boat in this respect.

I have found, in the course of studying this encampment, that we seem not to be an imitative people, in matters military at least. There have been, and still are, capable instructors here who have carried this matter of voice-power to a high development. Notable among them was Captain Weeks, of whom I have already spoken in these notes, and who was so capable an officer that he was called all too suddenly "somewhere." Another is Captain Mastellar, in command of one of the New England companies. I mention these individuals because they are convincing, and because in this very matter of voice-power even a weak and halting

THESE MANEUVERS DEPEND FIRST OF ALL ON VOICE-POWER

BOOKS OF THE MONTH
FICTION · THE WAR · PSYCHOLOGY

A CONFUSION OF TONGUES
By PAUL REVERE FROTHINGHAM

"Eloquent and illuminating essay-sermons on various aspects of life as affected by the war."—*Brooklyn Eagle.*

"'A Confusion of Tongues' breathes the spirit of this war-racked age. They are more than ordinary addresses. . . . Every one is a tonic for faith."—*The Congregationalist. Net $1.25.*

HOUGHTON MIFFLIN COMPANY, Boston and New York

A DIVERSITY OF CREATURES
By RUDYARD KIPLING

Fourteen Stories Fourteen New Poems

Mr. Kipling's first book of short stories in seven years. To read them is to renew the magic of many of the great Kipling creations of the past twenty-five years with a new undertone of the world war breaking forth in at least two stories of the highest genius. *Green Cloth, Net, $1.50. Red Limp Leather, Net, $1.75.*

Published by DOUBLEDAY, PAGE & COMPANY

LYDIA OF THE PINES
By HONORÉ WILLSIE

Author of "Still Jim," etc.

"*What America needs is real love of America.*" This is the message of this story of young womanhood in the Hiawatha Country. Gertrude Atherton calls it "*An American classic.*" The Philadelphia Press says it is "*a vitally American novel.*" *Cloth, 12mo. Net $1.40.*

FREDERICK A. STOKES COMPANY

ONE YEAR OF PIERROT (Anonymous)
Gene Stratton-Porter says:

"From the first to the last line, straight and logically the story develops, with each line gathering grace and strength, keeping poise and gripping the human heart in its tenderest spot. I do not remember ever to have read a book that was more touching, closer truth to life or better literary art." *Profusely illustrated by Lester G. Hornby. Net $1.50.*

By adding it to your library you will help the fatherless children of France, for whose benefit part of the profits will be used.

HOUGHTON MIFFLIN COMPANY, Boston and New York

ARISTODEMOCRACY FROM THE GREAT WAR BACK TO MOSES, CHRIST AND PLATO
By SIR CHARLES WALDSTEIN

With an American Preface. 8vo. Net $3.50.

"But if 'Aristodemocracy' claims and deserves a complete study we imagine the reader will be most arrested by that section in which Sir Charles Waldstein outlines his idea of a new heaven and earth after the welter of blood is dry. Here is no Utopian creed. . . . Rather does he demand for modern man and modern society 'a clear and distinct codification of the moral consciousness of civilized man.'"—*Daily Telegraph (London).*

LONGMANS, GREEN & Co., New York

THE RUSSIAN REVOLUTION
By ISAAC DON LEVINE

"Tells in crisp, journalistic style, and with a full sense of its amazingness, this latest romance of human freedom. The author draws from a full and deep knowledge of Russia; he is able to sum up the salient facts leading gradually and surely to the revolution without wasting time or losing the reader's attention."—*New York Times.* *$1.00.*

HARPER & BROTHERS. 1817–1917.

THE RUSSIANS: An Interpretation
By RICHARDSON WRIGHT

Author of "Through Siberia: An Empire in the Making"

What is Russia? Who is the Russ? What have Russia and America in common? These are the questions the American asks, and here are their answers. This book will go far toward dispelling false impressions of Russia in this country. It throws out a challenge to American business men to get into the Russian market. *Cloth, 8vo. Net $1.50.*

FREDERICK A. STOKES COMPANY

SUMMER
By EDITH WHARTON

A big, outstanding novel, revealing the romance of a young girl who hungers for life and for love. How she meets her "fairy prince," and how her brief period of happiness is followed by bitter disillusionment are wonderfully told. Mrs. Wharton has risen to the height in writing "Summer." *Cloth, Net, $1.50.*

D. APPLETON & COMPANY

THE SHADOW LINE
By JOSEPH CONRAD

The "shadow line" is that dim boundary between youth and maturity. Conrad builds his tale around a young lad, who crosses his "shadow line" in charge of a fever-stricken ship in the Gulf of Siam. His first command too. Ever in the background is the malignant spirit of the former captain, who had died. We believe it will rank beside Conrad's finest work. *Cloth, Net, $1.35.* "*Deep Sea*" *Leather, Net, $1.75.*

OUR HIDDEN FORCES (La Psychologie Inconnue)
By EMILE BOIRAC

Translated with a Preface by Dr. W. de Kerlor.

The leading psychologist of France proves, through the results of experiments with the hidden forces in men, that every human being possesses latent, unsuspected psychic powers of great practical value. The author also gives a remarkable explanation of the mysteries of hypnotism, spiritism, and the like. *Illustrated. Cloth, 8vo. Net $2.00.*

FREDERICK A. STOKES COMPANY

THE RELIEF OF PAIN BY MENTAL SUGGESTION
A Study of the Moral and Religious Forces in Healing

By DR. LORING W. BATTEN

"Dr. Batten's book is admirably written. It is moderate, conservative and wise, and it is based on a wide experience in dealing with suffering men and women. I heartily commend it to those who believe that faith and religion are factors of physical and moral health."—*Dr. Elwood Worcester, Rector of the Emmanuel Church, Boston. At all bookstores. 12mo. Net $1.25.*

MOFFAT, YARD & COMPANY, Publishers, 116-120 W. 32d St., N. Y.

LIFE OF JAMES J. HILL
By JOSEPH GILPIN PYLE

Personally selected by James J. Hill to write this biography, and given exclusive access to private letters and papers.

As a record of a life of achievement it is truly American—an inspiring story full of human appeal. As a picture of pioneer life and of the romantic upbuilding of the Northwest, it is vivid and interesting. As an inside story of big business by a man who climbed to the top, it will appeal to every business man. *Two volumes, Illustrated, Boxed, Net, $5.00.*

WAR SERVICE

FIRST LESSONS IN SPOKEN FRENCH FOR MEN IN MILITARY SERVICE

By Wilkins, Coleman and Huse. Flexible cloth; 50 cents, postage extra.
Ready in July.

FIRST LESSONS IN SPOKEN FRENCH FOR DOCTORS AND NURSES

By Wilkins, Coleman and Preston. Flexible cloth; 50 cents, postage extra.

Prepared for the use of those who are to enter the service in France. These books are the result of courses of instruction given to those expecting to sail soon. The special work-lists form one of the valuable features. *Ready in July.*

LE SOLDAT AMERICAIN EN FRANCE

By Wilkins and Coleman. Flexible cloth; 50 cents, postage extra.

A handbook and guide for conversation for all soldiers who go to France. Intended for the use of those who already have some knowledge of French but will find themselves often hard pressed for the right word or phrase. *For August Publication.*

GENERAL

THE RELIGIONS OF THE WORLD

By George A. Barton. Cloth; $1.50, postage extra.

A keen and sympathetic interpretation of all the great religions, comprehensive and interesting. *Ready July 15.*

RECREATION AND THE CHURCH

By Herbert W. Gates. Cloth; $1.00, postage extra.

Gives the experience of the author and his methods of handling one of the vital problems of the church.

FOOD POISONING

(The University of Chicago Science Series.)

By Edward O. Jordan. Cloth; $1.00, postage extra.

Discusses the extent and prevention of food poisoning, articles of food most commonly connected with poisoning. Describes characteristic epidemics due to food.

THE BIOLOGY OF TWINS

(The University of Chicago Science Series.)

By H. H. Newman. Cloth; $1.25, postage extra.

Of interest to the general reader as well as to the biologist. Considerable mass of data dealing with the phenomenon of twins in man and other mammals is here brought together for the first time.

HOUSEHOLD MANUFACTURES IN THE UNITED STATES OF AMERICA, 1640-1860

By Rolla M. Tryon. Cloth; $2.00, postage extra.

A universal interest exists in the habits and conditions of the life of our forefathers, and this volume vividly portrays in detail the life of the people of this period.

The books described above will be found among an extension exhibit of the publications of the University of Chicago Press at Chautauqua Institution. An invitation to visit the exhibit is cordially extended to all.

For a complete list of publications or information regarding the list in certain fields write to

imitation would put the student-officer on the right road. Imitation is no flattery in such case. From time to time men will be called from the ranks to take command of units of varying size, and, all other things being equal, their voice-power will make all the difference in the world.

We know, of course, that in actual combat the whistle and other forms of communication will be paramount, but the fact remains that this all-important voice-power will have served for the process of building the New Army, and that the character behind that voice-power will go echoing on even when there is no further possibility of direct voice-command. So this development of voice-power is the salient feature of this stage of the training at Plattsburg.

There are other phases of the progress of the work here which have come to be of the utmost importance and which must be recorded here before another week carries us onward into the beginnings of actual battle technic. So fundamental are they that they come in the nature of a shock to the unprejudiced observer, who, none the less, should have been prepared for just such a shock.

First, and foremost (and I am basing my statement on contact with camp-groups of every sort and their instructors), we have yet to become as ugly as we ought to be in the face of conditions that confront us in that still too misty yonder-region across the seas. Clean, upstanding American men who are seeking their commissions here are temperamentally reluctant to admit that they have got to learn "dirty fighting."

They know that they must, yet they hate it. They have sufficient imagination to see what the new bayonet practise means—a practise that has been too much neglected here and which I believe is to have a thoro revival now that we are taking a little closer stock of the training work in Canada, which is, of course, uniform thruout the empire of our English-speaking ally. A very high percentage of the men at Plattsburg consists of American college athletes—football players first. These men have played their game hard, and roughly—have given and taken hard knocks and gloried in the give and take, but they have discovered that there is no sportsmanship in this war, and that at least for the time being, and in order to be effective leaders, they have got to dig down into the roots of their being and change that being into something tremendously repugnant to them.

As this is written I know that not two per cent of the present encampment understands as do the Canadians the tremendous effectiveness of "shock action"—to put it truthfully and brutally, the use of poundage behind the knife supplemented by the feet and hands. It has got to come. We have adopted the British method of charging, and so far merely played with it. Even in its play form it has been sickening. It has got to be made more sickening to the enemy.

There has always been a fundamental difference, which is especially noticeable in games requiring physical contact, between the American and the Englishman. Your American prefers "sparring"; your Englishman lives on "in-fighting." We have adopted in our training the English "in-fighting," and having adopted it, the officers-to-be of the New Army have begun to realize with a sort of wonderment that it must be gone thru with. It may sound almost childish to say that in the Canadian training camps, from which we must be willing to learn, the charging infantryman is imbued by his instructors with the feeling that the dummy he attacks is a human

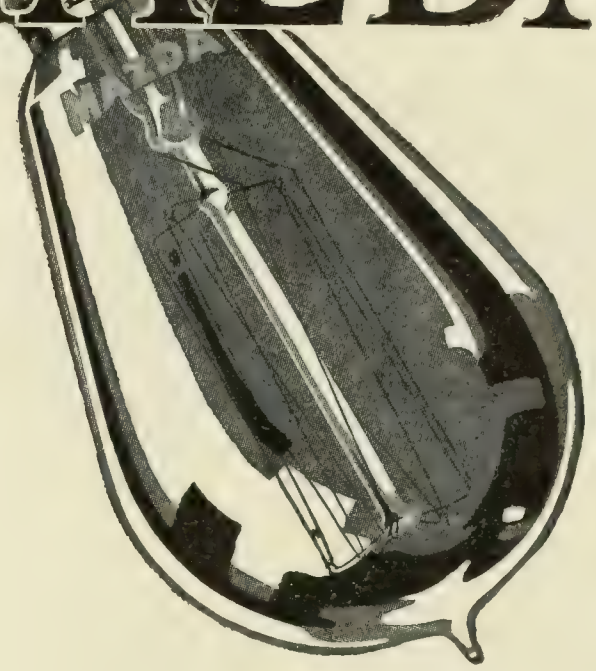
being. It has been done effectively in Canada. It is a matter of record. The facts must be faced, nauseating tho they are.

It was natural, of course, that there should arise the sentiment in favor of the use of the revolver in these charges. Such a sentiment was merely an expression of the feeling against looking a man in the face and impaling him or otherwise making a revolting mess of him. It was promptly pointed out that comparatively clean killing would not have the same effect in destroying the morale of the foemen who escaped and reformed their lines. It is, perhaps, a debatable point, but I do not think that the supporters of the revolver will in the end prevail.

In modern warfare the breaking down of the morale of opposing troops is a thing ardently to be desired. It must be taught by the officers-to-be to the nation's drafted troops. I think that neither civilian nor professional soldier will dispute that.

These things, I repeat, are in the minds of the men in camp at this particular, and to my way of thinking, critical stage of the training period. So that I am not preaching any theory of American terrorism in warfare, but attempting to make clear to those back home the problems of the men who are to represent them in the field.

There is just one other matter of great moment to these men just now, and that, too, comes to us from Canada. It is the problem of learning to live cheerfully and with the conservation of every physical and mental resource in absolute muck and slime preparatory to facing and dealing with these same conditions on the battle line. It has been done in Canada and it can be done here. It is absolute fact that many of the Canadians have found trench life on the other side more endurable in many ways than life in their own practise diggings. The Canadian training camps have come far closer to imitating actual war conditions than our own, down to date, and their advanced training has been begun after only two weeks of the hardening process. We shall get around to it, I think, ere long, and get around to it in such a way as to "make it go."



A little criticism of a course of teaching that in many ways has approached perfection, and I shall have done with disagreeable things, to pass on next time to the doubtless more interesting study of advanced war technic. Problems in minor tactics have been taken up in the course of the training—problems in which one Sergeant Hill, already a famous character among the student-officers, has maneuvered men over a terrain as like that to be encountered abroad as could well be chosen. Our good sergeant has done his work well. There is nothing to add to it. And it has been valuable. But the able instructors here have gone over with their pupils the theoretical ground already covered in many valuable minutes of time that might have been given to something new. It has been a case of treading in well defined footsteps. This, however, is a phase that will pass.

Plattsburg, New York

Andrew, a sweet-voiced Cockney chap, was chosen to sing in a London slum concert and obliged with "Kathleen Mavourneen." His enunciation of one line, "The 'orn of the 'unter is 'eard on the 'ill," jarred very much on the nerves of one man, who mentioned that Andrew really ought to put a few "aitches" in now and then. "Garn!" said Andy, eyeing him with pity, "don't show yer ignorance—don't yer know there ain't no H in music? It only goes up to G!"—*Saturday Night.*

"Not the name of a thing, but the mark of a service"

MAZDA

MAZDA Service—a systematic research for making lamps more economical

THE MEANING OF MAZDA—MAZDA is the trademark of a world-wide service to certain lamp manufacturers. Its purpose is to collect and select scientific and practical information concerning progress and developments in the art of incandescent lamp manufacturing and to distribute this information to the companies entitled to receive this Service. MAZDA Service is centered in the Research Laboratories of the General Electric Company at Schenectady. The mark MAZDA can appear only on lamps which meet the standards of MAZDA Service. It is thus an assurance of quality. This trademark is the property of the General Electric Company.

AN INSPIRING WORK, AN INTRODUCTION AND GUIDE TO THE BEST ENGLISH BOOKS

ENGLISH LITERATURE

BY PROF. EDWIN L. MILLER, A. M.

78 unusual illustrations. 597 pages Map and charts. $1.75 net. Postage extra.

Literature should be a living source of inspiration and pleasure. Many textbooks on the subject destroy the reading habit because of their dry treatment of the subject. This will never be said of the present work. Professor Miller's own love of reading is marked on every page. The man or woman who wishes to gain a better understanding of and take a keener delight in English Literature will prize it. Emphasis is laid upon forces and influences not upon dates. It is a stimulating introduction to the vast field of Literature which is always intended for the interpretation and enrichment of life.

Thursday, July 12, 1917, at 2 P. M.

$47,500,000—4½%

Gold Corporate Stock of the City of New York

Payable July 1, 1967,

——and——

$7,500,000—4½%

Gold Corporate Stock (15-Year Serial) of the City of New York

Maturing annually from July 1, 1918, to July 1, 1932, inclusive.

EXEMPT FROM FEDERAL INCOME TAX

and from all Taxation in the State of New York Except for State Purposes.

The latter class will be only sold in series. For example: A single bid for $15,000 is a proposal for 15 $1,000 items maturing from one to fifteen years. No bids will be accepted for separate maturities.

Separate Proposals must be made for each class.

The Greater New York Charter provides that bids may be made for as small an amount as $10 and in multiples of $10 for each maturity. No bid for Corporate Stock in the serial form can be accepted for less than $150.

Send bids for each class in separate sealed envelopes, enclosed in other envelopes addressed to the Comptroller. A deposit of Two Per Cent. of Par Value must accompany each Bid. Such deposit must be in money or certified check upon a New York State Bank or Trust Company, or any National Bank.

For fuller information see "City Record," published at Nos. 96 and 98 Reade street, New York, or consult any Bank or Trust Company. Send for descriptive circular to

WILLIAM A. PRENDERGAST, Comptroller

City of New York, Municipal Building, New York.

THE NEW BOOKS

THE NEW REPUBLIC

Anyone who has knowledge—or imaginations—about Russia nowadays is fairly sure of a welcome at the publisher's door. As a forerunner of the host of books that are sure to be upon us shortly it is worth while to consider some half dozen out recently, and see how much light they really throw on the complicated situation of that disordered government. *Russia of Yesterday and Tomorrow* is by a Russian, Baroness Souiny, who retails court gossip after the fashion of our own Marquise de Fontenoy, and is on the whole vastly entertaining. She likes Czars and Czarinas and court favorites and such folk. She even defends Rasputin. Curiously the most enlightening portion of the book deals with the peasants and with their probable attitude toward the impersonal form of government that is to take the place of their "little father."

The court loyalty of Baroness Souiny is amusing, but the author of *Russian Court Memoirs, 1914-1916*, has not the lady's vivacity and has, to our Yankee understanding, an incomprehensible affection for those of high estate. From the opening paragraph we choose an indicative sentence:

> During the last two years the Tzar has so endeared himself to his people that he now possesses not only their respect and veneration as their emperor but their love and devotion as a friend whose first thought is for them and their welfare.

Turning to the final chapter entitled Looking Forward we find, amid mention of other more or less important social matters, some discussion of the cost of rooms with private baths in Russian hotels.

A curious and interesting compilation published just as the Revolution set free the long suffering Jews, is *The Shield*, edited by Gorky, Andreyev and Sologub, and with a foreword by W. E. Walling. This gathers stories, sketches, pleas and discussions of the Jewish problem, by eleven Russians including such representative names as the editors, Paul Milyukov and Korelenko. These are dramatic, sympathetic, indignant, and show how the "intellectuals," the liberty loving of Russia, felt toward this "hump on the back," this shame of the nation.

The Revolution of 1917 was not made in a day nor did chance play the part that the broken reports coming to us might suggest. William English Walling went to Russia in 1905, shortly after the October Manifesto. A new edition has been issued of *Russia's Message*, the book he published after two years' companionship with Russians of all shades of revolutionary opinion. It sets forth the sordidness underlying the whole of the reign of Nicholas II. Mr. Walling's intimate, personal knowledge of political movements takes one to the heart of Russian absolutism. The late Czar he paints not as the weakling apologists usually represent him, but as a crafty statesman, deep dyed in every form of political crime. This well informed study is of especial interest today.

Professor Kornilov has developed from his lectures at the College of Peter the Great, in Petrograd, a scholarly and unbiased study of *Modern Russian History*. The short introduction sketches the early history and describes the reigns of Catherine and Paul. The work deals with the nineteenth century, that is to the accession of Nicholas II. It is a book for the student, not heavy, but with no particular attempt to attract the casual reader. The full index makes it excellent for reference. The final period, 1894-1916, is given in four chapters by the translator. Alexander S. Kaun. A member of the *intelligensia* he does not attempt to treat the period in Professor Kornilov's strictly historical spirit. His résumé of the final years of the long struggle for liberty is swift and readable, enthusiastic and very helpful to an understanding of the climax that came after his work was in type.

Isaac Don Levine has done all English readers good service in his account of *The Russian Revolution*. His book is clear, straight-forward, and gives the reader the sense of at last getting at something akin to facts and to what at least sound like rational explanations of events. Mr. Levine has been long watching the Russian situation, studying each move as it was made, learning the qualities of each actor. Consequently, when he describes the events that led up to the Revolution, the amazing days in March, and the various crises that have followed those days, the story takes on coherence, and its separate incidents have significance and bear consistent relation to the whole movement. To those who would make their guess at the probable meanings of the daily conflicting reports from Russia, Mr. Levine's timely book will give some notion of the forces now at work and of the men now to the fore.

Russia Yesterday and Tomorrow, by Baroness Souiny. The Century Company. $2. *Russian Court Memoirs*. E. P. Dutton & Co. $5. *The Shield*. A. A. Knopf. $1.25. *Russia's Message*, by W. E. Walling. A. A. Knopf. $1.50. *Modern Russian History*, by Alexander Kornilov. A. A. Knopf. 2 vols., $5. *The Russian Revolution*, by Isaac Don Levine. Harper & Brothers. $1.

THE RAILROADS AND THE PEOPLE

The railroads of the country are the chief arteries of its commerce; upon their intelligent management and wise administration depends much of our industrial success. Homer B. Vanderblue, in his book on *Railroad Valuation*, a Hart, Schaffner & Marx prize essay, has attempted a scientific study of the economics of railway administration. He has examined the court decisions and the practises of the Interstate Commerce Commission and of the various state agencies, for the purpose of arriving at a just estimate of the proper distribution of railway income. The character of the book can be judged from an examination of some of the chapter headings, Physical Valuation, Cost of Reproduction. Unimpaired Investment, Intangible Elements of "Fair Value," etc. The book is non-partisan in its attitude toward the problem, but highly technical and not to be recommended for popular reading.

Government Partnership in Railroads, by Mark Wymond, on the other hand, is a popular treatise dealing with the relation of the railroads to the Government, national and state. Mr. Wymond is a railroad administrator. His book is a brief for the railroads. It makes much of the evils of state regulation and little of the sins of the railroads. It favors national control and national reorganization, but is absolutely opposed to anything which might ultimate-

Nujol the Internal Cleanser

Don't Let Indigestion Spoil Your Vacation

Change of water, change of climate, hotel and dining car food, the inconvenience of traveling—all combine to upset digestion and spoil the good time you are expecting.

You can't carry your own provisions and drinking water. But you can be sure to take a bottle of Nujol on your vacation. It's the surest and safest preventive of digestive troubles. Nujol helps to remove decaying waste matter from the intestines before it has a chance to poison the system. In this way it prevents the headaches, weariness and depression as well as other more serious diseases caused by intestinal poisoning.

Nujol is particularly good for young children. It is excellent for the mother with a nursing infant, as it in no way affects the baby's feeding. The infant will enjoy it and it will do as much for him as it does for the mother.

Nujol is not habit forming; the longer you take it, the less you need it. Nujol does not gripe, relieves you of straining, does not weaken (even when taken in large quantities), it is not absorbed into the system, does not upset the stomach, is absolutely pure and harmless and is pleasant to take.

Nujol is sold only in pint bottles bearing Nujol trademark—never in bulk.

The Standard Oil Company (New Jersey) has used its world-wide resources in producing Nujol, and its reputation is behind the product. Nujol is absolutely distinctive and individual. There is no other product on the market like it.

Write today to Dept. 12 on coupon and margin below for instructive booklet on Nujol and its uses.

Metropolitan Hospital Training School for Nurses

BLACKWELL'S ISLAND, NEW YORK CITY

offers a three years course of training. The school is registered by the University of the State of New York, and connected with a hospital of nearly two thousand beds, which gives ample opportunity for a broad, general training.

The Nurses' Residence, removed from the hospital, is homelike and ideally located.

Requirements: At least one year of high school or equivalent. Age limit—18 to 35 years.

Remuneration—$10.00, $12.00 and $15.00 per month; the increase made yearly.

For information address Superintendent, MISS AGNES S. WARD

ly end in Government ownership of the roads. *Railway Organization and Management*, by James Peabody, is a textbook for students who desire to enter upon positions as employees of the railroads or of the Interstate Commerce Commission. It presents a clear analysis of the executive, engineering, operation, traffic and accounting departments of a typical railroad, but it offers no criticism of the ways in which our transportation systems are controlled.

Railroad Valuation, by Homer B. Vanderblue. Houghton, Mifflin Co. $1.50. *Government Partnership in Railroads*, by Mark Wymond. Wymond and Clark, Chicago. $1.50. *Railway Organization and Management*, by James Peabody. LaSalle Extension University, Chicago.

HERBERT SPENCER

A biography of *Herbert Spencer* by one who for years believed fervently in his teachings and who gradually changed his point of view to one of critical opposition, is written for the "Makers of the Nineteenth Century" series by Hugh Elliot. Spencer was not a man of action, and the story of his life is largely the story of his thinking and writing and publishing. In accordance with what he learned from his master, Mr. Elliot strives to attain "the right to speak of him as one of the greatest and most powerful minds of the nineteenth century"; that is, to get the spirit of Spencer's philosophy without accepting his doctrines as finalities; to criticize details and to appreciate fundamental principles.

In reading this brief survey one is again impress with the power of a man who, "without money, without special education, without health, produced eighteen large volumes of philosophy of many diverse kinds; invented an entire new system which for half a century filled the attention of all thinking people; and led the chief controversies on evolution and biology without ever having received any tuition in these subjects." The author says truly that Spencer was a pure Victorian—"he flourished while his ideals were in fashion; he withered when they passed away." He was a maker of the nineteenth century, altho his influence persists with diminishing force into the twentieth. There is included a helpful bibliography, a chronological table and an index. The frontispiece is from the Burgess portrait.

Herbert Spencer, by Hugh Elliott. Henry Holt & Co. $2.

A WORTHY FOE

We are at war with the armed forces of Germany, and they are our enemies. But since the United States army and navy have ever been ready to recognize gallant or chivalrous conduct in their foes, presumably we shall not depart from that traditional custom in the present war. This by way of foreword to *The Emden*, by Kapitänleutnant von Mücke. We now have the complete story of that notable sea raider up to the time of her destruction by the Australian cruiser "Sydney." It is a thrilling tale, one of which our foes may justly take pride, and concerning which the author writes with the personal modesty of a real sailor. If to the officers and men of the "Emden" it was simply their duty to harass and destroy as much of the sea power of their enemies as possible, it is to their credit, tho Lieut. von Mücke does not seem to see it in that light since, he contends, the "Emden" was not a pirate, that they observed the strict rules of humanity in providing for the safety, even comfort, of their prisoners, especially in the case of women and children. To this, captured seamen and civilian passengers have since testified. The flitting of the "Emden" hither and yon, together with the daring

and resource of her able commander, is a gallant tale that will live to brighten some of the darkest pages of history. As she went to her ocean grave with unstained colors flying, those of her crew who were captured were properly treated with the utmost consideration by the equally gallant captain of the "Sydney." Lieut. von Mücke was in command of the detachment sent ashore to destroy the cable station at Keeling Island, and thus, escaping the "Sydney," reached Germany after a further series of astonishing adventures.

The Emden, by Kapitanleutnant von Mücke. Ritter & Co., Boston. $1.25.

AMERICAN MEN AND WOMEN

The fifteenth volume of the *National Cyclopedia of American Biography* is as nearly a contemporary record of American public men and women as it is possible to make so inclusive a work. Amid the host of cheaply printed and superficially edited compilations of biographic notices it is a pleasure to meet this well considered work. The plan of the former volumes is continued; that of including all the higher government officials both federal and state, presidents of important societies, leaders in philanthropies and educational work, scientists and writers. The portraits are many and clear. An special word must be said for the uncommonly full and practical indexing in which names of associations, offices, papers, etc.; are included.

The National Cyclopedia of American Biography. Vol. XV. James T. White & Co. $10.

GALSWORTHY

Sheila Kaye Smith has written a sympathetic and discriminating study of *John Galsworthy*. She ranks the plays first, "Strife" at the head; then the novels, then the sketches, last the poems—indeed hardly at all the poems! She analyses his attitude toward life as that of the reformer and the artist combined, the artist predominating. His strongest element is situation rather than character; his predisposition is toward suffering, and humor becomes in him irony. He falls down in plot perhaps, and this by reason of not always quite plumbing the depths of his characters. He paints life simply as he sees it, not as it may be altered by determination.

Above all these limitations and differentiations Galsworthy's sense for beauty and fitness of word never fails, he is ever the poet in prose, the master of concise expressive language. His admirers will like this essay and it may help those who demand that he be other than he is to understand and value one of the real artists of our time.

John Galsworthy, by Sheila Kaye Smith. Henry Holt & Co. 60 cents.

IDLE DAYS IN PATAGONIA

W. H. Hudson has a genius for titles. Fancy anyone ever having idle days anywhere and then finding time to write about them afterward. It is good for the modern soul to have a book with a title like that lying on the library table. As a matter of fact the modern soul won't let it lie there long without reading it and finding that its charm and restfulness extend a long way beyond the title.

It is the record of the way the author spent his time when he started on a ornithological expedition in Patagonia and was laid up at the outset by an accidental bullet in his knee. It is a book of agreeable musings on beasts and birds and men and things generally. There is more natural history and less romance than in most of Hudson's books—which is a hair-splitting distinction because Hudson always makes romance sound absolutely true

and scientific fact sound like the wildest and most delightful sort of romance. It is all explained by that convenient and comprehensive word, style, which is simply a synonym for personality and, like personality, much better to enjoy than to analyze.

Idle Days in Patagonia, by W. H. Hudson. E. P. Dutton & Co. $1.50.

YESTERDAY'S SOLDIERS

The Life of Ulysses S. Grant, by Louis A. Coolidge, is a popular biography. The book offers nothing new about the career of the great American commander, but it is easy and entertaining reading, full of vivid details about the personal life of the hero. Considerably more than half of the book is devoted to the story of Grant's life after the end of the Civil War. (Houghton, Mifflin Company, $2.)

The Mexican War Diary of General George B. McClellan, edited by William Starr Myers, besides containing a remarkable revelation of General McClellan's much debated personality, and graphic pictures of the march on Mexico City from Vera Cruz, fully explains, at that early date, the unwisdom of employing raw volunteer forces in active military operations. In this case their lack of morale and material fitness served rather to hamper than assist the regular forces. (Princeton University Press, $1.)

The Old First Massachusetts Coast Artillery, by Frederick Morse Cutler, is the record of this famous military body from its origin in 1784. The Train Bands are traced thru the militia, into the National Guard in such manner that the little volume makes most interesting historical reading. It will be news to many to find that in 1784 the general apathy toward military affairs in the United States was so marked that the total regular army was comprized within a single company, now Battery F of the Field Artillery. (The Pilgrim Press, Boston, $1.)

Rossiter Johnson is an acknowledged authority upon military history, but his *Fight for the Republic* is merely a restatement of information which can be found in his earlier books and in those of a dozen other writers. The book is written in clear and simple English, but is absolutely lacking in details about the political, social and economic background of the War of Secession. It cannot be recommended to students familiar with the work of Burgess, Rhodes, Ropes, Wood and Edmunds and Formby, but will be useful to any one making a beginning in the field. (G. P. Putnam's Sons, $2.50.)

CHURCH AFFAIRS

Modern Messages from Great Hymns, popular discourses on twelve favorite hymns, giving such biographical and illustrative material as will lead to a clear understanding of the content and message of each. (Abingdon Press, $1.25.)

Efficiency applied to church work is the theme of *A Modern Church Program*, in which A. F. McGarrah suggests many methods for pastors and lay workers. He advises that church campaigns be mapped out with particular reference to the various seasons of the year. Valuable forms and blanks are displayed in an appendix. (F. H. Revell & Co., 60 cents.)

In his usual masterful fashion, Henry Churchill King singles out the *Fundamental Questions* involved in the Christian view of God and the world. Seven problems, vital to the religion of every thinker, are discussed. President King is most successful in his handling of the perennial problem for all idealism—the question of suffering and sin. (The Macmillan Company, $1.50.)

Modern Church Finance by Albert F. McGarrah, contains a large fund of information about the principles and methods best adapted for the business management of church affairs. Budget plans, finance campaigns, the every member canvass, as well as church accounting and business efficiency, are admirably outlined

NOW READY

The Vocational Library

Studies in Christian Heroism

The "Library" consists of four small volumes, attractively and uniformly bound in flexible cloth, put up in a set in a neat box, or sold separately.

Price $2.00 Net, for the Set

The Vocational Library has been designed for one particular purpose: to present to young people the appeal of Christian service at the time when they are thinking of choosing their life work.

Such courageous, whole-hearted devotion to the Master's cause as these little volumes record will bring to many the "one clear call" to consecrate their own lives to a like service. Note the titles:

THE TRIUMPHANT MINISTRY
By Timothy Kilbourn. **40 Cents**
This volume, written in the form of letters from the author to a young fellow minister, covers many vital questions of interest concerning the Christian ministry.

REAPERS OF HIS HARVEST
By John T. Faris, D. D. **60 Cents**
Made up of brief chapters from the lives of ministers at home and abroad who have made an indelible mark on the church. Special attention is given to the incidents leading up to the decision to enter the ministry.

THEIR CALL TO SERVICE
By Philip E. Howard. **60 Cents**
This is a similar volume, devoted to laymen, and aims to show how young men who do not go into the ministry, may respond to a definite call to serve God in business or other callings.

JUST ISSUED

HEROES OF THE CAMPUS
By Joseph W. Cochran, D. D. **60 Cents**
Tells of students, both young men and a young woman, who have been notable in college life because of their sterling character, as well as their Christian leadership in student affairs.

and discussed. The finance committee of every church should be supplied with this complete guide by an expert. (F. H. Revell & Co., $1.25.)

Truths That Save is a collection of interviews and five minute talks given by F. H. Decker, head of the Church House, Providence. They go straight to the heart of the moral questions with which they deal, and will certainly help those who are feeling their way in the same great task, that of helping men and women solve the problems of suffering and sin. (The Pilgrim Press, Boston, $1.)

The Ministry, an Appeal to College Men, by President Thwing, is an excellent little volume setting forth the attractions and objections to the ministry today, and emphasizing the qualities necessary in the man who would make a true success of the sacred calling. President Thwing holds that the opportunities for service and influence in moral and social upbuilding were never greater for the devoted minister than now. (Boston: The Pilgrim Press, 50 cents.)

STORY BOOKS

The Whale and the Grasshopper, by Seumas O'Brien. Gay fables full of true Irish humor and shrewd comments on the time. (Little, Brown & Co., Boston, $1.35.)

Stories of hidden treasure are perennially popular. *The Hiding Places*, by Allen French, is a story of the treasure hidden on a New England farm and of the avarice and enmity that the finding of it engenders. (Charles Scribner's Sons, $1.35.)

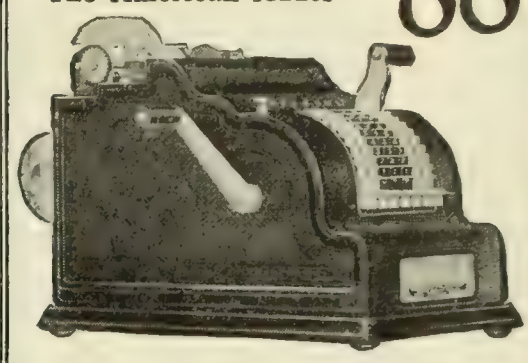
Bringing Out Barbara, by Ethel Train, is a somewhat trivial love story about a wholesome and lovable little debutante who did not like society and did not want to come out, a "poor little rich girl"! (Charles Scribner's Sons, $1.25.)

Grace S. Richmond has written *The Brown Study*, a religious love story. A sincere clergyman leaves a wealthy parish and pleasant associations in order to be able to do a simple, human work among people who really need him. (Doubleday, Page & Co., $1.25.)

An odd and interesting little collection of stories on the *Romance of Labor* has been arranged by F. D. Twombly and J. C. Dana. These are extracts from novels and describe all sorts of work from logging by Edward Stewart White to glass blowing by F. Marion Crawford. (The Macmillan Company, 75 cents.)

If you can imagine "The Broad Highway" turned into Hell's Kitchen in New York, you have a fair idea of Jeffery Farnol's latest story, *The Definite Object*. Even in the disguise of Bowery life and dialect the characters and the situations imitate altogether too closely Mr. Farnol's earlier success. (Little, Brown & Co., Boston, $1.50.)

Children of the Desert, by Louis Dodge, is a melodramatic novel in which is told the story of the love of a "king among men" for an irresponsible, utterly unworthy woman who destroys his faith and his life. The beauty he would have built up she broke down. The scene is laid in the Southwestern desert near Mexico. (Charles Scribner's Sons, $1.35.)



The Torchbearers of Bohemia is a romantic, historical story by a Russian writer, V. I. Kryshanovskaya, and deals with the events of the early fifteenth century in Bohemia, the fight of the Bohemians for political and religious freedom, the denunciation of corruptions in the church by John Huss and his followers, and the martyrdom of the great religious leader. (Robert M. McBride, $1.40.)

In his new novel, *When the Sun Stood Still*, Cyrus Townsend Brady has amplified the Bible narrative of the taking of Jericho and the battle with the five kings and Joshua's command to the sun, and associated with this narrative the love story of a prince of the tribe of Benjamin. Mr. Brady's description of the "rich green leaves" of the olive tree makes one wonder if he has ever seen them! (F. H. Revell & Co., $1.35.)

WAR-TIME WATCHWORDS

MARKET PLACE TALKS

BY LUIGI CRISCUOLO

TAXATION AND THE BOND MARKET

THE bond market is of unusual interest at the moment because of the drastic liquidation it has experienced. Following the fall of bond prices from 1909 onward, which was unexplainable for a long period, it was finally ascertained that the silent drop in prices was occasioned by the zeal of Teutonic institutions and investors to acquire gold in preparation for political changes.

While we had a rise in average bond prices from the latter part of 1915 thru to the beginning of this year, the entry of the United States into the war was interpreted as an argument for lower prices.

These facts coupled with the talk of high taxes on incomes, have resulted in a general lowering of bond prices until the whole has resulted in almost complete indifference on the part of the large investors to corporation bonds. The bond buying by large interests has been confined recently to tax-free issues such as the United States Liberty Loan bonds and municipal securities. However, as the large subscribers to the Liberty Loan will only get a fractional allotment, it is likely that some of these will seek investment for their idle funds in other classes of bonds.

I believe it is safe to assume that large buyers will continue to look for tax-free bonds and for this reason there should be a steadily increasing demand for good municipal issues on account of their tax-free feature. For the small investor there is not a great deal of inducement offered to confine all of his purchasing to municipals because they yield little above 4 per cent. The small investor is taxed so lightly that it is not worth while for him to lose 1 per cent (one-fifth of a 5 per cent return on an ordinary taxable investment) in order to secure a tax-free security.

Of course, in the case of the large investor whose tax and sur-tax under the proposed income tax schedule might reach as high as 40 per cent of income, an investment netting 5 per cent would be cut down to 3 per cent. In his case, an investment in tax-free securities yielding 3½ per cent or 4 per cent would be preferable. It is this point of view which has caused a great deal of liquidation of sound securities, without, however, causing a loss in intrinsic values. There are many sound railroad bonds which normally sell on a 5 per cent basis which are now selling on from a 5 per cent to a 6 per cent basis, or even better.

Among the important factors which affect the future course of bond prices are: demands of capital by this Government and taxation of bonds by this Government for war purposes. The demands for capital by all governments will result in higher interest rates for our own Government securities, so if tax-free Government securities ever reach a 4 per cent yield, railroad securities which are not tax-free must adjust their selling price so that they will sell lower than our Government bonds. If a tax-free Government bond sells usually on a 3 per cent basis when taxable railroad bonds of first grade sell on a 4.25 per cent basis, then, when a tax-free Government bond is selling on a 4 per cent basis, a first grade railroad bond must reach a 5 per cent basis, or thereabouts, in the first downward movement.

However, there are factors which affect the bond market in another way. If, for instance, a number of large investors decide to sell millions of dollars of corporation bonds in order to switch into tax-free securities, the result will be a deluge of offerings and decline in prices. The decline, in the flood of selling, as has happened, will cause prices to reach a level lower than intrinsic value warrants. In other words, the actual pressure on the bond market has been so great and the demand for corporation bonds so small, that bonds went down very fast—far below normal intrinsic values.

As I have pointed out, the small investor is not materially affected by the proposed tax schedules. A calculation shows that a fund invested in bonds (at 6 per cent) to yield an annual income of $100,000, will show a net yield after the proposed taxes are deducted, of about 4.60 per cent or an amount considerably above the yield afforded by good tax-free securities. Smaller incomes would be affected in a proportionately lesser degree so that as the income decreased toward $2000, the proposed exempt income, the yield after taxes would increase..

Furthermore, there are three prospects which would favorably affect such an investment—

(1) In case of railroad bonds—an increase in rates.

(2) Reduction of taxation at close of war.

(3) Enhancement in value as soon as wave of liquidation ceased.

For the man whose income is from $5000 to $25,000 the tax is negligible if the principal be invested to yield a gross of from 5½ per cent to 6 per cent.

It is possible to invest funds at this time to yield from 5½ to 6 per cent gross and have comparative safety of principal and interest. There is no doubt that the Government program of war preparedness will affect all industries, very materially, especially by way of regulation or supervision. However, it must be conceded that war brings on a great demand for munitions. and munitions have to be shipped; all of these things mean demand for labor and transportation.

WITH an increasing business activity, and no labor disturbances, all industries should prosper and this should result in an increasing margin of safety for many railroad, industrial and public utility corporations. There are a great many sound railroad bonds which are now selling at prices to yield over 5 per cent. If the small man who bought his Liberty Bond last month has more funds to invest and wants to average up his income, he can do it by pur-

chasing good general mortgage bonds of the greater railroad systems, first mortgage bonds of the well known industrial concerns, and of the long established public service corporations particularly those dealing in power.

A wave of purchasing by medium-grade investors, that is to say those who earn from $5000 to $25,000 annually, would start a healthy movement in the bond market and would serve to check the decline in bonds which is not warranted to such an extent excepting as it affects the great holders of securities who are heavily taxed under the proposed schedules.

Investors have been advised in some quarters to "wait for the swings" before investing—that is to say: to buy when prices are low and sell when they are high. But, even the large institutions which deal in bonds are not always able to do this. Investors should buy regularly—when they have funds—and not tie up money in banks at a low rate of interest until bonds are at a point believed to be low in price. Bonds should be bought for the *return* on the money invested and not for speculation. Provided a bond is sound, is marketable and affords a good yield—an investor, no matter how particular, should not seek further features.

THE Liberty Loan was the first *real* stimulus given the bond business in so far as the millions of people who previously did not own bonds were concerned. The Franco-Prussian indemnity made the French buy their Government bonds and taught them what bonds were. In our Civil War greenbacks were more or less of a substitute for bonds. But the Liberty Loan has been taken by 4,000,000 people, whereas previously less than 300,000 Americans actually owned bonds.

There is no doubt that with such an aggregation of investors, and with the industrial activity that lies before us, the American people will begin to interest themselves in sound securities as opposed to mining and industrial stocks of the wildcat class. With a movement in this direction and the purchase of sound bonds under intelligent guidance, it would be possible to inaugurate a real bull movement in the bond market in spite of high taxes and ensuing liquidation on the part of the large bondholders.

The Independent offers a Service for Investors in which personal attention is given to the desires of its subscribers for information in regard to investments of all kinds. We cannot, of course, decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves. Readers who request advice on investments will receive better service when they specify the class of securities now held, approximate amounts of each, stating if the investment is for an estate, business or professional man, woman or minor. All information given will be held in strict confidence.

Acid Tests of Investments in War

WE have just published a booklet with the above title, which outlines the precautions that should be taken to ensure safety of invested funds at this time.

THIS little brochure, whose value is out of all proportion to its size, reaffirms those fixed principles of conservatism that many are apt to overlook in such a period.

WE will send this booklet on request to every investor who is genuinely interested, together with our August Investment List. This list describes a diversified variety of sound first mortgage bonds, safeguarded under the ***Straus Plan,*** which are desirable war-time investments. They net 5½—6%. Write today for this literature, and specify

DIVIDEND

WELLS FARGO & COMPANY
Quarterly Dividend

A quarterly dividend of $1.50 per share upon the capital stock of this Company has been declared, payable July 20, 1917, to stockholders of record at the close of business July 6, 1917. The Transfer Books will not be closed. Checks will be mailed. C. H. GARDINER, Secretary.

New York, June 28, 1917.

KEEP YOUR DOLLARS BUSY

Now, as never before, it is important that your money be kept at work in legitimate enterprises. You will benefit by consulting The Independent Investor's Service before buying securities of whose merit you are uncertain.

What to Read about Aircraft

The Aeroplane, by C. Grahame-White and Hay Harper. (Stokes, New York, $1.50.) Popularly written history of the triumph of the flying machine, with over a hundred diagrams of many different models and chapters on aerial training and warfare.

Model Aeroplanes and Their Motors, by G. A. Cavanagh. (Moffat, Yard, New York, $1.) A small handbook of aeroplane construction, with diagrams of various models of biplanes, monoplanes and seaplanes.

Textbook of Naval Aeronautics, by Henry Woodhouse. (Century, New York, $6.) Specialists contribute chapters to this most up-to-date book with its 300 illustrations. It deals with the need of aircraft in the war, with the organization of our service, and includes the latest official information.

Flying Machines, by R. Kennedy. (Van Nostrand, New York, $2.) A scientific work on design and construction, with rules, measurements and principles stated non-technically.

Learning to Fly, by C. Grahame-White and H. Harper. (Macmillan, New York, 75 cents.) A good, readable exposition of the airman's training and what he needs by way of temperament and physique.

Zeppelins and Super-Zeppelins, by R. P. Hearne. (Lane, New York, $1.) A scary book, but not more so than its subject has proven it deserved. Shows the possibilities of the airship and the way to defend against it.

Flying Men and Their Machines, by C. Winchester. (Dutton, New York, $2.50.) A recent descriptive work interestingly written, comprehensive, well illustrated.

Aircraft in Warfare, by F. W. Lanchester. (Appleton, New York, $4.) The "fourth arm," its defensive and tactical value, its use in attack, and its importance in sea warfare are some of the matters here made clear.

Aerial Navigation, by A. F. Zahm. (Appleton, New York, $3.) Accounts of the various experiments that have led to the development of the various forms of aircraft, with chapters on winds and storms.

MAGAZINES. *Scientific American*, weekly (233 Broadway, New York, $4). *Flying*, monthly (280 Madison Avenue, New York, $3). *Aerial Age*, weekly (Fortieth Street and Madison Avenue, New York, $4). *Aviation* and *Aeronautical Engineering*, 12 West Thirty-second street, New York, $2. *Flight*, English weekly (Brentano's, New York, $4).

BULLETINS. *Aeronautic Federation of the Western Hemisphere*, February, 1916 (Pan-American Union, Washington, D. C.). *Military Aviation*, War Department Document 515 (Superintendent of Documents). *Aviation Schools and Training Grounds for the Signal Corps* (Superintendent of Documents, 50 cents).

ARTICLES. *Nation*, March 15, 1917 (Zeppelin and His Achievement). *Harper*, April, 1917 (Safe and Useful Aeroplane; an Interview with Orville Wright). *Everybody's*, May, 1917 (Wings of the United States). *New Republic*, April 28, 1917 (Our Duty in the Air). *Outlook*, June 6, 1917 (Our Flying Corps), June 27, 1917 (America's Air Fleet). *Independent*, June 16, 1917 (Only Way), June 30, 1917 (Third Dimension in War), April 28, 1917 (Our Fleet in the Air).

How can I safely get over 6%?

It is this that tests the investor's skill. Up to 6% all is pretty plain sailing—but with all returns over 6% there usually enters a *compensating* factor—generally the element of *risk*. The higher the return the higher the risk—this seems elementary. The

LACEY PROFIT SHARING BOND

however, solves the problem otherwise. It pays over 6% (sometimes indeed to average over 30% per annum) and the *compensating factor* is not *risk* but *waiting*. Investors in these bonds must be ready to wait (in absolute safety) for 2 to 5 years—even longer in some cases.

LACEY PROFIT SHARING BONDS are practically certificates of part-ownership in large selected tracts of standing timber bought at sacrifice prices (under advice of James D. Lacey & Company, the country's leading timber factors for 37 years) and held for a profit. Many large fortunes have been thus made under the same auspices, *and no cent has ever been lost for an investor*. The bonds pay 6% cumulative (deferred) interest *plus profits*. The principal is secure, large profits practically certain. Denominations $100, $500, $1000.

Booklet T-203 gives fullest particulars, and should be read by all thoughtful investors. Sent on request.

PASSENGER CAR SERVICE

CONDUCTED BY JOHN CHAPMAN HILDER

THIRTEEN WAYS OF INCREASING TIRE MILEAGE

DURING the past month thousands of people have cancelled orders for motor cars. Some have so with reason. The majority, however, were prompted by hysteria.

In this regard it is well to remember two things: first, that heavy cancellations are as earthquakes to industry; second, that buying motor cars today is buying transportation, education and health insurance. The motor car is a utility. Seventy-five per cent of all passenger car mileage is *necessary* mileage. The man who cancels his order for a car, provided he have the money to pay for it, is not practicing the sort of economy this nation requires. It would be more of a help to buy the car and economize by learning how to operate it efficiently.

You will save both money and anguish by embedding the following principles in your memory:

1. *Keep your tires properly inflated.* If you run on tires that are not sufficiently blown up you will not run on them very long. Underinflated tires puncture easily. The side walls, which are the thinnest parts of all tires, are bent to and fro. This has the effect of loosening the rubber from the fabric, creating friction, and results in premature disintegration. You can't test the air pressure in a motor-car tire by pinching it. Buy a tire gage. They cost about a dollar.

2. *Stop when you get a puncture.* The best way of ruining a tire is to run it flat. If you have no spares when the puncture occurs, or no inner tube, take the tire right off and run on the rim. Needless to say, when running on the rim it is well to run slowly.

3. *Start and stop your car gently.* Every time you let the clutch go with a bang and the car jumps forward as tho it had been shot from a gun like breakfast food, you tear fifty cents' worth of rubber off the rear tires. Every time you drive up to your stops at twenty miles an hour and jam on the brakes and lock the wheels, you scrape off another fifty cents' worth of rubber. These things not only damage the rubber but injure the inner fabric.

4. *Keep your brakes properly adjusted.* Brakes on the rear wheels should be adjusted so that the tension is the same for each wheel. If your brakes are improperly adjusted so that one brake-band is tight while the other is loose the tight one will do all the braking and the tire on the wheel that does all the braking will wear out just twice as quickly as it should.

5. *Keep your wheels in proper alignment.* Wobbly wheels scrub the tire tread unevenly.

6. *Lubricate your springs frequently,* or buy one of several devices which keep the springs constantly lubricated.

Springs are put on a car to absorb shocks caused by inequalities in the road. When they become rusted and caked with mud so that they are no longer flexible they cease to spring. Since all such blows are received first thru the wheels, the only cushioning influence between the frame and the road lies in the springiness of the pneumatic tires. It should be obvious that tires cannot last long under the burden of this double duty.

7. *Drive slowly around corners.* Quite apart from the moral obligation of driving slowly around corners to prevent accidents, you will find it a good investment. Every time a car skids it leaves some of the rubber from its tires behind it. There is also a heavy strain on the fabric of the tire, often so heavy as to tear it internally.

If the road is at all wet put on tire chains. They are indispensable on slippery roads and will not injure the tires if properly fitted.

8. *Find out the exact extent of tire injuries.* When you hit a stone, car track, grade crossing or some other protuberance with unusual force, the chances are one or more of your tires will be severely bruised. At the earliest opportunity take the tire off and examine the fabric on the inside. Quite often tire bruises are scarcely visible on the outside, while inside the fabric may be badly torn.

9. *Use care when backing and approaching curbs.* It is a common sight to see motorists scraping away valuable rubber by running too close to the curb. Of course it is desirable to get the car in as close as possible. But it is feasible to come very close without touching.

In turning in a narrow space, be careful not to run head on into curbs. Sharp cuts and bruises in front and rear tires are often the result of careless maneuvering. Remember that rubber may be cut much more easily when wet than when dry.

Many motorists—and a great many more chauffeurs—find it pleasant to drive along the smooth car tracks. This may be pleasant, but it is expensive, for the rails have sharp edges which play havoc with tires.

10. *Go over your tires frequently.* If you find cuts or other abrasions in the tread, clean them out and vulcanize them at once. If you don't, water and sand will sneak in between the rubber and the fabric, make blisters and eventually loosen the tread entirely. You can buy a vulcanizer for about $3.50. If you want complete directions for repairing tires please write me.

11. *Pick your roads whenever you can.* Slow down over the rough spots.

12. *Carry spare tubes* in a clean box with a little French chalk.

13. *Keep your tires properly inflated.*

A GREASE AND OIL SCHEDULE TO KEEP YOUR CAR YOUNG

Spare the oil and spoil the car is a major maxim of motoring. Always buy good lubricants of *known* brands. Even if their price is higher they will cost you less eventually than the nondescript kinds. You would not buy an unnamed car or an anonymous tire. Apply the same principle in buying lubricants. Order them by name and see that you get what you order.

Part	*Quantity*	*Lubricant*
DAILY		
Grease cups on front and rear springs	two turns	cup grease
(or) if there are oil cups	fill	cylinder oil
Spring shackles	few drops	machine oil
Grease cups on steering knuckles and tie rod	two turns	cup grease
Grease cup at base of steering column	two turns	cup grease
Examine crank case oil level	add as needed	cylinder oil
EVERY WEEK		
Distributor shaft oil hole	few drops	cylinder oil
(or) Distributor shaft grease cup	one turn	cup grease
Squirt oil in rear wheel hub oil holes	few drops	cylinder oil
Brake and clutch pedal hubs	few drops	cylinder oil
Brake rocker shaft bearings	few drops	cylinder oil
Grease cup front engine support	two turns	cup grease
Oil hole in upper steering column	few drops	cylinder oil
Gear shift lever ball socket	few drops	cylinder oil
Clutch release yoke bearings	few drops	cylinder oil
Starting gear screw shaft	few drops	cylinder oil
Speedometer swivel	two turns	cup grease
EVERY MONTH		
Universals	pack cases	cup grease
Drain crank case oil, flush with kerosene	refill	cylinder oil
Front wheel bearings	pack hubs	cup grease
Rear wheel bearings	pack hubs	cup grease
Spring leaves		graphite grease
Speedometer shaft	few drops	cylinder oil
Starter and generator oil holes	few drops	machine oil
Steering reach rod	pack ends	cup grease
EVERY THREE MONTHS		
Drain transmission, flush with kerosene	refill	heavy oil
Drain rear axle housing, flush with kerosene and	refill	heavy oil

These instructions need slight variations in detail to fit various makes of car. But in principle they may be applied to all.

JUST A WORD

One of the several pleasant things about being an editor is that people write us letters like this:

Company I, New York Division,
Plattsburg Barracks, July 4, 1917.

I am sitting in the Plattsburg Barracks Y. M. C. A. devouring Herbert Reed's articles in The Independent. They appeal to me more than anything of the sort I have read because they are scientifically helpful. I have already jotted down two ideas, inspired by his June 23 article, which I want to use in my work with the new army.

JOHN D. KENDERDINE.

Mr. Reed's series of Plattsburg articles, published under the caption "Right Wing at the War Camps," has appeared in The Independent every week beginning with the issue of June 9.

Have you read the one this week, "'Not a Minute' Koehler Takes the Team"?

A SIDELIGHT ON THE WAR

"She used what I can only call naval hypnotic treatment," says G. Ward Price in his story of the victory by "moral suasion" which a British cruiser won recently off the coast of Greece. We take his description of it from the London *Times:*

Volo, with its large admixture of Royalists and German-paid roughs, had been for three days on the verge of trouble. That those days passed quietly was probably due to the arrival in port of an English ship, a merchantman, which the navy had converted into an auxiliary cruiser. As a fighting unit her modest gun equipment hardly made her formidable, but the moral effect of her arrival was immense. As a British resident told me, she proved "a powerful sedative." And the means she took to impress the hostile Royalists were characteristic of the resourcefulness which is traditional in the British navy. She used what I can only call naval hypnotic treatment. Until she came the Royalists were holding meetings every night on the sea front, where are the cafés. In gatherings several hundred strong they would inflame one another with raki and blood-thirsty oratory. The evening after H. M. S. Robin (that is not her real name) arrived one of these meetings was in full swing. "Down with the dogs of Allies!" cried the stubbly chinned Royalists. "Curse Venizelos!" "Long live King Constantine!" The meeting had reached the zenith of enthusiasm when suddenly every Royalist started as if he had been shot. Thru the sultry blackness of the June night had struck a brilliant beam. It came from the searchlight of the English ship, and it had fallen and rested full upon them. It never wavered. It seemed to be looking into the face of every man among them as if to see who would speak next. Words died away on their lips. The unprecedented spectacle was witnessed by a crowd of Greeks without half a dozen people talking at once. The Diehards, who had been most vociferous against the Allies the moment before, found a strange difficulty in enunciating any more curses. The worst desperado of a Last Ditcher ceased abruptly to advocate fighting. The searchlight simply stared them into silence. Then individually and inconspicuously they slipt away into the grateful obscurity of the surrounding darkness. After that the searchlight was master of the situation.

REMARKABLE REMARKS

MARY PICKFORD—There is such a thing as a soul slouch.

BILLY SUNDAY—I am not worrying about the future.

KING ALEXANDER—Oh Lord, the Russians are no good.

PROF. EDWARD KREHBIEL—Militarism is the religion of martial force.

DR. JAMES C. WARBASSE—The poor man is the potentially sick man.

DR. BEVERLY ROBINSON—I despise water. It gives me dyspepsia.

ED. HOWE—I regard John D. Rockefeller as greater than Swinburne.

AMBASSADOR GERARD—I have seen Belgians working as slaves in Germany.

ANNETTE KELLERMANN—One should not attempt to rescue while fully clothed.

PHILIP SNOWDEN, M. P.—All autocratic governments and thrones are crumbling today.

ADMIRAL VON TIRPITZ—The submarines will reach their goal if we at home retain our nerve.

DR. CHARLES H. MAYO—National prohibition should be welcomed by the medical profession.

WOODROW WILSON—When peace is made as handsome as war there will be hope of war's passing.

VICTOR L. BERGER—The real trouble with our country is that we have a rubber stamp Congress.

DON MARQUIS—You can easily avoid making errors if you are content not to make anything else.

THEODORE FRIEBUS—One of the most beautiful and hopeful mottoes I ever saw was "Smile, damn you, smile."

KARL LEMMERMAN—A woman simply must be a bargain hunter with the amount of money her husband gives her.

REAR ADMIRAL PEARY—Why not make it the sixth national aim of the United States to be the first air power in the world.

GEN. LEONARD WOOD—The uniform of the soldier is just as much to be respected as the robe of the bishop or the cassock of the priest.

THEODORE ROOSEVELT—Any man who hates England more than he loves the United States should be thrown out of the country.

EMPEROR WILLIAM—The mailed fist of Germany with further aid of Almighty God will restore you [King Constantine] to the throne.

EX-KING CONSTANTINE—I am following with the utmost interest the Government's effort for the restoration of the unity of Greece.

BERNARR MACFADDEN—The average fat man or woman will gain in strength and endurance day by day while abstaining entirely from food.

FREDERICK PALMER—We may yet have to chronicle the National Guard of Kansas participating in a siege of Germany or the Kaiser interned on Ellis Island.

HENRY CLEWS—I often note with deep regret that when our soldiers are marching in the street so few men and boys uncover when the flag is borne by.

PRES. G. STANLEY HALL—Our country may as well think of going to war without first class military equipment as without a knowledge of applied psychology.

ORVILLE WRIGHT—The time is not far distant when the people will take their Sunday afternoon rides in their aeroplanes precisely as they now do in their automobiles.

NORMAN ANGELL—Opinion—a mere moral thing—was something that the German military leaders seem to have held in immense contempt, and that contempt will be paid for by Germany at the price of defeat.

What Parents Can Do For Their Children

A man or woman's success or failure in life depends almost entirely upon the home training received in childhood; right and wrong methods

By R. H. Sinclair

WHEN you see a fine straightforward, successful man—a leader among his fellows—you nine times out of ten see a man whose parents, consciously or unconsciously, knew how to train him as a child, how to bring out his strong points and how to overcome his weaknesses.

When you see a home-loving woman with a charming personality who is highly successful socially, you see a woman whose parents, although they may not have realized it, applied the scientific laws of child training when she was a little girl.

But just as many parents are unconscious that their success in child training is due to right methods, so are many parents unconscious that their failure will be traceable to wrong methods. Character is not born but builded. You as a parent are the architect of your child's character—the constructor of its future career, for upon character depends success. Abraham Lincoln, perhaps our greatest American, once said: "All that I am or ever hope to be I owe to my mother." Great men before and after Lincoln have said the same thing of their mothers, and how truly they spoke!

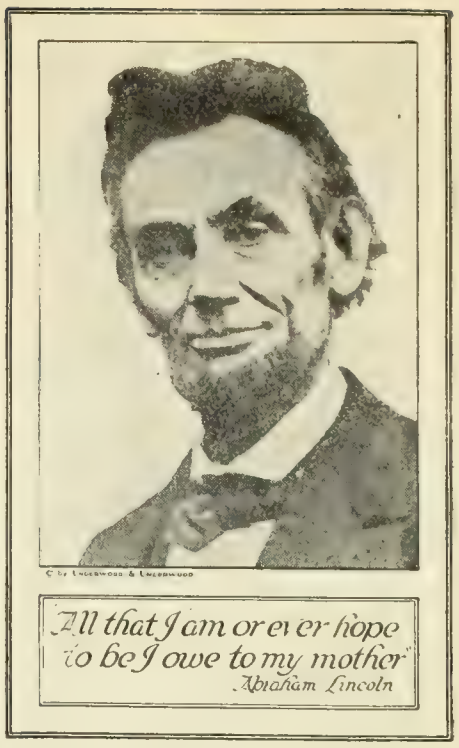
If Lincoln as a baby had been switched to the cradle of another mother, his name might never have been known outside of his home community. If you put the baby son of the most cultured of families in a nest of thieves he would grow up to be one of them. Reversed methods of training could have turned many a ditch digger into a financier and many a financier into a ditch digger. And this difference is not one of school training, but of training *in the home* from the time the child is born.

When a child is born, if normal, its chance in life is as good as any other child's. It is just as with a piece of putty. Under one master the clay becomes a noble work, while under another it remains nothing but putty.

When you look into the big, innocent blue eyes of that little yellow-haired kiddie of yours, do you fully realize your responsibility? Do you realize that it depends entirely upon you whether he grows up to be admired or to be looked down upon whether he becomes a strong character or a weakling, a success or a failure?

And your little girl—will she be frivolous, pleasure-seeking, or domestic and home-loving? Will she have the strength to overcome temptation, or will she succumb? Will she be a helpful wife or a burden on her husband? Whatever she is to become rests entirely with you.

Children are disobedient, untruthful, stubborn, disrespectful (forewarnings of a life of sorrow and failure) only because their parents do not know how to handle them. You can make your child what you will if you only know how to appeal in the right way to its higher instincts, according to Professor Ray C. Beery, President of the Parents Association, an organization which is giving the most practical kind of help to thousands of parents who are anxious to make fine men and women of their children.



Professor Beery, who has supplemented his personal experience by special study in eugenics, psychology, and various branches of sociology, at Columbia and Harvard Universities, teaches that *Confidence is the Basis of Control.* And the results he is enabling parents who are members of the Association to secure with their children are almost miraculous—the results are immediate. The Association is constantly receiving letters from its members marveling at the quick improvement in their children's deportment and manners. Professor Beery's methods give the parents a new sense of pride in their offspring.

An interesting feature of Mr. Beery's work is that, while obedience comes first—being the foundation of all other training—he does not believe in physical punishment. According to Professor Beery, the secret of curing various bad habits is to know the cause of those habits. He attacks the problem by teaching the parent how to find the real causes of disobedience, untruthfulness, and other bad traits, and then how to correct them in a lasting way.

An Invitation to Join

At this time an invitation is being extended to earnest fathers and mothers who would like to join the Association and learn the methods which are proving so universally successful with children of all ages from babyhood to man and womanhood.

Life membership in the Parents Association—which has no dues—entitles you to a complete course in child training by Professor Beery, in four handsome volumes of approximately 275 pages each. This course must not be confused with the hundreds of books on child training which leave the reader in the dark because of vagueness and lack of definite and practical applications of the principles laid down. It does not deal in glittering generalities. Instead, it shows exactly what to do to meet every emergency and how to accomplish immediate results and make a permanent impression. No matter whether your child is still in the cradle or is eighteen years old, these books will show

"All that I am or ever hope to be I owe to my mother"
Abraham Lincoln

how to apply the right methods at once. You merely take up the particular trait, turn to the proper age, and apply the lessons to the child. The younger the child the better. You cannot begin too soon, for the child's behavior in the first few years of life depends on the parent, not on the child.

Membership in the Parents Association gives you, in addition to the special four-volume Course in Practical Child Training, the following privileges:

First: Unlimited free use of the Association's advisory service in the solution of perplexing problems in Child Training.

Second: Mail service which will consist of Special Bulletins to be issued from time to time, containing the newest findings of the Association's Board of Experts, and relating the experiences in child training of other members of the Association, thus keeping each member informed as to the progress being made in this important and far-reaching work.

Third: Authoritative advice as to children's books, schools, camps, and all matters pertaining to educational methods.

Fourth: Unlimited free use of the Association's Purchase Service Bureau, through whom all educational books, whether school text-books, or books treating on the mental, physical or moral development and training of children can be purchased. This service will be free and members availing themselves of it will find by comparison of prices, that they secure the benefit of publishers' trade discounts.

Before becoming a member of the Parents Association you are privileged to examine the four volume Course in Practical Child Training without the slightest obligation, and without even making a deposit, in order that you may be sure that the work of the Association is along the lines of which you approve, and that the course contains exactly what you want.

Here is the offer the Association is making for a limited time: If you will fill out and mail the application form printed below or send a post card or letter, without any money, the complete Course in Practical Child Training will be sent by return post on five days' approval. Examine it carefully and then, if you feel you can afford to be without it, send it back and you will owe nothing. If, on the other hand, you are as well pleased as the thousands of other fathers and mothers who are turning to it each day for guidance—send $2 after five days and $2 a month for four months—only $10 in all. On receipt of the first payment you will be enrolled as a member of the Association, and will receive a certificate of membership.

If you are truly anxious to make the greatest possible success of your children's lives, you owe it to them to at least look at this course, which you may do in accordance with this offer, without risking a penny. I must urge you to act promptly, however, as this offer may never be made here again.

Do You Know How—

to instruct children in the delicate matter of sex?
to always obtain cheerful obedience?
to correct mistakes of early training?
to win confidence of children?
to keep child from crying?
to develop initiative in child?
to teach personal courage and self-reliance?
to suppress temper in children without punishment?
to overcome objectionable habits in children?
to succeed with child of any age without display of authority?
to make fixed, unbreakable rules?
to discourage the "Why" habit in regard to command?
to direct children directly in their work, play?
to wisely guide child's choice of companions?
to prevent worry in child?
to develop sense of responsibility?
to train child in neatness and order?
to prevent quarreling and fighting?
to cultivate ideal temperament?
to deal with supersensitive child?
to cure impertinence? Discourtesy? Vulgarity?
to deal with boy who is a bully? A braggart?
to remove fear of darkness? Fear of thunder and lightning? Fear of harmless animals?
to eliminate all forms of viciousness?
to replace disinclination for bathing with delight in same?
to encourage child to talk?
to teach punctuality? Perseverance? Carefulness?
to teach child instantly to comply with command: "Don't touch"?
to inculcate respect for elders?
to overcome obstinacy?
to cure habit of coaxing?
to teach value of money and its proper use?
to correct wrong habits of thought?
to prevent and correct round shoulders? Slouching postures and careless carriage?
to cultivate mental concentration?
to engender interest in work or study?
to combat various juvenile temptations?
to teach honesty and truthfulness?
to insure your child's financial success?
to treat child that runs away?
to cultivate cleanness of speech and thought?
to break child of sucking thumb?
to prevent fickleness? Jealousy? Selfishness?
to develop imagination? Judgment? Discrimination?
to strengthen memory?
to interest child in right kind of reading?
to induce child willingly to go to bed at night and get up in the morning?

These are only a few of the hundreds of questions fully answered and explained, in a way that makes application of the principles involved easy through this course.

THE PARENTS ASSOCIATION, Inc., Dept. 47, 449 Fourth Ave. New York City

THE PARENTS ASSOCIATION, INC.,
Dept. 47, 449 Fourth Avenue, New York City:

You may send me, carrying charges prepaid, your complete four-volume Course in Practical Child Training, by Ray C. Beery, A.B., M.A., for five days' free trial. If it meets with my approval and I decide to become a member, I will send you $2 five days after delivery of the four-volume Course, and $2 a month for four consecutive months in full payment for Membership and Course. If I do not care to subscribe, I will return the books within five days after their receipt. It is agreed that when I send the first payment you will at once send me a life membership certificate and that the $10.00 is payment in full, and there are no additional dues or assessments whatever.

Name.....

Address.....

Note: If full payment is made at one time after the free examination of the four-volume Course, you may deduct 10% ($1.00) when sending remittance.

The Independent

WITH WHICH IS INCORPORATED

HARPER'S WEEKLY

THE SIXTH SENSE

THE reason why people who apparently are in full possession of their five senses make such farcical contributions to the discussion of public questions is that five senses are not enough. There is an essential sixth sense which is usually called the sense of proportion and sometimes the sense of humor. Perhaps the people who are unhappy enough to lack it deserve rather pity than blame, but if they rise into places of power and influence they can be just as harmful as if they meant to be.

One variety of this type is the man whose mind carries no scale to measure public wrongs. We all know the person who says with apparent sincerity that it is hypocrisy for the United States to champion the principle of nationalities in Poland so long as we hold the Philippines. Doubtless an intelligent man could make a case against retaining the Philippines; either on the ground that they are too far away to be properly protected by us or that it is wrong to annex any country occupied by an alien people. But he would certainly not fail to see the difference between a unified nationality with an historic past and free institutions of its own creation and a mixture of mutually hostile tribes who are just beginning to enjoy their first taste of liberty and develop the earliest foundations of a common nationality.

One of the banners borne by the Socialist procession in Boston which ended in a regrettable, reprehensible, but not at all surprizing riot, bore the reproachful legend: "Who crushed Hayti?" Apparently, to the mind of something human our attempt to relieve the distrest republic of a bandit who preyed upon the people, followed by our prompt evacuation of the island as soon as we had reëstablished the constitution and trained a popular army of native Haytians to safeguard it against future usurpation, was "crushing" Hayti; a deed similar to the worst outrage upon Belgium or Armenia.

This sort of person uses big words recklessly. He lumps together low wages, a limited franchise, a court injunction, a military service law, a Sunday closing ordinance indiscriminately as "slavery," showing very little sense of what chattel slavery really was. If a rioter goes to jail it is "martyrdom," a word befitting the rack and the stake. If an elected president takes a somewhat dictatorial tone toward Congress we are an "autocracy." If in a stray instance here and there among a hundred million people a policeman is officious we are "as bad as Russia," meaning of course the old Russia. We do not imply that such evils as we have enumerated should not be denounced. Let any one that chooses to do so speak his mind as violently as he likes, let him exhaust the vocabulary of vituperation. But if he is wise he will make us ashamed by comparing our civilization with what it ought to be and not move our laughter by comparing it with evils which the present generation of Americans has never known and cannot even realize. Those who have seen the tiger do not call kittens by that name.

RACE TOLERATION: A PROBLEM

IT is to be feared that we are yet children in our attitude toward the world-old problem of race toleration, and that our thoughts about it are crude and elementary.

Facts are facts, and the first step toward solving problems of fact-content is to get away from make believe, concealments, and attempts to ignore.

The race problem has been made unnecessarily difficult by assumptions of "race equality," "human brotherhood" and "natural goodness." These assumptions have been inevitable reactions against the opposed and long-accepted assumptions of "total depravity" and a God-decreed inferiority of an "accurst" race that should forever be subject to its superior brethren. Nevertheless, they are assumptions, working hypotheses at the best, and the only way to prove them true is the pragmatic one. It is time to find out whether they work.

Is it true, for example, that the races are "equal" in specific things that are worth talking about? Are they equal in qualities that have economic value, or political value, or intellectual value?

They are not equally tall: even subdivisions of the same race are not equally tall, for example Scotchmen and Greeks. They are not equally heavy, in statistical average, median or mode. They are not equally effective in sustained physical labor. Why, then, should we inject into the problem of race relations within a nation the purely sentimental assumption (for it is nothing more) that races are equally capable of profiting by education, equally fit to hold public office and to make laws, equally fit to run locomotives, or banks, or churches.

"But what harm does the assumption do, even if it is false?" This is the question always asked by the fact-shirkers, and it is peculiarly mischievous. The harm done by false assumption is twofold. First, every time it is discovered that one race actually cannot, as a usual everyday performance, do a particular thing as well as another race can, it confirms prejudices far more seriously than it could if no false assumption had been made. Second, it diverts educational and opportunistic endeavor into wrong channels, gives inferior men and women "the big head," and thereby calls down on them further prejudice, discrimination and abuse.

The war is mixing the races and nations up as never before. There will be need of wisdom as well as of good

© Brown & Dawson

THE NEWS FROM HOME

intentions. Assumptions of race values of every kind should be thrown over. The only way to arrive at a working equilibrium and peaceful relations is to "try out" with system and patience the specific capacities and abilities of each racial variety, and accept in good faith the experimental results.

RESULTS

TO accomplish something: group men about ideas, not ideas about men.

BRAIN AND BRAWN

IN a civilian government like ours, the Cabinet and National Board of Defense represent the "General Staff." These men are working long hours and at high pressure. Two years before this war broke out, the German General Staff were working similarly long hours and at high pressure, but they were taken into the Tiergarten every morning for one to two hours' exercize before going to their offices.

Our cabinet officers and executives and the members of the Council of National Defense are likely to forget in the excess of their patriotism and loyalty that there is one edict higher than that of the greatest government in the world. When Nature gives an order there is no appeal to a higher court, and the excuse that a man has not the time to obey, or is doing something that his country more urgently needed, has no weight in that court. When Nature touches a man on the shoulder and says "Stop!" he stops. Nature ordained at the beginning that a man should earn his bread by the sweat of his brow, and as far as he departs from that and neglects that physical exercize which she has determined is essential, so far will he pay the toll. The penalty of frayed nerves, overworked brains and underworked bodies is final breakdown. The symptoms are positive: irritability, quarreling, illness, depression, fierceness and inefficiency of effort, and finally failure. Physical exercize under a scientifically tested plan and arrangement will keep these men fit. Is the price in this emergency too high to pay?

IS CHEERFULNESS A SIN?

THE annual crop of "gladiolas" never fails the reader of American fiction and it never fails to create an equal and opposite reaction among the critics. The oftener books of the "Pollyanna" type appear the more do the self-constituted censors of American cheerfulness bewail our national vice of optimism and contrast the degenerate state of our literature with the superior merit of Schopenhauer, Gorki, Baudelaire and Strindberg. A happy ending is condemned as the cardinal sin against Art, and Hardy is ranked above Dickens because he makes his characters more uncomfortable. Literature, like a spring tonic, is supposed to be beneficial in proportion as its taste is bitter.

There can be no doubt that this protest is sometimes necessary. The national bird of America would sometimes seem to be not the eagle but the ostrich, so conveniently blind are we to the evils of industrial and political conditions until they force themselves on our attention. We produce in quantity the kind of pacifist who thinks that the real cure for German imperialism is to ignore its existence and the kind of politician who thinks that the art of government means keeping things out of the papers. We are prone to bear our friends' toothaches with exemplary patience and good humor and expound the gospel of cheerfulness to people who would be much happier if they were allowed to be miserable for a little while. But if we adopt a philosophy of gloom to balance a one-sided optimism we are not seeing things as they are; there are smoked glasses as well as pink spectacles and the one gives as false a picture of life as the other. Why do we reserve the word realism for pictures of slums and opium dens? Are real people never really happy?

But our chief cause of quarrel with the critics is not that they insist on gloomy themes, but that they insist upon a gloomy attitude toward them. It is not enough to face the truth; we must face it with a shudder. If you fill your book with battle, murder and sudden death you are only halfway to salvation; to produce a real masterpiece you must extract from it the hope and courage with which such evils might be faced. Thus the enemies of Robert Browning have made his alleged optimism the chief count in their indictment and have quoted in derision his famous lines: "God's in His heaven, All's right with the world," as if it were the equivalent of Pope's dictum, "Whatever is, is right." But Browning was certainly not ignorant of human evil; the very poem from which these lines are taken is a tissue of crimes and conspiracies, of base or terrible passions. Who said that all was right with the world? Not Browning but Pippa. Who was Pippa; some favorite of fortune, sheltered from the ills of life? A factory child, cruelly overworked and surrounded by the dangers of the city streets. What the critic objects to in the poem is the idea that a factory child should be happy. She ought to be miserable, therefore she must be made miserable is the line of argument. The same sort of critic will declare that Stevenson is, after all, only a writer of the second rank because of his superficial optimism. But if Stevenson, dragged to the grave by a lingering disease, could be cheerful what right has any one who has not shared his suffering to object? We should indeed pardon the sadness of those whom life has afflicted. But have we the right to condemn their happiness?

THE QUESTION OF ALSACE-LORRAINE

NOW that the United States is at war in coöperation with the Entente Powers, tho not in alliance with them, it is most desirable to have a thoro discussion of the question of how far we are willing to underwrite the demands which these powers have severally or collectively declared to be their aims. The attempt of President Wilson to elicit a statement of these aims previous to our entrance into the war was not altogether successful, for the reply of the Allies was indefinite and omitted to mention some of the most important of the issues involved in the conflict. More recently at the insistence of the new Government of Russia more explicit declarations have been obtained and these can now be studied.

One of the most perplexing of these questions is that of the status of Alsace-Lorraine. Here, fortunately, we have a clear declaration of policy from the French Government. On June 5 Premier Ribot stated "We demand that the provinces, which never ceased to be French, be restored to us," and at his request the Chamber of Deputies passed by a vote of 453 to 55 the following resolution:

> It declares that it expects from the war imposed upon Europe by the aggression of imperialist Germany the return of Alsace-Lorraine to the mother country, together with liberation of invaded territories and just reparation for damage.

On the other hand the German Government has not publicly admitted that it is willing to make any concessions of territory to France under any circumstances, and the German press is unanimous in declaring that "Alsace-Lorraine was German, is German, and will remain German forever, no matter what the Chamber may decide." Here, then, is a clearly defined issue. What is the duty of the United States in this matter?

The cause of Alsace-Lorraine has always appealed strongly to American sympathy. When the tourist at Paris sees in the Place de la Concorde the statue of the city of Strasburg with its mourning wreath and its inscription

> Lost 1870
> Regained ---

he always wishes to insert the current date. Americans

have heard with indignation that boys were imprisoned for whistling the "Marseillaise" and that the French language was prohibited even upon tombstones. No instances of Prussian tyranny have aroused such indignation both inside and outside of Germany as what occurred in the street of Zabern the year before the war when Lieutenant von Forstner struck a lame Alsatian shoemaker over the head with his sword. And barely a month before the outbreak of the war Jacob Waltz was on trial at Leipzig for high treason because he had, over the pseudonym of Oncle Hänsi, published those charming sketches of Alsatian child life, "Mon Village," showing that forty-four years after the conquest the love of France still lingered in the hearts of the younger generation. Has any one of us ever read "The Last Lesson" by Daudet without a choking in the throat? If so, the Lord have mercy upon his hard heart.

Our sympathy with Alsace-Lorraine was well deserved and our righteous indignation over Prussian rule was abundantly justified. This, however, does not help us much when it comes to the question of what shall be done with the disputed provinces. Here, as in all other cases, we are confronted with the absolute impossibility of righting an historic wrong or of punishing the men who perpetrated it. The only thing that can be done is to prevent present injustice and future oppression. For instance, the present British Government is willing to do anything to repair the injury done to Ireland in centuries past, but is helpless to set things right. If the Kaiser should stand in sackcloth and ashes before the high altar of Strasburg Cathedral and repent the act of his grandfather it would not solve the Alsace-Lorraine question. Restoration would not mean reparation. It would merely add another wrong to those suffered by the inhabitants of this debatable land during the last thousand years. According to the latest issue of that British authority, "The Statesman's Yearbook," only ten per cent of the inhabitants are French speaking. Probably a larger proportion would have put down French as their mother tongue if it had not been disadvantageous to do so, but there is no question that German is now the dominant language as French was in 1871. If Alsace-Lorraine were returned to France today there would be more than one school in which the teacher would give his last lesson in German with the same sadness as the last French lesson described by Daudet, tho it is doubtful whether the scene would find so perfect a literary expression. For forty-six years the provinces have been subjected to a systematic process of Germanization which, however cruel and unjust, has not been ineffective.

When Alsace and Lorraine were annexed by Germany in 1871 the people were given a year to decide whether they would remain under German rule or go over to France. Fifteen per cent of the population preferred to emigrate. Many of them settled in Algeria, where the French Government provided them with free homesteads. Ever since then the country has been continually drained of its French population. It has been quite the custom for young men of French families to slip over the border before the time came for their enlistment in the German army and join the Foreign Legion instead. Of course they could never come back. The leakage of the French part of the population has been replaced under Government encouragement by Germans. Besides this, the population of the country has increased some twenty-five per cent since 1871, largely by German immigration.

But in whatever proportion they may be divided by blood and language the people of Alsace-Lorraine, regardless of blood and language, are united in their aversion to Prussian rule. The constitution granted in 1911 failed to satisfy their demand for autonomy. In resentment of what he considered their ungrateful repudiation of his generosity in granting this the Kaiser went to Strasburg and addrest the Mayor as follows:

> Listen. Up to here you have only known the good side of me: you might be able to learn the other side of me. Things cannot continue as they are: if this situation lasts, we will suppress your Constitution and annex you to Prussia.

A witty Socialist took advantage of this unwary remark to say in the Reichstag:

> We salute the imperial words as the confession, full of weight and coming from a competent source, that annexation to Prussia is the heaviest punishment that one can threaten to impose upon a people for its resistance against Germany. It is a punishment like hard labor in the penitentiary with loss of civil rights.

What action the people of the disputed provinces would take if they were allowed to settle their fate in their own way cannot be determined in advance. We cannot assume the absence of a desire for reunion with France, for we know how dangerous the statement of such a desire has been. But so far as the desires of the people have found expression in party and press they have been directed toward securing recognition as a sovereign nation in the German Empire on the same terms as Bavaria and Saxony, or, to use an American analogy, they are unwilling to remain as a territory and wish state rights.

Professor Fife in his book on "The German Empire Between Two Wars" puts it fairly:

> Forty odd years of separation has not availed to make the inhabitants of the provinces Germans, but they have thoroly unmade them Frenchmen. The industrious people of the Alsatian valleys and plain and the valleys of the Moselle and the Saar realize the enormous advantages which they have enjoyed for the products of their land and factories thru the union with the German states, and had it been possible to hold a plebiscite, they would undoubtedly have voted to retain these rather than return divided up into departments of France. On the other hand, there has been absolutely no sympathy with the political greatness of the German Empire.

The latest official expression of the desires of the people is contained in the inaugural address of Dr. Georg Ricklin, elected president of the Second Chamber of the Diet, at Strasburg on June 6:

> We Alsatians and Lorrainers will never forget that our Emperor, by his peace offer, showed his readiness to end the miseries of the war. We bless every action tending to shorten the war by a single day and reject everything which, allegedly undertaken to better our lot, in fact only serves to prolong the war and our sufferings. An overwhelming majority of Alsatians and Lorrainers did not want the war and only wanted to work out to completion their position as members of a state in union with the German Empire, and to proceed further with peaceful labor. In this connection the war has made no change as far as we are concerned. We make this confession of faith in the face of the whole world. May it be heard everywhere, and may peace be restored soon.

Obviously Dr. Ricklin could not have exprest a hope of re-annexation by France even if he had wished to. But there is no reason to question his sincerity or that he represents a considerable proportion of the population, and we can at least join with him in the wish that the war should not be unduly prolonged on account of the assumed desire of the people of Alsace-Lorraine to join France. How the question would be decided if it were left to a secret ballot it would be hard to predict. We know that certain districts would vote for France and others would vote for Germany. It would therefore be possible to divide the disputed territory between the rival powers with a greater degree of justice than now. Or perhaps a majority of the people as a whole would prefer to become independent like Belgium. There are many possible ways by which the question could be settled. The worst way of all is to leave it to the decision of the big guns with the certainty that however it might be decided part of the people concerned would have a just grievance. It is, at any rate, intolerable that the whole world should continue at war over a strip of territory smaller than a Wyoming county. Yet in answer to the question, asked in the House of Commons on June 7, whether "the Allies are prepared to go on fighting, regardless of every other consideration, until this object had been achieved—the restoration of Alsace-Lorraine," the Government gave an absolute affirmative.

THE STORY OF THE WEEK

Air Raids on England The Germans are now tending to use the aeroplane in preference to the Zeppelin for their descents on Great Britain. On the morning of July 4 a squadron of aeroplanes circled over the town of Harwich, a seaport in Essex, dropping bombs in the neighborhood. Eleven persons were killed and thirty-six injured. Aided by low clouds the raiders escaped, but according to a British report they were intercepted by British aircraft and two were destroyed. The German official statement claims that all returned in safety.

Three days later the Germans sent some twenty aeroplanes to bombard the heart of London. They flew over the city at a comparatively low altitude and succeeded in scattering a large number of bombs before they were finally driven off by the British anti-aircraft batteries and aeroplanes. On this occasion thirty-seven men, women and children lost their lives and 141 were more or less seriously injured. Altho the aeroplanes were partly obscured by the morning haze, hundreds of thousands of Londoners were able to follow the progress of the aerial battle from the city streets. This attack on London, following the even more destructive one of June 13, roused an angry spirit among the citizens. Three foreign shops were attacked in the East End slums before the police could disperse the mob, and mass meetings are threatened to bring the pressure of public opinion to bear on the Government to make raids on Germany by way of reprisal.

The French, who have for a long time indulged in retaliatory aeroplane warfare, entered Germany on the night of July 6 and did not return until they had placed sixty-seven thousand pounds of explosive bombs. Eighty-four aeroplanes took part in the raid and all but two returned in safety by the next morning. Factories and munition plants at Treves, Essen and Coblenz were selected as objectives of the attack.

Germans Hammer French Lines At the same time the Russians resumed the offensive in Galicia the Germans redoubled their blows against the French trenches north of the Aisne along the Chemin des Dames. Infantry attacks, preceded by heavy artillery bombardments, continued during the night of July 3 along an eleven-mile front and were repeated many times during the next two or three days. None of these assaults succeeded in carrying French positions of importance, and the Germans desisted when they saw how costly further attacks would be. Among the boldest defenders of the French trenches were Basques from the Pyrenees Mountains on the Spanish border, whose skill in their native ball game of pelota had made them the best hand grenade throwers in the army. The French replied to the German offensive with counter-attacks, which, however, were quickly repulsed. The Germans also renewed their old attempt to carry the defenses of Verdun but without any success.

The British are still tangled in the intricate rabbit warren of cellars, mine galleries, shell craters and entrenchments which surround the great coal center of Lens. Progress in such a battle area is naturally extremely slow, and the British have to proceed by blasting away the German earthworks before delivering an attack. Slow as is the advance on the doomed city it continues without cessation. A measure of the success of the Allies during their present general offensive is the official report that from the middle of April to the end of June 63,222 Germans were taken prisoners on the western front, in addition to the capture of 509 cannon, 503 trench mortars and 1318 machine guns. The British claim not to have lost a single piece of artillery on the western front for more than two years.

EMPEROR FOR A DAY

Hsuan-Tung, last of the Manchu dynasty, was made the puppet in an attempt of the army under General Chang-Hsun to overthrow the Chinese republic. The imperialistic troops succeeded in taking Peking, but they were soon overcome by the republican forces

Russia Opposes Coercion of Greece The provisional government of the Russian republic is reported to have protested against the diplomatic action of Great Britain, France and Italy in compelling King Constantine to resign his throne. The Russian Government had no friendship for the autocratic rule and pro-German attitude of King Constantine, but it regards any attempt of foreign powers to intervene in the domestic affairs of Greece as a violation of national sovereignty. The western powers, while not accepting the Russian view of the situation, seem disposed to relax their oversight of Greek affairs. Senator Jonnart, the French High Commissioner to Greece, has returned to Paris after concluding an agreement whereby the Greek warships seized by the French are returned to their rightful allegiance. The provisional government established by Premier Venizelos has become wholly consolidated with the new royal government of King Alexander, and the country is once more wholly under one rule. Greek officials who adhered to the ex-King will retain their posts undisturbed unless they have violated the constitution or laws or have taken advantage of their position to persecute the Venizelists.

King Alexander seems to hesitate to abandon neutrality, but if he retains Premier Venizelos in power a formal declaration of war cannot be long delayed. M. Venizelos has telegraphed the Serbian Government that "the Hellenic people, henceforth free, considers as its first care the faithful execution of its alliance with Serbia." This means, of course, war with all the Central Powers, and the numerous Greek settlements on the coast of Asiatic Turkey are apprehensive of a general massacre such as Armenia and Syria have experienced.

The Spanish Situation The Spanish Government is in the curious position of being held in power rather by the balance of revolutionary forces than by any strength of its own. The Carlists, perhaps the least important of the revolutionary parties, are not only working to put their pretender on the Spanish throne in place of King Alfonso, but are also lending themselves to the purposes of German propaganda. There is likewise a pro-German party among the nobility and in the army which is loyal to the dynasty but desirous to force it into the war on the side of Germany. The Liberals are equally anxious to have Spain

join the Entente Allies. Ninety-nine Liberal members of the Spanish Parliament met recently in Madrid to express their approval of the pro-Ally foreign policy of Count Romanones, former premier. Republicans, Socialists and Anarchists, representing three stages of Spanish radicalism, are actively at work stirring up discontent among the people. Most interesting of all is the "home rule" movement in Catalonia. Sixty members of Parliament from this prosperous Spanish province met in Barcelona on July 5 to request the Government to give autonomy to all the provinces, thus transforming Spain from a centralized to a federal nation. If the Government does not yield to this demand a serious revolt may break out in Catalonia. Premier Dato announces that the foreign policy of Spain will still remain one of strict neutrality.

Russian Mission in New York The visit of Ambassador Bakhmetieff to New York, an event of interest in itself, was made more so by an unexpected incident in connection with the mass meeting held in his honor at Carnegie Hall. Ex-President Roosevelt, who was one of the principal speakers of the occasion, opened his address with a strong denunciation of the rioters of East St. Louis who had disgraced their fellow countrymen before the world. Samuel Gompers, president of the American Federation of Labor, replied to Roosevelt by throwing the blame for the riots upon labor agents who had attracted negro laborers to East St. Louis to depress wages. Roosevelt was back at Mr. Gompers in an instant, accusing him of palliating murder. Finally Mayor Mitchel succeeded in recalling the angry speakers and the excited crowd to the purposes of the occasion. Ambassador Bakhmetieff explained that "peace without annexations or indemnities," the formula which has created so much perplexity among Russia's allies, referred to forcible conquests against the will of the people of the country annexed.

American Socialists Condemn War The executive committee of the Socialist Party, meeting in Chicago on July 7, formally announced the result of the party referendum on the majority statement adopted last April by the St. Louis convention. 21,639 party members put themselves on record as condemning without qualification the present war against Germany, and only 2752 exprest their willingness to support the national cause. Among the leaders of the war party were Allan Benson, the Socialist candidate for President in 1916, John Spargo and many other of the party "intellectuals," not including those who, like Charles Edward Russell, have been dropt from the party for their patriotism. The pacifist majority included Morris Hillquit, Victor Berger and Algernon Lee, the three delegates to the Stockholm conference who failed to secure passports from the Department of State.

THE GREAT WAR

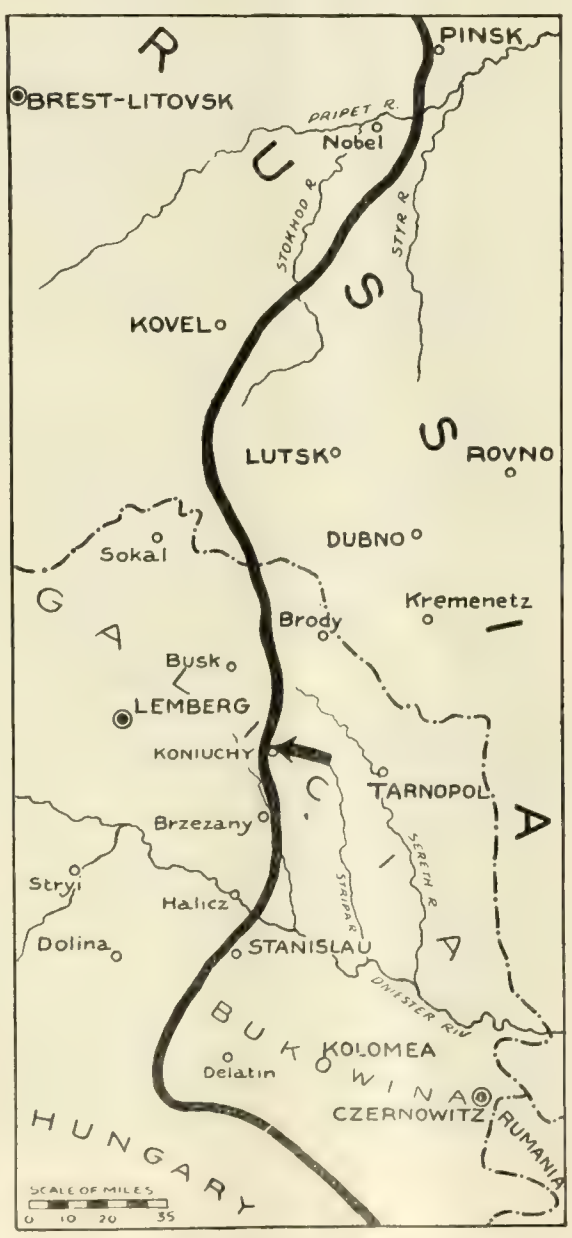
July 2—Twenty British ships sunk in past week. Russians occupy Koniuchy.

July 3—Russian drive at Brzezany. Germans attack north of the Aisne.

July 4—German air raiders bombard Harwich. Russian ministry announces proposed transfer of mines to American management.

July 5—German offensive on the Aisne repulsed by French. British attack near Ypres.

July 6—Canadian conscription bill passes second reading. Russians renew battle in Galicia.



July 7—German air raid on London. Russians bombard Pinsk.

July 8—Wilson announces export embargo. French make counter-attack on Verdun.

Watching the Enemy Within The information apparently possest by the German authorities of the movements of our army and navy has created something of a spy panic. The secret service agencies of this Government have already interned a number of prominent Germans resident in this country as possible dangers to the national security, among them Carl Heyman and P. A. Borgemeister, commercial agents who before we entered the war were in constant touch with the Imperial German Government. There is a persistent demand for a censorship of all cable, telegraph and telephone messages and many rumors that Germans are using our neutral neighbors, Mexico and Venezuela, as information bases for the transmission of secret intelligence from this country to Germany. A conspiracy has been unearthed for the wholesale destruction of shipping in the Great Lakes. A number of recent "accidents" to vessels are under investigation, and instances have been discovered of the misplacement of channel buoys and damage done to canal locks.

In South Dakota a rather startling attempt to cripple the resources of the nation is reported. Certain leaders of the syndicalist labor union, the Industrial Workers of the World, have mapped out the grain fields of the state with the intent to burn crops. A number of grain elevators in the Middle West have recently burned down under suspicious circumstances and Food Administrator Hoover has approved plans for the protection of grain elevators by guards, barbed-wire fencing, lights and the identification of all persons entering the premises.

Indictments have recently been returned against ninety-eight persons charged with conspiracy against British rule in India. A vast network of intrigue is disclosed by the investigation and everywhere agents of Germany have supported and financed the movement. Among those implicated are former German consuls in Chicago, Honolulu, Shanghai, Manila and San Francisco, together with members of the German diplomatic corps at Washington; several prominent citizens of San Francisco, some Hindu students in American colleges and universities, and Hindu laborers of the Pacific Coast.

THE BIG DRIVE IN GALICIA
The black line represents the present Russian positions

Prohibition in the Senate Whiskey disappears from the United States for the duration of the war unless Congress reconsiders the action taken by the House and approved by the Senate in connection with the Food Control bill. The liquor provision as finally shaped by the Senate forbids the use of any foods or feeds in the production of distilled liquors, except for governmental, industrial, scientific or medical purposes; forbids also the importation of distilled liquor into the United States; directs the President to take over for the Government all distilled liquors held in bond when the act goes into effect after paying the owners the cost of the liquor plus a profit of not more than ten per cent. This means a heavy direct charge upon the national purse for the purchase of the bonded liquor and the loss of much excise revenue which was counted upon to help finance the war. Russia, however, made an even greater relative sacrifice in giving up the vodka revenues at the opening of the Great War, considering, as does Congress, that the economic condition of the people bore as direct a relation to military efficiency as the fiscal condition of the Government. The liquor purchased by the Government will be redistilled to make alcohol for military purposes.

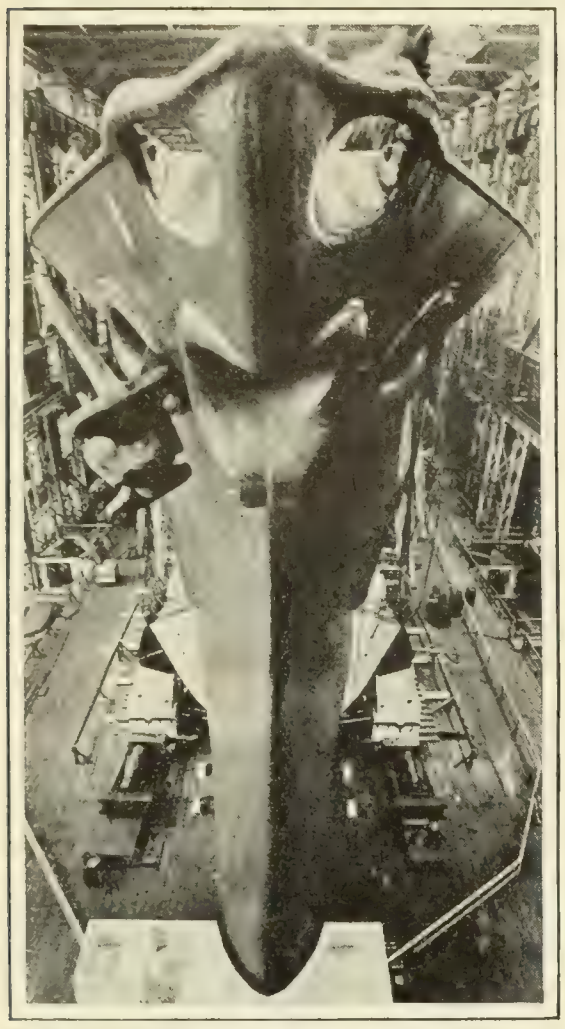
RUSSIA—THE BEAR THAT WALKS LIKE THE MAN WHO CAME BACK

Empire Restored in China The puppet Manchu Emperor Hsuan-Tung is restored to the dragon throne by the intervention of General Chang-Hsun, an able military governor and reactionary politician. Since this Chinese king-maker had command of the strongest army in the neighborhood of Pekin, President Li Yuan-Hung's Government collapsed almost instantly. The President made no attempt at resistance, surrendered his office quietly and was rewarded with the title of Duke of the First Class, altho one report declares that he was killed, another that he was imprisoned, and a third that he found refuge in the Japanese legation. China has reverted to monarchy twice since the republican revolution, once under Emperor Yuan Shih-Kai and now once more under the restored Manchu dynasty.

General Chang-Hsun was designated Grand Secretary of the Empire by Emperor Hsuan-Tung and he will be the real ruler of China as long as his army remains the chief reliance of the new Government. A proclamation by the imperialists announces the policies of the incoming administration. The form of government will be a constitutional monarchy under the Manchu dynasty and the legal code of the republic will be abolished in favor of the old laws. Several concessions are made to public opinion. The expenses of the royal household will be kept down to the size of the civil list under the republic, various petty taxes are abolished, Manchus and Chinese are to have equal rights in all respects and even be allowed to intermarry, Manchu princes will not be permitted to interfere in politics, political offenders are pardoned and no one will be forced to wear the queue unless he chooses to do so. All treaties and contracts now in existence with foreign nations will remain in force.

It remains to be seen whether the new Government is more soundly established than any of its predecessors. Already the southern provinces of China, where republican sentiment is very strong, are in full revolt and a prolonged and bloody civil war appears to be inevitable. One of the forces which overthrew the deposed president was popular resentment at his refusal to permit China to join the Entente Allies in making war on Germany, and yet it is impossible to say whether the imperialist seizure of the central Government is a victory for the war party or not. Japan and the other Entente Allies are thus far strictly neutral as regards the internal situation in China, but they may be forced to intervene on behalf of the safety of their own citizens resident in the country if the impending civil war is very destructive.



The Capture of Koniuchy Beginning with the first day of July the Russian army in Galicia attacked the German and Austrian lines along a front of more than eighteen miles. This movement appears not to have been generally anticipated either by Russia's allies or by her enemies, altho War Minister Kerensky had announced several weeks earlier that Russia would resume the offensive early in July. The first day's attack resulted in the capture of the fortified village of Koniuchy and of more than 10,000 prisoners of war. The head of the Russian advance was formed of "regiments of death" who were informed before the attack that they could not expect to return alive.

After the taking of Koniuchy, the Russians concentrated their efforts on the more important and difficult objective of Brzezany. This city was obstinately defended and a number of massed infantry attacks broke up under the German fire. The Russians, however, extended their offensive on a continuously wider front and every day added to the number of prisoners taken in the hostile trenches. A German counter attack on July 5 resulted in the recapture of some shell craters which the Russians had occupied. An encouraging feature of the Galician campaign is that the Russians are far more nearly equal to their foes in artillery and ammunition supply than at any previous time during the war.

Kerensky Dominates Russian Situation The informal truce between the Russian revolutionary government and the Central Powers is at an end. Not since the close of last year's offensive in Galicia has the Russian army been an aggressive factor in the war. The attempt to send aid to Rumania failed because of the scandalous inefficiency of the Russian civil officials, the coming of winter and the breakdown of the inadequate railroad facilities of the country halted the advance toward Lemberg, the revolution suspended all military operations and since the establishment of the provisional government the Russian army has been hampered by the intrigues of German agents and the disloyalty of pacifist extremists. The renewal of the offensive in Galicia is proof that the leaders of the republic can count upon the loyalty of the army. The Congress of Workmen's and Soldiers' Delegates, suspected of a desire to arrange an immediate peace, voted to send greetings to the army and urge it to continue its efforts. The Congress of Cossacks has offered its support to the Russian ministry and condemned the attempt to establish a Republic of the Ukraine.

This rehabilitation of Russia has been largely the work of one man, Alexander Kerensky, the Minister of War. By appeals to the riotous civilians in the big cities and to the discontented and bewildered troops at the front he has attained his aim of blending the revolutionary impulse with patriotic enthusiasm and spreading his conviction that victory was the only road to liberty. Almost alone among Russian statesmen he has the full confidence of the Socialistic Congress of Workmen's and Soldiers' Delegates and of the conservatively Republican Duma. Not content with harmonizing the internal troubles of Russia, Minister Kerensky insisted on leading in person an attack on the hostile trenches during the advance in Galicia.

The mining commission of the Russian Ministry of Trade has decided to

A MONSTER OF THE DEEP

If you're one of the average folks to whom "all battleships look alike," you'll be a bit puzzled by this photograph of the newest United States superdreadnought, the "Idaho," which has just been launched at Camden, New Jersey. The photographer stood almost under the bow and snapped the ship head on before it slid into the water

transfer to American management a large number of the coal and metal mines of Russia. The coal and petroleum deposits of the Russian half of the island of Sakhalien, which is divided between Russia and Japan, are among the properties which it is proposed to turn over to American development. To relieve the Russian transportation difficulty Chairman Stevens of the American Railroad Commission suggests the extension of American credit to the Russian Government to the amount of $375,000,000.

Our First Big Naval Victory Not until every American soldier of the Pershing expeditionary force had been safely landed at "a French port" did Rear Admiral Gleaves of the convoy squadron make public the news of unsuccessful attacks upon the American transports by German submarines.

The first attack took place on the night of June 22. The disquieting feature of this incident was that it makes practically certain the possession by the German Government of sources of information closed even to the American press. The attack was made in force so far from the French coast that the submarines could not have been merely a part of the German war zone blockade, but must have known with great accuracy the exact course to be taken by the Americans. At least five torpedoes were launched, but none of them struck their mark.

A few days later, after the transports had joined their convoy of destroyers, the Germans again attacked one of the American contingents. The submarines came from the second battle with even less credit than from the first. They not only failed to strike any of our ships, but lost at least one of their own vessels in the attack. After this last attempt to intercept the overseas expedition the transports continued on their voyage undisturbed under the double escort of American destroyers and French warships.

To make certain that there will be no future "leak" of secret information regarding the landing of American troops the Secretary of War established a temporary censorship of press dispatches without waiting for authorization from Congress. When General Pershing's field headquarters are fully established dispatches bearing on the movements of American troops will be censored there instead of in Washington.

Germany's Submarine Disappointment The failure of the German submarine navy to embarrass the transportation of American troops across the Atlantic is but one chapter in a history of disappointment. The first of July was the date fixed by Albert Ballin, the German shipping magnate, for the conclusion of peace by means of ruthless warfare on the merchant marine of the Entente Allies. As an offset to the failure of this rash prophecy, the German Admiralty has recently published calculations to the effect that of ten million tons of shipping available for British use more than half had been destroyed by the first of June and from eight hundred thousand to a million more tons were being eliminated each month. Field Marshal von Hindenburg confidently asserts that if the armies of the Central Powers can even hold their own the German submarines will win the war.

The weekly report of shipping losses issued by the British Government shows that fifteen ships of over 1600 tons were sunk and five ships of smaller tonnage. Sixteen vessels were unsuccessfully attacked. During the same period arrivals at British ports were 2745 and sailings 2846. No week since that ending June 3 has shown so few losses and only twice since February have fewer large ships been destroyed. The French Government has announced the loss of fourteen merchant ships during the month of June and the escape of twenty others which were attacked by the Germans. During the same period the French patrol vessels fought thirty-one engagements with enemy submarines and French seaplanes made eight attacks on them. What measure of success was attained in these contests is unknown. An American transport joined the Portuguese shore batteries in repelling the attack of a German submarine on the port of Ponta Delgada in the Azores.

Discontent in Germany The movement for political reform within the German Empire which followed the outbreak of the Russian revolution has been renewed with increased vigor and has won new and influential adherents. Ten distinguished German scholars and officials, most of them rigid conservatives, joined in a declaration for an absolutely democratic franchise for the Prussian Diet. Almost without exception the newspapers of the Empire acclaimed this appeal and urged the Government to take immediate action, and the Socialists favor action by the Reichstag to override the constitution of Prussia unless the Prussian Diet will consent to reform itself. Chancellor von Bethmann-Hollweg has already agreed to give consideration to the demand for a redistribution of seats in the Reichstag which would conform more closely to the present distribution of population. This, however, would not affect the unsatisfactory constitutional systems of Prussia and the other individual states of the Empire. Theodor Wolff of the Berliner Tageblatt and Georg Bernhard of the Vossische Zeitung have denounced the German Government for forcing the United States to enter the war, and declared that the misconduct of foreign affairs by the German diplomatic service showed the necessity for drastic reforms. It is not surprising of course that the German press should feel this way, but it is perhaps significant that the Government should tolerate such criticism. Maximilian Harden's paper, *Die Zukunft*, overstepped the limit of tolerance and has been suppressed.

The storm center of the German Empire appears to be the Kingdom of Saxony. The Saxon Diet passed a resolution, offered by a Socialist, requiring the Government of Saxony to support reform in all parts of the Empire. The Premier, Count Vitzthun, defied the Diet and refused to pledge himself to any program of imperial reform, whereupon the vice-president of the Lower House warned him that loyalty to the king was disappearing in Saxony and that reform would come if not from the Crown, then from the mob.

Shaping the Army The big drive for army recruits which aimed to raise 70,000 men in one week proved to be a disappointment, enlistments not greatly exceeding a thousand a day. Even the patriotic sentiment appropriate to Independence Day did not increase the number of volunteers daily enlisting in the regular army. By that time twelve states had completed their assigned quota: California, Idaho, Illinois, Indiana, Michigan, Montana, Nebraska, Nevada, Oregon, Pennsylvania, Utah and Wyoming. The total number of men obtained for the regular army since April first was 137,018, or 46,880 less than the authorized war strength of the army. At the present rate of enlistment the regular army may not be completed until the drafted men are called to the colors.

Plans for the draft are rapidly being completed. The Federal Government will select at random certain numbers which correspond to the names of registered men and then the news will be given to the local boards. Many of the local boards have already been selected and the names of their members published in the daily papers. The chief function of these boards will be to pass upon claims for exemption, altho in some cases appeal will be permitted from the decision of the local board to a higher authority. President Wilson in the public instructions which he issued to the boards admonished them that "they are called upon to adjudicate the most sacred rights of the individual and to preserve untarnished the honor of the nation." Porto Rico held its registration day on July fifth, a month later than the rest of the country.

Altho several hundred persons the country over have been arrested and sentenced to various terms of imprisonment for refusal to register, there has been no violent opposition to the law. In Boston a Socialist anti-draft demonstration was broken up by irritated soldiers and civilian spectators on July first, but few persons were injured, and Governor McCall expressed his regret at the incident on behalf of the army and the state. In New York there is much interest in the trial of the anarchists, Alexander Berkman and Emma Goldman, who are charged with conspiracy against the conscription law.

Labor and the Copper Mines As copper is one of the metals essential to modern warfare, particular interest attaches to the present labor troubles in the copper mines of the western states. The mines near Butte, Montana, have been almost completely tied up by the strike of the Metal Mine Workers' Union, which is affiliated with the Industrial Workers of the World, and the sympathetic strike of many of the "regular" unionists. By the end of June nearly ninety per cent of the workers were on strike and all attempts at conciliation had failed. The Metal Mine Workers' Union replied to the reproach that it was unpatriotic to take advantage of the nation's necessity by adopting resolutions calling upon the Government to assume the management of every mine in the Butte district.

In Arizona the labor troubles have assumed an even graver form. All of the copper mines in the Globe-Miami district, where seven thousand men are usually employed, have suspended operations. The Metal Mine Workers established a ring of pickets about the mines to prevent any other miners from approaching them. The sheriff at Globe, Arizona, maintained order by swearing into service a large number of deputies, but as this force was not enough to open the mines or to secure the community against possible future disorder, Governor Campbell came to the conclusion that it was necessary to send a request for federal troops. The Industrial Workers of the World are reported ready to support their branch organization by extending all possible assistance, even to a general strike. Between thirty and forty per cent of the copper mines of the whole nation are now inactive on account of the strikes.

Stock Market Prices For several days following Friday, June 29, the movement of prices on the New York Stock Exchange was affected by the Interstate Commerce Commission's decision in response to the application of the railroad companies for permission to increase their freight rates by 15 per cent. Railroad shares had been firmly held and had shown some strength, owing to an expectation that the decision would be satisfactory to the companies, as their plea had been based mainly upon the greatly increased cost of all their materials and an addition to labor cost which the Government had caused or approved. The character of the decision was not known until the morning of the 30th. Railroad shares showed a loss of 1 or 2 points at the opening that day, but recovery followed, and net changes at the close were small. The Commission's concessions and promise of a review if the situation a few months hence should call for such action had some weight, altho one or two railroad officers were predicting receiverships. The advance granted to Eastern roads was estimated to be about 8 per cent. The full effect upon share prices was to be seen at a later date. Industrials advanced, and the motor stocks were unexpectedly strong. On Monday, the 2d, railroad shares sharply declined, and other stocks went down with them. St. Paul's net loss was 5 points, and its price was the lowest recorded in many years. The interest rate on call loans was favorable, having fallen to 3 or 4 per cent from 6. One-fifth of the transactions were in Steel stock, with prices 1½ points lower at the end of the day. No attention was paid to good news from Russia. There was recovery on the 3d, due partly to purchases by those who had sold for a decline and who desired to close their contracts before the holiday. Railroad stocks advanced a little. Those of two prominent motor companies were very weak.

After the holiday, on the 5th, the downward tendency was shown again by a general decline of prices. The greatest railroad loss was 3 points for St. Paul. What are called war order stocks were lower by 3 or 4 points. The price of Steel Corporation was reduced by 2½. Among the motor companies, Studebaker's loss was 6, and Chandler's 3⅝. Those who saw sales

Clinedinst

THE MEN IN CHARGE OF ALL OUR RED CROSS WORK

Henry P. Davison (at the left) was recently appointed by President Wilson as chairman of the Red Cross War Council in this country. The successful Red Cross campaign for a hundred million dollars was carried thru under his direction. Standing with him is Major Grayson M. P. Murphy, now with General Pershing and in charge of the Red Cross activities in France

of Studebaker at 54¼ remembered that the price had been 85 a week or two earlier, and 110 in January, while Chandler, which fell to 67, was 104 in March. There was no more talk about great profits to be gained by making airplanes for the Government, but much was said concerning high cost of material, new taxes, and a poor market for cars. The Russian army's work favorably affected the price of Russia's bonds, the 6½ per cent issue gaining 3 points, while 5 points were added to the price of those whose rate is 5½. Pending legislation for taxes on excess profits has tended to depress many securities.

The Grain Supply There has been but little change in the prices of wheat. Those reported from the Chicago market are nominal; at least 50 cents a bushel must be added when the grain is bought for immediate shipment. The latest trustworthy unofficial estimates point to a crop of 676,000,000 bushels, or 20,000,000 more than was foreseen by the Government. But this will be a small yield, and only by Government control—which appears to be assured—and a reduction of the quantity ordinarily consumed at home can the surplus needed by our allies in Europe be obtained.

Our exports have been growing. Shipments from Canada and the United States were nearly 8,500,000 a week in June, altho the weekly rate in the first half of May had been only 4,500,000. It is noticeable that weekly exports of oats have recently been multiplied by three. The increases have been due mainly to purchases made by Holland and other European neutral countries which fear that exports to them will soon be forbidden because they have been, and some of them still are, selling food to Germany, whose crops this year will be very much below the average. The price of corn at Chicago is about $1.62 a bushel, as the quantity available in the markets is very small. This year's acreage exceeds that of last year by 10 or 12 per cent.

Loans to Allies Loans from our Government to its war allies now amount to $1,008,000,000. Authority for the use of $3,000,000 in this way was given in the Bond Issue law, and in a little more than two months one-third of the sum has been transferred. Great Britain has received $550,000,000, France $210,000,000, Italy $100,000,000, and Russia $100,000,000. Russia's share may be largely increased if the Government makes a favorable response to the Stevens Railroad Commission's plea for the shipment of locomotives and cars. Mr. Stevens' urgent message from Petrograd calls for so much railway equipment of this kind that $375,000,000 would be required to pay for it. The loans, $1,008,000,000, made since the last week in April, may be compared with $814,000,000 advanced in the year 1916 by investors here to England, France and Russia on the security of their war bonds.

The Pogrom in East St. Louis From the first to the third of July East St. Louis, Illinois, was in the hands of a mob and the scene of a race war between whites and blacks. By the time the authorities of the city and state had the situation once more under control twenty-nine persons, of whom twenty-five were negroes, had been killed, many scores were seriously injured and more than three hundred houses burned to the ground. The fighting began with an attack by a mob of armed negroes upon an automobile containing several policemen. In retaliation the white men of the city slums resolved to wipe out the negro quarter. After a number of buildings had been fired the mob shot down the black men who tried to escape from the flames. Women as well as men attacked the street cars and dragged negroes from them to be beaten or killed in the streets. Many instances were reported of the cold-blooded murder of refugees by individuals who hung about the outskirts of the crowd or even kept aloof from the rioting altogether.

The massacre in East St. Louis was but the last and greatest of a long string of riots and disorders which have marked the relations between the two races for several months. In origin these troubles were due more to economic jealousy than to race hatred. The high wages in northern towns, due to war conditions, have drawn several hundred thousand negroes from the southern plantations to improve their fortunes by migration. East St. Louis received more than its share of the new supply of cheap labor. Labor union agitators spread the report, which was eagerly believed, that the manufacturers intended to displace white men by southern negroes who would work for lower wages and put up with less favorable conditions and to attain that end had sent agents into the South to persuade the negroes to come to East St. Louis. Almost as much resentment would have been shown under these circumstances if the immigrant laborers had been Chinese, European aliens or even native American "scabs." The evident intent of the mob was to establish a reign of terror which would frighten away the negroes who had come in search of work and prevent others from coming in their place. It is still a mystery why such an outburst of lawlessness was permitted to gather head in view of the many warnings of trouble which the authorities had received from previous troubles of the same character, tho on a smaller scale.

THE EAST ST. LOUIS REIGN OF TERROR

Twenty-five negroes were killed and a large section of the black quarters wiped out by fire in the three days' massacre of East St. Louis. The chief incentive seems to have been labor rivalry rather than race hatred

DOCTOR DU BOIS

THE PASSING OF "JIM CROW"

BY W. E. BURGHARDT DU BOIS

AUTHOR OF "THE SOULS OF BLACK FOLK," "THE NEGRO"

URGED by the Negro's "best friends" in the South, Americans continually assume that he is exceptional and does not respond to the ordinary impulses of human nature or to the ordinary laws of economic change. If he is enslaved, we are assured that he likes slavery and is fitted for nothing else; yet his systematic running away from slavery and attempted revolts precipitated a Civil War in which 200,000 black men fought for freedom. When freedom and education were offered the Negro his neighbors who "knew him best" assured us that he could never become a free workingman and that it was impossible to educate him.

When the Negro became a free worker and reduced his illiteracy two-thirds we were assured by the best opinion of the South that the "second generation" of young Negroes were naught but criminal spendthrifts who must be curbed by peonage, extraordinary vagrancy laws, a rigid caste system, and occasional lynching. When a remarkable accumulation of lands and property, and the rise of black men of ability and insight proved all these dogmas of the white South to be mainly unproven assumptions born of slavery the South doggedly answered by a series of disfranchising and "Jim-Crow" laws.

Under such circumstances what would one expect the Negro to do? Leave the South and Southern conditions? But for years he apparently did not leave and the South cried triumphantly: "He loves the South! He does not want to vote! He knows that he is inferior!"

Was this true? Let us see.

Slavery meant a fixed place of labor and fixed employers. The most effective revolt against slavery was the Underground Railroad for fugitives organized by Negroes and whites in the fifties. This was the first migration of Negroes and it added considerable numbers to the Northern Negro population. The most effective result of Emancipation was to accelerate this movement suddenly and to send the freed men not only northward but to various neighboring states.

In 1880, sixteen per cent of the Negro population, that is, over 1,000,000 persons, were living in states where they were not born; this migrating population increased 100,000 between 1880 and 1890. Between 1890 and 1900 it increased still faster, reaching in the latter year 1,370,000. Between 1900 and 1910 it increased 240,000, so that in 1910 a larger proportion of our colored population lived in states other than those in which they were born than ever before. This represents a large migratory movement, probably larger than most other groups of ten million in the world can show.

Why did these people move? Despite all efforts to becloud the issue and despite well-known exceptions the grievances of the colored population in the South are perfectly clear and well-understood by them and by their friends. They may be set down as follows:

1. Low wages and mediaeval working conditions.
2. Insecurity of life and limb.
3. Insecurity of property.
4. Disfranchisement.
5. "Jim-Crow" legislation which means persistent public insult in almost every walk of life.

These grievances do not mean that the white South has been wholly stationary or reactionary. The South has moved and moved tremendously in its attitude toward blacks since 1863. Slowly, very slowly, but surely it is coming to realize that lynching is a poor investment for an industrial community; it is beginning to believe

that intelligent labor is better than ignorant peons; it knows that the methods of enforcing "Jim-Crow" legislation and caste customs are unjust, disgraceful and dangerous, and it sees in the near future the ousting of political oligarchy by real democracy from which it sees no way to exclude, permanently, Negroes or women.

All this is true and here most American philosophers seem content to rest and sing. But the truth is far more complicated than this indicates. Fast as the white South has moved, the modern world and the Negro have moved faster. The white South with all its increasing liberalism has not begun to keep pace with the advance of modern philanthropic thought or with the expanding power and aspiration of 10,000,000 people of Negro descent. The South still remains, compared with the rest of the land, provincial, lawless, and oligarchic.

Grant all that may be claimed as to the advancement of the white South, it remains true that no modern white laborer would for a moment submit to the labor conditions under which the mass of Negroes work if he could escape; no modern white laborer would submit to the labor conditions under which the mass of Southern white laborers work if the competition of the Negro's low wage did not compel him.

What is the result? The intelligent black laborer does not propose to submit to present Southern conditions a moment longer than he must.

Whither can he escape?

THERE have appeared to him several possibilities:

1. To fight his way up in the South.
2. To go to the free land in the West.
3. To go to freer conditions in the North.
4. To emigrate from the country.

His effort to fight his way up in the South rested on faith that the spiritual and social development of the white South would progress so fast that oppression of the Negro and unbearable caste insults would slowly, perhaps, but certainly disappear. In this thought he has been grievously disappointed. Disfranchisement has increased rather than decreased; lynching has not perceptibly lessened; common school training for blacks is worse today than twenty years ago; industrial legislation to hamper Negroes, segregation ordinances, and discriminating laws have become more numerous.

In spite of this there has arisen a persistent effort, backed by unlimited Northern money and influence, and advocated by certain leading Negroes, insisting that no matter how shamefully the South treats the Negro, the Negro must stay there and that his only salvation is humble submission.

The Negro did not accept this philosophy. He never has accepted it and he never will. Quietly and persistently he has sought to escape from the slave-shadowed South and he is still seeking.

The Negro's effort to migrate West began in the celebrated Kansas "Exodus" in 1879 and culminated in the Texas-Oklahoma rush in 1900-1910. Lack of capital and unfamiliar crops kept most Negroes out of Kansas and the North while savage lynching and unprecedented "Jim-Crow" legislation discouraged them in Texas and Oklahoma.

The effort of Negroes to migrate to Africa and elsewhere is one of the most disreputable chapters of American pseudo-philanthropy and need not take time or space here. This left the North as the one haven of refuge and into the North the Negro has gradually filtered.

BETWEEN 1860 and 1910 the Northern Negro population increased from 350,000 to 1,075,000, indicating a migration of at least 200,000 persons in addition to the natural increase. This is a considerable migration but small when one considers all the circumstances. Why did not the black workingman rush North faster? Three factors hindered:

1. European immigration.
2. Northern prejudice.
3. Fear on the part of Northern Negroes.

The European migration was the really active competitive factor and it reached over 900,000 a year, 1900-1910, bringing in men and women who bid for precisely the jobs that the average Southern Negro wanted.

Secondly, the Northern racial attitude was sufficiently uncertain to make the Negro immigrants hesitate and this uncertainty was increased by a persistent Southern industrial propaganda in the North decrying Negro labor, and in the South by alleging that the Negro could not get work in the North. Northern labor unions quickly seized this opportunity to close their doors to Southern competition and received here public sanction which they could not get in the case of immigrants.

Finally, the Northern Negros were bidding for higher places in the industrial machinery and gradually getting them. They feared that wholesale Southern migration would arouse prejudice and dispossess them.

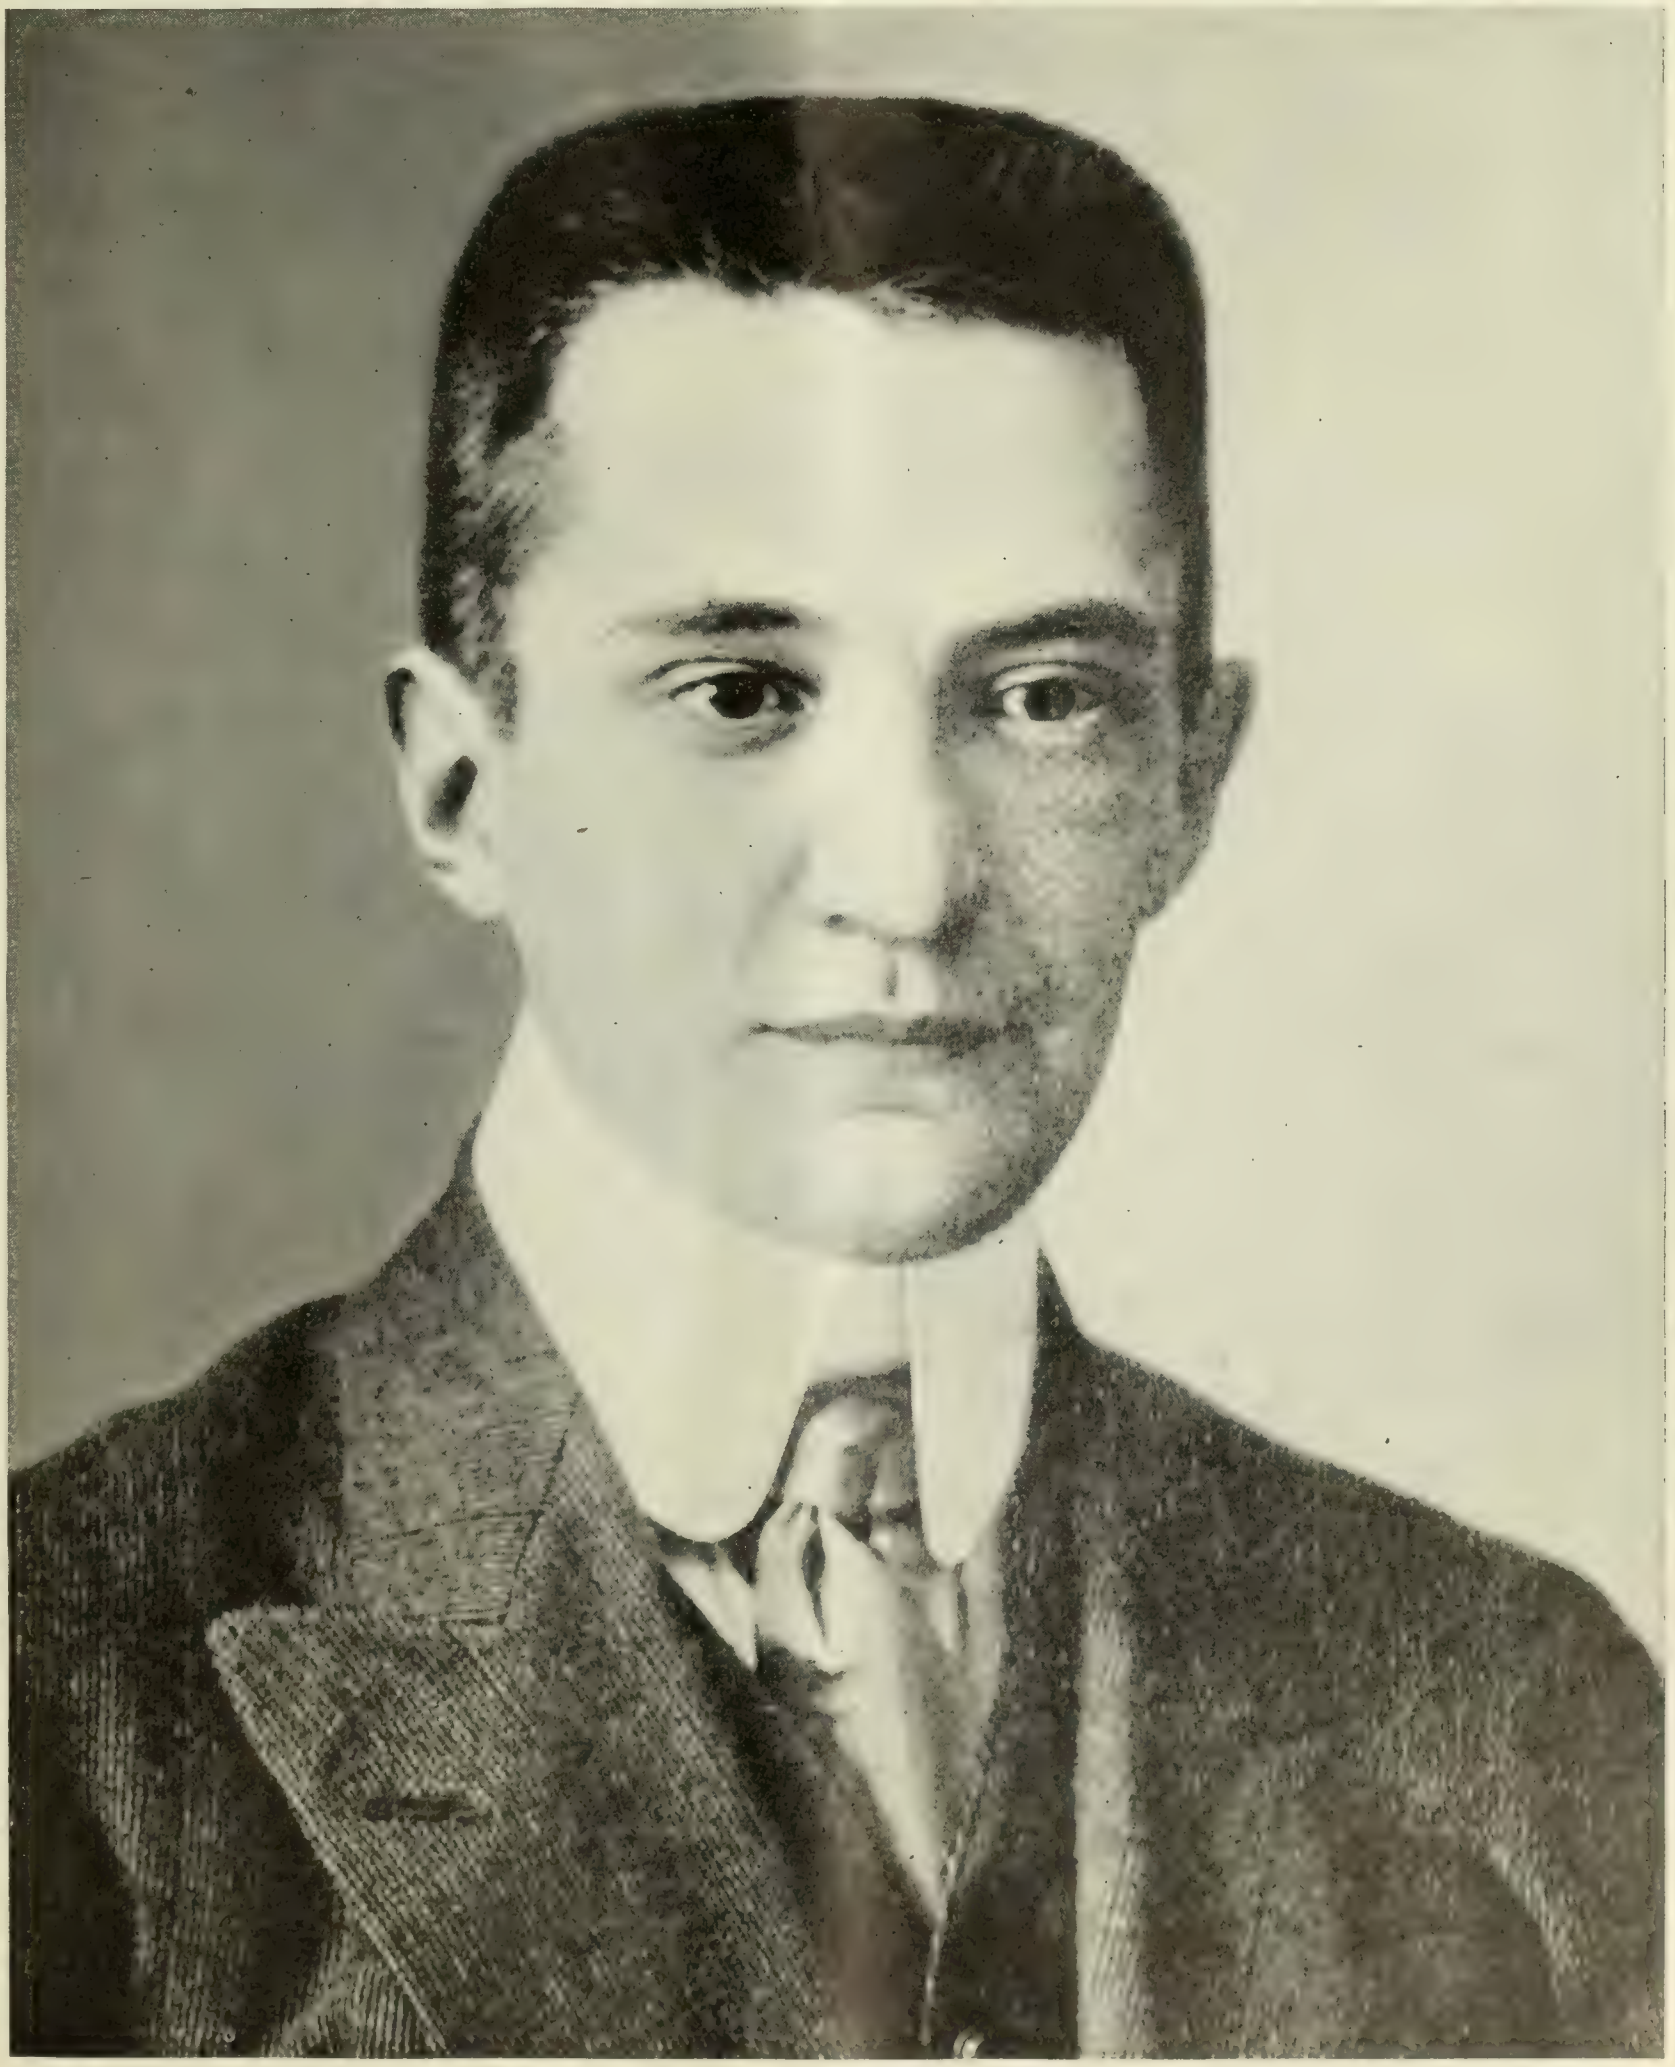
This was the situation when a foreign immigration of over one million a year in 1914 suddenly fell to 300,000 in 1916, and was balanced in that year by at least 150,000 persons returning to Europe. A sharp, new demand for common labor arose and railroads, builders, and various industries turned to the South.

A curious industrial war ensued. Every effort was made by the South to keep knowledge of new oportunities from the Negroes and to prevent them, even by force, from leaving; wholesale arrests were made and "emigrant agents" were taxed as high as $2500 for the right to operate. Despite this, great corporations like the Pennsylvania Railroad imported Negroes by the thousands and estimates of the total migration run into the hundred thousands.

What does this portend for the future?

The present movement is largely tentative. Perhaps 100,000 permanent Negro immigrants have located in the North during 1916. The future movement depends on the European war, the industrial acumen of Northern business men, and the organizing ability of Negroes.

We often preen ourselves on the keenness of American industrial leaders and our industrial history proves that in many cases we have a right to do this, but certainly in the treatment of Negro labor Americans are peculiarly obtuse. They have today at hand not simply a mass of good-natured laborers who, because of the past, are unusually appreciative of reasonably decent laboring conditions and fair wages, but they also have a growing class of young, intelligent colored men and women capable of doing excellent work in the higher walks of industry, capable even of leading American industry and commerce into parts of the world where the darker races abound and where these same races are increasingly resentful of their treatment by whites. Instead now of our seeing an intelligent movement in America to better the condition of Negro labor, and to open the doors of opportunity to its higher representatives we find the country largely concerned in forwarding an effort to make migration from the South difficult, if not impossible, and industrial welcome in the North unlikely. The Negroes are invited to remain in a land which annually lynches from fifty to one hundred accused colored men without giving them even a semblance of a trial and which allows practically no colored man to have a voice in his own government.



Moreover, when the Negro, breaking away from tradition, advice, and pressure, comes to the North, how is he welcomed? Instead of always finding work under modern conditions the conditions are too often lowered to "fit" him.

THUS we come back to our first proposition. The Negro problem consists of the refusal of America to learn or admit that the same laws of social development hold in the case of black as of white workers, and this is all the more astonishing since hundreds of thousands of these workers whom we call black are black only in the sense that they have had a black grandfather.

If for a generation after the present war European migration is restricted the Negro will have an economic opportunity which no bourbonism can wholly close; if migration is increased by the European catastrophe then the Negro will more and more be thrown back on the peculiar inner economic coöperation which he has been organing on a rapidly growing scale for years in the South and which is now moving North. But that is another story.

THE SEVENTH VIAL

BY WILLARD WATTLES

These are the days when men draw pens for swords
  Hurling hysteric bombs of epithets,
And girding on the glory of great words,
  Storm the embarrassed parapets.
Words, words,—"Democracy!" they cry,
Who pass their neighbors with averted eye.

America, my country, not with the lesser love
Do I, thy son and lover, set the flame
  Cleansing thy shame,
But only that I know what love is molded of.
That here for us in these United States
  Where still the dullard prates
  Of the propitious fates,
Democracy as yet is but a name!

A name for demagogs to juggle facilely,
A tinsel ball to catch the crowd and mock it
While deft confederates with razor-edge set free
The staring burgher's plump distended pocket.

The trumpet blows to war and youth upstarts
      With shaken hearts,
Stirring to all old splendors of the past,
Knowing that we are heritors of glory
Whose names shall stand in story:
  The die for us irrevocably is cast.

For youth has never shrunk to pay the price
Of the recurrent sacrifice.
      It is youth's prerogative to do
      What gray age tells them to,
      With song upon our lips
      Facing the last eclipse;
Death never waits to summon young men twice.

      Youth is ready to lay down
      Strength of foot and body brown,
      Glow of eye and red of lip,
      Supple knee and clinging hip,
      Sting of health and gracious breath,
      All to weave a crown for Death.
      Youth is ready, stripped to run
      That immortal Marathon.

And so the khaki clothes glad limbs once more,
The rifle's shouldered, and the quick-step starts,
The old flag billows, deep male cannons roar,
  And honor draws our hearts.
To die for one's country, that is bliss—
  But what of this:

      Old men have a bitter tongue,
      "So were we when we were young;
      Now that we have wavering knees,
      Blessing fall on subtleties!

      "Youth would find a foe to fight
      When his heels and heart are light;
      Now that we have wavering knees,
      Blessing fall on subtleties!"

      Ah, old gray-beards, howdy-do,
      Here's a subtlety for you:

Out of the crush of cities, maddening lights,
Exotic gardens of obscene delights,
The turmoil of the elevated overhead,
Faces that one passes set and dead,
Men's faces with slack creases at the lips,
And women mostly eyes and smell and hips;
  There burns one vision of a summer night,
The night that England set her hand to war
Remembering her Waterloo and Trafalgar,
And men had gathered in the midnight glare
To watch the bill-boards posted at Times Square.
When I saw the German waiter who had lately brought my
      dinner
Stand beside me in the crowd with face grown sudden thinner,
And hand met hand but with a manlier grip
Than I suspected when he palmed my tip:
  "You're going?" "Yes, the 'Vaterland.'
She sails on Wednesday. And I'm glad to go."
  "Auf Wiedersehn—"
                  He'll not come back, I know,
Yet I am glad I knew that different hand.

Just as the sense of all it meant struck home,
The broken bodies spumed with bloody foam,
The towzle-headed boys who scarcely knew
One of life's joys before death thrust them thru,
Staggering women learning how to plow
And children starving for milk of one lean cow,
  There in the crowd upon the unshamed Square
I saw two men and a woman with red hair.
Her white arms gleaming, with dimples in the bends
Familiar with the shoulders of her friends;
Two men, one woman, but they scuffled there,—
Let Europe tumble, ten million young men die,
"Aw, quit your kidding, you're the lucky guy,
This is the life"—it's midnight in Times Square!

      Not in Manhattan only
      But in lonely
Forgotten villages upon the plains
Men still are forging their invisible chains
      Out of misplaced endeavor
That bind them to hoar Caucasus forever.

America is still the awkward boy,
      Hobbledehoy,
Knowing no joy except in birds' nests or the mood's employ.
Stranger to heart-sweetening laughter,
Tooting horns and running after
Each his own peculiar grafter,
  Reckless in all things, trying all by turns,
  Here hits the saw-dust trail, there a negro burns,
  Mortgages his home to buy a motor-car
  Still hitching wagons to a darkened star,
With something still of the strange whim of boys,
Thinking that man most great who makes the loudest noise.

And yet we need not be the thing we are.
There is a greater war,
  The War at home!
And tho we go abroad
With the avenging rod
Calling ourselves from God,
Upholding now the desperate hands of France
  In crater-scarred advance,
And tho to Mother England now we swarm
  Under her wearying arm,
And tho to Russia we in faith extend
  The warm hand of a friend,
Restore to Belgium all of what she lost
  Haloed in holocaust,
And tho we win and break the brutal Hun—
  Our task will not be done,
      But just begun.

There is a War, a greater War, at home,
  Not whistled by shrill fife,
  But still a war to knife.
    For more than life.

America has need, oh, pitiful, utmost need
Of the old breed here in our weakened seed
  The spawn of mighty fathers, Jeffersons and Lincolns,
    Washingtons,
  And shrewd-eyed "Richard" with his almanac.
We have lacked something, we oblivious sons,
  Something we must win back.

A few there are by some direction sent
As if our fathers still were provident,
And gave us in this hour, a president.
  Thank God, thank God for Wilson!
      He has set
His hand against all bluster and it dies,—
  The ancient verities are with us yet.

This is the hour I saw the angel stand
The seventh vial in his hand.

This is the Armageddon prophet-told
When seven hills give up the dead they hold.

When shines the angel in the bloody sun
And in the darkness Cæsar is undone.

This is the day the flaming planet swings
Back to the sun from lonely wanderings.

And this the revelation shall not cease
Till ye have seen the perfect Prince of Peace.

So, oh, my country, follow, follow far;
Tho this is war, there is another War!

A NEW VOICE FROM THE WEST

BY HARRY KEMP

ONE of the most significant phenomena in the literature of the day is the preoccupation of its novelists and poets with the life and character of Christ.

Even George Moore, that exquisite artist in gossip and vulgarity, whose spirit is so alien to the imaginative reaches of Christianity, turns to a New Testament theme, in his recent work, "The Brook Kerith."

And, on dipping into the current literature of the day, one finds that even radical magazines like *The Masses* are remarkably theological in their content, so much so that future students of life in this era will probably tabulate them, not as revolutionary periodicals, but as the special organs of peculiar religious sects that obtained in the twentieth century.

There comes out of Kansas the voice of a new American poet whose clearest and most inspired note is the proclaiming of the love of man for man, as Christ taught it, as the only solution for the problems of present-day life:

"Who art thou, Carpenter
Of the bowed head,
And what buildest thou?"
"Heaven," he said.

Like Vachell Lindsay, Willard Wattles in his poetry smacks genuinely of modern America.

Back of him spread the wide, blue spaces of Kansas sky, around him roll the endless acres of the West—not the vaudeville West of swearing, manly cowboys, marauding Indians, and herds of stampeding cattle—but the New West, the West that gives votes to its women as a matter of course, supports great democratic co-educational universities, bringing culture to the very door of the people, while back of all stands a pastoral sense of the intimate union of labor and and the life of thought and art, a simplicity of life consonant with rippling miles of wheat and whole counties of green-bannered corn.

Willard Wattles is a young professor in the University of Kansas.

With the exception of a few years' teaching of English at the Massachusetts Agricultural College, his life has been spent in the West; and he has accepted the color of his country, and the vastness and simplicity of it, tho much study and thought have made his ideals and sympathies universal.

I think that a poet should begin in open spaces.

Being born and brought up in Kansas is the greatest possible thing that can happen to an American poet, if afterward he becomes a mental adventurer in the world and gets the visions and dreams that made Greece and Rome, and are making the world of today.

Mr. Kemp is already known to Independent readers thru his own verse "To the Kings," "The Whips of Life," "Unnumbered Worlds," "The Seekers After God," and others. His comments here on Willard Wattles' work and personality are particularly interesting in view of the long friendship between the two poets when they were both students in Kansas.—THE EDITOR.

And wheat fields, and wood doves moaning in Osage orange trees by the straggling lanes, are just as informative and inspiring as clipped hedgerows and nightingales in the dusk. The whippoorwill singing under a western moon is an unforgettable ecstasy.

Neglect no small beginnings,
Despise no village dearth,
The influence of Nazareth
Went out to all the earth.

In one thing, at least, there is a great similarity between the West of our day and the Judea of the time of Christ. There, as it was in the Judea of that time, it is looked upon as better to be earnest even to fanaticism than superficially clever, to be intense even to narrowness in one's desire for political, social, and spiritual righteousness, rather than off-handed and blasé, and willing to call apathy and slackness comprehension and tolerance of the other man's point of view.

Wattles is a poet in whom this religious and social consciousness is strongly developed.

A man who has plowed fields, who goes out and works on farms and ranches every summer getting in the harvests, as he does, cannot help but do a little fundamental social and religious thinking, and to such a man the thought of Christ, the Christ whom dogmas have belied, the great, simple carpenter—the thought of Him must come *and stay!*

And to read the New Testament in haymows with the light of a lantern, before rolling up in one's blanket, must bring to one all the reality and poignancy of the parables and sayings of Christ. As one reads the olive leaves must again glisten like bronze in the mid-day sun, and the lilies grow white and splendid without taking thought for the morrow, the fishers cast and draw in their nets with play of practised arm and hand, the bleating sheep go on before the shepherd to their nightly fold.

Then one will see, as Wattles does. the Christ who lived both grandly and simply, who lived for the morrow by wholesomely living for the day, who loved all mankind, who taught a generosity of life and a generosity of spirit such as to put philosophers like Nietzsche and Schopenhauer to shame for their own littleness.

Just to dare to be
One's simple self, to think, to love, to do,
And not to be ashamed; to live one's life
Fearless and pure and strong, true to one-
self,
Tho the false world were full of lies and
hate,
Where blind men lead each other thru the
dark,
Too weak to sin, ashamed of what is good,
Unable to do evil, thinking it.

The New Testament belongs to the open air, to the outdoor work of the world; and whoever goes about the fields and the herds, or down to the sea in ships, should bear his copy with him.

There is no denying the fact that enviroment reacts on the soul as well as on the body, and that the great realities of life and the spirit are, in a measure shut out by restricted and hampered horizons and close-drawn doors and windows.

The world has always expected that, in the ripeness of time, great things would come out of the West—great artists and great writers and great leaders in social reform.

And it must be so. Horizons must count for more than huddled roofs, despite Genius that has dwelt in attics and had visions in cities. —and vistas of hills and plains surely go deeper into the imagination and soul than cramped and twisted streets noisy with traffic.

New York City

WILLARD WATTLES

WAITING FOR THE DRAFT

"THE BACHELOR 'E FIGHTS FOR ONE AS JOYFUL AS CAN BE;
BUT THE MARRIED MAN DON'T CALL IT FUN, BECAUSE 'E FIGHTS FOR THREE."

HURRY UP!

BY NUMBER 63

THE barber shop and the long line of waiting men were sufficiently familiar. I had seen the same men waiting with the same patience on the days of election, registration and the primary, or even on an ordinary rush day in the shop. To answer all the questions on the enrollment blank took longer, however, than to vote a blanket ballot or to get a close shave, and the line of waiting men lengthened while we waited until it extended past the policeman and the Man in Khaki who guarded the door. A crowd of American young men always expresses its impatience in jests. Whenever any one claimed exemption, or got tangled in his answers, or gave an address from another registration precinct, some one would make a humorous remark which rippled down the line. The air was so hot and still, that at last, in response to repeated hints from the crowd, the barber turned on an inadequate electric fan. "Here comes the draft!" we shouted. Finally we managed to escape from the crowded shop and the visibly worried barber (I think he was a German), with the little blue cards which proved our right to walk the city streets without being locked up. If any of us were particularly enthusiastic, deprest or anxious over the registration we concealed the fact behind that emotionless mask that covers the face of every New Yorker.

My own chief feeling was one of relief. I was glad to have the Government take the decision from my uncertain hands and tell me in plain, explicit fashion that if I were wanted I would be summoned and that if the war could be carried on just as well in my absence I could go about my daily business with good conscience. Before Congress passed the compulsory service law my conscience had been giving me a good deal of trouble, or, to speak with greater accuracy, I had two consciences that held nightly debates. One of them would say "How will you feel, you who have declared this war wholly just and necessary in frequent writing and still more frequent conversation, if you do not prove the sincerity of your words by some self-sacrificing act? Why don't you volunteer?" But the other conscience always had an answer ready: "Who ever told *you*," it would scoff, "that you would make a soldier. You have the physique of a bookworm, you are as ignorant as a baby about the soldier's duties, you would be only a handicap to any army. Whatever you are now doing, you are doing it more competently than you could perform the specialized task of modern warfare."

But to have my Uncle Samuel settle the question for me was so satisfactory that I began to understand why mankind has thruout the ages so readily submitted to the rule of kings and bosses. It is so much easier to do what one is told than to figure out for oneself what should be done. I almost sympathized with the Jesuit in his description of obedience: "Oh, holy and blessed liberty by which one becomes almost impeccable."

But a quiet conscience is not the same as a quiet mind. To the registered man—I think I now speak for the whole ten million of us—the majestic deliberation of the Federal Government in arranging the details of the draft was distinctly unpleasant. It is a long time from the fifth of June to the first of September, the probable date for summoning the first contingent of drafted men to the colors. In the meantime every plan which looked many weeks toward the future was clouded with an "if." One accepted a job with the implied provision "—unless summoned for military duty." I do not think I have felt any particular anxiety as to the result of the lottery at Washington. I am untroubled with any scruples as to killing the enemy (tho I have some doubts of my ability to hit them), and, while I share the common human objection to being killed, the risk is too distant and problematical to arouse the emotion of fear. But any kind of uncertainty, especially when it involves one's whole future, becomes in time a strain even when one is prepared for either outcome. I feel like a candidate for office after election day when the returns are delayed. And if President Wilson wishes to do me and my fellow-registrees a favor he should hurry up with that selective draft.

MY DAILY JOB

BY A MARRIED MAN

IN my paper this morning I find the names of three men who will make a decision, within a fortnight or so, which has greater import for my wife and myself than anything which has occurred since our marriage. I have never heard of any of them. Theoretically they are my neighbors; but I have not had even so slight a connection with them as would be involved in checking their names on a city ballot. Except that one is a physician, whose mind has presumably become professionalized on matters involving life and death, I know nothing of their principles or practises.

Yet, technically these men will decide whether my country or my wife has the stronger claim on my life and endeavor. They will settle a question which under the volunteer system would have been left to my own conscience.

It is a thoroly ironical state of things. For months before the war came, I believed, like thousands of other men in my situation, that the nation must fight, tho I recognized something of the stupid futility of war and regarded with some suspicion the whole militaristic propaganda. Even then I could not escape the realization of inconsistency, for I did not wish nor expect to volunteer unless the war took an unforeseen turn.

Now, tho I believe we are rightly at war, I am preparing to enter a formal claim for exemption from taking a personal, bodily part in that war.

And I am to be exempt—if at all—not because my education and professional training fit me for almost anything rather than the trenches; not because my unit of personal power would depreciate very considerably if it were applied there; not because the thought of participation in organized but none the less individual murder is as odious to me as any experience so far removed even from the reach of imagination can be; not because a woman's happiness and the social potency of a family are involved; but solely because my wife happens to have no independent means of support. The nation asks me not how I can most effectively serve her, nor whether I can bring a free conscience and a willing mind to her dreadful work, but whether I married a rich woman or a poor one! Even if I were not married, unless I were a munition maker or farmer or Quaker, or fell in some other rather narrowly circumscribed class, the Government would simply not be interested in these other qualifications.

This irony is most patent in the case of my friends who are not married, but who will be, none the less, relatively

thrown away if they are called into the army, men who could offer the nation no common endowment of intellect and idealism, and no small equipment for other service. I have been troubled in thinking of them. I know my life has already brought me richness which they cannot have experienced. It seems unjust that they should jeopardize their unfulfilled lives to preserve the conditions that make happiness possible for me. And yet I cannot but believe that a different distribution of the hazard would involve so much more suffering that it would be still more unjust.

To some of them, as to me, the coming of conscription was in a sense a relief. We have agreed in conversation that its effect has been to take off a man's shoulders the agonizing indecision which, in a sensitive mind, must be a corollary of the volunteer system. For me, there is the assurance that, wholly independent of any decision of mine, the fact is recognized that the nation does not now need in the army any man who cannot answer her call without relinquishing the responsibility he assumed at his marriage.

I believe that my conscience is clear of a desire to shirk military duty for fear of the consequences to myself. And yet, on the surface, I seem to be out of the current. I know it will sometimes be hard for me to remember that I have played a part in the great enterprize by simply doing my own normal work as well as I can. Perhaps my children will fail to understand, and will regret the part I play; but if the next generation makes progress as great as our own toward comprehending the social implications of war and its national technic they will recognize perhaps more readily than I do now, the validity of the service that men in my class are rendering.

At any rate I shall probably never work out for myself, now, the choice between the two horns of the dilemma which war imposes: to fight knowing that not to fight is to lose the thrill of perilous sacrifice shoulder to shoulder with men of one's own generation; or to fight knowing that war is always cruel and often ineffective, and conscious that my participation may mean nothing more than watching myself and my fellows sink in a maelstrom of horror and insanity.

I have tried to find an opportunity to serve in some other way. So far I have not succeeded. My wife and I are willing to sacrifice for such an opportunity, and I am confident that I could be useful somewhere in the official or unofficial scheme of things. Perhaps some day men such as I will be mobilized for the work we can do best. In any event, I know that my daily job is at least an infinitesimal addition to the national resources. But like most men I am not satisfied with that logical conviction; I want to be geared more directly to the national machinery.

Meanwhile, not wholly at ease, I am awaiting the draft. I can reasonably expect to be exempted—this time. But I know the war is likely to be a long one. I know that my theorizing about my responsibility will crumble before the stern necessity which may yet come. I know that married men here, as overseas, will serve ultimately if the nation's strength is really challenged. I know that—together—we may yet find ourselves in the maelstrom.

IN THE MATTER OF IRELAND

BY SEUMAS MacMANUS

AUTHOR OF "YOURSELF AND THE NEIGHBORS," "A LAD OF THE O'FIELS"

IN the County of Longford the other day the people elected as their Parliamentary representative a convict, a young man, who was breaking stones in an English prison. He was, a year ago, convicted of the fearful crime of fighting for the freedom of a small nation. If he had been a Belgian or Serbian, fighting for his country's freeing, he would, very properly, have been a hero on whom England would have hung medals. But as he was only an Irishman fighting for Ireland's freeing, he was, of course, a rebel, and, by English officers and gentlemen was very properly branded a criminal, very properly convicted, and very properly transported. Before the said Longford incident there was another Irish election—in Roscommon. The people there elected an old man who had just come out of an English prison camp—his crime having been that he had had one son transported, and another son shot, for fighting for the freedom of a small nation. If the small nation for which they suffered, had been trampled upon by the Hun, England, lover of liberty, would of course, have gone wild with enthusiasm over the venerable hero and martyr—but, as the little nation happened to be one "protected" by the champion of liberty, English officers and soldiers wrecked his house, wantonly smashed all the beautiful objects of art which the old man had spent a lifetime gathering, pocketed the money in his wife's escritoire, and cast the aged venerable couple (against whom there was never any charge) into a dirty cell without seat, bed or food—and afterwards deported them to an English prison camp.

I dwell upon these two incidents for the purpose of impressing upon my readers—however much they may dislike the impression—the fact of which the English cable has, thru an oversight, forgotten to inform them—that the Irish people are just as earnestly and determinedly striving to drive the English conqueror out of Ireland as are the Belgians to hurl back the German invader—and win their liberty.

These two "traitors," elected for the purpose of hammering into the English mind that Ireland is defiant and determined to break the English yoke, were so chosen, despite all the efforts of Mr. Redmond, who was the people's leader until he strove to compromise Ireland's full claims; and despite the political machine which is entirely in Mr. Redmond's hands; and despite all the moderates and conservatives who counsel going slowly and winning and accepting liberty by instalments—the instalment in sight being "Home Rule."

Irish men would not be men, and would not be worthy the respect of friend or enemy, if they did not stand, as they do, determinedly and uncompromisingly for their country's absolute freeing from enslavement (whether real or only nominal) by foreign power. Even that diplomatic portion of the Irish people which still clings to the policy that they should at first aim for, or pretend they only want, Home Rule—even this conservative portion (still supporting Mr. Redmond) desire ultimately, to see Ireland completely independent. So, however the Nationalists of Ireland may differ as to the means direct or indirect, slow or fast, of reaching their goal, still, to all, it is the same goal—absolute freedom.

Americans who have had the psychology of the Irishman thrust upon them, who know his itch for power, his restless ambition to rule, must know that if Ireland were bound to the car wheel of the conqueror by, not chains, but only silken threads, these silken threads would fester Irish limbs.

So much for the purely Irish in Ireland, but we have the Hyphen there—and in an aggravated form that Americans never dreamt of. Three hundred years ago, James the First drove from the six most fertile counties in Ulster all of the Irish that had, till then, survived, and gave their lands to his Scotchmen—one thousand acres of the richest lands in Ireland to each Scot whom he had brought over. The descendants of these people are in America called Scotch-Irish. Among their descendants in Ireland today flourishes the Orange Society, formed to put and keep the Pope and all Papists in their right place—a place where the high price of coal will never worry them. And these people, after living and enjoying the confiscated garden spots of Ireland for 300 years, are still Hyphenates, not only fighting to uphold the rule of a foreign autocracy in Ireland, and the worst measures which that autocracy can conceive for humiliating the country that ought to be theirs, but also unceasingly and bellowingly struggling against any let-up of the

foreign autocratic rule, which might lighten the burden upon their represt fellows, and enable the rest of Ireland to progress toward ease, prosperity, and freedom.

These so-called Scotch-Irish, together with the Anglo-Irish, who altogether form about one-fourth of the population of the country, and who, until quite recently, have always had Ireland ruled for them (in fact, ruled by them, inasmuch as they had a monopoly of all the offices in the country)—these Hyphenates in Ireland have howled and struggled and foamed at mouth each time that the Irish-Irish have, by their struggle, wrested from England another little grudging concession. Because each grudging concession was (they knew) irrevocably fixing the power of the Pope and the chains of Rome upon the world of Protestantism in general, and on this island in particular, which they, the Hyphenate minority, should and must rule.

Of course, the more intelligent of them do not really fear the Pope-of-Rome bogie against which they are constantly screaming. But they fear the loss of their monopoly on all offices in the land—and so, in self-defense, it is well and right to keep the ignorant mass of their followers in panic-stricken dread of the bogie.

If Ireland be in imminent danger of receiving a little instalment of liberty, in the name of Home Rule—even tho the name be, as in this case, a misnomer—these Orangemen threaten to raise a rebellion. If Americans, in this threat, see an *impasse*, it is because they do not know at all, what the Irish know, that the same threat was made every previous time that Ireland was on the verge of getting any half-hearted reform measure.

It was made on the eve of the disestablishing of the Protestant Church in Ireland, and also on the eve of Catholic Emancipation. On each occasion, their martial ardor dissipated itself in noise: and six months after the event, they did not like to hear any reference to their late frenzy.

Their present frenzy, however, is much better systematized, more wisely directed, by an abler politician, of smoother method and cooler head than any former political misleader. Also, tho it began in sheer bluff, getting away from its director it plunged into a gallop of sincere frenzy. And tho the frenzy is now, to a large extent, past, there is the big danger that, rather than be taunted as cowards or impostors, they may, in a crisis, have to do in Belfast, not less than the Nationalists Volunteers did in Dublin—speak for themselves thru rifle barrels.

This is but a chance—yet it is a chance, if, the relations remaining the same of the two parties in Ireland (the Irish-Irish and the Hyphenate ones), Ireland is offered a *real* Home Rule measure. (A measure which gives the Irish people no control of their own finances, would not now be taken even as a little instalment, by Nationalist Ireland).

But now, as ever, England will follow her invariable rule of not yielding to Ireland any concession that she, either by force or by strategy, can withhold. Lloyd-George's newest Convention offer is a mere trick for deceiving the foreign world—a trap into which the real Nationalists, the Republicans, will not walk.

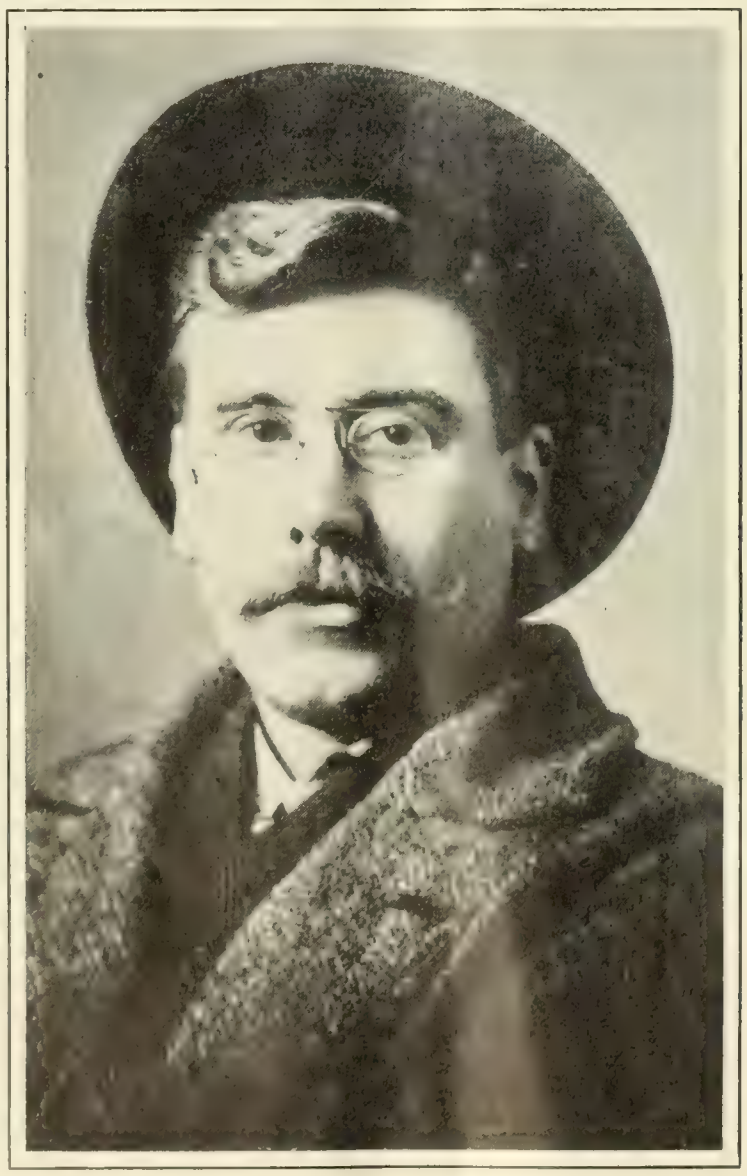
But a new and most interesting element, provocative of prophecy, and fertile of possibility, has entered into the national ferment in Ireland. A little paragraph set down rather obscurely in only one or two of the New York newspapers the other day—the paragraph may well have escaped most of the readers of The Independent—told that a firm protest against any attempt of English statesmen to partition Ireland was given to the Irish public over the names of thirteen Catholic and three Protestant Irish bishops. That remarkable joining, for the first time in Irish history, of Protestant ecclesiastics with Catholic ecclesiastics, and publicly proclaiming their belief that Ireland is a distinct national entity, is probably the first fair blossom on the young tree of Irish liberty in the now assured springtime of Ireland's reborn nationhood.

When this dropping of the hyphen is completed, and that the British blooded portion of Ireland (which is Protestant) links with the Irish blooded portion (which is Catholic), English rulers in Ireland will be packing their portmanteaus, knowing that their days are numbered. America, depending entirely upon the London cables, has been unaware of the wonderful working of the new leaven in Ireland in recent years—and, consequently, will be astonished—and I hope pleasantly astonished—at the result.

Some Americans know—there are many who do not know—that, from the more intelligent portion of the Protestants of Ireland, the Nationalists were always drawing recruits—and that, in the last hundred years—from the days of Henry Grattan to the days of Douglas Hyde, almost every leader of Nationalist Ireland was Protestant—including, of course, that Protestant saint to Catholic Ireland, the martyr, Robert Emmet.

But there are very few Americans—because they depended on the London cables for the news—who have been aware of the wonderful ferment working in the Protestant portion of the Irish people, in recent years, causing these people to think, as they had not thought, and causing many of the best of them to realize that Ireland, not England, is their country, and, that to Ireland, not England, their duty is due—and causing in recent years, a rapidly increasing stream of recruits to pour into the ranks of the Gaelic League and of Irish-Ireland.

And the fierce agitation over the so-called Home-Rule measure, and the frenzy into which politicians drove the fanatical portion of the Orangemen, has given a wonderful impetus to the stream.



That impetus, in a few years, will show its result, when thousands of hostile Protestants—and those, too, of the ranks of the best, have awakened to the realization that it is criminal to oppose their fellow countrymen who are working and fighting and dying for the country of Ireland, which after all is their common country—and have accepted Nationalism, tacitly or confessedly.

And, mark well, it is but a beginning.

The man who knows Ireland, and the present conditions there, needs to be but an indifferent prophet to foretell that, within the next few years, the political alignment in Ireland will have changed so radically as to surprize the world in general, dumbfound the British world, and delight the new Irish nation.

Before very many years Ireland will solve her own problem.

New York City

SEUMAS MacMANUS

"NOT A MINUTE" KOEHLER TAKES THE TEAM

BY HERBERT REED

THERE is a new Voice in camp, and it was sorely needed. While the instructors were moving along smoothly enough in their allotted tasks, while the progress was steady, while the marching was so good as to provoke the unstinted praise of French visitors who have always been specialists in marching, and while the shooting on the range was so good as to prove that we are still a nation of natural marksmen, there had been something lacking. Every one felt it, from the instructors thru the student-officer body, clear down to the humble civilian observer. The instructors knew what it was, and now they have been able to remedy the defect.

What was needed was a new Voice, a new leadership by some great specialist. And this leadership was needed along physical lines—physical lines that would be disciplinary as well as muscle-building. The same situation has existed in the great peace time games again and again. It was the same situation that used to result in a hurry call for the late Tom Shevlin toward the end of the football season at New Haven; the same that sent Charles E. Courtney out in the launch when he should have been in bed, to pull the Cornell crew together; that in the old Oxford rowing days called for the advent of Harcourt Gold; and that in Princeton football resulted annually in the hasty summons to Eddie Hart.

There comes a time in all group effort of this kind, in which the physical and mental are so closely bound together, when the new Voice and the new drive that results therefrom are absolutely essential to success. It is simply a case of "You take the team, they've heard us every day and they need a change."

THE man who has "taken the team" is Major Herman J. Koehler, for many years Master of the Sword at West Point, a unique figure in the United States Army, and without doubt a wonder-worker. He will be here two weeks and then move on to the other camps. And while he is here there will be action of the kind he is supremely able to produce, besides a revival of the British bayonet battle practise, something that, as I have already pointed out, was mistakenly dropt. Koehler went to West Point many years ago as an instructor. He had no commission, and was in the strict sense not of the Army at all. Yet it is to his work over a long stretch of years that the Academy owes much of its fame as a maker of men—as an institution whose rigid discipline makes for wonderful *esprit de corps*. After a long time he was made a captain by act of Congress, and is today a major, albeit not in the line. He is a very special sort of person, both individually and in rank. Another odd feature about him is that, outside of the buildings, he has been for years the only really permanent institution at West Point. By the time the present camps are over he will have become a permanent institution of the New Army unless I am seriously mistaken.

In the training of officers, and, too, in the training of men, the limit of what he can do for our armies is the limit of his own time and physical and nervous energy. These latter seem almost inexhaustible. It wasn't mere gruffness that made him bark, when asked if he had "five minutes to spare for the newspaper correspondents," "Not a minute." It was an appreciation of the value of his time. He has none to spare even for himself. So as "Not-a-Minute" Koehler he is likely to go down in the history of these training camps.

IT was Koehler who wrote the physical drill into the Infantry Drill Regulations. He did so reluctantly, for he realized the extreme difficulty of getting chilly type to explain the unison-value, the concentration-value, the disciplinary value of these exercizes. He is the man who has made the muscles and the mind follow the voice. How explain it in print? I find myself facing the same difficulty. Now on the morning after his arrival he got out a squad of 250 picked men, and in the afternoon another squad of the same size. And in this one day's work he stamped himself and his methods on this camp, in a way that the men themselves feel will be indelible. I watched him carefully while he was at work. A single command marked him as one with the habit of authority, and his own superb physique and mental alertness at once gripped the attention of the entire class.

And then the Voice. With the first position of the body and the subsequent movements explained, one could shut one's eyes and then be literally pulled or driven thru the exercize, according as the movement called for pulling or driving. The long, coaxing, sympathetic count, the occasional explanatory matter, always in the cadence of the exercize, the sharp command for the recovery that snapped the pupil back to the primary position—and long forgotten or undiscovered muscles rippled and hardened under the pupil's skin, answering to this man's uncanny knack of searching them out. So too, with the mental response. In the afternoon class one husky young man "passed away" thru simple over-concentration. I know not what else to call it. They laid him out gently flat on his back, but he was not allowed to resume the work. No chances of permanent trouble are going to be taken in the course of this development. And consider the strain on the instructor, going thru the camp at the rate of 500 men a day. That is "Not-a-Minute" Koehler's task.

I had known of Major Koehler at West Point as a physical instructor and as a swordsman, but this I had taken as a matter of course. I had known him also as a brilliant football coach, the man who developed teams that took on Yale, Harvard, Princeton, and occasionally Pennsylvania in a single season and made a tremendous battle of it, with now and then a tie or a victory over the strongest of them—teams that now and then simply rolled over the Navy like a wave of bone, muscle and brains. Of the great value of his fundamental work I had known little, and, incidentally, he was never a self-advertiser. But now I know that the work he is doing is laying the *absolute foundation* of modern preparation of men for war. And he so impresses his pupils that when they come to handle the draft they should be able to "carry on."

The resumption of the bayonet work and the coming practise in trench warfare present some problems of a fundamental nature. It seems probable now that we shall not be able to go into the trench fighting quite as thoroly as the Canadians and the English have done. Of course the trench charging, bayonet and bombing, thru wire entanglements and fascines will be taught, but unless there is a sudden change in plans I doubt if the complicated labyrinths used over the northern border will be duplicated. There seems to be a growing feeling that since we are building up from the bottom we must devote more time than the new levies of our allies to the strategy and tactics of open warfare. It is of course understood that many of us, how many no one knows, are going to France where trench warfare is at its hight, but the powers that be have not been unmindful of the work of von Hindenburg early in the war on the eastern front, and they do not want to be caught flat-footed should the opportunity for swift open-field operations on a large scale ever offer. It is in such operations that the officers of the line, the battalion commanders especially, and the second lieutenants as a matter of course, need a larger vision than is to be gained thru the intensive study of trench warfare alone. This is what I gather from

Westinghouse

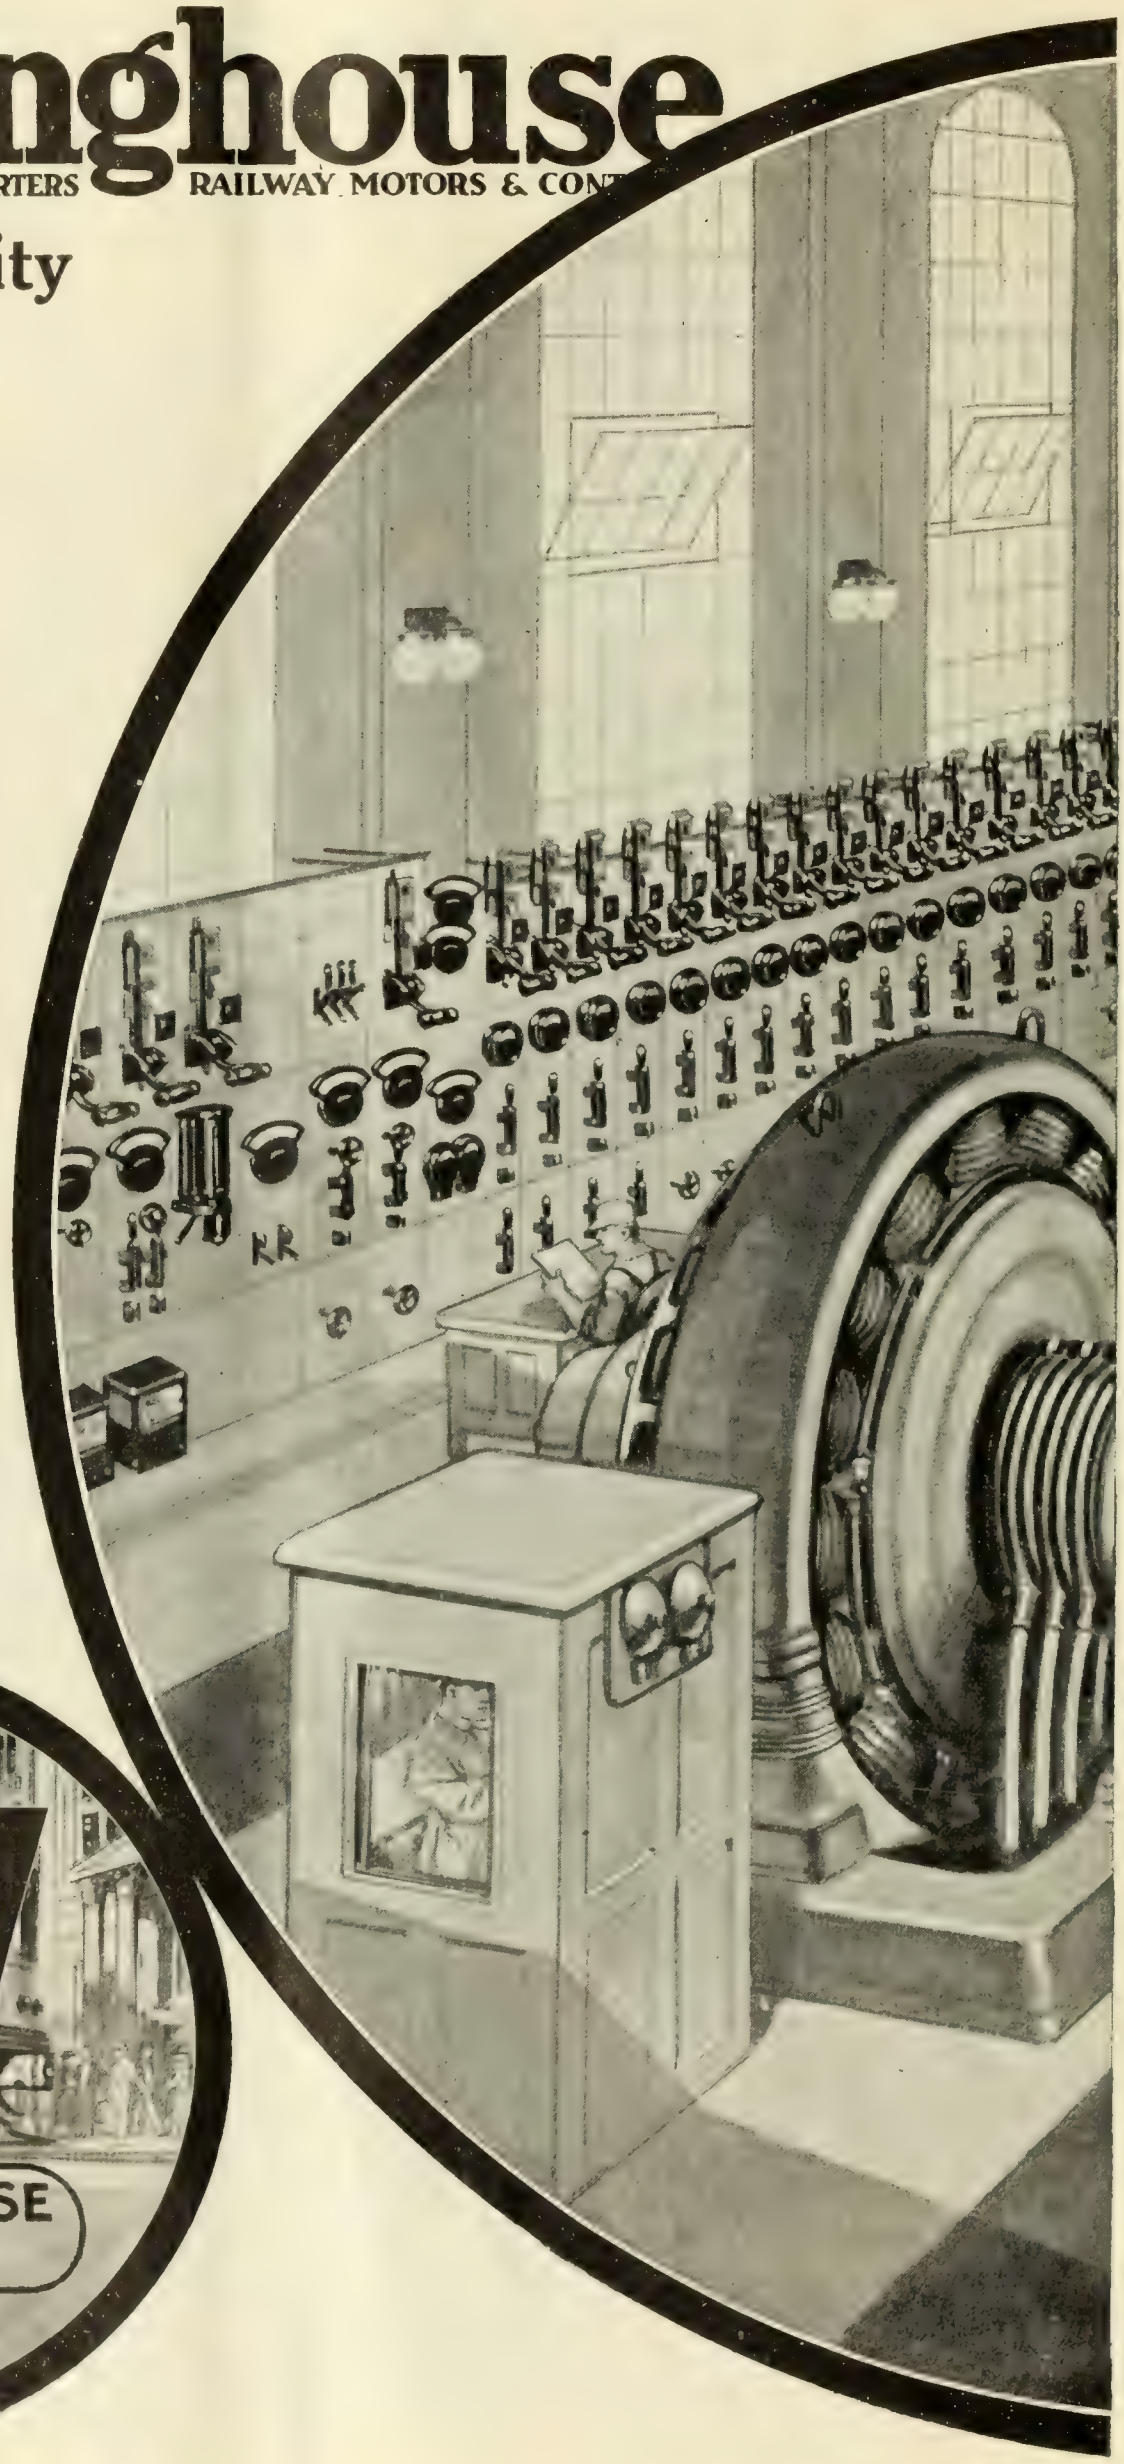
TRANSFORMERS, CONVERTERS RAILWAY MOTORS & CON

Making Electricity Fit to Use

When you take the trolley-car home from your office, you know that an invisible stream of energy, flowing from trolley-wire to motors, moves the great weight of car and passengers in instant obedience to the motorman's hand.

But you may not realize how many changes had to be wrought in the electric current before it was fit for your service.

When it entered the sub-station it was truly a giant force—too powerful for a motorman's control, so powerful in fact, that it would wreck the motors or melt connections in an instant.

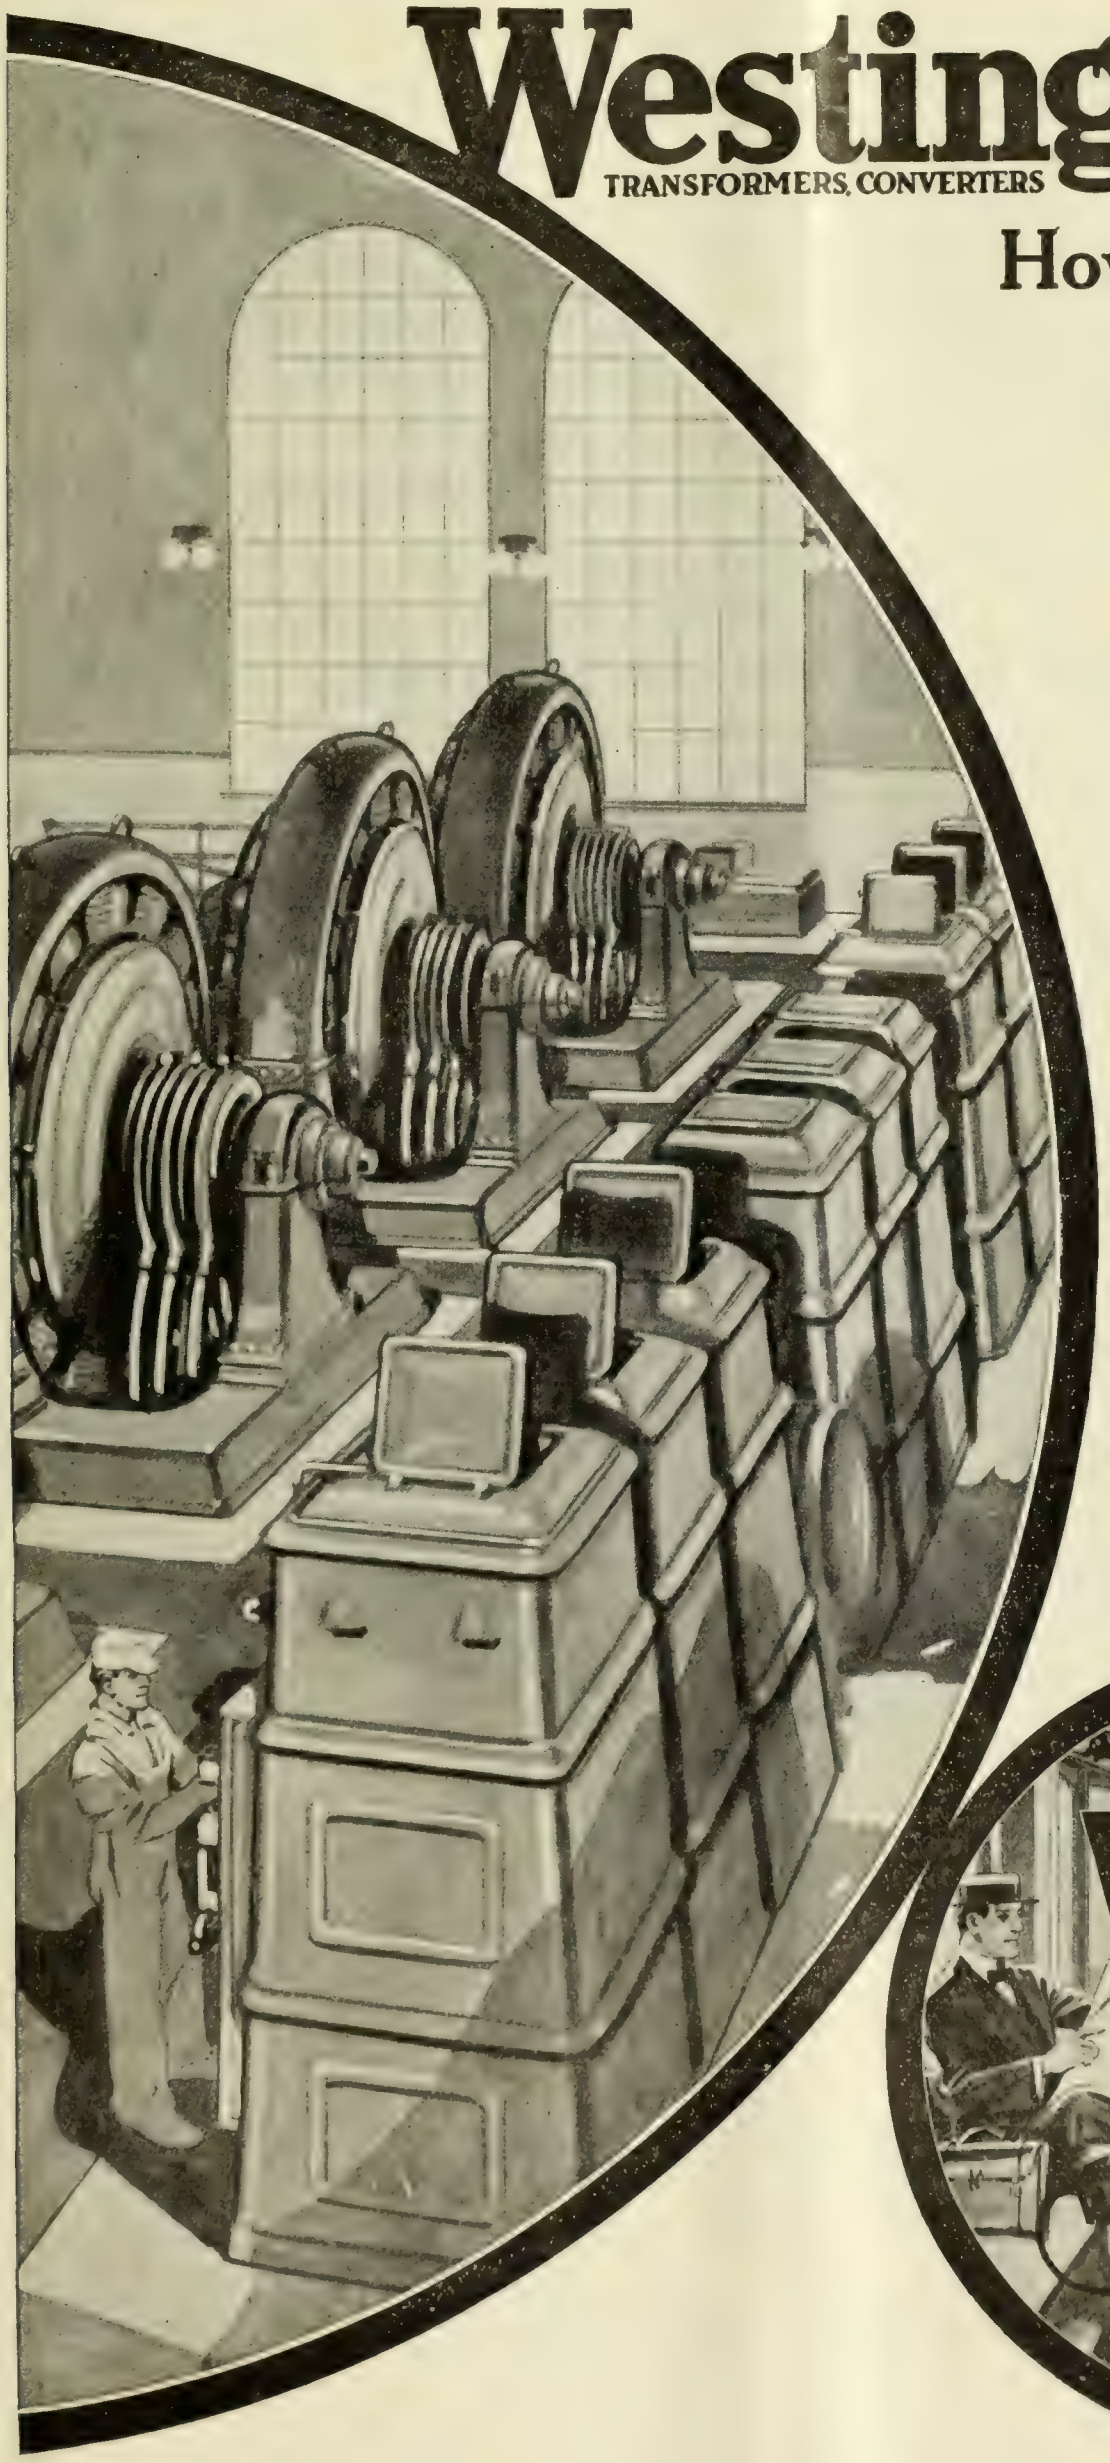


It was then not one force but several, requiring three wires and rushing first in one direction, then in the opposite direction.

Now it is a single steady stream flowing over one wire.

You must look to the transformer and converters in the sub-station for the explanation of this remarkable transformation.

For in principle they represent two great Westinghouse contributions to electrical progress—contributions that have, perhaps, done more than any others to make possible the far transmission of electrical energy, together with its easy transmutation into forms that are fit to use.



Years ago Westinghouse Electric engineers foresaw the day when electricity would be in universal use, when it must be produced in larger units, when it would be carried hundreds of miles over transmission wires, when it must be distributed over the whole area of a city, county or state.

Westinghouse

TRANSFORMERS, CONVERTERS RAILWAY MOTORS & CONTROL

How Mighty Forces Were Mastered

The voltage, that is, the pressure, required for transmission is far greater than that at which the current can safely be generated or applied.

And while it is more practical to generate and transmit electricity in the form of alternating current, it is often more convenient to use it as direct current.

So when the streams of energy leave the great turbo-generators in the Central Station they pass through transformers and are raised to the tremendous voltages that carry them over many miles to some sub-station. There they again go through the transformers and are "stepped-down," so that they can enter the rotary converters, from which they emerge as direct current fit for service in the motors under the car.

At other stations they are not changed to direct current but merely reduced in voltage by successive steps, until one of them enters your home to give you light, cook your meals, wash and iron your clothes or serve you in many other ways.

Westinghouse brought the first transformer patents to America. Westinghouse developed the rotary converter to its present high efficiency, and Westinghouse, too, has played a leading part in introducing and perfecting the turbo-generators in which the great streams of energy have their source.

At every step from power house to railway, factory or home, you find Westinghouse contributions to the electrical age in which you live.

WESTINGHOUSE
ELECTRIC & MANUFACTURING CO.
East Pittsburgh Pa.

HOW STEEL SASH MAKE PROFITS

Steel Sash mean *more daylight* in your building—the first step to greater profits. Under better lighting conditions, employes work more efficiently. Less materials are wasted. Accidents are fewer. Every foot of floor space is available for use. Insurance rates are lower—the fireproof steel sash protect the building and its contents against fire-loss. In every way you profit by the use of

UNITED STEEL SASH

United Steel Sash provide maximum daylight and perfect ventilation. Superior in design, material and workmanship have extra weight and exceptional strength. Equipped with rigid ventilators with double contact weathering. Improved method of glazing. Special hardware of our own manufacture.

Stock units of United Steel Sash can be supplied on short notice. Carried in many sizes so as to meet practically all requirements of window openings. Semi-stock and to-order units of United Steel Sash also furnished in all types.

The complete line of United Steel Sash includes all standard types of Horizontal and Vertically Pivoted Sash, Sliding Sash, Continuous Sash, Partitions, Doors, Casements, etc.

Write for full information and free United Steel Sash Book.

certain unmistakable indications which need not be specified here. I am simply attempting to seize the general feeling here.

The all-important bayonet fighting, which is not "sporting," as the English would say, and which we ourselves consider far from "sporting," is now to be thoroly taught. Hitherto there had been little to work on save Major Stewart's article in the *Infantry Journal*. Later several important kinks, also decidedly not "sporting," were picked up, and the full British system is at hand, the part that has not been printed together with the part that has been.

The English are not adding in print to their bayonet manual, for the reason that too much has been translated into German already and has been transmitted to the troops. In the course of training 30,000 men and later 500,000, it may be difficult to keep these little secrets. However, from what I have learned of the bayonet method so far there is no theoretically perfect defense against it. Deeper than that I cannot go in print. It was Lord Fisher, if memory serves, who when the proposition came up before the Hague years ago to "humanize" war, retorted "As well seek to humanize Hell." The same goes for the modern bayonet. Major Koehler is going to put the drive behind it here and in the other officers' camps.

There is a growing feeling among the student-officers, a feeling already prevalent among their instructors, that in the main the quality of the draft is going to be remarkably high. It is the thing the regular army has been waiting for all these years. And the reason is simple. It is felt that it will be the Army's great opportunity to unearth the right sort of material for non-commissioned officers. It is no reflection on the "non-com" of the old regime, who, by the way, is to have his long-deferred chance for promotion, to say that in the mass the Army expects better material.

The new men will meet in many cases—probably in most cases—as entire strangers, and the battle for the "non-com" position will be on before the men get to know each other too well. The friendships of the old days, generally long founded by the time promotion came around, were too often a bar to discipline. The situation made it hard for the man pushed up and for his old side-partners in the ranks. This accounts, of course, for the lonely life of the top-sergeant, that most efficient king-pin in our line troops. In the New Army the top-sergeant in many cases will be "there" long before he has made any deep friendships in the ranks, and the task all around will be easier.

This should be encouraging to that great body of disappointed young men who for one reason or another could not make the first training camps, and are too young for the second. If not drafted they can enlist directly with the knowledge that they will have their chance for a commission along with the brightest men of the regular draft.

One of the most cheering aspects of the sixth week of training was the discovery that many of the younger college men who had not been doing any too well in the infantry had chosen the field artillery branch of the service. Mathematics, and in the artillery, despite the use of tables, there is a lot of it, was still fresh in their minds, and it was possible to make rapid "book" progress with them while awaiting the arrival of the guns from New York. So, altogether, there is nothing but good news of the work at this rather important stage of America's greatest undertaking.

Plattsburg, New York

WAR TIME REAL ESTATE in N.Y. CITY

"The Greatest 'Buy' in the U.S.A. Today"

Brooklyn Real Estate at ½ Value

(To Close Estate of Late Mr. Chas. E. Wood)

NEW YORK CITY

200 N.Y. City Lots **$590 Each** **$5 First Payment $5 Per Month**

READ THIS LETTER

JAMES R. & HARRY B. CATON
Attorneys & Counsellors At Law

ALEXANDRIA, VA. May 25th, 1917.

Wm. E. Harmon, Esq., New York, N. Y.

Dear Sir:--I am directed by the American Security & Trust Company, Executor of the last will of the late Chas. E. Wood, to say that it desires to emphasize the necessity for the liquidation of the assets in which he was interested as a member of the firm of Wood, Harmon & Co. You are therefore requested to proceed to the sale of such property as is under your control with all reasonable dispatch.

American Security & Trust Co. By JAMES R. CATON, Attorney

Many of the country's largest fortunes are based on wise and TIMELY purchases of land in New York City. This advertisement offers a war time investment opportunity to the present generation, which fairly entitles it to be called the greatest "buy" in the United States today.

Mr. Chas. E. Wood, late member of the firm of Wood, Harmon & Co., had substantial holdings in the firm's various New York City realty developments. As Mr. Wood's heirs request a speedy settlement of his estate, WM. E. HARMON & Co., Inc., formerly Wood, Harmon & Co., must offer part of their Brooklyn holdings at LESS THAN HALF VALUE, to ensure a quick sale.

These lots are most desirably located, being near the terminus of the Nostrand Avenue Subway, part of the colossal $366,000,000 Dual System of Subways now within less than a year of completion. At present, trolleys on Flatbush Avenue direct from City Hall, pass the property, with other lines conveniently near.

The opening of the first subway from the center of Manhattan through Brooklyn, which opening is to take place within a year, will herald the coming boom in Brocklyn real estate. Foresighted people will not wait until the best bargains are picked up. It is better to be two months too early than two minutes too late. If we are not mistaken, the rise in values will be something like Washington Heights, where lots could be bought for $2,500 six months before the opening of the subway that sold for $6,000 six months after.

Mr. Wood's interests MUST be disposed of at once. WM. E. HARMON & Co., Inc., the most widely known and largest realty operators in this country, stand behind the offer, which is an assurance of the soundness of the investment. "Buy now and share in the dividends of the near future."

Don't wait. There may be an enormous response to this offer. It is an opportunity which rarely comes. ACT NOW!

Free Trip to New York

We want every customer to visit New York and inspect his purchase and we therefore make the following offer, viz.: We will allow your entire railroad fare to New York City and return, not to exceed $36, crediting the full amount on your purchase. We only require that the inspection be made with our representative, and within one year from the date of purchase.

Our References

We have been in business over twenty-nine years and are considered the largest real estate concern in the world. We refer you to your own bank or any commercial agency regarding our financial standing and reputation.

---

Certificates of
First Trust and Savings Bank
Chicago, Ill., for

The Kansas City Northwestern Railroad Company's
First Mortgage Five Per Cent. Gold Bonds, Series A, due 1933.

The new First and Refunding Mortgage Five Per Cent. Gold Bonds of Series A, due February 1, 1965, of Series B, due January 1, 1923, and of Series C, due August 1, 1926, and General Mortgage Four Per Cent. Gold Bonds, due March 1, 1975 (all in coupon form) of Missouri Pacific Railroad Company (the New Company organized under the laws of Missouri to carry out the Plan and Agreement of Reorganization as modified July 25, 1916, of the Railway Companies first above named), together with Trust Certificates for Convertible Five Per Cent. Preferred Stock and Common Stock of said Missouri Pacific Raliroad Company, all in definitive form, and fractional scrip for such bonds and for such trust certificates, are now ready for distribution.

Holders of the certificates of deposit above described, issued in the United States, must, to obtain the new securities to which they are respectively entitled, surrender their certificates of deposit **to the respective Depositaries which issued the same. In the case of issues marked with asterisks (**) above (which are exchangeable for trust certificates for preferred stock), the certificates of deposit so surrendered must be accompanied by a statement of the names and addresses of the holders, and the new trust certificates** and any checks for adjustments in respect of interest **will be issued only in the names of the holders as so stated.** Forms of such statements must be obtained from the respective Depositaries. Deliveries of the new securities will be made, so far as practicable, in the order in which certificates of deposit are so surrendered.

In the case of **certificates of deposit issued by Central Trust Company of New York for stock,** trust certificates for the new common stock will be issued in the names borne by the certificates of deposit surrendered, unless different names are specified by separate instrument in writing by the persons surrendering such certificates of deposit. **In the latter case the certificates of deposit surrendered must be accompanied by New York State transfer tax stamps at the rate of two cents per share, and by such Federal tax stamps, if any, as may be required by United States law** at the time of such surrender, and the trust certificates will be issued in the names so specified.

All certificates of deposit surrendered to Depositaries must, unless in bearer form, be accompanied by properly executed transfers thereof in blank. Signatures to transfers must be guaranteed to the satisfaction of the respective Depositaries, and, in the case of certificates of deposit issued by Depositaries in New York, every such guaranty must be by a New York City bank, trust company or Stock Exchange firm, or by a bank or trust company having a New York City bank or trust company as correspondent.

The new First and Refunding Mortgage Bonds will be delivered with coupons due August 1, 1917, for interest from June 1, 1917, and subsequent coupons. The General Mortgage Bonds will be delivered with coupons due September 1, 1917, for interest from June 1, 1917, and subsequent coupons. The First and Refunding Mortgage Bonds of each series, and the General Mortgage Bonds will be in the denominations of $1,000 and $500, and any holder of a certificate of deposit entitled to receive new bonds of either issue, may deliver to the Depositary, with his certificate of deposit, written directions specifying in which of said denominations such holder desires the new bonds to be delivered; but **no holder of such new bonds or of such certificates of deposit will thereafter be entitled to exchange bonds of either denomination for the other,** and in all cases where denominations are not specified as aforesaid at the time of surrender of the certificates of deposit, the Depositaries at their option may deliver bonds of either denomination.

At the time of distribution of the new securities, cash adjustments in respect of interest will be paid to holders of certificates of deposit for the bonds in this paragraph mentioned, in the cases and in the manner provided by Article VI of the Plan. Adjustments for interest upon old bonds **exchangeable for new bonds** will be made up to June 1, 1917, the date from which the new bonds bear interest, but interest upon the face amounts of coupons covered by adjustments, will be allowed to June 30, 1917. **In cases where no advances in respect of interest have been made under the Plan,** the total amounts of the adjustments payable in respect of the several issues, for each $1,000 principal amount of bonds,

Independent Opinions

We are glad to see that Porto Rico is heartily with us in this new war against European tyranny:

Among the warring nations summoned against the Central Powers there are a few states which seem apparently harmless; as, for instance, the restless principality of Albania, the Portuguese Republic, poor overpowered Montenegro, and the small republic of St. Marino.

Now, way across the ocean, following the momentous declaration of war from the United States upon the German Empire, a highly cultured young people have also declared their hostility toward Germany. Excited by the spirit of a heroic ancestry and moved by a recent sentiment of gratitude the future state of Porto Rico has willingly, thru its Legislative Assembly, passed a message to President Wilson acknowledging absolute fidelity to the American flag which waves over their beloved island, and expressing their voluntary desire to coöperate, if possible, to defend the American cause. Of course, Porto Rico is an American possession acquired as a result of the Spanish-American War, and inevitably the government authorities had to submit to the United States Government. But, forced fidelity is not the same as voluntary loyalty.

The action of the brightest men representing a population of over a million American citizens means that Germany and her Allies have a new moral power gathered against them. German influence has failed, in a new people, to justify her cause.

Small Porto Rico is at war with mighty Germany. BOLIVAR PAGÁN.
Ponce, Porto Rico

Business Not as Usual! A million men are needed in our army—more if the war continues long. To properly equip and feed them will require the labor of an army of workers four times as large as the fighting army, it is said. And I think all patriotic Americans will agree that our army should be supplied with all the airships, munitions and other supplies that they can use to advantage. The United States must feed not only the American people and American army but also must ship as much wheat and other foodstuffs as possible to our Allies. This requires more farmers and more farm laborers and more tractors and other farm machinery. There is a demand for a large fleet of wooden ships to be completed as soon as possible. This will take more material and labor.

To fulfill these unusual war requirements millions of workers must leave their ordinary occupations to become soldiers, workers in munition factories, farmers, etc. How, then, can we have "business as usual?" Is it necessary to spend our money in order to keep our fellowman busy, as advised in the article "Keep the Shop Fires Burning" in the June 23 number of The Independent? Would it not be well to conserve our supply of steel, coal, lumber, oil, wool, cotton, etc., as well as our supply of food? Farmers and others engaged in necessary work are prosperous. Let them pay the taxes. Would it be wise to keep any unnecessary business going in order to tax it?

This does not mean that "foolish" economy is desirable. Every one should spend what is necessary to keep his efficiency as high as possible. The worker who needs a

will be as follows: 5% First and Refunding Mortgage Bonds due 1959, $27.75; Forty Year 4% Gold Loan Bonds, $22.20; Consolidated First Mortgage 6% Bonds, $5, in addition to any interest due on such bonds on or before May 1, 1917, and not yet paid over by the Depositary; Trust 5% Bonds due 1917, $119.00; First Collateral Mortgage 5% Bonds due 1920, $95.80; St. Louis, Iron Mountain and Southern Railway Company's First and Refunding Mortgage Bonds, $120.40; The Kansas and Colorado Pacific Railway Company's Bonds, $93.33; The Central Branch Railway Company's Bonds (when exchanged for 100% in new bonds), $76.63; The Central Branch Union Pacific Railway Company's Bonds (when exchanged for 100% in new bonds), $21.02; The Leroy and Caney Valley Air Line Railroad Company's 5% Bonds, $27.25; The Kansas City Northwestern Railroad Company's Bonds, $27.25; and Little Rock Junction Railway's Bonds, $10, in addition to any interest due on such bonds on or before April 1, 1917, and not yet paid over by the Depositaries.

Holders of certificates of deposit for stock of The Missouri Pacific Railway Company who have paid only the first instalment of $12.45 per share under the Plan, will not be entitled to receive the new securities until they shall have made the final payment ($37.50, and interest, per share). Such final payment must be made on or before August 22, 1917, under penalty of forfeiture.

For all fractional interests in bonds and in voting trust certificates for stock, bearer scrip certificates will be delivered.

Dated, New York, June 26, 1917.

KUHN, LOEB & CO.,
Reorganization Managers.

To Holders of Undeposited Bonds, Stock and Unsecured Claims:

Additional deposits of bonds, stock and unsecured claims, under the modified Plan and Agreement above mentioned will for the present be accepted by the respective Depositaries therefor, subject to such conditions and restrictions as may from time to time be imposed by the undersigned Reorganization Managers, and subject, **in the case of stock,** to the requirement that the **Depositors shall pay in full, at the time of making deposit,** the sum of **$49.95** per share required pursuant to Article Fourth of the Agreement of Reorganization, **together with interest thereon** at the rate of six per cent. per annum from May 22, 1917. **This offer is subject to withdrawal at any time without notice.**

Dated, New York, June 26, 1917.

The Weight of War

The heavy hand of war has disturbed the balance between supply and demand the world over. Our problem of serving the public has all at once assumed a new and weightier aspect.

Extraordinary demands on telephone service by the Government have been made and are being met. Equipment must be provided for the great training camps, the coast-defense stations must be linked together by means of communication, and the facilities perfected to put the Government in touch with the entire country at a moment's notice.

In planning for additions to the plant of the Bell System for 1917, one hundred and thirty millions of dollars were apportioned. This is by far the largest program ever undertaken.

But the cost of raw materials has doubled in a year. Adequate supplies of copper, lead, wire, steel and other essentials of new equipment are becoming harder to get at any price, for the demands of war must be met.

Under the pressure of business incident to war, the telephone-using public must co-operate in order that our new plans to meet the extraordinary growth in telephone stations and traffic may be made adequate.

The elimination of unnecessary telephone calls is a patriotic duty just as is the elimination of all waste at such a time. Your Government must have a "clear talk track."

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of $5,000 by a man aged 67 would provide an annual income of $618.35 absolutely beyond question or doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

vacation should take it. But the unnecessary spending of money and employment of labor will not help to win the war.

NEBRASKA.

We agree with our correspondent that to support the war labor must be set free from the making of luxuries for the production of the tools of war. But, of course, this cannot be accomplished in a day. A too sudden stoppage of ordinary peace-time manufacture might throw many people out of employment before a place could be found for them in the war services of the nation. The best motto is neither "spend little" or "spend freely," but "spend wisely."

"Let the present, not the future, pay the price of the war—in cash as well as blood," says a correspondent who writes to second The Independent's stand for the conscription of wealth in wartime. We are glad to quote at length from his argument:

The future will have its own problems to solve. Why should we try to ease our own shoulders at their expense. If we see fit, or are driven, to enter upon a great enterprize, we certainly should be ready to pay the price. Just now we are commandeering the young manhood of the nation. Congress is just now considering the question of ways and means required to pay the bills incidental to supporting the resultant armies. We simple-minded Westerners feel that there should be no hesitation in determining what to do. If our young men must face enemy bullets, every dollar of wealth should be subject to call to meet attendant bills. To us the manhood of the nation rates higher than its wealth.

Out this way we incline to the belief that the man with the largest income is the man best able to meet bills—to pay taxes. We hold to this the more firmly when the income is derived from industries whose prosperity is based upon war conditions. We even consider that $100,000 annual income is a reasonable maximum to allow to any individual and that any excess may in all reason be taken by the Government. Where the income of most families is less than $1000, these same families will hardly see any injustice in requiring wealth to foot bills caused by a war in the prosecution of which the people of small income furnish most of the "cannon fodder."

Under the "future savings" theory the war must be fought most largely by the present producing classes and the cost of the war left to be paid by the remnant who survive and their descendants. Under such a scheme the war becomes a productive source of revenue to certain large industrial concerns and furnishes the choicest of securities to large investors. This makes the man whose chief capital is his muscle fight the war and pay for it, too, while others profit at his expense.

The Senate has been casting about to find many petty sources of revenue. All the time enormous incomes are being made on all hands. Why not commandeer money as well as men, especially when even a confiscatory seizure would fall far short of the sacrifice that our national manhood is preparing to make. I hope The Independent will continue in its editorial demand that wealth perform its whole duty.

In order that a wholehearted appeal may be made to the country, such that will meet with a like response, our national legislature may well follow lines laid down in a speech by Congressman Ramseyer in Congress, May 14. He held that the chief war taxes should be as follows:

1. A tax taking most of special war profits.
2. A progressive income tax up to 100 per cent.
3. High consumption tax on all luxuries.

Where a war must be carried on beyond our borders, the people will be exceptionally critical of the financial policies adopted, and doubly so where bond issues are employed as a means of raising funds.

JOHN M. STOKE.

Magnolia, Iowa

THE NEW BOOKS

MAJOR PROPHETS OF TODAY

The prophets of today not only indicate, but to a large extent create the thought of tomorrow. They stimulate, modify and direct the living forces that operate in society, and thus, by their emphasis forecast the future. To understand these contemporary, forward looking, creative minds is to catch more clearly the spirit and trend of human progress.

In his two volumes entitled *Major Prophets of Today* and *Six Major Prophets* (the latter just from the press), Dr. Edwin E. Slosson, Literary Editor of The Independent, has performed a notable service for us in bringing to our attention forcibly and interestingly the work and thought of twelve of the most distinguished thinkers and leaders of our time. His sketches include Maeterlinck, Bergson, Poincaré, Metchnikoff, Ostwald and Haeckel in the first volume, and Shaw, Wells, Chesterton, Schiller, Dewey and Eucken, in the second book, four each of professors of philosophy, scientists, and men-of-letters. Altho the author has aimed at exposition rather than criticism, he has given both in a very intimate and inspiring way. Dr. Slosson's racy style, power of analysis and keen observation of men and movements are all brought into play in setting forth the character and scope of each of these notables' life, work, and contribution to the world currents of thought. The shafts of wit cast at well known foibles, and dashes of description from unaccustomed viewpoints, keep the reader alert and give him the impression of coming into sympathetic contact with the personality under consideration. Each article is followed by a list of the published works of the author discussed and suggestions about appropriate readings and biographical materials for further acquaintance with the "prophet." Those who have followed Dr. Slosson's articles in The Independent will find that large additions have been made, and will be glad to have the whole in this permanent form.

The striking title under which Dr. Slosson has chosen to present his studies into the lives of these "Twelve Major Prophets" has undoubted reference to the Biblical books usually called the "Twelve Minor Prophets." It is interesting to note that of these "twelve major prophets," as among the "minor prophets" of olden time, not one is an ecclesiastic and most of them are real heretics as regards current theologies, and non-conformists in religious practise. But their heresies and repudiation of current ecclesiastical sanctities are, on the whole, not so pronounced and revolutionary as were those of the Biblical prophets.

That some of these men have the gift of "prophecy" in the old sense of prediction is clearly seen by their forecasts of the present war and its terrible revelations. Shaw and Wells, particularly, foreshadowed with considerable insight the coming events. Of the former, Dr. Slosson says: "Few writers have as little to take back on account of the war as Shaw, altho few have exprest such decided opinions in such extreme language on so many topics." The

"What's the Matter, Robert?"

"You hardly said a word the whole time the Petersons were here. It was quite noticeable. I'm afraid they think you don't like them."

"Noticeable! I should say it was. But I was more uncomfortable over it than anybody else. I *like* them well enough, but *I couldn't think of anything worth saying*, and you can't talk nothings to people like the Petersons. I'm beginning to dread having people in. I haven't time to do the *reading* necessary to be a good conversationalist, and——"

"Oh, I know the very thing for you. Mrs. Peterson told me about it this evening—a way *they've* found to learn at least one interesting, worthwhile thing every day. It is by joining

The Mentor Association

and we must join." The Mentor Association numbers among its members 100,000 folks who know that to be interesting to others one must constantly be absorbing interesting information—information, for instance, about Art, Nature, Music, Travel, and other good things that the world has to offer. They are obtaining this information twice each month in the most delightful form in "The Mentor."

"The Mentor" Discussed

and illustrated, at various times during the last several years, for instance, the following topics (note the scope of its interests and activities):

Beauty Spots in India; The Mediterranean; Alaska; Grand Canyon of Arizona; Shakespeare's Country; Beautiful Children in Art; Beautiful Women in Art; Pictures We Love to Live With; Michelangelo; Raphael; The War of 1812; Story of the French Revolution; Story of America in Pictures; The Golden Age of Greece.

Joan of Arc; Napoleon; Dickens; Shakespeare; George Washington; Abraham Lincoln; American Poets of the Soil; American Pioneer Prose Writers; Famous English Poets; Makers of American Humor; Masters of the Violin; Famous Composers; Masters of Music.

Gothic Architecture; Sporting Vacations; Game Birds of America; Game Animals of America; Favorite Trees; The Weather; Story of the American Railroad.

"The Mentor" is only a part of the advantages of "The Mentor Association."

What Membership Means

Briefly, membership gives you these five things:

First. 24 issues of "The Mentor," bringing a beautifully printed and illustrated story every two weeks, each different subject written by a leading authority upon that subject—300 pages during the year.

Second. 600 beautiful illustrations, distributed during the year through the text of the 24 issues of "The Mentor."

Third. 144 gravure or color pictures, reproduced on heavy paper, all ready for framing, in deep, rich tones that bring out all the beauty of the originals. On the back of each picture is a crisp five-minute description of the subject portrayed.

Fourth. Answers to any question on Art, Travel, Literature, History, Nature or Architecture, each answered by an authority.

Fifth. Authoritative Club Programs. Any program you may want for a club, a reading circle, a literary afternoon or evening—each made for you by an expert.

How to Become a Member

The Mentor Association wants among its members only those people who love the finer things of life, and yearn for them—Music, Art, Nature and Travel—who seek for self-improvement; who believe that education is only commenced in school and should be followed through life. If you believe as we believe, if you desire as we desire, then we warmly invite you to our membership.

Send for "The Mentor" on Approval

No need to send any money now. Just fill out the coupon below and mail it. "The Mentor" will be sent you ON APPROVAL. If you like it, send us $1 then and $1 each month for the next three months ($4 in all) for a full year's membership, including 24 complete issues of "The Mentor." If you don't like it, tell us within 10 days and the subscription will be immediately canceled.

Mail this Coupon Today

Ind. 7-14-17

THE MENTOR ASSOCIATION
222 Fourth Avenue, New York, N. Y.

I accept your invitation to membership for one year. Send me the next 24 issues of "The Mentor." Upon receipt of notice, I will send you $1 and $1 monthly for three months until the total of $4 has been paid—with the distinct understanding that the subscription can be canceled and money refunded if I am not entirely satisfied.

SCHOOLS AND COLLEGES

INDIANA

VALPARAISO UNIVERSITY

Founded 1873

VALPARAISO, INDIANA

Thorough Instruction at Lowest Expense

VALPARAISO UNIVERSITY was organized with three departments, four instructors, and an annual enrollment of 210 different students. Now there are 22 departments, 220 instructors, and an annual enrollment of more than 5000 different students.

THIS GROWTH is owing to the constantly increasing facilities, the strengthening of the courses of study, and the offering of additional advantages to the student.

THE UNIVERSITY is well equipped with buildings, libraries and laboratories for giving instruction in the following

DEPARTMENTS: Preparatory, High School, Primary Methods, Kindergarten Methods, Commerce, Phonography and Typewriting, Review for Teachers, Bible Study, Education, Arts and Sciences, Engineering, Architecture, Manual Arts, Agriculture, Public Speaking, Music, Fine Art, Home Economics, Pharmacy, Law, Medicine and Dentistry.

While the expense in all the Departments is exceedingly low, it has not been made so at the sacrifice of a high grade of instruction, but by applying business principles to

THE COST OF LIVING, so that the most satisfactory accommodations for board and room may be had at from $44 to $56 per quarter of twelve weeks; tuition $20 per quarter, or $75 if paid in advance, for a year of forty-eight weeks. If the entire tuition is paid in advance for the year, it includes all departments, except Medicine, Dentistry and private lessons in Music.

The total expense for board, tuition and furnished room for the regular school year (thirty-six weeks) need not exceed $192, or for forty-eight weeks, $246. For Free Catalog address

HENRY B. BROWN, Pres., or OLIVER P. KINSEY, Vice-Pres.
Box 54, University Hall, Valparaiso, Ind.

The Forty-fifth Year will open September 18, 1917

Second quarter, December 11, 1917. Third quarter, March 5, 1918. Fourth quarter, May 28, 1918

New Domestic Science Building — *Old College Building*

Group of Valparaiso University Buildings, including the Depts. of Medicine, and Dentistry, located in Chicago

MASSACHUSETTS

Co-ordination of Mind, Body, Voice. 38th year opens October 4th.
Summer Terms: N. Y. University, University of Vermont, Boston, Asheville, Chicago. List of Dr. Curry's books (recommended by educators) and "Expression" free.

S. S. Curry, Ph.D., Litt.D., President Copley Sq., Boston, Mass.

Wheaton College for Women

Only small, separate college for women in Massachusetts. 4-year course. A.B. degree. Also 2-year diploma course without degree. Faculty of men and women. 20 buildings. 100 acres. Endowment. Catalog. REV. SAMUEL V. COLE, D.D., LL.D., President, Massachusetts, Norton (30 miles from Boston).

prescience of Wells is clearly shown in his anticipation of the present development of the submarine, armored automobile, trench warfare, machine gun and war mobilization of entire populations. Altho much has been written about some of these men, especially Shaw, no other volume contains their comments on the Great War or affords such an opportunity of comparing the views of these representatives of divers schools of contemporary thought.

Major Prophets of Today and *Six Major Prophets*, by Edwin E. Slosson. Little, Brown & Co., Boston. $1.50 each.

GARDENERS AND OYSTERMEN

During the past few years Eden Phillpotts has been writing the industrial novels that mark a change and an advance in his art. In his "Old Delabole" the English slate-mines; in "Brunel's Tower" the potteries; in "The Green Alleys" the hop-fields of Kent have formed the setting for tales of human beings at their daily work, which is the larger part of life. Mr. Phillpotts' latest novel, *The Banks of Coln*, describes two great modern industries, flower-nurseries and oyster-fisheries in Essex. The great gardens of the nursery give opportunity for pages of glowing pictures in the author's happiest style:

> Gardens are pictures. . . . To make a garden is to make a painting with living colors—to paint with living things. And you can say what the plants will be doing in your picture each month of the year. So your picture isn't one but many.

As Mr. Phillpotts' hero paints landscapes with flowers and trees, the author paints them with adequate words. And the descriptions of the oyster world are charming:

> Older than humanity is the oyster;
> Tho men may rudely drag him from his shell
> And probe and prod and pepper him as well
> And sour his mild existence—yet, what then?
> To live for some brief space in mouths of men
> Is fame, and this fulfils the Oyster's mission;
> To please and satisfy is his ambition;
> And tho not proud, his gentle heart will flutter
> To know he's worthy of his bread and butter.

The time of the story is today and we hear the distant thunder of the guns in Flanders thru the closing chapters. The Great War solves some of the problems that trouble this little group of people busy with their gentle tasks of flower and oyster culture, but beset by love and death and sin as fatefully as on the wider battlefields to which some of them are called. As often happens in Phillpotts' novels, the women are less noble than the men; Aveline, the heroine, has no more conscience than a humming-bird; and Margery is about to drown herself when we meet her on the banks of the Coln; but, also as always, the women are alive and never stupid, however unmoral they may be. Mr. Phillpotts writes of rural England with full knowledge, unfailing sympathy and finished artistry.

The Banks of Coln, by Eden Phillpotts. The Macmillan Company. $1.50.

BOOKS FOR THE SOLDIER

A capital and most timely little volume is *What a Company Commander Should Know*, by Major J. C. McArthur, U. S. A. It is not too much to state that every reserve officer should provide himself with this handy guide to the general supervision, care and welfare of his men. By it he will learn how to maintain discipline without becoming a martinet, to foster in his men those absolutely essential requirements of cleanliness and sobriety, initiative within proper restrictions, cheerfulness under hardship, and last but not least how to make thoroly understood that the good conduct and comradeship of each individual is responsible for the well being of the whole command. Of these, examples are

given by way of personal anecdote, which assist in pointing the author's instruction. There is an excellent appendix of military forms and abbreviations but one wonders why a little book so cheaply bound and printed should cost so much.

Trench Warfare, by Lieut. J. C. Smith, an American officer serving in the British army, is another handy volume which officers in process of training should not miss reading. Lieutenant Smith writes from experience of the development of trench warfare and describes not only the construction of modern trench systems, but necessary plans for the defensive or offensive. There is so much of value to the student officer condensed within a small space, that we can but note the chapters, location of trenches, trench drainage, and training as of particular importance. Further, as parts of his subject, the author discusses bombs, gas warfare and the general duty of an officer in the trenches, so that practically all that can be learned between book covers of this phase of war is herein presented. Numerous diagrams are helpful by way of clearer explanation.

For those who aspire to the Aviation Corps *War Flying*, by an English pilot, discloses the system of training, and what may be anticipated when the time comes to sail forth on a raid over enemy territory. One gathers, however, that no matter how keen the desire may be to join this branch of the military service, the candidate must possess above all the quality of absolute self-control. Mere bull-dog courage is not sufficient unless supported by an alert intelligence. Apart from this view, the author conveys the impression that tho the career of a war pilot is hazardous enough, yet compensation is provided in a certain joy of the air which to those of us who cling to the earth can hardly be appreciated. There are thrills aplenty in the book, when the author is pelted with shells, gets lost in the clouds, is compelled to pancake in a wheat field, and escapes from a "crunch."

What a Company Officer Should Know, by Major J. C. McArthur. George U. Harvey, 109 Lafayette St., New York. $2. *Trench Warfare*, by J. S. Smith. E. P. Dutton & Co. $1.50. *War Flying*, by an English Pilot. Houghton Mifflin. $1.

BELGIUM

At first glance it seems like going back to a period of remote history to take up the German invasion of Belgium and opening war scenes in France. But Albert Rhys Williams has apparently written *In the Claws of the German Eagle* after bringing the facts gathered in his extraordinary adventures into perspective, and his book is worth more than a dozen snapshot records. He entered into the field as an accredited war correspondent without previous experience and as a convinced pacifist. Considering this combination handicap, he presently achieved the almost impossible of being the first neutral into Liège after its capture by the Germans. He just footed it there from the Dutch frontier, and back, every mile of the trip being a series of surprizes. He passed unmolested thru the mighty grey-green host, was on the whole well treated. Still, it is quite clear, another with a less resourceful nature attempting this would have been shot in any one of half a dozen situations. Later, he was nearly shot as a spy in Brussels, and that is quite another tensely dramatic story. Mr. Williams admits that just as his pacifism crumbled amid the rising tide of French nationalism—a little longer and he might have been marching out to kill Germans—so at Liège he fell under the self-same spell woven by the Germans. Atrocities at least

became no longer incomprehensible to him, for the whole thing imprest him as an atrocity, and while there his blood pulsed with the same rage. In fact, Mr. Williams became an atrocity—for the benefit of the camera men—and has since seen himself reproduced in the magazines being shot to death by a firing squad!

A magnificent testimony of the relief work in Belgium is set forth in *Women of Belgium*, by Charlotte Kellogg. The book is a living witness of the heroic spirit of the Belgian people in defense of their country against the German invader, not only on the battlefield but in the humble homes of the peasantry and the industrial workers. Upon the black and desolate background stand forth the inspiring figures of the King, Queen, and Cardinal Mercier. Upon an equal footing with them in the righteous cause of humanity must also be placed the American Minister, Brand Whitlock, and Herbert C. Hoover, as indefatigable, persistent, and unswerving in shouldering the tremendous burdens of responsibility willingly undertaken.

In the Claws of the German Eagle, by A. R. Williams. E. P. Dutton & Co. $1.50. *Women of Belgium*, by Charlotte Kellogg. Funk & Wagnalls Company. $1.

HALF THE CITY

Mrs. Simkhovitch has worked for many years at Greenwich House, New York, and knows well the mixt population of the crowded and cosmopolitan Greenwich neighborhood. She writes of the *City Worker's World* not only with sympathetic understanding born of sharing it, but founded in a broad and thoughtful study of the problems of immigration and poverty.

The opening chapter analyzes the general characteristics of our various immigrant races. The tenement house itself, however, is the foundation of the study, this being the frame, adaptation to which in itself explains a great part of the difficulties of life in the crowded districts. The close association forced by tenement life makes for a strong clan spirit, for deep family loyalty, and for certain standards of propriety that obtain so strictly in no other group. Mrs. Simkhovitch differentiates between materialism and the struggle for livelihood. "Materialism is found in the classes that have a surplus. The anxiety to reach the security line is all of one piece. The dividing line between the material and the spiritual has no meaning below this plane."

In the chapter on leisure Mrs. Simkhovitch discusses the amusements left to the tenement dweller after nearly all the outdoor sports and enjoyments have been subtracted, and she shows the positive values that finally work out of the few forms of pleasure within the reach of the town laborer. The description of the characteristics of the tenement house mother is particularly comprehending and vivid. "Her life is lived deeply tho narrowly. Her conversation has a tang and directness and character that makes the talk of the average woman of higher economic stratum appear vague, wobbly and vaporous, and the philosophy of the tenement gossip being founded on experience is realistic, sound, witty, but none too cheerful."

The most acute comment in the book perhaps is that on the lack of enthusiasm among the tenement group for "the business idea in politics . . . business ideals cannot deeply appeal to working people whose position is that of employed . . . where property is a weak idea the business administration idea also is vague, unreal and regarded with suspicion."

To the lay reader this is an uncommonly enlightening and suggestive book. It deals

Kiskiminetas Springs School
Saltsburg, Pa.

with the problem in general, not with the special difficulties of different ages and different peoples that make up the city workers. It is written with eyes wide open to all the good that is in the possession of the town laborer and it is not engaged in the propaganda of any panacea or particular reform. Whether it were the intent of Mrs. Simkhovitch or not we do not know, but she leaves the reader, while hopeful of all sorts of ameliorations and improvements that are already on the way, yet with a strong impression that the root of the conditions, here rather under than overstated, are inherent in the great town, and so long as aggregations of factories and laborers are encouraged, so long as cities run a rivalry as to population, so long will we have the slum in some sort. And, do the best we may with it, in the slum can be lived but a stunted life.

The City Worker's World, by Mary Kingsbury Simkhovitch. The Macmillan Company. $1.25.

HERE AND THERE AT HOME

Thomas Bailey Aldrich's ever delightful sketch of Portsmouth, the *Old Town by the Sea*, is issued in a pleasant "visitor's edition," with many photographs. (Houghton, Mifflin Company, $1.25.)

At the North of Bearcamp Water is the record of Frank Bolles's wanderings in the White Mountains from July to December some twenty-five years back. It is a pleasant work, well deserving its new and well illustrated edition. (Houghton, Mifflin Company, $1.50.)

Those who know well their White Mountains will welcome C. E. Beals, Jr.'s *Passaconaway*. Opening with chapters on the Indians of the region, it is an uncommonly full gathering of local history and legend. Illustrated by photographs. (Richard G. Badger, Boston, $1.50.)

An interesting compilation from the records of *Mount Ranier* has been made by E. S. Meary. These records, often contemporary, open with the journal of Captain Vancouver, in 1792, include Theodore Winthrop's charming legend of Hamichou and close with papers by specialists on the glacier and the mountain's geology. The Macmillan Company, $2.50.)

Your National Parks, by E. A. Mills, contains full accounts of eleven Western reservations and shorter accounts of others of the United States and of Canada. There are interesting chapters on many allied topics, many photographs and clear maps. In the appendix is a detailed guide to the greater parks, prepared by L. F. Schmeckebier. (Houghton, Mifflin Company, $2.50.)

George R. Putnam, in *Lighthouses and Lightships in the United States*, has chosen a topic round which romance gathers. Loneliness, devotion, courage, are the words that come first to the mind and that give the topic its never failing fascination. Much of historical information and heroic story is gathered in this pleasant volume with its many pictures. (Houghton, Mifflin Company, $2.)

CONCERNING THE WAR

Irvin S. Cobb, when *Speaking of Prussians*, quite forgets to be humorous. He is brief, uncompromising, but he is also fair-minded. He defends the German soldier from many charges, and thereby makes his arraignment of the German government and military system the more convincing. (G. H. Doran Company, 50 cents.)

Scraps of Paper, a pamphlet coming to us from England, contains facsimilies and translations of the German proclamations that have been pasted up in the invaded towns of Belgium and France. Among these are the first to the people of Belgium; that for the execution of Edith Cavell; that for the deportations from Lille. (G. H. Doran Company, 25 cents.)

Mr. Balfour provides a happily satiric introduction to the translation of Treitschke's *Politics*. In these essays one finds the Ger-

She Couldn't Go; Her Corns Wouldn't Let Her

She remembered the agonies of the last dance. It kept her at home to coddle her touchy corns. She simply couldn't face the pain again.

How easy it would have been, what instant relief, if she had only known of Blue-jay. Blue-jay stops pain instantly. And the miserable corn is gone, roots and all, in 48 hours.

New shoes—smart styles—have no terrors to Blue-jay users. These soothing plasters, inset with a medicinal wax, have ended millions upon millions of corns.

man leader's theory of the state, of the Prussian system, as compared with what he thinks is to be found elsewhere, of public morals, of women, of Jews and Turks, and, of course, of war. (The Macmillan Company, 2 vols., $7.)

Patrick MacGill's *Soldier Songs* are verses from "the front" written much as the soldiers might make them up and sing them. They are informal and casual expressions of the several moods of the men in khaki—ennui, anger, weariness, courage and fear and homesickness. They can hardly be called poetry, but here and there is a fine phrase. (E. P. Dutton & Co., $1.)

Mary Roberts Rinehart writes whereof she knows when in *The Altar of Freedom* she tells the mothers of this land why and how their sons must enter this war. One of her sons has gone, the other two will go if, when they are old enough, they are needed. She has seen the war close at hand and her unflinching words are born not of theory and imagination, but of facts. (Houghton, Mifflin Company, 50 cents.)

William Archer has collected a bookful of *Gems (?) of German Thought*, consisting of fragmentary quotations from German writers known and unknown (mostly the latter) illustrating the unmoral or criminal egoism which is the outstanding feature of Germany's political philosophy. In the midst of such a war, stringing little beads of German wickedness to make the public's eyes pop out seems a childish occupation. (Doubleday, Page & Co., $1.25.)

Exaggerated self-importance seems to speak in the letter with which Captain Viand prefaces his *War*. He harps on the "dignity of his five rows of gold braid." He lambasts the Kaiser and the Germans with violence equal to any German hate blast. Occasionally, however, the Pierre Loti of aforetime paints for us scenes at the front and elsewhere that have his graceful charm, and are shot thru with a very real patriotism. (J. B. Lippincott Company, $1.25.)

LIVES AND LETTERS

Personal reminiscences of the first ecumenical council fill the first volume of Cardinal Gibbons' *Retrospect of Fifty Years*, and here is a description of Rome at Easter. The second volume contains besides recollections of various notable events of the church in America, many of Cardinal Gibbons' sermons and addresses. (James Murphy, $2.)

Dr. G. Frederick Wright's *Story of My Life and Work* opens with the pioneer days of his grandparents in northern New York. Much of the book is given to the exploration of the Muir Glacier and the journey thru Central Asia. An impersonal, simply written, interesting autobiography. (Bibliotheca Sacra Company, Oberlin, Ohio, $2.)

For a lifetime Everett P. Wheeler has been active in labors for the public welfare. He has had share in the civil service, currency and tariff reforms. He has known many notable men. His *Sixty Years of American Life* opens with his recollections of Webster and one wishes the book contained more such personal recollections of which his memory must hold great store. (E. P. Dutton & Co., $2.50.)

Among the friendly, leisurely recollections that make up *Further Pages of My Life*, by W. Boyd Carpenter, is a chapter recounting his meetings with the Kaiser, and his theory of the present development of that apparently amiable character. Of a quite different interest is the acquaintance with J. S. Shorthouse, and Bishop Carpenter's ending for "Little Schoolmaster Mark." (Charles Scribner's Sons, $3.50.)

William Newton Clarke was one of the wise and noble religious thinkers who trained this generation of preachers. Born to the straitest Baptist tenets he became a broad and scholarly leader in theological thought, a man ahead of his generation in sociological interests. This modest and dignified record of a beautiful life is followed by most interesting descriptions of Dr. Clarke in his various fields, by such fellow

laborers as Dr. Judson and Dr. William Adams Brown. (Charles Scribner's Sons, $2.)

A recent issue of the convenient Wayfarer's Library is Clement Shorter's collection of letters from the *Brontës and Their Circle*, one of the delightful books of English biography. (E. P. Dutton & Co., 50 cents.)

Francis Spencer Spalding, missionary bishop of Utah, was a genial and human person. Always on the side of the poor, always openminded, sympathetic, fearless, his death robbed the Episcopal Church of one of its strong men. In Mr. Melish's well told story of this earnest life we get no sectarianism and much discussion of the practical problems now before the church and before society, and much shrewd advice to the missionary. (The Macmillan Company, $2.25.)

JUST FOR FUN

There is a new edition of that merry little work *How to Tell the Birds from the Flowers and Other Woodcuts*, by R. W. Wood. A welcome summer, or winter, birthday card. (Duffield & Co., $1.)

The *List of Educational and Selected Films* includes a wide range of topics, industrial, scenic, scientific, novel adaptations, all chosen with careful judgment and suitable for young people. (Moving Picture World, New York, 10 cents.)

A book mighty convenient to find in one's pocket is *Legal Points for Automobile Owners*, by Leslie Childs. This does not rehearse definite laws, but gives topically arranged explanations of regulations governing the road and the car. (J. S. Ogilvie Publishing Company, 50 cents.)

Barrett H. Clark is author of a most useful handbook, *How to Produce Amateur Plays*. It pleads for simple staging, has a list of plays for amateur acting, discusses organization of the company, but spends most space on directions for training the actors. (Little, Brown & Co., Boston, $1.50.)

Warren H. Miller had his first sailboat when he was twelve and has been getting boats ever since. He tells, in the *Boy's Book of Canoeing and Sailing*, how a boy can build a boat at small cost, as well as how to manage anything from a canoe to a launch afflicted with "engine troubles." (G. H. Doran Company, $1.35.)

Amateur Circus Life, by Ernest Balch, is a textbook of physical development and the simpler tumbling "stunts." Mr. Balch gives careful directions for practise and wisely cautions young acrobats against ambitions too vaulting. The last chapters give suggestions for school exhibitions and minstrel shows. (The Macmillan Company, $1.50.)

The third quarterly catalog of selected motion pictures, interesting to "father, mother and the young people," contains about three hundred titles with description, names of star, film company and number of reels. Other useful pamphlets issued by the National Board are *Motion Pictures and Censorship*, and *Principles Governing Selections of Motion Pictures for Young People*. (National Board of Review of Motion Pictures, 70 Fifth Avenue, New York, 10 cents each.)

RUSSIA AND HER NEIGHBORS

There is no glory in war for either officer or soldier according to V. Veresaer. *In the War*, translated from the Russian by Prof. Leo Wiener, is a tragic monument to the Russo-Japanese conflict, and uncovers vividly the bureaucratic authority, and incidentally the incompetence, that lost the last war for Russia. (Mitchell Kennerley, $2.)

Arthur Ruhl's *White Nights and Other Russian Impressions* is a pleasant bit of travel literature. A visit to Ellen Key is the feature of the journey to Russia. A voyage down the Volga the freshest of the descriptions of Russia itself. One gains no new outlook on the present situation but

YOUR HOTEL *in* NEW YORK

WHEN you come to New York, make the Hotel Astor your home. It is more than a mere stopping place. It is New York epitomized.

Situated in the very heart of the metropolis, the Hotel Astor is the logical scene of New York's most important functions. Here Big Business meets for consultation. Here are held receptions for distinguished foreign visitors and ambassadors. The Hotel Astor is chosen for great National festivities.

Whether you need a single room or an elaborate suite, you will obtain at the Hotel Astor the utmost in comfort. From the magnificent roof garden to the cool orangerie and the numerous lounges, promenades, writing rooms and restaurants you will find a spot to fit your every mood. The cuisine and service are superb.

Do not run the risk of marring your visit by accepting less than the Hotel Astor offers you—nor waste time in an effort to obtain more elsewhere.

CONSTIPATION KILLS!

More people than all the bullets ever made. The seat of all disease is in the bowels. The first step in maintaining HEALTH is in the STOMACH, the next is in getting rid of the waste matters in a natural way. YOU CAN'T DO IT with **OILS, PHYSICS AND PIFFLE!**

They Are Dangerous. Let Me Tell You Why

Use Nature's methods when you deal with a precious human body that is Nature's highest expression of beauty and form. Use STRONGFORTISM, because it explodes the true principles of Nature's laws. Many times you imagine you are suffering from rheumatism, heartweakness, mysterious pains, headaches, twitching, nerve exhaustion, and almost all other ailments, when in reality it is just the poisoning of your whole system from the foul accumulations of the bowels. CONSTIPATION is also largely responsible for the irritating effects which lead to the loss of PRECIOUS VITAL POWERS. Read what STRONGFORTISM has done for others.

"My CONSTIPATION has entirely disappeared. I am feeling fine."—James F. Cully.

"My CONSTIPATION was very stubborn, but I have followed your instructions and am entirely rid of it."—Earl Goddard.

Hundreds like this could be given. I shall be glad to give you the full names and addresses of these and others who are happy to speak a good word for STRONGFORTISM at any time.

Send for my wonderful book, "INTELLIGENCE IN PHYSICAL AND HEALTH CULTURE." Enclose 6c to cover postage charges. It will show the way to a better life for you, happier, more earnings, more pleasures. Write TODAY.

much of general interest. (Charles Scribner's Sons, $2.)

An uncommonly interesting and illuminating little book is Demetra Vaka's account of her journey thru *The Heart of the Balkans*. She is mainly concerned with the women of Albania, Montenegro, Serbia and Bulgaria, and in describing them she makes clear various differences that lie within the eternal Balkan question. (Houghton, Mifflin Company, $1.50.)

Helen Davenport Gibbons and her husband were in Armenia at the time of the massacre of 1909. They shared with the missionaries its terrible experiences. Unfortunately many of these letters to Mrs. Gibbons' mother, the form in which the story of the *Red Rugs of Tarsus* is told, contain information which must have interested her mother greatly but which will seem irrelevant to the public, or trivial, when thought of in relation to such great happenings. (The Century Company, $1.25.)

ESSAYS ON BOOKS

In *Wisdom of the East, a Feast of Lanterns*, L. Cranmer-Byng has produced a legendary source book, concerned with the motifs of Chinese poetry. The Moon, Flowers and Dragons are shown to be mighty factors in Chinese versification. Various other inspirations, and the forms of Chinese verse, are pleasantly and very readably considered, with interesting illustrative examples. (E. P. Dutton & Co., 80 cents.)

If you are superficial is it a virtue or a vice to be entertaining? On your answer to that question depends your enjoyment of John Cowper Powys' *Suspended Judgments* or your irritation. In this score of readable little essays the author leaps lightly about literature, touching where he will on Pascal, on Blake, on Conrad, winged with the sublime confidence that he knows quite as much about one as about the others. (G. Arnold Shaw, New York, $2.)

Of the four parts of Edward Hale Bierstadt's *Dunsany the Dramatist*, The Man is an uninteresting biographical sketch, seemingly only moderately informed. His Work has intrinsic interest, of course, also shows flashes of more than the conventional manner of "critical" commonplaces, but is, as a whole, not critical in any deep, sure sense, marvelously contradictory in fact, and lacking in humor. His philosophy is muddled. (Little, Brown & Co., Boston, $1.50.)

Choosing seemingly the worst quotations he can find, Edward A. G. Hermann, in his *The Faith of Robert Browning*, laboriously, tritely and satisfyingly edifies himself in studying what has elsewhere been called "the most profoundly subtle mind that has exercized itself in poetry since Shakespeare." He, however, seems to forget both the untimeliness of his great man's message and human unwillingness to be edified, unentertainingly! (Sherman, French & Co., 80 cents.)

Stephen Coleridge had great fun, as his readers will have, picking out favorite poems overlooked by anthologists, and chatting about them in *An Evening in My Library Among the English Poets*. His American shelf was almost too scanty for exhibit, however, with "The Rosary" prominent thereon. And why not refer to the dictionary before stating that "excelsior" means "a taller man" and that "Latin must have been an unknown tongue" to Longfellow. (John Lane, $1.25.)

Stuart P. Sherman, in his dissertation, *Matthew Arnold*, one of the "How to Know Him" series, was braced by diligence both in the collecting of minor material and in the weaving of it into a predetermined disquisitive pattern to square with an inherently unsympathetic attitude toward the poet and essayist. But tho the verse quotations from Arnold are not always of the best, certain contributory information of real worth (as in "Literary Criticism") may, here and there, be culled from the 314 pages. The Bobbs-Merrill Company, Indianapolis, $1.50.)

A NUMBER OF THINGS

BY EDWIN E. SLOSSON

The sermon had closed with an impressive climax and a brief and solemn prayer. Its theme had been lifted heavenward on the wings of poetry and song by the united voices of all the congregation. The sound of the great amen had passed from the soul of the organ and entered into ours. We stood with bowed heads and closed eyes waiting for the seal on the message; listening for our pastor's words as he invoked upon us in parting the blessing of God. After a moment of silence we heard his voice, but its tones were not those of a priest but of a business man. It was a very worldly and emphatic voice which said:

"Don't forget to take a card at the door announcing our series of Sunday evening lectures on 'The Great War,' illustrated with the stereopticon."

The spell was broken. Like a strain of music which has stopped on the last note but one, and so left the aggravation of the expected return to the major; like a parting without a final hand clasp; like a letter without a signature; like a staircase we ascend in the dark and expect another step that is not there; like a dinner without dessert; so rapidly it brought our spirits down to the prosaic.

Maybe the minister pronounced the benediction in due form after that. Nobody knew. And it did not make any difference whether he did or not. The time for it had passed.

*
* *

Josh Billings once said: "Things is mixt." In the midst of the chorus of praise over the combined philosophy and wit of the saying few have noticed its greatest merit and the author's real claim to rank as reformer and philosopher. The idea of the aphorism is as old as the hills, but it was never exprest so well before because it was never before exprest in simplified spelling—nor yet in simplified grammar. It is the imperishable glory of Josh that not only was he a pioneer in the great modern pragmatic movement to shed meaningless and useless letters from our words, but that with a prophet's vision he could look forward to the distant age when even grammar must resign its fondness for superfluous forms. What need is there for a plural verb when the noun is plural? There is no plurality about is-ness. A verb can have no number and to make it take a plural form because it follows a plural noun is compulsory hypocrisy and enforced sycophancy.

An inflectional language was natural enough in imperial Germany or despotic Russia; and the English, who have already won for themselves the substance of a republican form of government and the almost equal boon of a largely uninflected language, may perhaps be pardoned for keeping a few anomalies in their language as well as in their constitution. But we of America, who have discarded the shell of monarchy as well as the kernel and established our political system upon a purely republican basis, should show similar courage and unflinching logic in extirpating the last vestiges of linguistic slavery. To do away with the comparatively few remaining grammatical forms in the language which serve no useful function would involve far less change than the language has already undergone time and again, and it would establish a new precedent for deliberate and conscious improvement of our tools of thought.

*
* *

It is a very wise precaution to lock the stable door after the horse has been stolen, if you have other horses in the stable.

*
* *

One of the liveliest pages of that lively British weekly, *The New Statesman*, is signed by the name of "Solomon Eagle," altho we suspect that the writer, in spite of the name, is neither a Jew nor an American. In one of his recent causeries he compliments The Independent in the following fashion:

> There is a New York paper called The Independent. I read it with pleasure. Its articles and stories are interesting, and its war-pictures exceptionally so. But one of its features is more than interesting: it is unique.

He then quotes our Lesson Plans for the study of The Independent in English and Political Science classes and continues:

> It is the most ingenious method ever devised of soaking people in a paper. Our English journalism is not so thoro as this. We are reticent and reserved: we have not the courage of our convictions! How large a rum-ration would it take to induce the directors of this journal to start such a page? In fancy I picture Sir Arthur Quiller-Couch and Professor Pigou drawing up alluring questionnaires on its contents. As, for example:
>
> 1. Why do you think the leading articles in the *New Statesman* the most persuasive ever written? Why have you always thought so? What should you do without them?
> 2. What form of suicide would you choose if, by some misfortune, you were deprived of this journal?
> 3. How much has your income risen since you began to read "Solomon Eagle"? Analyze, as succinctly as you can, the secret of his invigorating power.
> 4. Who is "Sardonyx"? What is he?
> 5. "We must beat back the Germans." Parse this sentence on page 323 and state in which back numbers the same sentiment can be found exprest (1) in the same words, (2) in different words. (N.B.—Back numbers 6d. each, more if very old ones.)
> 6. Write an essay proving that Lord Devonport would be much more comfortable if he had taken this paper's advice.
> 7. Explain the present status of the Bukit Panjong Rubber Company. What price were the shares when Mr. Emil Davies first mentioned them?
> 8. Why do you consider the poem on page 312 the best poem you have seen in a British periodical for many a long year?
> 9. Give reasons for your belief that Homer would like to have written it.
> 10. Write a short explanation of your reasons for always buying six copies of any book advertised in our columns.
>
> No prizes are offered for answers to the above questions.

We regret that our esteemed contemporary suspects us of ulterior motives in introducing these questionnaires on the contents of The Independent, but we hope that the directors of his journal will adopt Mr. S. Eagle's suggestion. Nothing would speed up the water-logged schools of Old England more than introducing *The New Statesman* as a textbook in literature and current history. *The New Statesman* is the equal of Addison's *Spectator* any day and far superior to it for today.

INSURANCE

CONDUCTED BY W. E. UNDERWOOD

SAFETY FIRST IN LIFE INSURANCE

"FROM personal experience as the father of a large family," said a friend to me recently, after reading a letter I had shown him from an inquirer asking the way out of a difficulty due to long membership in a prominent fraternal order, which will probably succumb to the assaults made on it by a constantly increasing rate of mortality, "I deeply sympathize with your correspondent. He is in real trouble over a proper insurance provision for his family in case he should die. His case is as clear as sunlight; and yet there is no solution of the problem he is up against. You can't mend the matter for him because he has invested both his money and his time in what he has believed all along was cheap insurance. The money spent is as nothing against the time lost.

"My sympathy for him is based on first-hand knowledge, for I came near becoming just such a victim as he is now. My first investment in life insurance, so-called, was in the American Legion of Honor, promoted by a man of the name of Warnock—Adam Warnock. I was elected secretary of the first camp, or chapter, or whatever was the name, organized in Denver. I was young and full of confidence in myself. What I did not know in those days on every subject was not worth putting down in the record. I was certain, among other steady convictions held, that the old line companies were robbing the people. As we say in these smarter days, I had the 'dope' for it, and I fancy no one during his time had a more skilful hand in passing it out than Adam Warnock, president of the American Legion of Honor. I went in for several more assessment societies, including the Knights of Honor and the Chosen Friends.

"Where are these three now?" he inquired, musingly.

"Fortunately for me, at about that time, I had two real possessions—a good head for figures and a good friend who was making a rather poor living trying to sell life insurance for a Philadelphia company. This fellow knew I was all wrong on life insurance mathematics; in fact, he regarded my poverty in that direction as a matter worthy of commiseration. I was a healthy, husky young chap, and he often told me that if I lived out a decent average life-expectancy; the death and burial of my assessment associations would eventually become a dim memory.

"My friend was not a successful solicitor because, as I believe now, he knew so much about the science of life insurance. He spent too much time studying and demonstrating that side of it and, instead of convincing people they should buy it, he got real satisfaction in having enlightened them on it. It was a fine thing to do for, without doubt, men who were good salesmen, coming after him, reaped the harvests he had sowed.

"Among those whose life insurance pathway had been lighted by the torch which this enthusiast held aloft, I was one. I was 'caught young,' greatly to my benefit, in an era of popular prejudice against old line life insurance, when the crowds were surging behind Harper, the founder of the Mutual Reserve Fund, Fouse of the Fidelity Mutual Life Association, and other apostles of the new cult, including scores of fraternals, which were steadily being organized. I have forgotten the names of dozens of these concerns which dotted the field like mushrooms, flourished and failed, leaving woe in their wake. For a full quarter century those which managed to survive as the result of exceptionally heavy accessions of 'new blood' to their membership every year, kept making serious and, perhaps in some cases, sincere arguments against the necessity for accumulating any kind of reserve. 'Keep your reserve in your pocket,' was their slogan.

"THE founder of one of the assessment associations previously mentioned invented a new system which he claimed was a safe substitute for the legal reserve system and which, while avoiding the technical liability imposed by the latter, as he claimed, was stricter and afforded greater freedom in plans. But its founder finally came to the despised legal reserve system in order to save his institution from failure. We may be sure that this change left many of its members, who were advanced in age and were financially unable to comply with the new premium exactions, in a lamentable plight.

"This has been the fate of all who went into the assessment companies and fraternal associations under the belief that the reserve was a superfluity and that life insurance could be furnished at a rate very much lower than is done by the regular companies. Your correspondent is in precisely the situation in which hundreds of thousands of his predecessors have been trapped, and unless he can pay the assessments demanded, ever increasing as the result of heavy mortality due to old age, his case seems hopeless. To a man advancing in years, declining in physical condition, with dependents who will suffer by his death, this is bitter.

"These people are victims: some of them are sacrifices laid on the altar of ignorance: others, the dupes of designing 'organizers' and promoters who prospered in the trade of furnishing 'pure protection'; all of them, sufferers under laws, demagogic in origin, which under the guise of discriminating against life insurance 'conducted as a business for profit,' exempted so called co-operative associations from every requirement that is essential to permanent security. It is difficult to find in the statutes of any of our states, or those of the national Government, a law regulating life insurance or touching any side of it, that does not specifically except these coöperatives from its operations. Since all insurance is a system of loss distribution and the money used for that purpose is furnished by the persons insured, and only by them, it is clear that all insurance is coöperative.

"As you very well know, it makes no difference how a life insurance premium is paid, whether once a year or once a week, provided the amount is adequate to the risk undertaken and is made up in conformity with a scientific formula. Fraternal and assessment life insurance could have been as safe as old line if its rates had been properly calculated, which means with due regard to the fact that as men grow older they die faster. But they were bent on furnishing 'cheap' insurance. It is cheap to those who die early, because they have escaped the payment of their proper share of the actual cost; but it is 'dear' to those who live into advanced life.

"Some of the fraternal orders now realize the necessity of a reserve and are endeavoring to reform their plans. But they are in trouble with the holders of hundreds of millions of outstanding insurance of middle age and older who are financially unable to meet level premium rates calculated at their attained ages. If they want to escape the deluge of an ascending yearly cost, they must pay the new rates, or submit to the imposition of a heavy lien on their policies, to be deducted at death. So it has come about that every such society has two or three classes of members: the poor old victims of pure assessmentism; those who can change to the new system, and the new accessions who start right, mathematically.

"AS I see it, the men in the class of which your correspondent is one—and there are hundreds of thousands of them—have been basely deceived by those at the head of their societies and associations. I can hardly believe that the chief officers of those concerns have remained ignorant for years of the course on which they were drifting. If they have, they are not qualified for the positions they occupy; if they have not, they are worse, and should have been removed long ago. If it is punishment enough, they are face to face every day with the criticisms and reproaches of the people they have deluded. Such reforms as those managements have made were forced upon them. Death plays no favorites and it has made no such exemptions in favor of assessment 'coöperative' associations granting life insurance 'without profit,' as have the laws of the land.

"Altho I am not in the life insurance business, as it is not a mystery and is comprehensible by any one with a common knowledge of mathematics, I have had no trouble in understanding the principles governing it. Any person with an average education who wants to do it, may get a good working idea of it in a week. Why so many able business men remain in ignorance of its elementary facts, puzzles me. Everybody who needs it should understand how it is furnished. All will then realize that it has no bargain counter—as you observed once several years ago—that there are no 'dear' and no 'cheap' brands, and that security, the main thing, depends on the accumulation of a scientific reserve."

This department of The Independent will undertake to furnish on the request of readers any information respecting the business of insurance and the companies transacting it which we have or can procure. We cannot, however, pass upon the debatable comparative differences between companies that conform to the requisite legal standards set up for all, except in so far as the claims made by any of them seem to be inconsistent with the principles of sound underwriting. Address all communications on insurance subjects to the editor of the Insurance Department.

INDEPENDENT OPINIONS

A number of our readers have written to us pointing out that the nation which crusades abroad to make democracy safe should see that its own citizens are safe from mob violence at home. We cannot print all of these letters, but we give a typical extract from one of them:

At a time when the American people are face to face with the perils and horrors of a mighty world-conflict, whose ultimate outcome none can now faithfully predict. it is of the highest importance that a unity and resoluteness of spirit pervade every element of our cosmopolitan citizenship. The highest considerations of patriotism demand that every element so deport and conduct itself as to promote and sustain that spirit of unity and resolution on the part of the whole group of our body politic. This, after all, is nothing more or less than that spirit of Nationalism which our most earnest statesmen, past and present, have striven to have the great body of our citizenship cultivate. It is this spirit that is holding the German Empire intact, this spirit upon which depends the future of Russian democracy, this spirit that determines the conduct and measures the strength of any nation in any supreme test.

Such, I think, is the test the American nation is facing today, a test threatening to tax our every resource. This is surely a critical, a supreme moment in the history of the American people and the dictates of statesmanship must regard as the wildest folly, in these uncertain days, any failure to call to the strictest account these evil and pernicious forces which in their very nature strike at the very spirit that ought now to be fostered. Any voluntary movement, any deliberate demonstration, calculated to affront or weaken or disrupt this spirit of unity and resolution on the part of any of the elements of our citizenship, whatever the motives or intent, remains none the less an act of the direst treachery to the American cause; and, to leave at large the criminals responsible for such conduct, not only encourages them to go on spreading their evil iniquity but, what is worse, invites others, elsewhere, with like propensities, to indulge with contempt and impunity in their fiendish hobbies.

We are entering this world-conflict with the avowed purpose of making the world safe for Democracy. A grand purpose, a most noble ideal, one that every red-blooded American must cherish. But in the face of the inhuman outrages perpetrated at East St. Louis, not upon assailants in self-defense, not upon criminals in punishment for crime, not upon law-breakers, not after rational provocation, not merely upon sturdy men, but upon unprotected women and helpless children, upon the unsuspected and unsuspecting, upon the unaware going about their daily business, men murdered, women maimed, children burned—all this in compliance with a deliberate, planned, determined policy of molestation, if not in defiance of law with absolutely no respect for any law civil or moral—I say, in the face of these outrages, even the unreflective are forced to ask, "How far indeed is Democracy safe against the scourge of the more deadly internal foes to law and order and those sacred principles of humanity we all avowedly hold to be inviolate and inviolable?

CHARLES B. WASHINGTON.

Detroit, Michigan

REMARKABLE REMARKS

THEODORE ROOSEVELT—I am not a Hindenburg.

EMPEROR WILLIAM—We shall not let loose our hold.

ED. HOWE—I have never convinced anyone by arguing.

WILLIAM ARCHER—It is not madness to seek to restrain madness.

JOHN D. ROCKEFELLER, JR.—I don't profess to be an expert on theology.

PREMIER VENIZELOS—Constantine has brought Greece to the verge of ruin.

MAXIMILIAN HARDEN—Cease your pitiful attempts to excuse Germany's action.

GUGLIELMO MARCONI—The submarine is like consumption. It is difficult to eradicate.

BILLY SUNDAY—I don't believe in Gehenna or Hades. I believe in H-e-l-l Hell.

DOROTHY DIX—A sign of age in a woman is when she begins to be shocked at every thing she sees.

DR. JAMES C. WARBASSE—Doctors, nurses and undertakers all have useful services to offer.

H. L. MENKEN—The most seriously misunderstood man in these states for a dozen years past has been George Ade.

SECRETARY LANE—The one word that most nearly summarizes his (Wilson's) nature and expresses his career is duty.

"BUGS" BAER—We know a guy who used to celebrate the Fourth of July by promising the kids a penny at Christmas.

GENERAL ALEXIEFF—The soldiers have had so many new ideas suddenly jammed into their heads that their brains can't boil.

DON MARQUIS—Publishing a volume of verse in these days is like dropping a roseleaf into a canyon and waiting to hear the echo.

ORVILLE WRIGHT—The difference between five years or more of war and an early victory for the Allies is 10,000 aeroplanes.

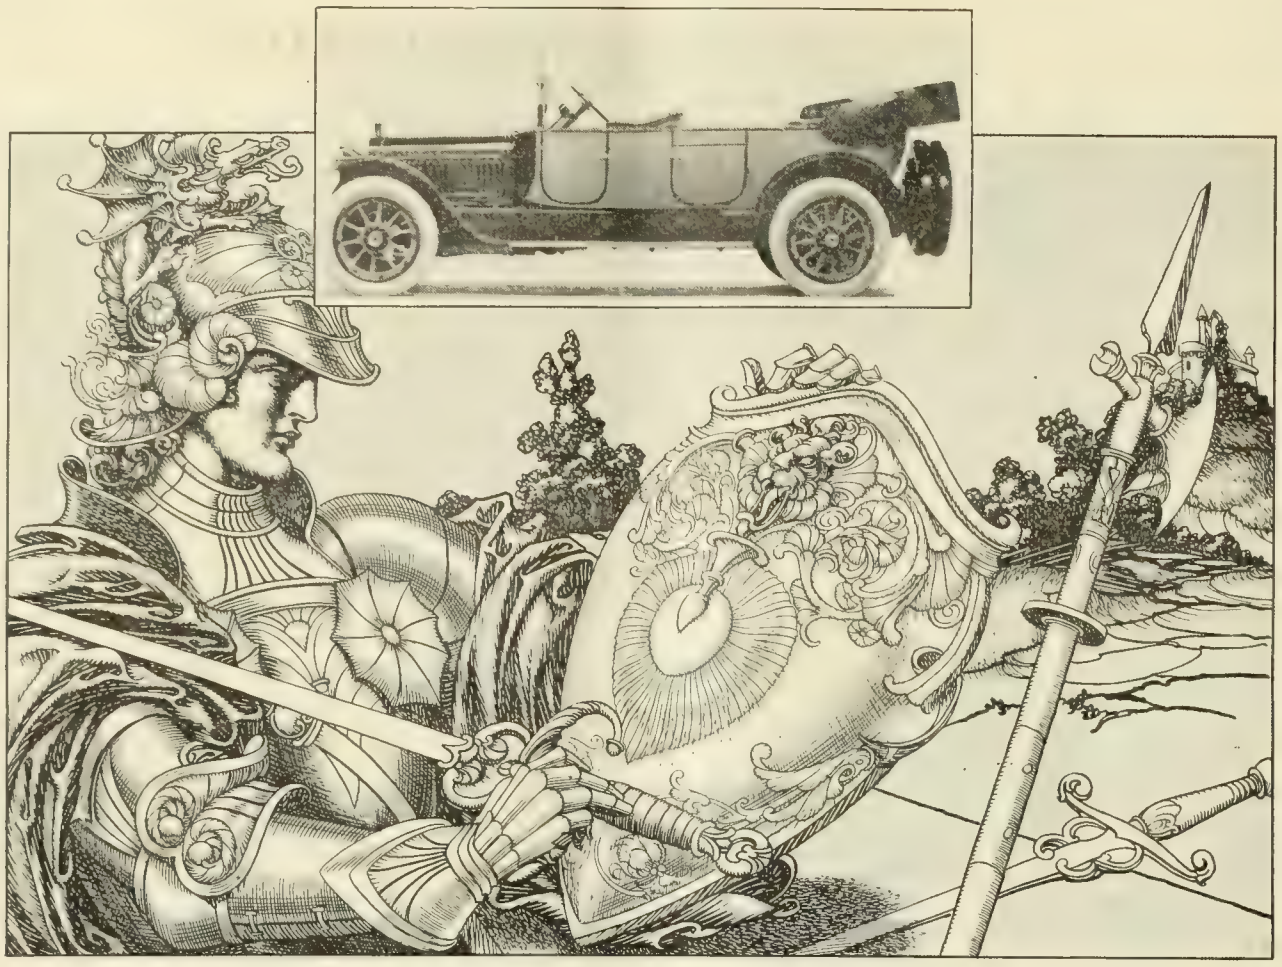
HALL CAINE—Against the gray banks of cloud the raiding German taubes looked precisely like a collection of cholera germs on a glass disk.

JAMES DOUGLAS—I feel that humanity is a ship that is sailing with sealed orders and that its captain is not altogether dependent upon its crew.

AMY LOWELL—Did you ever see, if you have lived near the woods, how the forest can creep and creep up to you and strangle you before you know it?

C. R. ASHBEE—Few things in America have in the last year or two been more significant than the cleavage of opinion between the old and the young.

CARDINAL GIBBONS—The history of the world down to the present time demonstrates the fact that the people have and always will indulge in intoxicants.



W. H. TAFT—The man who does not hope for better things and does not believe that better things can be brought about is not the man likely to bring better things about.

DON VON PLENER—Every intelligent person knows that Emperor Charles and Emperor William are more peace-loving rulers than Poincaré, Lloyd George and Wilson.

CAROLINE B. KING—Mother's cherry pie was plump, well-filled, deliciously juicy and the memory of its seductive syrupy juice, its translucent crimson fruit makes the mouth water even yet.

DAVID LLOYD GEORGE—I rather object to John Bull always being represented as if he were in a towering rage with somebody or something, growling at his food, and generally swearing at everybody.

MRS. O. H. P. BELMONT—America allows women to be unlawfully arrested then its Government at Washington for merely doing their patriotic duty—urging the wisdom and justice of the great ideal of democracy.

Long life! Will it stand the test of the hardest service?

When men of affairs traveled in armor, they required of it both beauty and comfort—but first of all the ability to meet the severest demands.

Now that people of affairs travel in motors, the demand again is for beauty and comfort—but first of all for long wearing qualities and the ability to stand up under the hardest tests.

These things tell *now*.

Look about you—and you will find ancient Packards still doing respectable service. In design they may depart from the current fashion—but sturdy cars they are, and have a high value in a quick market.

It is this ability of the Packard to *resist wear* that makes it a car of economy.

HARPER'S WEEKLY

A BELATED '48

CHANCELLOR VON BETHMANN-HOLLWEG, the only prime minister among all the belligerent countries of Europe who has been able to retain office since the beginning of the war, has resigned at last. His imperial master is said to be debating with himself whether his own timely retirement to private life would save the Hohenzollern dynasty, which, to do him justice, he seems to regard as more important than his personal fate. The Reichstag has for the first time ventured to refuse war credits during a national emergency. The Clericals have gone over in a body to the Socialists and this strange alliance of the red cap and the papal tiara controls an absolute majority of the people's representatives. The Germans have adopted the Russian formula of "peace without annexations or indemnities," altho we may doubt if the two nations mean quite the same thing by the same words. The Kaiser's own policy is unknown and to carry it into effect he has appointed a man who is himself almost unknown, who has never taken sides in party politics and who has not even a "von" to his name. This is the situation of the moment. Is it revolution?

The Germans are almost the only people in all Europe who have never carried to completion a revolutionary movement, and it is scarcely a matter for wonder if they now seem puzzled how to set about it. Great reforms have been made in the institutions of the empire, but they have hitherto always been handed down from above rather than snatched from below. The bravest attempt to make a people's Germany was the earthquake year of 1848 when every throne in Europe was shaken and several for a time were overturned. Then a procession of giant figures crowded to the center of the stage; poets like Heine, reformers like Schurz, our later fellow-American, radical Socialists like Karl Marx, and a certain Prussian junker who viewed the battle for national unity and reform with little sympathy but much understanding, Bismarck. The crown of a united Germany was offered to the King of Prussia, but he refused it because to his tradition-loving mind it was better to be monarch of a little nation by grace of God than to be ruler of a vast empire by the grace of the people. Then the Germans experimented with a republic and while they were formulating the Rights of Man in neat and accurate phrases the princes conspired to restore the old order. The old German kingdoms were restored within a few months by loyal armies and instead of a united and liberal Germany the people were confronted with a chaos of dynasties tied together by a clumsy constitution but really governed by the military machines of the two great German states, Austria and Prussia.

The failure of '48 was perhaps the greatest political tragedy in European history. Had all the revolutionary movements of that year borne fruit there would have been a united Italy governed by the ideals of Mazzini, more than twenty years before the union was in fact completed; France would have escaped the shameful episode of the Second Empire and the tragedy in which it closed; a republic would have been established in Hungary under the liberal Kossuth, and, best of all, Germany would have owed its unification to the self-assertion of its people and not to the intrigues of a reactionary statesman and the blind obedience of an army. There was once a liberal tradition in Germany no less strong than that of any other European nation. But when the idealistic Germany of Schiller, Kant, Fichte, "Vater Jahn" and the revolutionists of '48 proved unequal to the regeneration of the nation the task fell into very different hands. Bismarck, the giant realist, solved the problems of the day with blood and iron, and blood and iron have been the sole reliance of German politics ever since.

Bismarck had the unique greatness among German statesmen of comprehending the forces with which he fought. He cared much for the Kingdom of Prussia and little for the German people, but he saw that it was no longer possible to resist the combined forces of democracy and nationalism, and rather than yield to the former he chose to satisfy the latter. He gave Germany unity by conquest in order to forestall the threatened coming of unity by revolution. He made the German people see their whole nationality symbolized and summarized in the Hohenzollern crown. He fostered industry by wise laws and he glutted the national appetite for glory by carefully chosen foreign wars, and the German people soon forgot their craving for self-government.

William the Second could tolerate no Bismarck near his throne, for the great statesman was one of those servants who will serve on condition that he may control. But in rejecting the Chancellor he did not swerve from the line of policy which he had marked out. Germany remained the most heavily armed of nations, but it avoided war; it remained the least democratic of nations, but it permitted the people to go thru the motions of voting for that imperial debating club the Reichstag; it remained the least liberal of nations, but it fed the poor. These were the Bismarckian compromises which satisfied the mass of the German people. Perhaps on this basis Germany might have continued growing quietly in wealth and power for generations before popular discontent forced the dynasty to bend or break. But William was no Bismarck and the moment he decided—or was persuaded—to try an experiment of his own in *Weltpolitik* he blundered. He tried to renew the Hohenzollern tradition of conquest, but he forgot Bismarck's caution to weigh carefully the imponderables of war and his coarse diplomacy succeeded in rousing the fears, shocking the moral sense and setting ablaze the indignation of every other nation in the world except the three which he was able to bribe or bully into an alliance.

Drawn for The Independent by W. C. Morris

THE DELUGE

For the moment the raid on civilization seemed on the point of success. The best military machine in Europe backed by a uniquely balanced organization of field, factory and mine made conquests east and west and south until it seemed as tho the adhesion of new nations to the Grand Alliance but opened new opportunities for German arms. But before three years had passed the Hohenzollern dynasty had experienced a worse blow than any mere military defeat. Russia, the most reactionary of all the world's autocracies became the most radical of republics. Germany, Austria-Hungary and Turkey stood alone on an evil eminence as the only three civilized nations on earth, big or little, which had neither republican or Parliamentary government. The greatest of the neutrals, which was also the most powerful of republics, took the field against them. The Germans see at last that in surrendering their war for liberty after 'forty-eight they sold the German soul in order to inherit the whole earth. And yet the earth is not theirs.

BREAK THE I. W. W. NOW

THE I. W. W. has been looking for trouble since its first day on earth. The western wheat raising, lumbering and mining states have arrived at a conclusion that they might as well supply the commodity at once and enough of it to meet all demands. We sincerely hope that they will.

This organization is a public nuisance. Among its members doubtless are many well meaning persons. Among its organizers and officers there may be a few honest men; but it has not hesitated to give power and leadership to jail birds with histories, and of late it has freely been making threats to destroy the wheat crops, smash up saw mills, ruin mines and commit other depredations. Its moving spirits are temperamentally lawless, and anarchists by profession, and their motive is "pure cussedness." It is time for the American public to take them in hand, put them behind the bars and break their organization.

If this job means a considerable disturbance of industry, let's have it and have it now. There is nothing to be gained by waiting or by timorousness. The Federal Government is ready to back up the state governments to any necessary extent. This country is at war with a ruthless and dangerous enemy. All our resources, of materials, food supplies, lumber and metals, and man power are demanded. The I. W. W. is giving aid and comfort to the enemy. Whether it is taking German gold or not, is neither here nor there. It is obstructing the military operations of the Government and of the nation. It cannot and must not be tolerated.

The question whether the wage earners of the west are getting adequate compensation is another matter. That should be looked into and dealt with on its merits by lawful methods. If it is necessary for the Government to decree advances, as the British Government has done, good and well. We have an administration that will not hesitate at any action that may be found to be expedient and just, but the I. W. W., along with the kings and other public nuisances, must go.

A SILENT REVOLUTION

WHILE the majority of the Socialist party is bewailing the war as the triumph of militarism and capitalism, the United States is quietly absorbing the sounder elements of the Social Democratic theory. This change is not trumpeted in the press as revolution, it is not coming about in the way that Karl Marx anticipated, and therefore many of us do not realize that anything has happened. But to see how much the whole structure of industry has been altered it is only necessary to compare this war with our Civil War. During the Civil War we had a President even more democratic in his instincts than President Wilson, but the conservatism of public opinion compelled Lincoln to tolerate what today would be considered intolerable. Then a man could buy himself free from conscription; now the son of a multimillionaire is as liable to service in the ranks as the son of a ditch digger and more liable than a farm hand or a munitions worker. Then contractors made fortunes from contracts with the Government; now the President brands as treason every attempt to secure exceptional profits from a national emergency and the Secretary of the Interior declares that this war will not be permitted to make any man rich. Then the railroads could secure land grants worth many millions of dollars from the Government merely to induce them to build; now the railroads are so closely regulated in the public interest that the only danger is that they may not secure enough profit to keep their equipment in good repair. Then the burden of taxation was upon the consumer; today we are financing the war with direct taxes that are held by many to stop only a little short of confiscation. Profits, both in peace and war, are tending to sink to "wages of management" and, while industry still remains in private hands, this now is coming to mean that the captain of industry owns the goose and the public gets the golden eggs.

HOW DEMOCRACY RUINED RUSSIA

IN 1916 General Brusiloff led an ideal army from the militarist standpoint; an army of illiterate, superstitious peasants, incapable of insubordination and moved at the will of their officers like so many chessmen on the board. He did not take Halicz.

In 1917 General Brusiloff led an army of revolutionists who had broken with every tradition of their past, who had deposed a Czar, who refused to salute their officers, who fought or fraternized with the enemy according to their own feeling at the moment. He took Halicz.

Any one who wishes to may draw the moral.

THE MENACE OF THE WEST

ALL good things in the U. S. A. nowadays come out of the West. For instance woman suffrage, bone dry prohibition, direct legislation, the jitney, the cafeteria, William Allen White, W. J. Bryan and Jeannette Rankin.

But at last the iconclastic West has gone too far, and the effete East and the Bourbon South must refuse to follow its lead any further. For the Western Golf Association has declared for the abolition of the stymie.

Abandon, if you must, cleek, niblick, bunker, slice, stance, dormie, bogey, and even the 19th hole. But the stymie shall never be surrendered!

LET US BUY THE DUTCH WEST INDIES

THE recent acquisition of the Danish West Indies by the United States was a model of territorial transfer. The people of the islands, almost without exception, were enthusiastic for the change. The people of Denmark voted by a large majority to accept the liberal terms offered by the United States. The United States Senate passed the Treaty of Purchase without serious opposition. Thus all three parties concerned were satisfied, and nobody displeased except Germany, but we are not now worrying over the German feeling. It was a wise move, and the only regret about it is that it was not consummated fifty years ago, when Lincoln and Seward first negotiated the purchase.

The public has not been informed of the particular reason which made the transfer of the Danish Islands to the United States a matter of urgency at the present time. But Finance Minister Brandes, in bringing the treaty before the Rigsdag, plainly stated that serious international

complications were to be feared if the deal were not speedily consummated. President Wilson's manifest anxiety when the Senate showed a disposition to hold up the treaty pointed the same way. But in spite of our ignorance of the negotiations leading up to the treaty, it is easy to see what in general was the danger apprehended. That Denmark should become involved in the war was and still is quite likely, and in that case the United States would under the Monroe Doctrine be directly concerned.

The same danger still exists in regard to the Dutch West Indies. Holland, like Belgium, lies between the belligerents, and has been steering a difficult course of neutrality for the last three years. It is doubtful if this neutrality can be preserved much longer. If the British blockade is reinforced by an American embargo upon exports to the Netherlands, that country will be virtually cut off from the maritime commerce upon which her national life is dependent. So shut in and deprived of imported coal and food, the Dutch people would have a very hard time getting thru the coming winter. At the beginning of the war their sympathies were decidedly pro-Ally, but lately they have been swinging in the other direction on account of the increased stringency of the British blockade and the rumor that Belgium desires to annex the mouth of the Scheldt now held by the Netherlands. Amsterdam and Rotterdam have been placed among the foremost ports of the world by serving as the outlet of German commerce, so a permanent break with Germany would be ruinous to the Netherlands. If the Netherlands should show any disposition to join with the Allies, the German troops concentrated upon the Dutch frontier for that purpose would immediately enter the country and quite possibly overrun it as they did Belgium and Rumania before the Allies' troops could be transported across the perilous North Sea in sufficient force to meet the German invasion. But if the Netherlands voluntarily took part in the war or should be conquered or coerced by either side, the Dutch colonies would be thrown in with the spoils of war to be held by the strongest or to be disposed of by bargaining around the conference table.

With the Dutch East Indies, the only valuable colonies that Holland possesses, the United States is not concerned. But the transfer of the Dutch West Indies to any other European power would involve the Monroe Doctrine especially as interpreted by the Lodge amendment of 1912. The United States does not wish to become entangled in the complications of European politics any more than is necessary, and the best way to remove this particular difficulty is to offer to purchase the Dutch West Indies. Secretary Lansing's report of January 22, 1917, says: "The Caribbean is within the peculiar sphere of influence of the United States, especially since the completion of the Panama Canal, and the possibility of a change of sovereignty *of any of the islands* now under foreign jurisdiction, is of grave concern to the United States."

The Dutch West Indies are worth nothing to the Netherlands, but would be worth much to the United States both from a strategic and a commercial point of view. The Dutch territories in the West Indies consist of Surinam, or Dutch Guiana, and the six small islands called after the largest of them, the colony of Curaçao. Surinam is a little smaller than New York State and contains a population of 86,000, not counting the savages and the negroes who have run wild. Three hundred years ago Surinam was considered by the Dutch a fair trade equivalent for New Netherland. Today a square yard on Manhattan Island would bring more in the real estate market than a square mile of the Guianas. The Pilgrim Fathers hoped at first to settle there, but fortunately were deflected toward the more forbidding shore of New England. We nowadays recognize what our ancestors ignored—the unalterable difference between a tropical and a temperate land. It has still to be demonstrated that the tropics are capable of supporting civilization such as thrives in northern latitudes. But thru the advance in sanitary science the tropics have at last become livable to the white man, and we are beginning to realize their value for the supply of food and raw materials to northern civilization.

Surinam has now fewer inhabitants than it had a hundred years ago, and a large proportion of the coffee, cotton and sugar plantations that were then thriving have been abandoned. It was a mere accident of history that after two hundred years of conflict in the Caribbean between the four great maritime powers of Spain, Holland, France, and England, the final result was a European enclave on the South American continent.

Of the three Guianas the French is the worst off, the British is the best off, and Dutch Guiana comes in between. None of the three is prospering at present, and they cannot expect to prosper so long as they remain under European control. But if transferred to the United States their prospects would be bright, for they would be developed by American capital and enterprise and in a few years we should see a railroad running into the interior and connecting the coast with the rich valley of the Amazon.

The insular possessions of the Netherlands are of less commercial, but greater strategic, importance. The six islands altogether are a little more than twice the area of the three Virgin Islands that we have just purchased from Denmark. Two-thirds of this area is in the island of Curaçao, chiefly known to the public as the source of the orange peel from which is made the liqueur which goes by its name. But Curaçao is of great value because it possesses "one of the finest and most commodious harbors of the West Indies," to quote the report of the United States Naval Department on "Navigation in the Caribbean." This extends far into the interior and is from forty to eighty feet deep. What its possession would mean to us may be realized when we remember that it was in this harbor that Admiral Cervera's fleet was concealed in the Spanish-American War while our navy was searching the broad Atlantic for it. The United States Government has just made public the intrigue of Germany to gain control of the island of Margarita off the north coast of Venezuela for the purpose of using it as a shelter for submarines. Curaçao occupies a similar position off the coast of Venezuela, and would be a much more serious menace to the United States if made into a naval base by an aggressive power.

Near to Curaçao are the smaller islands of Bonaire and Aruba. Then five hundred miles north are three tiny islands —St. Martin, which, tho only thirty-eight square miles in area, is divided between France and Holland; St. Eustatius, of only seven square miles, and Saba, a mere volcanic peak, whose inhabitants live in the crater and build boats altho the island has neither lake nor harbor. Altogether the Dutch colonies in the West Indies contain 5,000 square miles, while the three Virgin Islands that we have just bought from Denmark, at a cost of $25,000,000, comprise only 138 square miles. The Dutch possessions would be vastly more valuable to us, altho of course we could not be expected to pay for them at the same price per acre. Holland has been hard hit by the war notwithstanding the high prices which the Germans have paid for its produce. The cost of caring for such a large number of Belgian refugees and interned soldiers and the expense of maintaining its troops in arms to protect the country from a possible German invasion at any moment have caused a great strain upon the financial resources of the Government. Under the circumstances, it seems likely that the Government of the Netherlands would welcome an offer from the United States for the purchase of its American possessions. At any rate it would do no harm to ask.

THE STORY OF THE WEEK

Draft Quotas Assigned The War Department has announced the gross quota of men that each state and territory is expected to raise for the army. This total includes the National Guard and the enlistments in the regular army between April 2 and June 30 as well as the number of men to be raised by conscription. After the National Guard has been fully mobilized and the new drafted army called into existence the United States will have under arms 1,152,985 men in addition to the regular army establishment as it existed at the beginning of April. The number of men to be drafted will be 687,000 and will, of course, be greater or less in each individual state according to the extent to which that state has recruited its militia and filled its quota of the regular army. The territory of Hawaii has so large a National Guard that it will not be subject at all to the first conscription. Of all the states in the union Oregon will furnish the fewest drafted men to the army. Nevada has done even better than Oregon in recruiting volunteers for the regular army, but Nevada has no National Guard. On the other hand, some New England states have a very heavy enlistment in the militia and have furnished very few soldiers to the regular army.

On July 9 President Wilson issued a proclamation providing for the mobilization of the National Guard. On August fifth the entire National Guard becomes a part of the Federal army and subject to all the rules and regulations of the regular army. Until this is done no member of the National Guard can be compelled to serve outside of the United States. The National Guard of eleven states is called into the federal service on July 15, of nineteen others on July 25, and all of the rest on August 5. Training camps for the National Guardsmen are already prepared for use.

THE GREAT WAR

July 9—Seventeen British ships sunk in past week. President Wilson proclaims mobilization of National Guard. Turks defeat Russian outpost on Persian border. British warship "Vanguard" blown up.

July 10—Russians reach Halicz. German Chancellor refuses to discuss peace.

July 11—Germans take trenches on the Yser. Russians cross Lomnica River.

July 12—Kalusz falls to the Russians. Chancellor von Bethmann-Hollweg resigns.

July 13—Reichstag refuses to consider war credits. British aeroplane victory on French front.

July 14—Georg Michaelis becomes German Chancellor. House of Representatives passes $640,000,000 aircraft appropriation.

July 15—Russians take 1600 Austrians in Galician battle. French and Germans raid trenches in Champagne.

The details of the draft are gradually being settled. Nearly every local exemption board in the country has met and organized. Each board has numbered the cards in the registration district with red ink in a series running from one to the total number in the district. These numbers will be drawn at Washington by lot, and as each is drawn the corresponding card in each district will be that of a drafted man. It is, therefore, imperative that every registered man find out at once the address of the exemption board in his home district and go there to inquire for his "red number." Then he should watch the newspapers, or inquire directly at the exemption office, to see if his number is among those announced as drawn. If so, he should report first for physical examination on the day mentioned in his call. If he passes the physical examination and desires exemption he may file a claim with the local exemption board within seven days of his call and have ten days thereafter to file proof in support of the claim.

House Passes Aviation Bill On July 14 the House of Representatives passed appropriations totaling $640,000,000 for the construction of a great fleet of aeroplanes, the training and equipment of aviators and other expenditures necessary to ensure us command of the air. The bill passed without any opposition and practically without debate. The only discussion of any moment related to the administration's policy of silence as to the details of the expenditure of this vast sum. Representative Kahn of California defended official secrecy on the ground that to discuss details would inform Germany of the exact nature of our program and the number of aeroplanes which we intended to build. He instanced the policy of Germany in keeping the rest of the world in the dark as to the size of the submarine fleet

TANK TACTICS

Here is one of the rarest of war photographs—the actual attack of a squadron of French tanks on the German positions. Artillery fire has cleared the way and they lumber straight thru, impervious to counter-attack. The tank in the foreground isn't even bothering to turn out for a shell crater

as a good example to follow. One disadvantage of this lump sum appropriation was a dispute between the Appropriations Committee and the Committee on Military Affairs over the question of which should have charge of the aviation bill.

The Prohibition Difficulty

The provision inserted by the Senate into the food control bill providing for the commandeering by the Federal Government of distilled liquor now in bond at a price equal to cost plus a profit of not more than 10 per cent has been attacked as unconstitutional and may result in the recasting of the entire bill. Several Senators have brought forward the argument that while Congress has the right to authorize the commandeering of supplies needed for war purposes it may not fix an arbitrary price, but must leave the determination of what constitutes "just compensation" to the courts. The prohibition provision can be modified in such a way as to meet the objection of unconstitutionality, but Congress is becoming more and more apprehensive that the sacrifice of the expected liquor revenues will upset all the financial plans of the Government and necessitate new taxes.

The prohibition question is not the only obstacle to an early consideration of the food control bill. The Senate struck out the provision inserted in the measure by the House of Representatives placing under civil service rules the persons appointed to administer the law. This at once made the Republican minority hostile to the bill from the fear that all the positions created by it will be filled by "deserving Democrats." Other Senators still profess alarm at the extent of the powers conferred on the President and Mr. Hoover. If the food control bill is much longer delayed the administration may agree to the immediate enactment of some simpler measure with the contested provisions of the present bill omitted.

The German Crisis

The political crisis within the German Empire is probably of greater significance for the future of the war than any of the military operations now in progress. It is still too early to tell whether the present discontent will bring about revolutionary changes or evaporate, as all previous German reform movements have done, with the granting of a few minor concessions and the promise of more at some unspecified time in the future. The Kaiser has made a definite pledge to do what he can to introduce equal manhood suffrage in the Prussian Diet, but he has done nothing to reform the constitution of the German Empire as a whole. He removed Chancellor von Bethmann-Hollweg in response to the desire of the imperial Reichstag, but in his place he appointed a little known Prussian bureaucrat, Georg Michaelis, who is not associated with any of the political parties into which the nation is divided and will probably be a mere mouthpiece for the Kaiser. Previous to his appointment Chancellor Michaelis was food controller, a position corresponding roughly to that of Mr. Hoover in this country, altho with much more extensive power.

Ex-Chancellor von Bethmann-Hollweg has held office for eight years and was the only remaining premier among the statesmen of the powers which entered the Great War in 1914. In Great Britain Asquith was replaced at the head of the Government by Lloyd George and in France, Austria-Hungary and Russia there have been frequent shake-ups of the cabinet, but von Bethmann-Hollweg managed to retain office in spite of criticism from every side. He was equally disliked by the Socialists, who demanded political reforms and a statement of peace terms, and by the extreme Conservatives, who wished him to outline a program of conquest. At the opening of the present session of the Reichstag he again refused to discuss the conditions of peace, and this reticence seems to have offended all parties. The Reichstag thereupon refused to consider the war credits bill and the Kaiser bowed to the storm and removed his Chancellor. With him went a number of the other cabinet ministers, including Dr. Alfred Zimmermann, who as Minister of Foreign Affairs tried to bring Mexico and Japan into an alliance against the United States.

The immediate occasion of the German political crisis was an attack on the Government by Herr Mathias Erzberger, who as leader of the "Center" party, which represents the political views of Roman Catholic Germany, wields enormous power in the Reichstag. The bold position suddenly assumed by the Center party in Germany may be connected with the peace rumors prevailing in Roman Catholic Austria-Hungary and the anti-war propaganda of the Church in Quebec.

THE REICHSTAG'S BASES OF PEACE

The majority bloc in the German Reichstag will, it is reported, attempt to secure the adoption of this statement of the principles which should underly the discussion of terms of peace:

As on August 4, 1914, so on the threshold of the fourth year of the war the German people stand upon the assurance of the speech from the throne—"We are driven by no lust of conquest."

Germany took up arms in defense of its liberty and independence and for the integrity of its territories. The Reichstag labors for peace and a mutual understanding and lasting reconciliation among the nations. Forced acquisitions of territory and political, economic, and financial violations are incompatible with such a peace.

The Reichstag rejects all plans aiming at an economic blockade and the stirring up of enmity among the peoples after the war. The freedom of the seas must be assured. Only an economic peace can prepare the ground for the friendly association of the peoples.

The Reichstag will energetically promote the creation of international juridical organizations. So long, however, as the enemy governments do not accept such a peace, so long as they threaten Germany and her Allies with conquest and violation, the German people will stand together as one man, hold out unshaken, and fight until the rights of itself and its Allies to life and development are secured. The German nation united is unconquerable.

The Reichstag knows that in this announcement it is at one with the men who are defending the Fatherland. In their heroic struggles they are sure of the undying thanks of the whole people.

The Battle of the Dunes

Coincident with the Russian offensive in Galicia was a new German drive in Flanders against the British and Belgian lines. The heaviest attack struck the British trenches along the Yser River north of Nieuport. On the night of July 10 the Germans occupied the British entrenchments on a front of about a mile and to a depth of six hundred yards, driving the British back beyond the Yser and capturing 1250 prisoners. The artillery preparation for the attack was so intense that the residents of London could plainly hear the sound of the cannon. The large number of prisoners taken was due to the fact that the Germans cut off the retreat of the men in the front trenches by artillery fire thru which no aid could pass. Trapped by the German fire in the rear and their defenses churned into dust by the bombardment in front, the English had to await helplessly the attack of the German marine corps troops who stormed their positions after the artillery had done its work. Further to the south, near Lombaertzyde, the Germans were repulsed.

The scene of this action was the seacoast at the very extremity of the long entrenched line which stretches from Switzerland to the North Sea. The British trenches amid the sand dunes are usually protected by naval support, but there were no ships off the coast on the night of the attack. It is not known whether the German offensive was a mere local action intended to distract the attention of the enemy from other theaters of war, and to encourage the soldiers with a taste of success, or was the first step in a big drive at Dunkirk, Calais and other ports of the English Channel.

Elsewhere on the western battle front the Allies have carried off the honors of war. Thruout the week the Germans made attack after attack on the French lines north of the Aisne along the Chemin des Dames, but always with the same lack of success. Altho the attacking columns inflicted considerable losses on the defenders, it seems probable that they themselves suffered more severely. The British retain their supremacy in the air. During one engagement the Germans lost thirty aeroplanes to nine of the British, and the British naval air service has made many raids on the Belgian coast in possession of the Germans.

French Ministry Holds Office

The beginning of the open sessions of the French Chamber of Deputies was marked by an attempt to overthrow the ministry of Premier Ribot. The chief complaint of the opposition was the failure of the French offensive in the west to gain as much ground as it had been expected to win. The Government admitted heavy losses, but contended that the results achieved were of real military importance. Others criticized, as a piece of party politics, the sending of M. Viviani as head of the French war mission to America. After a long and somewhat turbulent discussion the Chamber voted its confidence in the ministry and the immediate crisis was past. The Ribot government is in favor of a strong war policy. The Minister of War declared that a peace based on the restoration of conditions as they existed before the war would be equivalent to a German victory, and Premier Ribot insisted that France would annex Alsace-Lorraine without a plebiscite. The vote of confidence, therefore, implies that France will continue the war until a complete victory is achieved and will enter no negotiations looking toward a compromise peace.

Russians Capture Halicz

The Russian drive which began with the capture of Koniuchy on the first of July continued along nearly the whole Galician front with unabated vigor and a reckless expenditure of human life. The immediate aim of the Russians was to capture the important city of Lemberg, which is not only the capital of Galicia but the chief railroad center of the region. Once before during the war Lemberg has been taken by the Russians, but after it was recaptured in the summer of 1915 it remained securely Austrian. The second Russian offensive undertaken by General Brusiloff the following year was checked at Halicz, the city which is called "the key to Lemberg." But the revolutionary army achieved what the imperial army had failed to accomplish. The Russians forced the enemy back north and south of Halicz and on July 10 entered the city.

The capture of Halicz did not complete the victories of the Russian army. The Austrian forces between the Dniester and the Carpathians fell back behind the Lomnica River to the southwest of Halicz and during the retreat thousands of prisoners fell into the hands of the Russians. Many of these prisoners, however, were really deserters. The Slavic regiments of the Austro-Hungarian army have shown little enthusiasm since the Russian revolution has removed their fear of coming under the rule of an autocracy even more oppressive than that to which they were accustomed. Several Czech (Bohemian) regiments deserted to the Russians as a unit. In addition to the big drive in Galicia the Russians hammered the German-Austrian line at several places farther north. The city of Pinsk, which is the German outpost in the valley of the Pripet River, has been set afire by the Russian artillery.

THE GAS MASK IN CONGRESS

The United States is considering the adoption of this gas mask of American invention, worn here by Representative Heintz of Ohio, who recently demonstrated its use to Congress. Its chief improvement over the present gas mask is an air filter which will insure a supply of pure air as long as may be necessary

The hero of the Galician army is General Korniloff, who is perhaps the most romantic figure among the military leaders of the republic. Born in a Cossack peasant home he won by extraordinary scholarship the chance, which in those days rarely came to a peasant, to enter an officers' training school. He was decorated for valor in the Japanese war and he was regarded by the Austrians who made him prisoner in 1915 as at once the most formidable and the most chivalrous of their foes. He escaped from an Austrian prison camp and on his return to Russia was placed in command of the troops at the capital. By his refusal to repress the Petrograd insurrection he greatly aided the revolution and the provisional government was glad to give him a lieutenant generalship under General Brusiloff. General Korniloff has traveled extensively in Central Asia and is the author of several works of travel. He has the reputation also of being one of the best linguists in Europe.

Ira L. Hill's Studio

MUSIC FOR SUMMER AND WAR

Russian Readjustment

The inspiring victories achieved by the armies of the republic have contributed greatly to straightening out the internal problems which have hitherto paralyzed Russian arms. The American war commission which has been visiting Russia gives a most optimistic report of conditions. "We have found no organic or incurable malady in the Russian democracy," reports Mr. Root, adding that "democracies are always in trouble." Major General Scott, of the American army, who has witnessed at first hand the big drive in Galicia, declares that the Russian artillery was remarkably effective, and that there was not a sign of insubordination or reluctance among the soldiers when they were given the order to advance. Premier Lvoff, in a statement to the American people, announces that an adequate supply of munitions of war for the offensive was already assured so far as the immediate future was concerned. He admitted, however, that the transportation system of Russia was still in a very bad shape and that American aid was much needed to equip the railroads with all their needed supplies. Even the ex-Czar Nicholas has accepted the new order gracefully, and he has applied to the provisional government for permission to take part in the national "Loan of Freedom," corresponding to our own Liberty Loan.

Russia has not yet succeeded in conquering all separatist tendencies. The Diet of Finland has taken advantage of revolutionary confusion to prepare a bill assuming for itself all the powers exercized by the Russian Governor General of Finland, and thus making the connection between Russia and Finland a purely nominal one. The revolutionary government in Russia is in sympathy with the cause of Finnish autonomy but insists that all questions involving constitutional changes within the republic must await the meeting of the constituent assembly which will establish the permanent government of Russia.

The Mesopotamia Inquiry

"SAMMY" SIGHTSEES PARIS—AND IS LOST

New Yorkers who stared with friendly amusement at the French sailors looking lost on Broadway will enjoy this turning of the tables by their allies. The French poilu and his girl in Paris think it rather droll that a soldier should need to consult a map of their boulevards, even if he is an American on his first jaunt overseas

and forced to surrender because it had been hurried forward into the enemy's country without numbers or equipment sufficient for so venturesome an enterprize. Austen Chamberlain, one of the officials blamed for the failure of the expedition, has resigned his post as Secretary of State for India, and Lord Hardinge has offered to give up his present office of Under Secretary for Foreign Affairs. Several minor civil officials of the India Office may also be forced out of public life by the revelations of the commission.

The present campaign in Asiatic Turkey is progressing slowly and indecisively. The British still hold Mesopotamia and the country to the south of Jerusalem, but neither the advance by way of Bagdad or the advance thru Syria has penetrated far enough into the Turkish domains to reach a military decision. The best effect thus far of the campaign is to encourage the movement for an independent Arabia. The Arab "King of the Hejaz" has taken several towns from the Turks to the east of the Sinai peninsula. The Russians concede a local victory for the Turks on the Persian frontier.

Sinn Feiner Elected to Parliament

Edward de Valera has been elected to the House of Commons from the constituency of East Clare on a platform advocating an independent republic in Ireland. He received 5010 votes to 2035 for Patrick Lynch, the candidate of the Nationalist party who favored home rule within the British Empire. De Valera, an Irishman of Spanish ancestry, born in New York, was a professor in Dublin University. He associated himself with the Easter rebellion of last year, was arrested and sentenced to death, but was freed by the general amnesty recently offered to political prisoners by the British Government. The seat in the House of Commons which he has captured had been filled by Major William Redmond, brother of John Redmond the Nationalist leader, who was recently killed while fighting the Germans in Flanders.

The political significance of the election is very great in view of the forthcoming Irish constitutional convention which is to draw up a home rule bill for the consideration of Parliament. The Irish Nationalist party has favored participation in the convention and has built great hopes on it, but the Sinn Feiners disdain to have anything to do with a purely advisory convention. De Valera will probably refuse to enter Parliament, as his faction denies the authority of the British Government, and only contests seats as demonstrations of the strength of the popular demand for national independence. If Ireland as a whole shares the temper of East Clare, the national convention will come to nothing, as the British Government, ready to grant to Ireland almost anything short of independence, will never consent to that.

Republicans Triumph in China

The restored monarchy in China has been overthrown much more rapidly than had been anticipated. General Chang-Hsun counted on the dynastic loyalty of the Manchus and the indifference of the masses of the Chinese peasantry and his own excellent army to uphold the throne of the boy Emperor Hsuan Tung against the Republicans until the powers were forced to recognize the monarchy as the only existing government in China. But he made the capital error of underestimating the extent to which the Chinese people have become permeated with republican ideas in the past few years. Within a few days the imperialist army was beleagured in Pekin by some fifty thousand men from Southern China, and this force was daily increased by new arrivals and desertions from General Chang-Hsun's own troops. Tuan Chi-Jui, the new Premier, issued a proclamation to the Chinese people urging them to defend their liberties. The ablest men of the nation rallied around him and Dr. Sun Yat-Sen, who led the first revolution against the Manchu dynasty, took the post of commander in chief of the navy. The Emperor abdicated and his "Warwick the king maker," General Chang-Hsun, abandoned the attempt to hold Pekin.

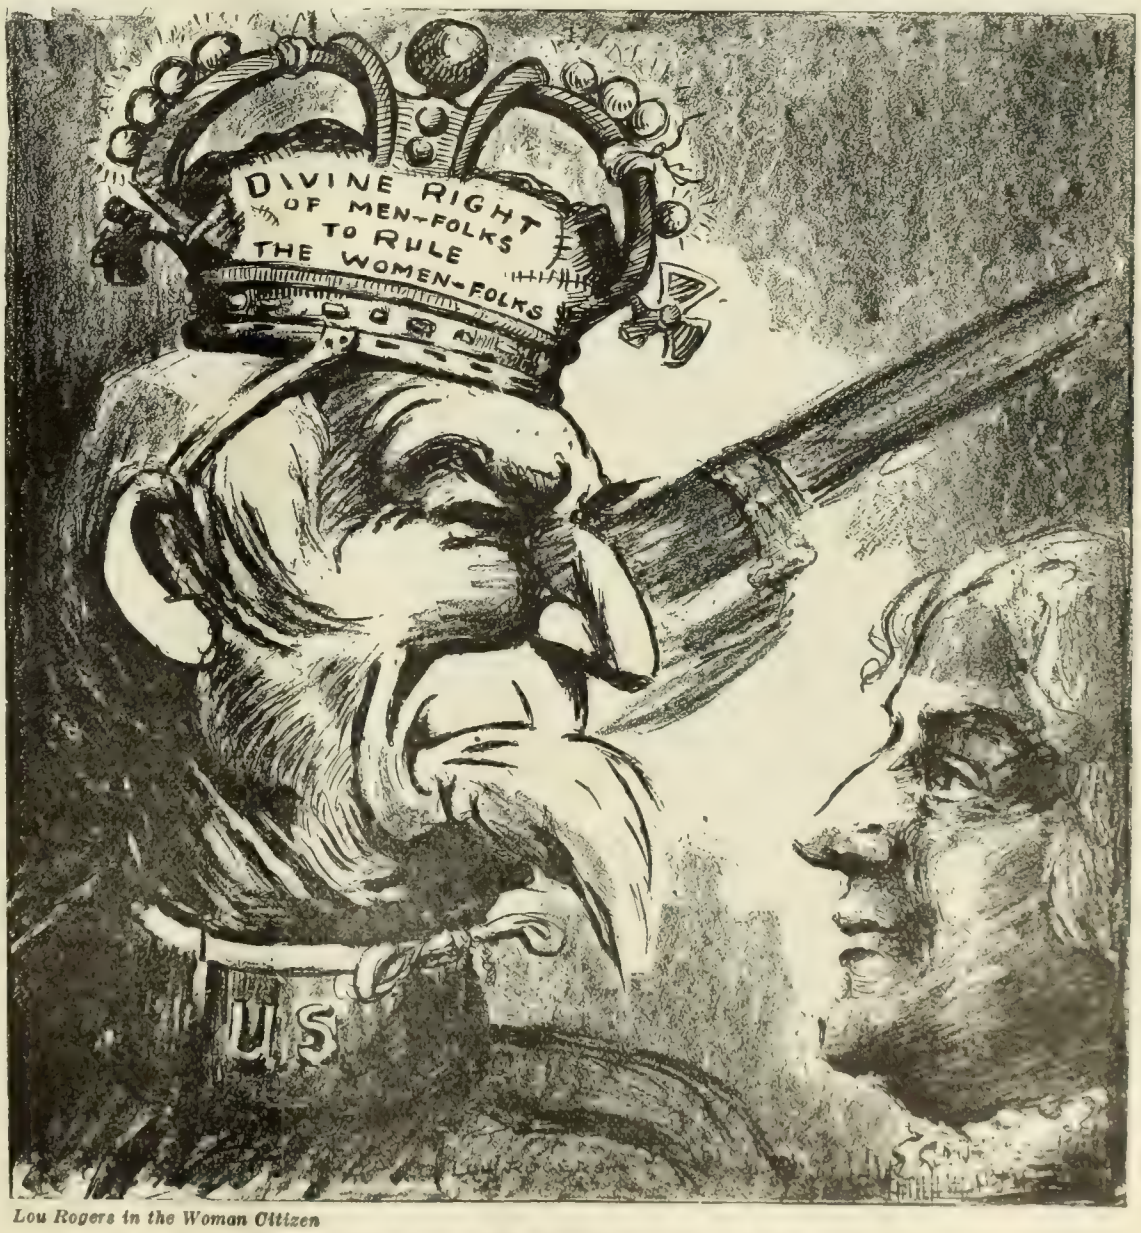
No foreign nation ventured to recognize the restored monarchy during its brief period of power. The Japanese Government formally declared that it did not intend to take sides in the internal politics of China. The coldness shown by the Japanese toward the Manchu ruler is partly explained by the report that the monarchy intended to restore the broken diplomatic relations between China and Germany, and that German agents had actively promoted the imperialist cause in the hope of such action. But the government directed by General Chang-Hsun did not remain in power long enough to embark on any foreign policy. The way in which the Chinese people rose to the defense of their free institutions is a hopeful sign for the future, but this will not be the last insurrectionary movement which China must face if Chinese generals continue to use the provincial armies independently of the National government. China may not inaptly be compared with Mexico in its actual government. Both countries are republican in form, but both are kept in constant disorder by military chieftains who are the real government over as much of the nation as their armies are able to terrorize.

A Slump in Submarines

The toll of British shipping destroyed by the Germans during the week ending July 8 is the smallest for any week since that of March 11. Fourteen ships of more than 1600 tons were destroyed by submarines and three of smaller tonnage. Since the first of March 535 British ships have been reported as sunk; a weekly average of more than twenty-eight. The present marked decrease in submarine attacks is encouraging, but is not conclusive evidence that the peril of blockade is over, as it is only a month since the number of ships sunk was above the average for the nineteen week period considered. Apparently the frequency of submarine attacks on merchant shipping varies periodically over a cycle of

several weeks; perhaps because large fleets of submarines leave port at the same time. Among the ships lost during the week was the American steamship "Kansan," which left on June 28 with foodstuffs and steel for France. It is rumored that Germany will soon extend the area of ruthless submarine warfare to the whole of the Atlantic.

Enlarging the Shipping Program The Shipping Board will, it is understood, request Congress for new appropriations which will enable it to double its output of ships. Chairman Denman of the Shipping Board declares the present appropriation of $500,000,000 will not replace in eighteen months more than four-fifths of the shipping destroyed by the Germans since the first of February. In addition to the usual burden of trade, the American merchant marine must next year carry to Europe an American army and all its equipment. If Congress grants the extra $500,000,000 which it may soon be asked to vote, the emergency fleet may be increased from two and a half or three million tons to five or six millions.



President Wilson has signed an executive order giving General Goethals and the Emergency Fleet Corporation of which he is the manager the power to commandeer all vessels now building and hasten their construction. Some two million tons of shipping will be taken over and completed. General Goethals will probably decide to build both wooden and steel cargo ships to the full capacity of the shipping yards. After the vessels are completed by the Emergency Fleet Corporation the Shipping Board will see that they are kept fully utilized in trade with the Allies. The Shipping Board is also empowered to requisition and operate ships already in commission. The agreement on prices with the steel men has greatly facilitated ship construction at a reasonable rate.

Embargo Proclamation Issued Under the terms of the omnibus espionage bill President Wilson has proclaimed an embargo, effective on July 15, on the exportation of certain commodities necessary in war time except under such limitations and regulations as may be prescribed by the national administration. The proclamation applies equally to the Entente Allies, the Central Powers and the neutral nations, but special license will be given in nearly all cases for trade with the Allies and, except for some special reason, with the neutrals. The commodities mentioned as subject to embargo are: coal, coke, fuel oils, food grains and flour, fodder and feeds, meats and fats, iron and steel and manufactures from them, ferromanganese, fertilizers, explosives, arms and ammunition. The purpose of the embargo is double: to prevent the exportation anywhere of commodities that are absolutely needed in this country, and to prevent the exportation to neutral nations of commodities that may be reshipped to Germany or its allies or may be used to replace native products exported to those countries. For example, there has been much complaint from the Allies that Sweden was letting Germany have the output of Swedish mines, and supplying its own needs by importing metals from the United States, which in effect is the same as if the metals were passed directly thru the British blockade from the United States to Germany by way of Sweden. Nevertheless, the neutrals dislike the idea of being "rationed" and complain greatly that the United States has betrayed its historic principle of the "freedom of the seas."

The War on Anarchy Thus far in our war with Germany the Industrial Workers of the World have been the most troublesome if not the most menacing of all our internal foes. German sympathizers and "conscientious objectors" even now on the eve of the draft have confined themselves to bloodless agitation, the Socialist majority seems to deprecate violence in spite of its reiterated condemnation of the war, and the more prominent anarchists, including Alexander Berkman and Emma Goldman, are now serving prison sentences for inciting resistance to conscription. The people of the western states are, however, greatly concerned over certain recent manifestations of the I. W. W. These agitators are numbered by the thousands and many of them are openly advocating insurrection and the wholesale wrecking of American industry. Federal troops have been stationed in Washington and Arizona to overawe the disturbers, and Federal agents in Nebraska and the Dakotas are investigating persistent reports that I. W. W. conspirators plan to burn the grain crops.

In several places the local authorities have taken matters into their own hands, and have made wholesale arrests of walking delegates of the I. W. W. In the majority of cases the arrested men were herded into freight cars and deported from the state. The largest deportation of this sort occurred at Bisbee, Arizona, in the midst of a copper mining district. Many of the miners were on strike and the others were intimidated from their work by I. W. W. pickets who poured into the copper mining region by the hundreds and attempted to establish a reign of terror that would close the mines entirely. Sheriff Wheeler, of Cochise County, enlisted some two thousand citizen deputies and rounded up nearly twelve hundred strikers and sympathizers whom they put into cattle cars and sent across the New Mexico boundary.

The Mobilization of Big Business President Wilson's eloquent appeal to the business men of America, which we print on another page of this issue, has awakened no little response among the captains of the big national industries. Representatives of the steel industry have agreed

Lou Rogers in the Woman Citizen

MRS. SAM: "IT IS TERRIBLY HUMILIATING TO ME, SAM, TO HAVE YOU GO TO EUROPE IN LAST CENTURY'S HAT"

to furnish the Government with as much steel as necessary at a cost plus fixed profit basis after the Federal Trade Commission completes its investigation of production costs. Steel prices if fixed on the principle of "all the market will bear" would now be very high since the unprecedented demand for steel shipping, war munitions and machinery has threatened a shortage of steel for ordinary industrial purposes. Since preference must first be given to the tools of war and secondly to the almost equally urgent needs of transportation, structural steel for builders will be very hard to obtain. A Chamber of Commerce bulletin advises the use of wood and concrete wherever it can be substituted for steel in buildings. Other industries are similarly responsive to the national emergency. The coal industry has been cleared of the charge of conspiracy to raise prices by the acquittal of one hundred and ten defendants, corporations and officers, accused of combining to control the soft coal output of West Virginia. The expenses of this great investigation and trial are estimated at about a million dollars.

An attempt has recently been made to forbid any member of the advisory commission to the Council of National Defense to participate in the disposition of contracts affecting the sale of their own products to the Government. As several members of the commission are at the head of important businesses, many regard this apparently innocent clause in the food administration bill as an attempt on the part of Congress to curtail the powers of the Council. The administration is believed to oppose this provision, and Secretary Lane, of the Interior Department, has spoken against it on the ground that the commission could make no contracts, but could only make recommendations to the Government.

Railroad Rate Increase Small

In spite of strong representations by the railroads of the United States that increased operating costs were reducing their profits and available capital for future development, the Interstate Commerce Commission refused the 15 per cent increase in all freight rates which it had been asked to grant. The Interstate Commerce Commission found upon investigation that in spite of increased expenses the railroads as a whole had enjoyed a very prosperous year because the unusual demand for the transportation of munitions and foodstuffs for export had enabled many lines to use their equipment continuously at their greatest capacity. As this war prosperity might be expected to continue for many months, the Commission saw no reason for any drastic change in the old rates. Some relief, however, was granted. The southern railroads were authorized to increase their rates on coal, coke and iron ore, and the western railroads on coal and coke to equalize them with the rates already allowed the eastern railroads. The eastern railroads, whose operating revenue had decreased during the last few months, were allowed certain increases in class rates amounting to a total of more than fifty million dollars a year.

The New Cotton Crop

Cotton prices advanced on account of the Government's July report, which showed that condition in the last week of June was only 70.2, while the ten years' average had been 80. These figures, with an acreage reduction of 4 per cent, indicate a crop of only 11,633,000 bales. In New York, sales were made at 27 cents a pound. Afterward, however, owing to expectation that cotton would be one of the products controlled by the Government, the price declined, and on the 5th it was 25 cents. The Liverpool Exchange, which was closed on June 19, after the price there had risen to 40 cents, was reopened eight days later, but trading has been carefully restricted. The crop has been affected by the northward movement of negro labor, unfavorable weather, the high cost of fertilizers, and the use of cotton land for the production of grain. Ocean freight rates are very high, and demand at American mills has been increased by orders from European governments and our own. No considerable reduction of price is expected, altho Government control may prevent any addition to the present rates.

Steel

The original estimates of the quantity of steel required by the Government did not exceed 3 per cent of the industry's output, but they have been increased and, with purchases for Allies, if these be added, may amount to 40 per cent. Manufacturers are deeply interested in the proposed regulation of prices to be paid for so much of their product. In the recent controversy about the price of ship steel, the figures named by Secretary Daniels must have been below the cost of production. Plates made of iron for which $55 a ton is paid cannot be sold profitably for $56 a ton, and Japan has been willing to pay $175. The cost of making steel has advanced rapidly in twelve months. Iron, now $55, was $20 a year ago. The increase for coke has been 600 per cent, and 50 per cent has been added to the cost of labor.

THE FIRST TEN THOUSAND SAILORS

Fortunately there's plenty of room to spread round the Great Lakes Naval Training Station at Lake Bluff, Illinois. Recruits come even faster than equipment, tho, and every tent has its full quota—and then some

A WHEAT HARVEST WORTH IMITATING

LEARNING FROM THE ENEMY

BY ROY S. MACELWEE

Dr. MacElwee, who is lecturer on economics at Columbia University, spent several months of the spring and summer of 1916 in Germany and was afforded an unusual opportunity to observe the conditions of which he writes. After a close study of the methods by which the Germans are solving their farming and food problem, he is convinced that the United States must have a Federal Food Board with large powers over production and marketing. Dr. MacElwee describes in detail the duties and powers of the various sub-departments which this Federal Food Board should have, and in each instance he shows how the Germans have struggled with and in many cases have overcome the problems before us today.—THE EDITOR.

"THE Germans can't be starved out!" This is the statement made by both Ambassador Gerard and United States Food Commissioner Hoover after an examination of the German food situation. There is one reason for Germany's self-sufficiency now, and that is because she has placed the agricultural system of her country on a national basis so efficient that it reaches out to the minutest detail of farm life.

In our own country we have already realized the necessity of federal food control, but we should inaugurate the system immediately, basing it on the far-reaching plan of Germany. By avoiding delay we can also avert a mistake made by the Germans in the beginning of the war, and one which might prove irreparable to us. For two years Germany and Austria-Hungary permitted jealousy of state rights to hamper the founding of a federal food board; in that time great quantities of potatoes and grain rotted because they were inadequately cared for, and there were times when one state had so much food that it spoiled, while other states were suffering want. Only when the Food Board was inaugurated under Batocki were these errors avoided, and did Germany reach her present basis of self-sufficiency.

Our own Federal Food Board, with its auxiliary departments, should be established on the example of our enemies, the Germans. The board should have far-reaching jurisdiction and responsibility, and under it there should be state food boards and county food boards which should be responsibile to the central board for executing its policies. In its working this hierarchy should come into direct contact with every farmer in the United States, and with the knowledge of all local conditions thus obtained the federal board can accomplish much. By dividing into main branches of production and marketing, this central board can avoid the great danger of dissipating our national resources in both these departments.

Under our department of production there should be several sub-departments such as the acreage office, the seed office, the labor office, machinery and implements office, fertilizer office, and the offices connected with the livc stock, transportation, and even rural credit for the farmers. In each of these sub-departments of production the work to be done is definite and helpful.

THERE'S NOT A CHANCE FOR WEEDS WHEN WOMAN'S PLACE IS IN THE FIELDS

In the acreage office the question of what the farmers should plant and how much must be solved; it must ascertain the probable demand for the staple products, and what proportion of the acreage should be put into such products as cotton, wheat, barley, rye, etc. Its duty also is to determine what districts will be best for each. The work involved in this is of tremendous importance. Again we must profit by the example of the Germans in their experience with sugar. In the beginning they made the mistake of planting all their acres with bread cereals, entirely neglecting to plant any sugar, despite its great importance to them. Today each German goes around with a small tube of saccharine, because sugar is absolutely unobtainable. Directions as to the right proportions of planting, such as our acreage department could give, would have made such a condition impossible.

Similar work could be done in the other departments, as in the distribution of seed, and the provision of transportation facilities. The departments of live stock and fertilizer have very essential work before them, because in both these lines our country is in great danger. Germany once more offers the example. By the utmost economy, and under federal direction, the Germans have increased their supply of live stock in a way that makes our increase ridiculous. One of their methods of increasing their supply of hogs, for instance, during the war, without food waste, has been to organize "piggeries" in back of their lines. The animals have been fed from the wastes of each army kitchen, and prizes are given for the best results. By this plan the VII Army alone fattened 50,000 hogs last summer. In the second year of the war when the supply of hogs was greatly reduced by slaughter, the Germans reduced the meat rations and increased their supply of hogs by about four million in six months, and their cattle by 800,000. The German methods of conserving

and increasing the supply of fertilizer were also remarkable. They increased the stall feeding, using the silo and feed-chopper. Their foresight can be shown when we know that they had stored up an immense amount of stall feed, such as cottonseed cakes and corn imported from the United States. For the conservation of fertilizer they build their stables with cement floor. They also have a system of drains and gutters back of the stall and pay particular attention to the conservation of animal by-products.

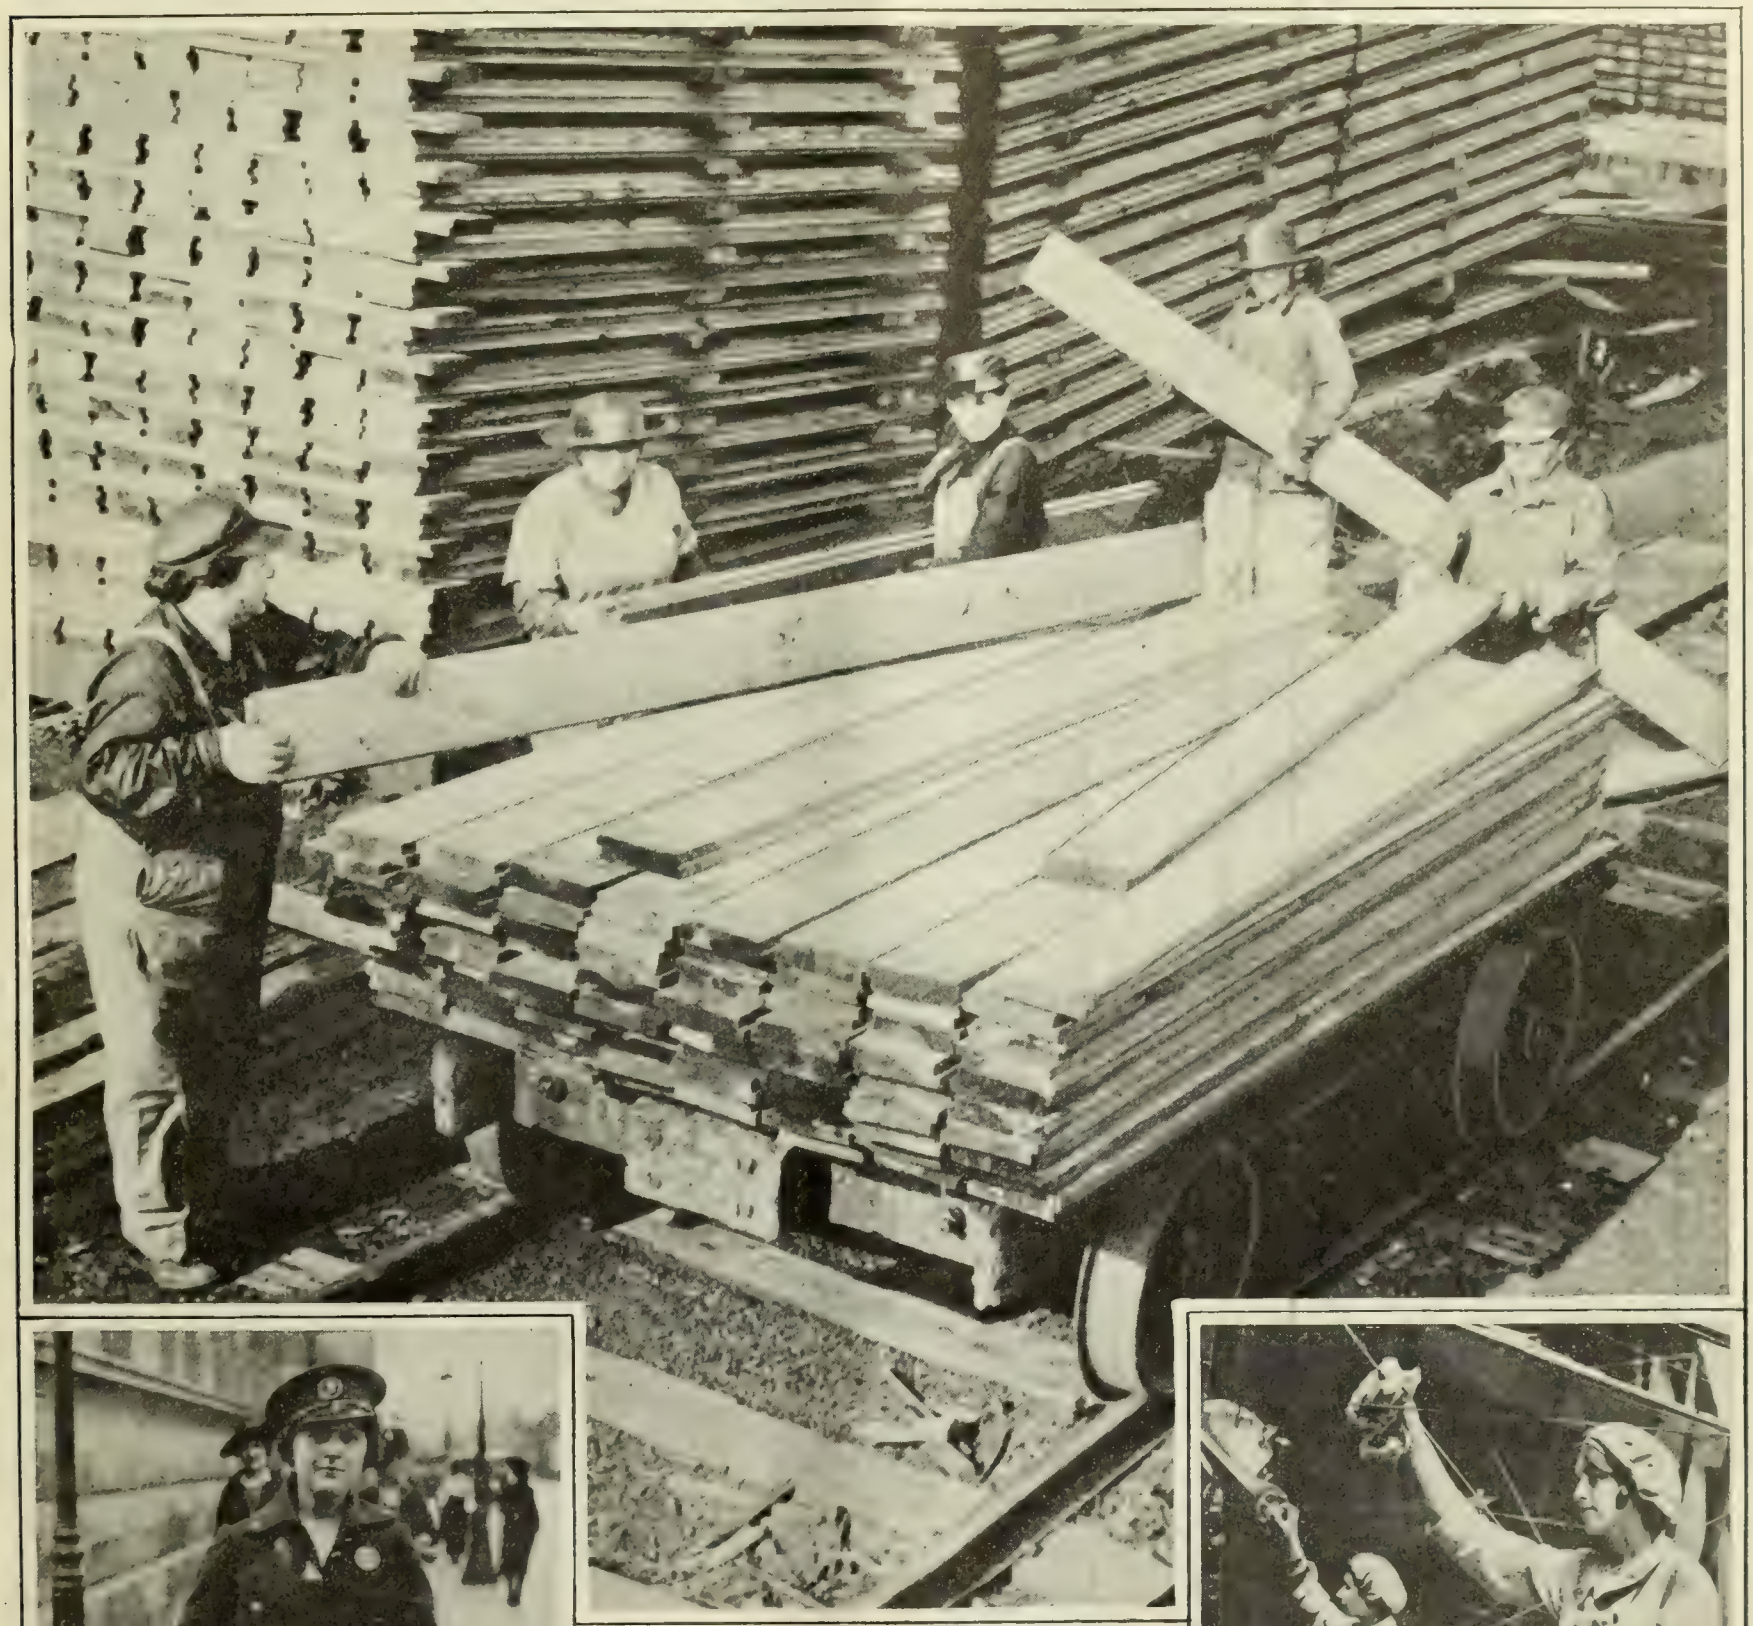
It is also proverbial that the American farmer is very careless about his equipment; our sub-department of machinery and equipment, by giving advice, should educate him to greater care. A typical case of good treatment of farm material in Germany is that practised on the estate of Baron von Sternburg, where some McCormick binders harvested 100 acres a year and were made to last twelve years. This is done by each farmer who understands the working of the machine and treats it with great care.

Another point of efficiency in which the Germans are worth imitating is their method of actually increasing the yield of each farm and limiting and reducing all waste. When we consider that in the United States the average yield per acre is fifteen bushels, while in Germany it is thirty bushels and even fifty and sixty in Saxonia and Pomerania, we can understand the great increase which each acre could be made to yield here. The causes for the German returns are, in the first place, a complete understanding of crop rotation. Our own farmers, relying on the great acreage of the United States, have neglected to pay attention to this and have thus drained the resources of the land. The Germans also make a practise of plowing the land very deep, as much as seven inches with a three-inch subsoil loosener under the plow sole. Besides this, they cultivate the soil between the rows of wheat, oats and barley. The plan also of discarding all fences and marking borders by corner posts would save probably thousands of acres here now wasted under fences.

A PERFECT PATTERN OF CROPS

The adoption of the long furrow which the Germans now have would also save a great amount of time. Instead of having the square field where there are double the number of turnings, the farmer could save time and labor, as in plowing the turn is most troublesome. The arrangement for all these plans of conservation should be made by the county boards with their field lieutenants; and in the county board to arrange this there must always be an expert map draftsman who can draw the pictures of all the farms in his locality and designate the wasted parts which could be arranged and made available for planting. Every German estate considers such a draftsman necessary and it is his duty to draw maps indicating times of planting and when the crops are due.

Of course, to all these plans the consent of the farmer is necessary, and without his cooperation our country can do nothing. But it is quite probable that if we follow England in assuring the farmer a fixed minimum price for his products, and mobilize sufficient labor forces to work his farm, we can induce him to coöperate with a Federal Board. In case of the failure of our agriculture to meet the demands made upon it during so critical a stage, there still remains the plan of sequestering the land and paying rental to the owners. This will probably not be necessary because the patriotism of the American farmer is above question, and the chances are that the farmer will realize the situation and will be more than glad to coöperate with the Federal Board.



There remains no other reason why the United States, however, should not immediately set to work to inaugurate this hierarchy for the control of agriculture. It is certain that our country ought to take example from our enemies and to evade the mistakes made by Germany in a similar crisis, by imitating the efficient machine she had built up to help her in the World War.

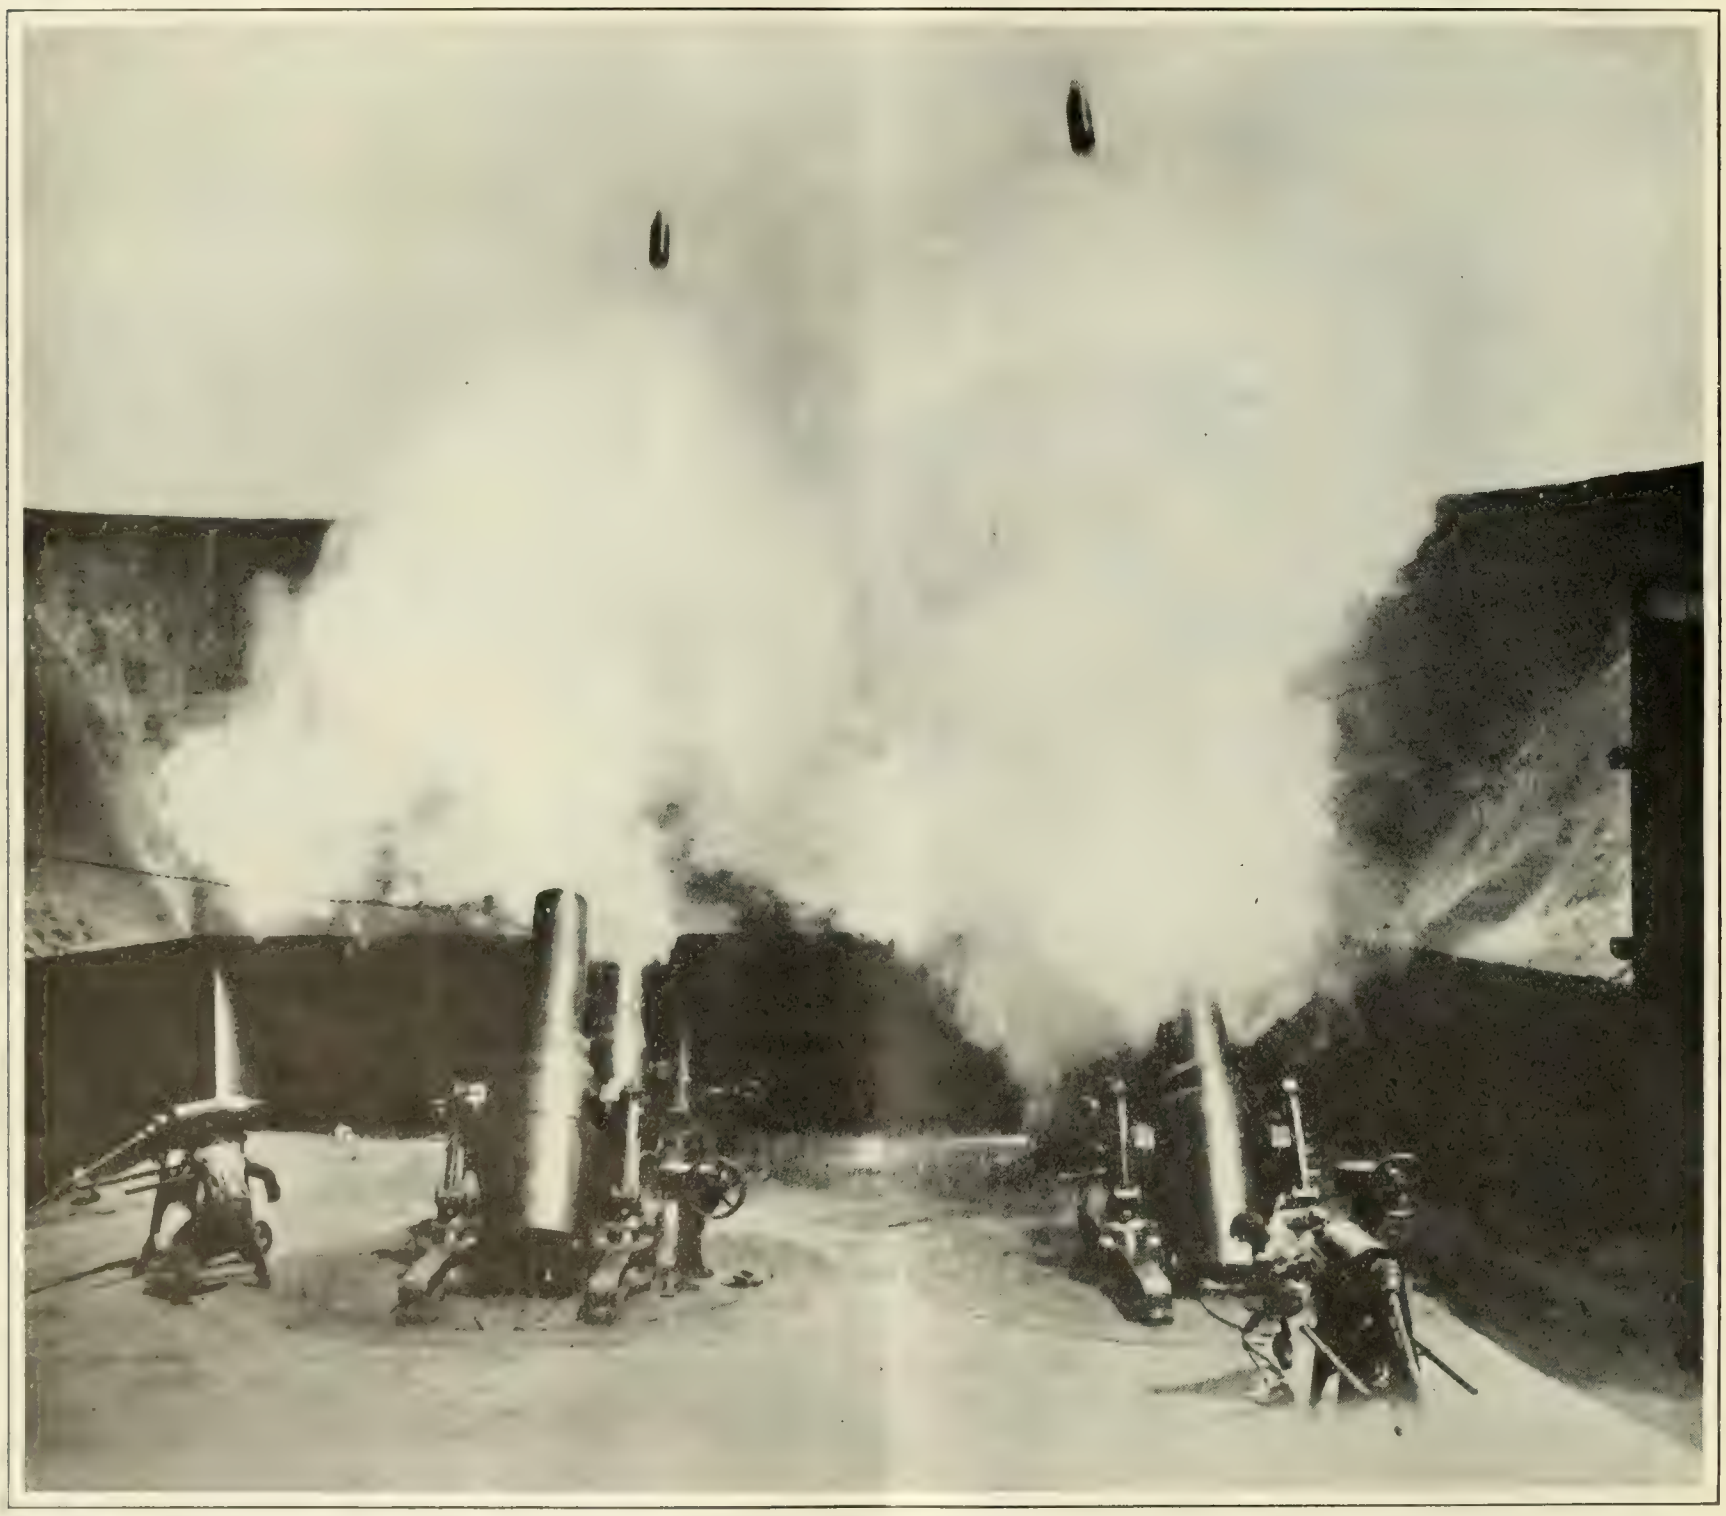
FIVE HUNDRED THOUSAND SHEEP FEED BY THE ROADSIDE IN GERMANY

The Independent-Harper's Weekly
NEWS-PICTORIAL

Underwood *Press Illustrating* © *International Film*



The question of "woman's place" gets more complicated every day. For even without the stimulus of war the boundaries of said place were rapidly coming to include all property adjacent thereto, and now that the need of national service justifies their venturing, women are by no means resting content with even the "adjacent" jobs. In France, perhaps, necessity has called on women most to do the work that once belonged to men. The mechanics at the right are employed at a big aviation station not far from the lines of fighting. The little Parisian messenger at the left stepped into Brother's job when he was called to the front. Above is a bit of the day's work in a Chicago lumber yard. Somehow it doesn't look as queer as you think it ought to!

The battered walls of Rheims Cathedral still stand, tho another shot like that photographed above may bring them down. But there's little left of the town itself. The City Council standing here in their ruined hall are forced to hold their meetings in a nearby cellar. The soldiers at the right are trying to carry the few undamaged works of art to a place of greater safety

NATIONAL EFFICIENCY
CONDUCTED BY THE NATIONAL INSTITUTE OF EFFICIENCY

NAVAL POWER AND NATIONAL EFFICIENCY

BY REAR ADMIRAL BRADLEY A. FISKE
PRESIDENT OF THE UNITED STATES NAVAL INSTITUTE

IN the present situation the main thing for us to realize is that the crisis has become a military one, and that history shows that the most dangerous thing a country can do in a military crisis is to underestimate the gravity of the situation.

The fashion in this country has been to take it for granted that, in the present conflict, the Allies will surely win. At its outbreak, the great majority of our people thought that the war would soon be won by the Allies.

Army and navy officers had no such illusion. We realized that the most perfect and enormous fighting machine that the world had ever seen, a monster of efficiency, had been set in motion. We noted, after about a month of war, that it was working with all the vigor and effectiveness that its most pronounced admirers had expected. The people of the United States had not been trained along military and naval lines, and they were very much imprest with the superiority of the material resources of the Allies in comparison with those of their antagonists.

So we must fight, not only with energy, but with strategical insight and invention. The conduct of war and the conduct of preparation for war are controlled by three agencies, strategy, logistics and invention. In the United States, we have become accustomed to thinking that war is fought with men, guns, ships, etc., only. It is true that war is fought with them; but they are simply the tools which strategy uses; they are comprized under the heading of "logistics."

We are weak in strategy, because we have paid little attention to it. We have few competent strategists, even in the army and navy. The competent strategist is a man so versed in the values of the various factors that are used in war, so familiar with the causes of success and failure (as taught by the lessons of history and the game board), so clearly cognizant of the military and naval ideas and ambitions of foreign countries, so well aware of their points of strength and weakness, so thoroly in touch with the military, naval and industrial conditions in this country, so keenly alive to what his country's interests demand that she should do, and so well posted as to the difficulties in the way and the means by which the difficulties can best be met, that he can estimate correctly each military situation, as it arises, and come promptly to a wise decision as to what steps should be taken.

Naval defense may be said to consist of three parts:

1. Defense of the coast against bombardment and invasion.
2. Defense of the trade routes traversed by ships carrying the exports and imports of the country.
3. Defense of the national policy, including defense of the nation's reputation, honor, and prestige.

Of these, defense of the coast against bombardment and invasion is the easiest, and defense of the national policy the most difficult; because in preventing bombardment and invasion the defender has the strategical advantage of being nearer home than the adversary; while in the defense of a country's policy, a naval force may have to "assume the offensive," and go even to the far distant coasts of the enemy—as the Russian fleet went to Tsushima, where it met its death.

It would be tiresome to recount all the battles both on sea and land, in which smaller forces defeated forces numerically greater; but it may not be possible by any other means to force the fact on the attention—even sometimes of naval officers—that material vessels, guns, etc., are merely instruments, and that the work gotten out of any instrument depends not only on the instrument itself, but on the skill with which it is employed. Usually, when thinking or speaking of the power of any instrument (or means or method of organization) we mean the power of which it is capable; that is, the result which it can produce, if used with 100 per cent. of skill. Possibly, we are subconsciously aware that we assume perfect skill; but whether we are or not, we have become so accustomed to the tacit acceptance of the phrase, "other things being equal," that we have come to forget that other things may not be equal at all; and that they certainly will not be on the day of trial, if we forget or undervalue those other things, while our antagonist does not.

Not only must the personnel be sufficient in number and correctly divided, it must be organized in such manner that the personnel itself will have the characteristics of a machine, in the sense that each unit will be so placed relatively to the hope of reward and the fear of punishment, that he will do his allotted tasks industriously; that he will have the place in the organization for which his character and abilities fit him, and that he will be given such duties and exercizes as will fit him more and more for his position, and more and more for advancement to higher positions.

Not only this, we must exercize foresight in the endeavor to have the material parts and the personnel parts ready at the same time, so that neither will have to wait for the other; and to insure the immediate availability at the beginning of war, of sufficient trained personnel to man and fight effectively all the material units that we shall need to use. This raises the question: "What units shall we need?" The Government itself must, of course, decide this matter; but it may be pointed out that if in any considerable war every unit we possess should not be utilized, the navy could not do as effective work as it could otherwise do. In the present war, the other belligerents have not only utilized all the units that they had, they have built very many more, using the utmost possible diligence and despatch. Few considerable wars have been waged except with the greatest energy on each side; for each side knows that the scale may be turned by a trifling preponderance on one side; and that if the scale once be turned, it will be practically impossible ever to restore the balance. Every advantage gained makes one side relatively weaker to the other than it was before, and increases the chance that the same side will gain another advantage; gains and losses are cumulative in their effect. For this reason, it is essential, if we are to wage war successfully, that we start right, and send each unit immediately out to service, manned with a highly trained and skillful personnel.

The Germans meet the difficulty of keeping their personnel abreast of their material very wisely. They utilize the winter months, when naval operations are almost impossible, for reorganizing and rearranging their personnel; so that when spring comes, they are ready in all their ships to start the spring drilling on a systematic plan. The crews being already organized, and the scheme of drills well understood, the work of getting the recruits versed in their relatively simple tasks and the more experienced men skilled in their new positions is quickly accomplished.

Not only the fleet, however, but all the bureaus and offices of the Navy Department, all the navy yards, and all the radio stations, recruiting stations, hydrographic offices, training stations, and agencies for securing information from foreign countries, have to pass instantly from a peace basis to a war basis. If the fires have all been lighted, the engine gotten ready, and the boilers filled in time, the engineer may open the throttle confidently, for the engine will surely do its part.

New York City

PLATTSBURG'S HOME-STRETCH

BY HERBERT REED

THIS might be considered rather a sardonic title for a farewell view of the big student-officers' camp at Plattsburg Barracks were it not for the fact that its common use in American sport has embedded its meaning unmistakably in the language. Of course, in the deeper sense this last month is far from being a home-stretch. It is rather a period of ripening for the next stage of development. It is a milestone. There is something rather more definite about it than there has been up to date, for at least one goal is near, and that the goal toward which all those who set forth at this encampment yearned. The greenhorn stage has passed, the men—yes, nearly all of them—are far more sure of themselves. As one of the men put it the other day, "The worst of the first is over." And as I write, much of the drudgery has begun to give way to actual battle practise. There has come the sound of guns, even tho loaded with blank cartridges—*aimed at somebody else;* the performance of maneuvers *directed at another body of men;* the theoretical, at least, defeat of one body of mobile troops by another. It is all rather thrilling in its small way and has served to keep an "edge" on the camp after the departure of the indefatigable and apparently inexhaustible Koehler. The small tactics are gone, and the larger tactics have come.

Battalions go into action, where hitherto there have been squads, platoons and companies; and as if to add to the dramatic value of the rehearsal for the larger stage the two fundamental units in the first action were commanded by members of the Officers' Reserve Corps who had seen real action—Major Reginald Barlow, actor, sometime of the Boer War, and Major Rhinelander Waldo, sometime of the Philippines and the New York Police. The judges gave the decision to the actor-major, for some of Major Waldo's forces went into the lake and were otherwise out of action. I shall not attempt here to go into the abstruse details of this opening action of the new battle of Plattsburg, leaving that for the competent army judges to set before the student-officers. I am concerned only with the value of the thing as a jet of new life into the camp, which had suffered from many humdrum experiences, and a deal of grind, lightened only by the Lambs' Gambol in the big open-air theater and the Independence Day sports, these latter held pretty much all over the parade ground and the contiguous "terrain"—to adhere closely to the new manner of speaking which so many of us are obliged to learn these days. And new life of any sort was more than welcome after the numerous and not always timely, from the viewpoint of the subjects, inoculations for typhoid, paratyphoid, and, for all I know, many other ills that military flesh is prone to.

So far the series of articles by "Right Wing" at the war camps has dealt chiefly with Plattsburg, the pioneer Officers' Training Camp, and the largest. But altho in many respects the other training camps follow Plattsburg's example, they by no means copy it altogether. Each one is making its own individual contribution to the progress of the New Army; Mr. Reed's story next week will begin an interesting discussion of just what those contributions are.—THE EDITOR.

The passing from under the domination of Major Koehler to the field of possible individual and group initiative came at the right time, which leads one to believe that with all its faults—and most of these can be traced all the way back to the fundamental fact that we are not primarily, or perhaps even secondarily a military people—the present system of the preparation of reserve officers has been as successful as could have been expected. There were days of hesitation, of drag, of uncertainty, of exasperating petty annoyances. "The constant standing in line, even for trifling things," said one of the most promising of the student-officers, who himself was rather rich in executive experience in civil life, "was the thing that got my goat." And the thing that got his goat was not the thing that got the goat of another. Or perhaps the other had another name for it. There was unevenness in the instruction both by Regular and Reserve Officers, and this of course was trying. There was, too, unevenness in the point of view because of the difference in the ages of the candidates. There were times when the easiest possible thing was to sit down and "gloom" about almost everything in sight.

THE LEADER OF PLATTSBURG

Colonel Wolf is more than commander of the big Officers' Training Camp, for his influence is based on personality and on judgment rather than on military authority

Now, however, the talk is in terms of battalions, perhaps the most fascinating term in military history, and the prospect that the action for the final month will be very largely in the same terms is inordinately fascinating. At least so I gather from the men in the ranks. Then, too, the assault on trenches will be carried on much closer henceforth to the Canadian ideal, and this, also, will be "battle action." As I write, the artillerymen have been getting their guns—belated and welcome because of the long and grinding periods of "book work" thru which the new gunners have been put. This is a fillip to their progress. The cavalry is not so well off, for mounted action probably will be out of the question, at least to any great extent, until perhaps the very last day or two of the camp; and there will be no chance for any extended maneuvers with all arms in action.

Summing up the purely military work so far it seems to me that the most just criticism that could be made is that because of changes in personnel, changes in company commanders, a failure to emphasize the competitive spirit among units, when that spirit needed only a match to touch it off, there were bursts of progress followed by descents into the nether world of the megrims, and thus there could never be anything like an exact record of the camp as a whole or of any unit or even individual thrown up out of the unit, in particular.

Certainly the charge could never lie that this Plattsburg camp has been "Prussianized," or that it reminded the observer of anything but a purely

(*Continued on page* 107)

THREE-DIMENSION EFFICIENCY

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

THE ultimate secret of power is balance. Great men have learned that life is a mental tightrope, firmly stretched between moral standards. They walk the rope. It isn't easy—but they walk it.

Every man is born with certain tendencies toward extremes, of heredity, habit; work, play; physical, mental and moral makeup; financial fiber, social sense, and religious faith. He who leans too far, one way or another, invites destruction. All failure is a form of indulgence in personal extremes of temperament. And all success is a properly blended use of these extremes. Here lie the finest powers, and the subtlest dangers, of human experience. Why does the average man die at about forty years of age? Because he is an extremist. Why does the American business man fail, nine times out of ten? Because he is an extremist. Why does the wage-earner have but a 21 per cent chance of earning more than $1000 a year all his life, with a 79 per cent probability of making less than a thousand a year? Because he is an extremist. Why does the ordinary man fall short of any goal worth gaining? Because he is an extremist. You don't see how the answers explain the facts? Then perhaps you are an extremist; you may be extremely averse and unaccustomed to logical and original thought; or else extremely ignorant of the physiology and psychology of success. Few people are aware of their own extreme views, traits and tendencies; but longevity and productivity rest flatly on such knowledge, and rise loftily as the embodiment of it.

How to make the most of yourself? Learn to *express your type* and *depress your temperament*. Which means, to combine your natural power with a supernatural poise, to concentrate on your work with a fanatic's hot speed but look on your personality with a philosopher's cool perspective. There are perhaps a hundred Americans between sixty and eighty years of age who have become world leaders. We note a few: Edison, Bell, Rockefeller, Carnegie, Root, Vail, Burbank, Wanamaker, Patterson, Burroughs, Eliot. The distinguishing mark of all these men is balance. Their lines of action are exceedingly divergent, but their methods of handling, viewing, developing themselves are wonderfully similar. They have all climbed to the top in proportion as they curbed their own extreme tendencies.

Unruly temperament is at the bottom of all failure. The man who thinks right, feels right, works right, lives right, does right, cannot fail. Whoever has failed has been somehow wrong in one of these five respects. During recent years a number of my personal acquaintances have met failure in their business projects or professional ideals, the amounts lost ranging from a few hundred dollars to $750,000. One man was a builder, another a manufacturer, another a publisher, another a lawyer, another a promoter, another a preacher, and so on. But they were all *temperamental extremists*.

One man failed because he was too social. He formed a business company on a friendship basis, most of the stockholders and officials being his personal favorites. Whereupon they, because he was their friend, up and did him out of his money.

Another man failed because he was not social enough. He took business problems and worries carefully home with him; all evening he kept them beside him when he should have been making friends or playfellows of his family and neighbors; he went to bed with his business troubles on his mind, so he could not sleep; and finally he went to pieces in a grand collapse.

Another man failed because he was too optimistic. He wrote a lot of rainbow literature on the success of other enterprizes that *looked* like his; and on the strength of his belief in the future

TEST FOR MENTAL BALANCE

BY WHICH ANY MAN MAY DETECT AND CORRECT HIS OWN UNSAFE EXTREMES OF TEMPERAMENT

DIRECTIONS. First read Mr. Purinton's article, "Three-Dimension Efficiency." Then grade yourself on the following questions. Where answer is Yes, write numeral 4 in space opposite. Where answer is No, leave space blank. Where answer is partial affirmative, write numeral under 4 that seems honest. Total of column gives your approximate grade in mental judgment, perspective and impartiality.

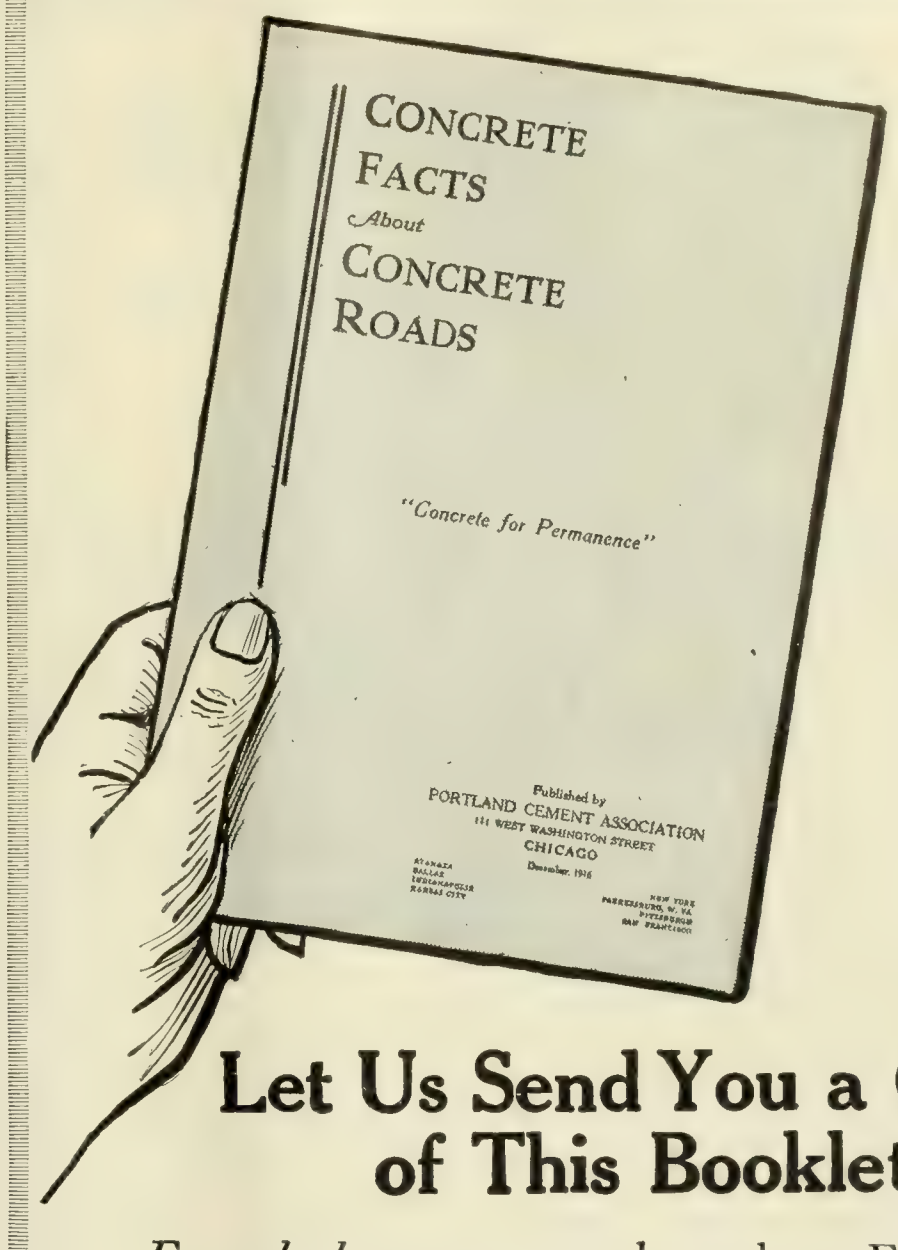
1.	Do you know which of the seven principal temperaments yours is?	.....
2.	Have you studied what extremes of thought, emotion, action, you must avoid?	.....
3.	Have you learned to "express your type and depress your temperament"?	.....
4.	Do you believe that every failure is the fault of the man who fails?	.....
5.	Can you trace at least four of your past failures to temperamental follies?	.....
6.	Would you rather be morally great than financially powerful?	.....
7.	Are you unsatisfied, and uncomfortable, in "high society"?	.....
8.	Do you dare always be natural and sincere, no matter who is shocked or offended?	.....
9.	Would all your intimate friends be glad to hear the exact truth about themselves?	.....
10.	Do you enjoy watching children play and playing with them?	.....
11.	Are you free of all the "shoddy habits" mentioned in the longest paragraph of Mr. Purinton's article?	.....
12.	Does home affection mean as much to you as business efficiency?	.....
13.	Can you rest better at home than anywhere else?	.....
14.	Do you often consult, respect, heed and thank a woman critic—one who loves you?	.....
15.	Would you be willing always to have your mother or wife read your inmost thoughts?	.....
16.	Is every member of your family earning money, and saving it?	.....
17.	Do you know how to give children a physical, financial, industrial and moral education?	.....
18.	Can you "stay out nights," occasionally, without injuring your family mentally and yourself morally?	.....
19.	Is all your man-fun clean fun?	.....
20.	Do you lock your business cares in the office over night?	.....
21.	Are you as neat in your home as you have to be in your business?	.....
22.	Have you learned just how brain-workers ought to eat?	.....
23.	Is your brand of religion as good as what you expect your womenfolks to have	.....
24.	Do you believe your home life is adding mental vision and moral force to your business career?	.....
25.	Does your greatest power come from the meditation, inspiration and determination of silence?	.....

Add column of numerals for your approximate grade in mental balance.

Copyright 1917 by Edward Earle Purinton

he sold several hundred thousand dollars' worth of stock. But he could not manage the business at all, in spite of its great possibilities. Wherefore the stockholders took out of the ruin a few cents on the dollar, instead of making thirty per cent on their investment as they were promised.

Another man failed because he was too philanthropic. He was so anxious to render a service to his patrons that he neglected to sell them goods at a fair profit. Having received something for nothing, they undervalued the whole proposition.



We could cite many other examples to show how the uncontrolled, perhaps unrecognized, extremes of temperament cause personal ruin. Failure is but the matured fruit of a lifelong temperamental folly. How many such seeds of folly are silently growing in your garden of personality?

We here make protest against the current fad of mere *business* efficiency. Your moral balance means more to you than your business method. If you must lose money and prestige that you may gain wisdom and character, you should welcome the loss. A big man is always the backbone of a big business; whenever a business totters and tumbles, or dwindles and dies, the need is for a bigger man somewhere in it. Personal perspective may be regarded as the fundamental factor in financial success. And efficiency only measures on the surface the moral size of a man too big to bother with efficiency. You will not get the finest results from your work until you are so well poised that you do not care what the results may be.

Efficiency engineers have placed too much comparative emphasis on the financial and industrial tests of man-power. When you go to buy an expensive horse, you study the animal at rest before you watch him at work. Equally, you should never hire an expensive employee until you observe him, or test him, outside of office hours. A man's behavior at home, on the street, in society and among his chosen friends, may serve to indicate what he will be twenty years from now even more clearly than his present salary or position. Business methods may be the effect of compulsion. Leisure habits, however, are the effects of volition. And the key to destiny will be found in what a man does when he has the time and chance to do as he pleases. The arbiters of your talents are your tastes.

Representing the efficient life as an oblong structure, we may call *business* the length of it, *community* the breadth, and *home* the depth. You must have three dimensions, and they must be proportional. If any side extends too far, or is made of poor stuff, your whole building is likely to crack. There isn't much danger of your having too much depth in your home nature, but there is great peril in extending your business side too far, and in making your social side out of bad material. Either defect will undermine or weaken your career. Having considered many phases of the business side in previous articles, we will here call attention to the other two sides.

From the efficiency vantage-point, "society" is largely deadwood. You have to cut it out, and make it over. Any relationship that is not mutually helpful is mutually harmful. Social relationships must all be judged by this test. We Americans have not yet begun to apply to society the efficiency reasons, methods and results that we apply to business. Our social fabric is so antiquated, so flimsy, that a firm grasp would tear it apart. Every man has to decide whether he will (1) be hemmed in and tied down by social customs, or (2)

Let Us Send You a Copy of This Booklet

Everybody wants good roads. For that reason *you* will be interested in looking through this booklet.

You can read it through in 10 or 15 minutes. You will find in it just the things you want to know—what concrete roads are and how they are built; how concrete roads benefit the community, the motorist and the farmer. There are no long, dry, technical discussions—just short, concise paragraphs in everyday language and plenty of interesting pictures.

CONCRETE ROADS:
THEIR ADVANTAGES
No Mud—No Dust
No Ruts—No Holes
No Slipping
No Skidding
Easy Hauling
Smooth Riding
Long Life—Safety
Always Ready for Use
Low Maintenance
Moderate Cost

After you have read this booklet, if the talk turns to good roads, you can enter into it authoritatively, whether it be with your friends or your road officials. **Just ask for booklet 136.**

break thru and fling them off, or (3) stay out of them by leaving them severely alone. The last course is the best, for big men.

Dances, teas, receptions, operas, musicales, weddings, funerals, card parties, church socials, club banquets, formal calls—most of these impositions are but a dreary waste of time, energy and money. They do not give the natural recreation or the subliminal inspiration that a man should have in his hours of freedom from work. It is estimated that 75 per cent of the social activities and relationships in the well-to-do American family are superficial, needless, false. One of our great national problems is how to emancipate ourselves from this all-prevailing social tyranny. The genius, like Edison or Bernard Shaw or Paderewski, does it. But how can the ordinary man, who is not allowed to have "eccentricities," free himself?

A noted specialist lately asked me this very question. He is a rarely useful man. Thousands of clients have been helped by his treatment and counsel. The world needs him. Yet he is becoming worn out and broken down in the early forties. I asked him what the trouble was. "Too little sleep," he answered promptly. "I didn't get to bed till one o'clock this morning—some friends of the family, who don't work as I do, came in and stayed on. It is the same about every night; we have to entertain, or be entertained, and seldom are asleep before morning. The strain of my profession demands that I get nine hours' sleep. I worry along on six. The end? Oh, a breakdown, I suppose. But what can I do? I must not be impolite to my friends, and I will not hurt my wife's feelings." They are *not* his friends. And his wife's "feelings" ought to be hurt. When a man, like this man, has found his great life work and is doing it, there should *be* no society obligations for him. Society should minister to him—not steal from him. And his wife should protect him from the social parasites that prey on his home.

Efficiency today requires that there be no shoddy in a man's work. Efficiency tomorrow will require that there be no shoddy in the *man*. A primary function of society is to test a man right here, because in society the shoddy in a man is likely to come out. Among the shoddy habits that prove, or will make, inefficiency and mediocrity are these: Catering to public opinion; following or imitating persons a peg or two higher in the social scale; measuring hospitality by the cost of the entertainment; criticizing the dress or house or person of your host or hostess; writing perfunctory "bread-and-butter" notes; worshiping etiquet and walking on decency; going to fashionable receptions or resorts because afraid not to; swapping invitations or Christmas gifts or courtesies of any kind on a mercenary basis; allowing visitors to call at unseasonable hours and stay after you all should be in bed; serving costly, untimely and unwholesome food to guests merely to observe a crazy custom; eating the same, when you yourself are a guest; paying a sleek and brainless dance instructor to teach you new steps that you will forget tomorrow; dressing in the latest styles merely because they are the latest, whether or not they become your taste, purse, position or appearance; buying gaudy household stuff and plastering your home with pretense; buying luxuries on credit and holding off your grocer and butcher; keeping a valet or maid or chauffeur that you do not need, for work you could and should do yourself; putting your club ahead of your home; choosing your idle hour companions from your busi-

ness associates; telling your personal friends anything about your business; boasting, backbiting, ridiculing, gossiping, jesting on sacred things, or allowing others to do it when they happen to be your cronies; becoming a confirmed card-player, or smoker, or anything else habitually weak; letting ideals drop—and your chances drop out; giving in, giving up, to the blind majority; cultivating, or permitting, shams of any kind; living a lie or standing for a compromise. Men full grown cut these things out. You can take your own measure.

The social ideal is to have only a few close friends, and each so true, so sure of understanding, that nothing you do or do not do will make the slightest difference. Anybody you *can* offend or insult has no right to call himself your friend, or to be treated as such. How simple and easy and beautiful and happy all our social relationships would be if we kept our friendship for our friends!

A man's home life presents the key to his character. Most men habitually think and feel wrong on certain household matters; this black streak of poor judgment is reflected in their work, health, influence, bank account; the defect persists because no efficiency engineer has yet acquired the nerve to offer efficiency counsel to husbands and fathers. The domestic virtues and vices of the ordinary man are a complicated mess of human faith and folly. We would help, in a small way, to extricate the gentleman by pointing out where he is right, and where he is wrong.

He is right in cultivating an air of prosperity, but wrong in allowing material facts to outweigh spiritual forces.

He is right in wanting his family to have the best of everything, but wrong in letting them have it without earning it.

He is right in condemning the extravagance of his children, but wrong in failing to teach them how to spend or save money.

He is right in giving his sons and daughters a college education, but wrong in depriving them of a still better schooling—that of hardship.

He is right in being proud of his wife, but wrong in dressing her up for the purpose of showing her off.

He is right in expecting her to be a good manager, but wrong in neglecting to show her how.

He is right in reserving an occasional evening for sane masculine fun, but wrong in deceiving his wife on the subject.

He is right in relaxing at home, but wrong in refusing to take his share of parental responsibilities.

He is right in demanding plenty of good food, but wrong in evading the science of nutrition and regarding the pleasures of the palate a merely sensual gratification.

He is right in paying the preacher and occupying a family pew with impressive regularity, but wrong in supposing that a fashionable church and a soporific sermon have any connection with real religion.

The foregoing list of contradictory masculine traits might be doubled or trebled, and the subject not yet fully covered. A profitable mental exercize would be for you to extend it, as regards your own right and clean home habits of thought, feeling, action; so that you may view your own life with a clear, impartial sense of logic and perspective.

The two predominant factors in business leadership are mental vision and moral force. By cultivating these elements of greatness at home, you will succeed more largely in your work. And you will attain something better—you will delight beyond words the woman of your heart.

Nujol the Internal Cleanser

Don't Let Indigestion Spoil Your Vacation

Change of water, change of climate, hotel and dining car food, the inconvenience of traveling—all combine to upset digestion and spoil the good time you are expecting.

You can't carry your own provisions and drinking water. But you can be sure to take a bottle of Nujol on your vacation. It's the surest and safest preventive of digestive troubles. Nujol helps to remove decaying waste matter from the intestines before it has a chance to poison the system. In this way it prevents the headaches, weariness and depression as well as other more serious diseases caused by intestinal poisoning.

Nujol is particularly good for young children. It is excellent for the mother with a nursing infant, as it in no way affects the baby's feeding. The infant will enjoy it and it will do as much for him as it does for the mother.

Nujol is not habit forming; the longer you take it, the less you need it. Nujol does not gripe, relieves you of straining, does not weaken (even when taken in large quantities), it is not absorbed into the system, does not upset the stomach, is absolutely pure and harmless and is pleasant to take.

Nujol is sold only in pint bottles bearing Nujol trademark—never in bulk.

The Standard Oil Company (New Jersey) has used its world-wide resources in producing Nujol, and its reputation is behind the product. Nujol is absolutely distinctive and individual. There is no other product on the market like it.

Write today to Dept. 12 on coupon and margin below for instructive booklet on Nujol and its uses.

MACHINERY AND MEN

BY FRANCES A. KELLOR

ASSISTANT TO CHAIRMAN IMMIGRATION COMMITTEE, CHAMBER OF COMMERCE OF THE UNITED STATES

The Efficiency Society is enabled to present this article by Miss Kellor to its members and the readers of The Independent thru the courtesy of The Engineering News Record.

THE coming executive in charge of industrial-relations management in America's great industries will be the executive with engineering training who can handle men as well as materials. In truth, that is a long jump from the present situation. It is a jump, however, that will be made in the next few years, because it must be made. The determining factors will not be benevolence and sentiment and good nature or a troubled conscience over large profits, but rather the state of the labor market, the increased cost of production and the trade conditions we shall have to meet after the war.

The question is, will the engineer be ready for his widening opportunity for handling men, and will the engineering colleges appreciate the demand in time to give us the trained executives?

Industrial-relations management will soon be included as a part of the cost of production. It will be administered directly by company employees and accounted for as a risk of business, with expected commensurate returns. This means we shall have to evolve principles, standards and methods for industrial-relations management just as we have for production and sales.

There is today an overwhelming desire on the part of industrial leaders to include industrial-relations management as a part of their plant work. We are in danger, however, of going too fast and of putting in all kinds of makeshifts and experiments, and palliatives and sops to labor, which have no specific organic relation to the administration of the plant as a whole and are not administered in harmony with it. One employer hears of something being done for workmen, and without inquiry or proper planning he adopts it; another puts in a lunch-room; some one else favors a playground; a third has a club building put up for his men. Then when these experiments fail to achieve his ideal or fulfil his dream, he condemns the movement or considers his men unappreciative.

Now I think we are at the point where we may formulate, at least for purposes of discussion, certain fundamental elements of industrial-relations management. These are submitted for the purpose of showing that this field is primarily one for the engineer executive and that the big problem before engineering societies is to see that men are trained to meet the demand that is fast setting in.

Industrial-relations management, exprest in plant location, construction and equipment, is solely the responsibility of the employer. A considerable part of this location, construction and equipment is already the task of the engineer. But when we see day after day splendid buildings put up to house machines and store materials and dispose of products, with little or no thought for the necessities, comforts and conveniences for workmen, then we know the engineer is neglecting the human phases of his work. When we see taxation rates and transportation facilities carefully worked out in advance, but housing and rentals and accessibility of homes to the plant ignored, we know the future labor turnover of that plant has been left out of the calculations of the engineer.

Labor management within the plant is also the direct responsibility of the industry. Its subject matter covers organization of the local labor market, census of employees, physical examinations of the men, promotions and transfers, dismissals, voluntary lay-offs and incentives.

Housing is the responsibility of the industry where private capital will not take the risk, as during temporary business expansion, or where the industry develops faster than the town can meet the situation. We are not agreed, however, on how this should be managed, whether directly by the company, whether houses should be sold to workmen or rented to other than company employees.

Beyond these fundamentals are shadow lines where we are not at all agreed on what the employers' responsibility is.

LET us take the processes thru which any engineering project goes and see how they may be applied to industrial-relations work:

Planning comes first, which determines what is to be done and how, embracing calculation, design, drafting, analysis of labor operations and analysis of material requirements. Scheduling comes second, which decides when a thing is to be done. It is the arrangement of the combination of the result of labor analysis and of material requirements and their assembling in a natural and dependent sequence. Preparation provides the means, as the assembling of plans, materials and tools, power and light and removal of interferences—in short, the establishment of standard conditions. Execution comes fourth and covers all the operations from the time the job is turned over to the workman. His success depends upon the suitability and efficient operation of the equipment, the character of supervision, scientific selection and training of workmen, and the method of pay. Inspection comes last and consists of an examination of the results and comparison with the plans to see that they have been carried out. Every piece of construction work, every minute product of a factory, goes thru these processes. The more thoro they are, the higher the grade of result.

A machine shop is a perfect environment for getting a specific thing done the best and quickest way by applying the principles of construction and production. An employment office is a makeshift, crippled at one point because some foreman objects to his prerogative being disturbed; at another because some superintendent's authority is handicapped; and somewhere else because each "boss" wants to hire or fire his own men.

One reason this is so is because employers lack the vision, the courage and the science to meet the labor situation squarely and to organize its administration within their industry with as much accuracy, thoroness, integrity and impartiality as a bridge is built. When we cease to regard industrial-relations management as an emergency or "rush order" to avert labor troubles and come to think of it as a production measure and as a measure for the conservation of men, we shall have reached the rock foundation upon which we can build.

IN any contemplated instalment of measures for successful industrial-relations management the basic principles are these:

1. The principles of construction and of production—planning, scheduling, preparation, execution and inspection—should be applied to the plant as a whole and to every contemplated addition. Any proposal that cannot be so tested and operated should not be included in such management. This method will invariably rule out haphazard, irresponsible, slipshod experiments that have no organic relation to the plant.

2. The field of industrial-relations management should be limited to company employees and company property. Beyond this the responsibility of the employer is coöperative and his opportunity a community one.

3. The scope of industrial engineering includes (a) labor consideration, which provides measures of safety, convenience, comfort and health in the location, construction and equipment of plants; (b) labor management, which provides standards of industrial justice in the employment, promotion, transfer, dismissal and retirement of men; and (c) labor fitness, which provides incentives and working and living conditions to keep men fit.

The structure we want to build in industries according to these principles is industrial-relations management by means of industrial engineering, and its two bases are the production of goods and the conservation of men.

PLATTSBURG'S HOME-STRETCH

(*Continued from page* 101)

American camp,' going about its business in a purely American way. It must be admitted that the element of time has been one of the most difficult factors. How much time should be spent in the close instruction of small units; how much in the instruction of masses? With the given factors of diversity of material, and diversity of age and experience of all sorts, who shall say what should be the correct measure? And for the reasons given above I doubt if even the keenest regular army observer could report on the work of this camp if asked to reduce the results to anything like exact figures. However, the spirit of the camp as I leave it seems to me to remain the same, and that, as I found it almost at the very start, was thus exprest by one of the men:

"*It will work out all right.*"

About the value of organized sport in this particular sort of a camp I am still in doubt. It was natural enough, I think, that the New York Regiment, altho beaten on Independence Day as they were on Memorial Day by the New England contingent, should set great store by the winning of the Military Pentathlon, in which Carroll Robertson figured mightily. This included jumping horses (and the mounts were none too good) over hurdles, shooting with rifle and revolver, and a combined cross-country run and swimming event. It was a military event, you see, and it may be that the satisfaction in that victory was really a subtle tribute to the teaching of the super-importance of things warlike. Baseball has drawn its crowds and provided its thrills, and oddly enough, tennis has made for great rivalry between the two contingents. But I wonder, if, after all, these two events have not been ultra-popular largely because of the high quality and reputations of the contenders. It is worth thinking over, at any rate. Perhaps a sidelight on it may be found in the furious wagering between individuals and groups on the rifle-range. So that perhaps, for the time being, at least, and considering the task in hand, the real battle among these men has been fundamentally military. Personally I think so, but I leave the decision to the General Staff, the War College, the Council of National Defense, and all other bodies that may be interested.

In the meantime, I want to leave this camp with a word for some of the cheering and steadying influences, some in the ranks, and some "topside," who have taken some of the smaller woes on their own backs, and for some of the "fighting influences," some in the ranks, and some "topside," who have taught the officers-to-be, when occasion offered, to fight for themselves as they will have to fight for the men who later are to put their lives in their hands; to respect the higher rank but not to fear it; and taught them that respect does not mean mere obsequiousness. Many of the men, I think, have learned that there is no time for explanation or excuse; that mistakes on their part can be corrected only by subsequent correct action; but that a straightforward demand for exact justice will be met by a straightforward answer. All these men shall be nameless in this last of the Plattsburg chronicles, for it is better that way, and they will hardly be nameless in just a little while. Nothing on earth will keep them from thrusting up and thru.

Plattsburg, New York

Of course you don't know what you said!

You have dictated thirty-odd other letters—and talked and thought about a hundred other things since you dictated that *fourth* paragraph.

That sort of thing happens every day where they still write every letter *twice*—once in shorthand and once on the typewriter. Don't blame your stenographer! If you talk away from her, fumbling through papers or telephoning—don't blame her if she can't get what you dictate. You are to blame for the system.

Cure that? That's only one thing. Let your typist *produce* finished typewriting or other important work. And get more letters and better letters—and at much less cost per letter.

Reach for your telephone NOW, and call The Dictaphone. If you don't find that name in the 'phone book, write to

POWDER IN SHOES AS WELL AS GUNS

Foot-Ease to Be Added to Equipment of Hospital Corps at Fort Wayne

Under the above heading the Detroit *Free Press*, among other things says: "The theory is that soldiers whose feet are in good condition can walk further and faster than soldiers who have corns and bunions incased in rawhide."

One war relief committee reports, of all the things sent out last year in their Comfort Bags or "Kits," Allen's Foot=Ease received the most praise from the soldiers and men of the navy. The British and French troops in Europe, and the American troops use it, because it takes the Friction from the Shoe and freshens the feet. There is no foot comforter equal to Allen's Foot=Ease, the antiseptic powder to be shaken into the shoes and sprinkled in the foot-bath, the standard remedy for over 25 years for hot, tired, aching, perspiring, smarting, swollen, tender feet, corns, bunions, blisters or callouses. The Plattsburg Camp Manual, chapter on General Advice, states: "Every morning shake a little talcum powder or Foot=Ease in each shoe." Why not order a dozen or more 25c. boxes to-day from your Druggist or Dep't. store to mail to your friends in training camps and in the army and navy.

DURAND Steel Lockers

IF you need lockers for an office, factory, club, school, hotel, or gymnasium, write us. We want you to compare Durand Steel Lockers with any others. It's to your advantage to do so.

Durand Steel Lockers are fireproof, convenient, well ventilated, economical and practically indestructible.

Our new catalogue shows various lockers, locker installations and locker construction.

We are also manufacturers of steel shelving, steel bins and general steel factory equipment.

DURAND STEEL LOCKER CO.

THE NEW BOOKS

ON THE BORDER

What we may aptly term a timely preface to our entry into the Great War, is comprized within the covers of *Watching and Waiting on the Border*, by Roger Batchelder, Private, Eighth Massachusetts. The author recalls his experience as the "great adventure," and such it unquestionably proves in the final analysis. It was a venturesome test of several now exploded theories, chief of which was that untrained, undisciplined and imperfectly equipped overnight volunteers would be found fit to contend with such armies as have been called into being in Europe. In this respect the author points to the National Guard organization as not only valueless but unjust, unjust because many of those responding to the patriotic call to arms found themselves ruined financially and their families in want, while those who stayed at home actually profited by their neighbor's sacrifice.

On the general attitude of our civilians toward our soldiers, this young Harvard citizen soldier delivers a rebuke, reserving the Texans for special censure. It certainly must have been with a feeling stronger than amazement that the author and his comrades beheld a sign on the door of a Ysleta dance hall which, read, "Soldiers and dogs not admitted." Curiously, the author contrasts such treatment from their Texan fellow citizens with the courteous hospitality of well bred Mexicans. While Private Batchelder is frankly outspoken in discussing these questions, he writes with the good sense and judgment born of experience. As a record of personal service in what may fairly be termed a hard country physically, his book is well worth reading by every recruit as a helpful guide to his duty and conduct.

Watching and Waiting on the Border, by Roger Batchelder. Houghton Mifflin Company. $1.25.

A CLERGYMAN—NOT A CARICATURE

Ellis Parker Butler has done fine justice to the hard-working, ill-paid, manly young minister in *Dominie Dean*, his latest novel. The usual portrait of a clergyman in novels and plays is so distorted his best friends would not see a point of likeness. David Dean is neither a hypocrite nor a fool but an upright, tender-hearted man with a touch of genius in his preaching and an unworldly wisdom in dealing with his people in a little church in a little city on the Mississippi River fifty years ago. The story of a sincere life is never uninteresting if told simply and sympathetically; David's life is full of interest from his arrival on the steamboat, with clear eyes, clean heart, and anticipations of helpfulness to the age of poverty that awaits him after fifty years of devotion to the church and people of Riverbank.

Of course, the church at Riverbank had a choir.

Indeed, is not the attitude of minister and choir in many churches usually that of armed neutrality? How many ministers would drop dead if all the bitterness that is put into some anthems could kill! To the minister the choir is often a body of unruly artistic temperaments bent on a mere secular display of its musical talents; to the choir the minister is a crass utilitarian, ignorant of all that relates to good music, and stubbornly insisting that the musical program for each day shall be twisted to illustrate some point in his sermon. To some ministers it has seemed that eternal vigilance alone prevented the choir from singing the latest Gem from Comic Opera.

There were quarrels, too, and small town tragedies. Gossips did their best, and baffled wills their worst to injure the straightforward dominie. Good women and bad were among his members, all sorts and conditions of men served as his officers. The church is not unfairly blamed for the injustice to the aged minister; the end of the book is pathetic rather than tragic, for David preserves his dignity thru poverty and misprision, the threadbare clerical coat clothes a man, and one who wins respect; he is less to be pitied than the people who have neglected him but we feel the author's indignation at the unfair treatment of a man who gives his youth and strength unstintedly thru long years of devotion to be "cast aside like an old shoe at last," and he puts his anger into white-hot sentences:

It was a pity our David wasn't a horse instead of a man; then we could have shot him when we had worn him out and were thru with him. . . . There was a Fund and it could spare something for David, as much perhaps, as a child could earn picking berries in the season each year . . . 'Thusia has worried so for fear David might have to go to the poorhouse alone. She has been afraid to die; David would have been so lonely in the poorhouse.

Dominie Dean, by Ellis Parker Butler. F. H. Revell & Co. $1.35.

OF THE OLDEN SCHOOL

Why do reactionary poets think they must write prefaces to their own collections of poems in which to explain or explain away, the "new poetry"? Are they on the defensive? Sometimes they seem like nervous mammas warning us all against the deep water, the swift water, saying tremulously, "Don't go in far—not above your knees! Stay near the shore where we can watch you. Play in these pretty ponds that we have made for you." I should like *Trails Sunward*, by Cale Young Rice, much better without the preface. Mr. Rice has already many readers and followers who know and like the kind of work he does. He needs no introduction. In this volume are several poems about the Far West, the Grand Canyon and California which will please Western readers. "A Mother's Cry to Her Kind" deserves mention, also, as the first "birth control" poem which I have seen. It is not quite so convincing as it would have been if a woman had written it, perhaps, but it is an interesting poem.

Trails Sunward, by Cale Young Rice. The The Century Co. $1.25.

THE SOCIAL LABORATORY

Present conditions of struggle afford unusual opportunities for new social adjustments and also for man to clear up some of his prejudices, enabling him to select desirable tendencies and to assist in their progress. *Education and Living* contains a series of papers well suited to help in forming a fair judgment of several educational issues such as the Gary School, Vocational Education, and Universal Service. In each Dr. Bourne sees an example of our movement from an "unconscious" wasteful and repressive system characterized by many forms of arrested development to a "self-conscious" education resulting in more effective discipline, richer culture and more adequate personalities.

An Introduction to Social Psychology is a more technical restatement of social con-

cerns such as Religion, Revolution, Socialism, Sex, Education and War in terms of the human nature of the individuals concerned. Here again consciousness "the psychic element which is the constituent principle of social life" is considered in its relationship to scientific method and other tools of advancement. This book is a simplification of Professor Ellwood's "Sociology in Its Psychological Aspects."

Education and Living, by Randolph Bourne. The Century Company. $1.25. *An Introduction to Social Psychology*, by Charles A. Ellwood. D. Appleton & Co. $2.

THE INTERNATIONAL LEAGUE

The Future of Militarism, by Roland, displays the moderation of British public opinion in permitting an open discussion of the author's view of the subject in the present national stress, when passion is naturally keyed up by suffering and sacrifice to an extreme degree of partizanship. In this volume "Roland" counters Oliver's "Ordeal of Battle," a denunciation of British unpreparedness, by arguing that preparedness could have had but one of two immediate goals—either war against Germany or an alliance with her. From this he contends that preparedness for war must inevitably lead to war sooner or later, that if every nation arms to the teeth for self protection, it is but a step to self aggrandizement and conquest. He thus insists that the pacificist-militarism—the hyphen in a new and rather paradoxical conjunction—of Mr. Oliver is a pacific delusion, and the sole means to secure an enduring peace after this Armageddon is a league of the Allied nations to found among themselves an absolute pacifist policy, and until such time as Germany becomes sane enough to accept it wholeheartily, to enforce this policy upon her.

Future of Militarism, by Roland. T. Fisher Unwin, London.

SUMMER TIME

Harriet Keeler's new book, *Wayside Flowers of Summer*, confines itself to the bloom of July and August. It is a handy volume, with color lists and Latin and English and botanical family indices and helpful pictures. (Charles Scribner's Sons, $1.35.)

Whoever of a summer day would know more about birds than can be discovered by casual observation will find very handy the *Primer of Bird Study*, written by Ernest Ingersoll and published by the National Association of Audubon Societies, New York, at 15 cents.

In *The Pruning Manual*, Dr. Bailey tells not only how to cut back apple trees, but how to train grapevines, how to grow wall fruits, how to cure wounded trees and how *not* to make "tailored bushes." He, as usual, gives more than his title promises. (The Macmillan Company, $2.)

The inclusiveness of W. J. Beecroft's *Who's Who Among the Wild Flowers and Ferns* will rightly make it a popular guide. Its outline illustrations are accurate, its descriptions clear. The popular name is made prominent. The flowers are arranged by color and by season. (Moffat, Yard & Co., $1.50.)

Lovers of trees will be pleased with *Forest Fancies*, seven stories of fantasy and reality, by Lucy C. Kellerhouse. The book will plead the cause of the forest with many whose ears would be deaf to mere practical statement of the economic value of trees. The Linden-Tree of Jonsboda tells of Carl Linnaeus, whose father "decked his cradle with flowers" and whose mother "would quiet him with a blossom." (Duffield & Co., $1.50.)

Four volumes of a new series of nature books, with excellent colored plates and interesting text, are issued. *Birds worth Knowing* and *Flowers Worth Knowing* are shortened editions of Neltje Blanchan's well known "Bird Neighbors" and "Nature's Garden." *Butterflies Worth Knowing*

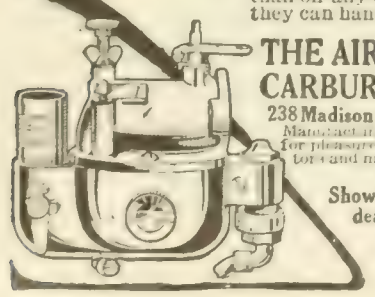
AIR-FRICTION CARBURETORS



Start your motor instantly and move off at once, even in zero weather, with no "popping", "spitting", or "missing". END your carburetor troubles.

We fit any car without changing present manifold or throttle connections.

ASK your dealer. If he can't supply you, write us direct, sending his name and the name and model of your car.

30% off list price where no representative is already appointed. Ask us about our 30 day trial offer.

Dealers, garages and repair shops make greater profits and give more satisfaction supplying AIR FRICTION CARBURETORS, and spark plugs, than on any other accessories they can handle.

THE AIR FRICTION CARBURETOR CO.

238 Madison St., Dayton, Ohio

Manufacturers of carburetors for pleasure cars, trucks, tractors and motor boats.

Show this adv. to your dealer or repair shop

is a clear guide with much information beyond the descriptions. *Trees Worth Knowing*, tho full of interesting matter, lacks in descriptive data. (Doubleday, Page & Co., $1.60 each.)

A new scheme for a flower guide is the *Pocket Garden Library*, a volume to each season. These are devoted to the favorites of lawn and garden plot, and to evergreens and house plants. Short notes on cultivation are added to the illustrated descriptions. (Doubleday, Page & Co., Garden City, New York, $1.25 each.)

How to Make the Garden Pay, by E. Morrison and C. T. Brues, is an excellent, business-like, little handbook prepared to help the home grower make the most and waste the least of his garden patch. Notes on the food value of each vegetable are included in the cultural directions. (Houghton, Mifflin Company, 75 cents.)

Friends in Feathers is a much enlarged edition of Gene Stratton Porter's "What I Have Done With Wild Birds." Her stories of bird hunting and the truly wonderful treasure trove of photographs she brought back from her field work make this one of the most fascinating of bird books. (Doubleday, Page & Co., Garden City, New York, $3.50.)

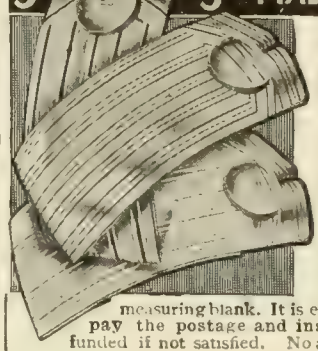
READY REFERENCE

The thin paper edition of *Webster's Collegiate Dictionary* is an abridgement with good type, pronunciations and derivations. The appendix holds a Scottish glossary, pronouncing gazetteer and biographical dictionary, punctuation rules, etc. (Springfield, Massachusetts, G. & C. Merriam Company, $3.50, $5, $6.)

The *International Yearbook* is nearly a hundred pages larger this year than is its wont, the Presidential campaign and the Great War and its mechanical developments taking much space. The arrangement is alphabetical, the information most inclusive, with many biographical notes, illustrations and maps. (Dodd, Mead & Co., $5.)

The special articles of the current *American Jewish Year Book* are an appreciation of Joseph Jacobs, known to all American children for his collections of folk and fairy tales, a most interesting biographic essay on Dr. Schlechter, the eminent scholar and discoverer, and accounts, so full as might be, of the condition of the race in the warring countries. (Jewish Publication Society, Philadelphia.)

FOR AMERICANS



A second volume of the Debater's Handbook on *National Defense* contains much material relating to the debate in Congress last year, and to the question of universal military training in this country. (H. W. Wilson Company, White Plains, New York, $1.25.)

A careful history of *Lincoln's Gettysburg Address*, of how, when and where it was written and how it was received has been written by Orton H. Carmichael. French's statue and a half dozen photographs illustrate the brief study. (The Abingdon Press, 85 cents.)

Colonel Wise holds a brief for two straight years of military training. Half his book, *The Call of the Republic*, goes to a short account of various military systems of other days and of some other countries of this day. There is, however, practically nothing on the Swiss and Australian systems, in which our people are mainly interested. (E. P. Dutton & Co., $1.)

Among the many patriotic booklets being rushed thru the press is an "Old Glory" edition of *The Man Without a Country* (Little, Brown & Co., Boston, 15 cents) and *The Flag and Its Message*, containing the President's message to the country on the entrance into war, an explanation of the flag's meaning, and the text of "America" and of the "Star Spangled Banner"—this last, to judge by popular singing, sadly needed. (J. B. Lippincott & Co., Philadelphia, 25 cents.)

3 FOR $5.00 MADE TO MEASURE

I will make to your measure shirts of perfect fit, smooth around the neck, no wrinkles and of correct sleeve length. These shirts will stand more trips to the laundry and give better service than any ready-made shirt you ever bought. Made plain front, with ocean pearl buttons and cuffs attached.

Send for 200 samples of 1917 designs, with colors that will not fade, and self measuring blank. It is easy to fill in—at my risk. I pay the postage and insure delivery. Money refunded if not satisfied. No agents. Also higher priced goods.

C. G. CLEMINSHAW, 171 River Street, Troy, N.Y.

DIVIDENDS

WESTINGHOUSE ELECTRIC & MANUFACTURING COMPANY.

A dividend of one and three-quarters per cent. (87½ cents per share), on the COMMON stock of this Company for the quarter ending June 30, 1917, will be paid July 31, 1917, to stockholders of record as of June 30, 1917.

H. F. BAETZ, Treasurer.

New York, June 20, 1917.

AMERICAN TELEPHONE AND TELEGRAPH COMPANY

Four Per Cent. Collateral Trust Bonds

Coupons from these bonds, payable by their terms on July 1, 1917, at the office of the Treasurer in New York, will be paid by the Bankers Trust Company, 16 Wall Street. G. D. MILNE, Treasurer.

AMERICAN TELEPHONE AND TELEGRAPH COMPANY

A dividend of Two Dollars per share will be paid on Monday, July 16, 1917, to stockholders of record at the close of business on Saturday, June 30, 1917.

G. D. MILNE, Treasurer.

The Market Place (Investors Service)

Luigi Criscuolo, Director

The Independent offers a Service for Investors in which personal attention is given to the desires of its subscribers for information in regard to investments of all kinds. We cannot, of course, decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves. Readers who request advice on investments will receive better service when they specify the class of securities now held, approximate amounts of each, stating if the investment is for an estate, business or professional man, woman or minor. All information given will be held in strict confidence.

THE CALORIES WE EAT

BY EDWIN E. SLOSSON

NOT long ago I received an invitation to lunch from the Life Extension Institute of New York. Being always willing to have my life extended at the expense of somebody else I accepted and I obtained not only a good lunch but an equally palatable and nutritious lesson in dietetics. Dr. Fiske, Medical Director of the Institute, had demonstrated by a three weeks' test on a dozen young policemen that twenty-five cents a day could buy enough food for anybody even at present city prices. But he was more generous to the editors—evidently knowing how much they needed a square meal—and he blew in a whole quarter's worth at one luncheon. First we were served with a cupful of cream of corn soup, guaranteed to contain 72 calories. With it came—much to the amazement of those who had been told that hot bread and melted butter were rank poison—a hot, crusty roll of Graham bread. The roll was valued at 100 calories and the butter, being a good inch cube, must have been 150 more. The next course was a broiled lamb chop (100 c. not counting the mint) and a small baked potato. Then a mixt salad of apple and lettuce with French dressing (75 c.) and a cracker (50 c.) on the side. Dessert was half a grape fruit, with sugar on top and a maraschino cherry nesting in the middle (150 c.), which brought up the entire meal to 772 calories, not counting the coffee, which, if you took sugar in it, was extra.

The "Rookies" were fed more generously and less expensively than the editors. Their menus were calculated as to cost and calories by Dr. Mary Rose of the Teachers' College, and are published together with recipes in a pamphlet of the Life Extension Institute and sold for ten cents. Here are the dietaries of two days as samples:

Saturday

Breakfast—Hominy and milk, toast with nut butter, coffee.
Luncheon—Welsh rarebit on toast, scalloped tomatoes, hot biscuit with nut butter, tea.
Dinner—Corned beef hash with vegetables, graham bread and nut butter, brown betty with hard sauce, tea.

Tuesday

Breakfast—Oatmeal with milk, buttered toast, coffee.
Luncheon—Baked macaroni and cheese, corn bread, tea.
Dinner—Meat loaf with French fried potatoes, graham bread, date pudding with sauce, tea.

The breakfasts usually cost six cents, the lunches seven cents and the dinners twelve cents for the materials at market prices, not counting the cost of cooking or fuel. Their food value ran from 3000 to 3600 per day per man.

All of the belligerent nations have been obliged to take lessons in the principles of dietetics, under the tuition of that stern taskmaster, Starvation. If we would avoid such a compulsory course we must voluntarily undertake the study without delay. It is really not so difficult as it seems.

There are practically only four things to look out for in planning a dietary: that it be (1) adequate in amount, (2) sufficiently varied, (3) properly balanced, (4) reasonably cheap. Now the third, which is the hardest to figure out, need not be bothered about by the ordinary eater if the second requirement is met, for his taste may usually be depended upon to make a fairly good selection if given a sufficient range of choice. But the fourth is dependent upon the first, for we cannot tell whether we are getting enough food for our money unless we know how much food we are getting. Here occurs the chief difficulty in the popular comprehension of the subject because it necessitates the learning of a term, the measure of food values, the calorie. We eat not for weight but for warmth and work. So we cannot measure food by the pint or pound but by the amount of energy it contains, that is, the amount of heat or work we can get out of it. Never mind about the definition of the calorie, just learn how much it is. You know how much a yard is without knowing whether it was or was not derived from the length of Henry VII's arm. Just look at the samples of food on the table at the bottom of the page. Any one of them would give you enough fuel to keep your body running for an hour. The human body works like any other machine. While the automobile waits at the door with the engine running it is using up gasoline, but not so much as when it is propelling the machine along the road or uphill. So the body engine has to keep going all the time to run the pumping plant of the heart and the ventilating apparatus of the lungs. Now a man expends energy at the rate of about 2400 calories a day even if he is not exercizing much, and if he undertakes muscular labor he must add to this 500 or 1000 or more. A woman somehow manages to get along on 20 per cent less; I imagine they have been trained to it thru the thousands of years by having to give up the best pieces to their lord and master and live on whatever was left.

It would be well if the manufacturers of package goods would print on the cover the number of calories contained, not that anybody need be always figuring up what he eats, but the price of foods bears no ascertainable relation to its nutritive value. Let me quote the cost per hundred calories of some of the dishes served:

COST PER HUNDRED CALORIES

	Cents
Cabbage	7.10
Beef pot roast	2.28
Baked potatoes	1.48
Sliced orange and banana	1.17
Chocolate ice cream	1.11
Codfish balls	1.00
Apple sauce	.88
Spaghetti and cheese	.84
Split pea soup	.76
Baked beans and pork	.74
Rice pudding with raisins	.68
Fried potatoes	.56
Baking powder biscuits	.45
Crullers	.41
Raisin bread	.39
Ginger snaps	.26
Fried cornmeal mush	.24

From this table it will be seen that cabbage is not a cheap food as is commonly supposed. It costs about thirty times as much as corn meal mush. Yet it must not be inferred that it would be wise, in the interests of economy, to cut out cabbage and baked potatoes and live on cornmeal mush and ginger snaps. Calories do not tell the whole story. For instance, sugar contains 1750 calories per pound and costs only half a cent per hundred calories, pure food, concentrated nutrition, no water, no waste, nothing indigestible, yet a person would starve on sugar alone. One needs a lot of other things besides carbohydrates, especially protein, and no one kind of protein will do. From ten to fifteen per cent of the calories should be in the form of protein, which is chiefly obtainable in milk, cheese, eggs, meat, beans, peas, oatmeal and bread, and the greater the variety of these the better. The reason I am particular in emphasizing this caution is because I once got into trouble by not doing so. I was lecturing to the ladies of Laramie and as a class exercize I had them figure out the cheapest form of protein in the market. They all got the same result and I marked them all 100 on the quiz. But afterward the husbands threatened to lynch me and I found it advisable to leave town and go East. Their wives were feeding them exclusively on codfish.

ONE HUNDRED CALORIE PORTIONS

For a full meal select 15 to 20 of them; for a light meal 5 to 7. The quantities are as follows: Bread, one slice, one inch thick if white, ¾ inch thick if whole wheat; steak, 1½ ounces with fat, or 2 ounces lean; beans, 1 ounce, weighed uncooked; oatmeal, 1 ounce, weighed uncooked; milk, 5 ounces; white flour, 1 ounce; sugar, 2 tablespoonsful or 2 large lumps; one large orange; one medium banana; butter or margarine, 1 tablespoonful or cube; one small potato; one slice mince pie, 1 inch wide; lettuce, 3 large heads, 22 ounces

PATRIOTISM AND PROFITS

President Wilson's Message to Business

MY Fellow Countrymen: The Government is about to attempt to determine the prices at which it will ask you henceforth to furnish various supplies which are necessary for the prosecution of the war and various materials which will be needed in the industries by which the war must be sustained. We shall, of course, try to determine them justly and to the best advantage of the nation as a whole, but justice is easier to speak of than to arrive at, and there are some considerations which I hope we shall keep steadily in mind while this particular problem of justice is being worked out. I, therefore, take the liberty of stating very candidly my own view of the situation and of the principles which should guide both the Government and the mine owners and manufacturers of the country in this difficult matter.

A just price must, of course, be paid for everything the Government buys. By a just price I mean a price which will sustain the industries concerned in a high state of efficiency, provide a living for those who conduct them, enable them to pay good wages, and make possible the expansions of their enterprizes which will from time to time become necessary as the stupendous undertakings of this great war develop. We could not wisely or reasonably do less than pay such prices. They are necessary for the maintenance and development of industry, and the maintenance and development of industry are necessary for the great task we have in hand.

But I trust that we shall not surround the matter with a mist of sentiment. Facts are our masters now. We ought not to put the acceptance of such prices on the ground of patriotism. Patriotism has nothing to do with profits in a case like this. Patriotism and profits ought never in the present circumstances to be mentioned together. It is perfectly proper to discuss profits as a matter of business, with a view to maintaining the integrity of capital and the efficiency of labor in these tragical months when the liberty of free men everywhere and of industry itself trembles in the balance, but it would be absurd to discuss them as a motive for helping to serve and save our country.

Patriotism leaves profits out of the question. In these days of our supreme trial, when we are sending hundreds of thousands of our young men across the seas to serve a great cause, no true man who stays behind to work for them and sustain them by his labor will ask himself what he is personally going to make out of that labor. No true patriot will permit himself to take toll of their heroism in money or seek to grow rich by the shedding of their blood. He will give as freely and with as unstinted self-sacrifice as they. When they are giving their lives will he not give at least his money?

I hear it insisted that more than a just price, more than a price that will sustain our industries, must be paid; that it is necessary to pay very liberal and unusual profits in order to "stimulate production"; that nothing but pecuniary rewards will do—rewards paid in money, not in the mere liberation of the world.

I take it for granted that those who argue thus do not stop to think what that means. Do they mean that you must be paid, must be bribed, to make your contribution, a contribution that costs you neither a drop of blood nor a tear, when the whole world is in travail and men everywhere depend upon and call to you to bring them out of bondage and make the world a fit place to live in again amidst peace and justice? Do they mean that you will exact a price, drive a bargain with the men who are enduring the agony of this war on the battlefield, in the trenches, amidst the lurking dangers of the sea, or with the bereaved women and pitiful children, before you will come forward to do your duty and give some part of your life, in easy peaceful fashion, for the things we are fighting for, the things we have pledged our fortunes, our lives, our sacred honor, to vindicate and defend—liberty and justice and fair dealing and the peace of nations?

"Of course you will not. It is inconceivable. Your patriotism is of the same self-denying stuff as the patriotism of the men dead or maimed on the fields of France, or else it is no patriotism at all. Let us never speak, then, of profits and of patriotism in the same sentence, but face facts and meet them. Let us do sound business, but not in the midst of a mist. Many a grievous burden of taxation will be laid on this nation, in this generation and in the next, to pay for this war. Let us see to it that for every dollar that is taken from the people's pockets it shall be possible to obtain a dollar's worth of the sound stuffs they need.

LET me turn for a moment to the shipowners of the United States and the other ocean carriers whose example they have followed and ask them if they realize what obstacles, what almost insuperable obstacles, they have been putting in the way of the successful prosecution of this war by the ocean freight rates they have been exacting. They are doing everything that high freight charges can do to make the war a failure, to make it impossible. I do not say that they realize this or intend it. The thing has happened naturally enough, because the commercial processes which we are content to see operate in ordinary times have, without sufficient thought, been continued into a period where they have no proper place. I am not questioning motives. I am merely stating a fact, and stating it in order that attention may be fixed upon it.

The fact is that those who have fixed war freight rates have taken the most effective means in their power to defeat the armies engaged against Germany. When they realize this, we may—I take it for granted—count upon them to reconsider the whole matter. It is high time. Their extra hazards are covered by war risk insurance.

I know, and you know, what response to this great challenge of duty and of opportunity the nation will expect of you; and I know what response you will make. Those who do not respond, who do not respond in the spirit of those who have gone to give their lives for us on bloody fields far away, may safely be left to be dealt with by opinion and the law—for the law must, of course, command these things. I am dealing with the matter thus publicly and frankly, not because I have any doubt or fear as to the result, but only in order that in all our thinking and in all our dealings with one another we may move in a perfectly clear air of mutual understanding.

AND there is something more that we must add to our thinking. The public is now as much part of the Government as are the army and navy themselves; the whole people in all their activities are now mobilized and in service for the accomplishment of the nation's task in this war; it is in such circumstances impossible justly to distinguish between industrial purchases made by the Government and industrial purchases made by the managers of individual industries; and it is just as much our duty to sustain the industries of the country, all the industries that contribute to its life, as it is to sustain our forces in the field and on the sea. We must make the prices to the public the same as the prices to the Government.

Prices mean the same thing everywhere now. They mean the efficiency or the inefficiency of the nation, whether it is the Government that pays them or not. They mean victory or defeat. They mean that America will win her place once for all among the foremost free nations of the world, or that she will sink to defeat and become a second-rate power alike in thought and in action. This is the day of her reckoning, and every man amongst us must personally face that reckoning along with her.

The case needs no arguing. I assume that I am only expressing your own thoughts—what must be in the mind of every true man when he faces the tragedy and the solemn glory of the present war for the emancipation of mankind. I summon you to a great duty, a great privilege, a shining dignity and distinction. I shall expect every man who is not a slacker to be at my side thruout this great enterprize. In it no man can win honor who thinks of himself.

Mr. Purinton's War Service Question Box 140

INDEPENDENT OPINIONS

Here is a suggestion for continuing "war Socialism" in time of peace:

We suffer many ills in times of peace, serious enough to call for all available remedies. It being granted that conscription is efficient and fair for war, it is equally so for peace. All authorities agree that this war arose over trade interests and rivalries; these being in the hands of the ruling class in its totality. It would then seem necessary to remove the cause by a conscription process in peace times, to prevent these dangerous aggregations of trade interests.

It could well be done by the same process that is now used to raise war revenues, taking for public use much or most of all the excess profits and incomes and inheritances. These taxes would provide freely for all desirable public services, and would have a tendency to reduce profits by larger returns to the wage earning class.

That peace casualties are approximately as great at all times as the war casualties in most wars, is shown by the fact that five times the proportion of infants of the poor class die, as of the well-to-do class, and by the brevity of average life, compared with the normal length of life properly employed and properly conditioned people, and by the statement of Dr. Gorgas of Panama fame, that more than a million preventable deaths occur every year in this country alone.

That we should not suffer from want of ability by withdrawing the inducement of great incomes and high living, is proven by the fact that young men of the best ability and of the upper class, are freely enlisting as private soldiers, taking the same pay and fare and risk as those of the wage earning class, and that men of established ability are giving up their own business to serve in the war for nothing.

Profit-making which includes salaries, is now the modern method of seeking wealth, as in former times it was by conquest and robbery. It has the same fascination for ability and its following; we must remove that cause before we can expect permanent peace.

N. O. NELSON.

New Orleans, Louisiana

We believe that much of the present war taxation will, as our correspondent suggests, continue after the war and perhaps be applied to such purposes as old age pensions, state insurance, labor exchanges and other forms of welfare legislation such as have recently been gaining favor in European countries and in many of our states. But the just distribution of wealth is only half the problem, the difficulty will be to harmonize it with adequate production, especially in time of peace when comparatively few persons are willing to give their best work with no inducement but patriotism.

Now that we are helping to make the world safe for democracy, certain of my British friends insist that Great Britain is democratic. Their king, they say, has little opportunity to shape the policies of the Government and has no responsibilities for its successes or failures. Our President has much more power.

How much does it cost the United Kingdom in salaries, fees, etc., to keep alive this hereditary ruler who does nothing for his kingdom but wear a crown? Is this twentieth century efficiency?

WILLIAM H. LEACH.

Alden, New York

Most Americans will agree with our correspondent that any king is an expensive luxury, especially in war time. Still the British way of paying a ruler to do nothing gracefully is better than the German way of paying him to do mischief. For the use of the king, the queen and the upkeep of the court Parliament appropriates 470,000 pounds ($2,350,000) each year. The British claim that they save the money for this by being economical in other ways in which we are extravagant.

One of our astronomical readers points out that it was Julius Caesar and not Pope Gregory who patented the Leap Year. Come to think of it, the Roman general's reputation for gallantries at the Egyptian court and elsewhere would suggest that he would be more apt to be interested in the institution of Leap Year than a celibate Roman pontiff.

A recent editorial in The Independent, in a vein of pleasantry, intimates that the pontiff to whom we owe the now generally accepted calendar, in the sixteenth century showed a leaning toward the feminism which we commonly think of as a twentieth century development.

The editorial writer has confused the facts in the case. It was Julius Caesar, not Pope Gregory, who gave to women their "one chance in four"—albeit quite unwittingly. Pope Gregory seems to have considered this unwarranted liberality to the sex and so curtailed the privilege by three per cent.

Detroit, Michigan A. B. LYONS.

PEBBLES

Here is the "plane" truth: we haven't enough.—*London Opinion.*

Black—What sort of a car are you using this year?
White—Trolley.—*The Lamb.*

She—Were the British soldiers happy when they started for France?
He—Happy? They were in transports.—*Brunonian.*

Allied control officers have discovered fifteen hundred tons of potatoes hidden in Athens. The Salonika expedition is now felt to be justified.—*Punch.*

Sponge—I think that a street car has just passed.
Blotter—How yuh know?
Sponge—I can see its tracks.—*Chaparral.*

"I attended a remarkable lecture last night."
"What was peculiar?"
"The speaker did not use the word pacifism once."—*Penn State Froth.*

Instructor—You were absent yesterday, where were you?
Frosh—At the cemetery.
Instructor—Any one dead?
Frosh—Sure, all of them.—*Lehigh Burr.*

"Why don't you make some more speeches?"
"Because," replied Senator Sorghum, "the subject is not one which I desire in any way to render obscure to the public mind."—*Washington Star.*

Convalescent Tommy (in public gardens, interested in botany)—Do you happen to know to what family that plant belongs?
Old Gardener—I happens to know it don't belong to no family. That plant belongs to the corporation.—*Passing Show.*

An Italian, having applied for citizenship, was being examined in the naturalization court.
"Who is the President of the United States?"
"Mr. Wils'."
"Who is the Vice-President?"
"Mr. Marsh'."
"If the President should die, who then would be President?"
"Mr. Marsh'."
"Could you be President?"
"No."
"Why?"
"Mister, you 'scuse, please. I vera busy worka da mine."—*Everybody's.*

The Countryside

First Countryside Number of The Independent—Next Week

Your house, outside and in, your town, your garden—these are the things with which The Countryside Department of The Independent, appearing in the first number of every month, will deal. Short, helpful articles by men and women of unquestioned authority will crowd every monthly issue with the sort of information and advice that will make you want to act on it instantly.

Your House

How can you make it more livable? More efficient? Aymar Embury II, one of the foremost specialists in country house architecture in the country, tells about the structure itself—what materials to choose and how to use them properly—in a series of three articles on The House Livable, Brick and Stone, Wood and Stucco, Getting the Details Right. The most practical of all building questions—how much will it cost?—is considered in an article on The House Building Budget, by Russell F. Whitehead, who is in close touch with both architects and builders all over the country. Harold D. Eberlein, author of The Architecture of Colonial America, gives in Building in the Vernacular sensible advice on the choice of a style, backed by authoritative information. Noble Foster Hoggson, of Hoggson Brothers, traces architectural tendencies in The Country House of the Next Generation.

Indoors, too. How can you change it to make it more comfortable, more beautiful, again, more efficient? Refurbishing the House—making it over for the autumn and winter, freshening it and bettering it without doing it all over—is the subject of an early article by Agnes Foster Wright, a New York decorator, who will also write on Living Rooms to Live in. George Leland Hunter, whose authoritative position in interior decoration needs no mention, writes with broad knowledge and originality on Carpets and Carpeting and Wall Papers. Maxwell Armfield, an English artist with a very interesting decorative outlook, tells in Stenciling how to apply a fascinating method of home decoration. Churchill Ripley, author of The Oriental Rug Book, writes on Rug Beauty in the Small House. The House-Furnishing Budget, The Efficient Kitchen, and Closets will be discussed in a way that will bring household efficiency very much nearer.

Your Garden

To keep the garden efficient you must work intelligently all through the season. Professor Hugh Findlay, of the College of Agriculture in Syracuse University, tells every month, in a painstaking way, just what needs attention in the war garden, the flower garden and the orchard. Miss Anna Barrows, of the School of Practical Arts, Teachers College, takes up the garden-food problem where Professor Findlay leaves off, and all through the growing season writes every month on the efficient use of the foodstuffs grown in the home vegetable-patch. There will be special articles, too, on particular garden problems, such as F. F. Rockwell's Winding Up the Campaign and Professor Findlay's Into Winter Quarters; early next spring will come a set of complete and practical garden manuals for next season's problems.

Your Place

Harold A. Caparn, former president of the American Society of Landscape Architects, has an interesting and immensely practical message for the man with a suburban lot. He outlines it in this number, and future Countryside Numbers will help you to make your place efficient and really beautiful. The poultry yard, too, has frequent attention. E. I. Farrington, a successful poultry-raiser, who knows the small poultry-yard problem through and through, guides the amateur around the poultry calendar.

Your Town

Good townkeeping will be treated in suggestive articles by men and women to whom better roads, better organizations, better amusements, better public spirit generally, are vital subjects. The special needs of the countryside motorist will be well handled in The Independent's Passenger Car Service by John Chapman Hilder.

Your Problems

The Countryside Shop, in connection with The Independent Efficiency Service, will continue to give the accurate, painstaking, cordial help in answering all sorts of countryside house questions that it has given hitherto. This service puts at the command of readers expert advice on the selection of equipment of all sorts for the house and garden, and the solution of all kinds of technical and artistic problems involved in efficient countryside living.

"To live and work efficiently is the supreme concern of the American Countryside today."

The Independent

WITH WHICH IS INCORPORATED

HARPER'S WEEKLY

THE HOHENZOLLERN DEFIANCE

THE Imperial German Chancellor's much heralded speech, when, after delay, it was made, was not addrest to the Allied Nations for information, warning, or reproof, nor to the opinion of mankind, for which the German Government long since ceased to have a decent regard. It was addrest to a long-suffering and badly damaged German people, and was in substance as in form a brutal defiance by the "Potsdam gang." The Hohenzollerns have learned nothing and will yield nothing. They will "stand pat" until a rising popular wrath sweeps them into oblivion.

Horace Greeley used to say to his unfriendly caller at the *Tribune* office, "You're a liar and you know you're a liar." The Imperial Chancellor is a liar and he knows as well as anybody in the world that he is a liar, and that all mankind outside of Germany knows that he is a liar. He repeats the silly stuff about British and Russian responsibility for the war and the "illegality" of the British blockade. This means that he thinks that the German people can be made to believe it awhile longer. He well knows that everybody outside the frontiers of the Central Powers understands what the Imperial German Government means by its claim to be fighting "a defensive war." It *is* fighting a defensive war—a war in desperate defense of Hohenzollern absolutism against the massing forces of world democracy.

The Chancellor intimates that if America interferes unduly with U-boat activity, Germany will be prepared to fight America. America takes pleasure in returning the compliment. She will undoubtedly be prepared to fight Germany and has no intention of awaiting Germany's pleasure as to a convenient time to begin. Germany made a large mistake in underrating the fighting spirit and the military prowess of Great Britain. America will take a sincere pleasure in undeceiving the German mind upon the military resources and determination of the United States.

It is just as well that things have turned out in Germany as they now stand. Nothing could have been worse for the future of civilization than any misapprehension or muddle-headedness in America upon the real purpose of the German Government. If the Kaiser's spokesman could have "put over" the impression that the Hohenzollerns stood ready for the good of the empire to surrender an appreciable part of their power, in particular the war-making power, to a Reichstag responsible to the people, American military effort might have been impeded. The Chancellor has thrown off all disguise and abandoned all pretense so far as this essential matter is concerned. With Great Britain and France the United States sees with perfect clearness the straight and simple issue of the conflict. Are the people, including the people of Germany, going to manage their own affairs, or is the "Potsdam gang" to manage us all?

One more worth-while result of the Chancellor's speech will be a clearer vision than any of us have been able to get hitherto of the probable further duration of the war. The faint-hearted are saying, "We are in for a long one." We do not so see the situation, or rather, perhaps, we should say, we think it is clear that the war need not last much longer if America acts with sufficient promptness and vigor. To suppose for a moment that the Allied Nations, backed by the resources of the United States, will not win this war is astoundingly childish. The one and only possible way to shorten it now is to strike stunning blows. For one thing, we should get our navy into action. It is time to destroy the German naval bases. The situation calls for the resolution and the action of Farragut at Mobile Bay and of Dewey at Manilla. "Damn the torpedoes; go ahead."

A MAN'S JOB FOR THE BEAR

THE young Russian republic like the infant Hercules has been forced to begin its mighty tasks in the very cradle. Upon an army inspired by victory and patriotic sentiment, but at the same time demoralized by intrigue and faction, upon a nation which is distracted by civil conflict, upon a government which fell heir to a thousand problems of maladministration, has been flung the full force of the most formidable war machine which the world has ever seen. It is not surprising that Russia has lost Kalusz and Tarnopol. It would not be surprising if the Germans were hammering at the gates of Moscow or Petrograd before the growing strength of the western Allies compelled them to turn their attention again to the other front. Nevertheless the friend of Russia must say to the heroic provisional government, "Lift up your hearts! Other democracies have lived thru greater dangers than this."

In many respects the situation of the Russian republic of 1917 recalls that of France in 1792. France had undertaken the colossal task of remodeling every institution in the nation and, while confusion was at its worst, had to face a royal alliance which began with Austria and Prussia, ever the consistent foes of democracy, and in the end included most of the kings of Europe. The noble and wealthy men of France had for the most part gone over to the enemy or remained to plot treason at home. The men who had the task of ruling the nation and directing its armies were inexperienced in government and drawn from classes which under the old monarchy had never been permitted to share responsibility and power. They had so aggrieved and affronted the Roman Catholic Church in France as to make every orthodox priest and every devout layman an open or secret foe. La Vendée was in full revolt and civil war was smoldering in every city of southern and western France. In Paris itself the government trembled before the mob, a radicalism far more cruel than the extremist faction of Russian anarchists have yet shown themselves to be.

CARTOON COMMENT

CLOSING IN ON HOHENZOLLERN

Three nations—none of them Germany—suggest these next moves for the Kaiser. "Out!" says Rehse in the New York *World*, adding a forceful reminder that "there are two who won't resign"—Defeat and Starvation. Ding, whose real name is Darling, has drawn Kaiser Bill in sorry plight for the New York *Tribune* (center). "That's what he gets for trying to walk off with the world." Ding's explanation of the

Kaiser's peace talk (in the lower left corner) is convincing, too. He finds him "a little late with his suggestion." The British comment (above) is from *Reynold's Newspaper;* it points the way to Wilhelm of Germany as "The next to fall" in the game of "Royal Ninepins." Italy has borrowed a bit of United States slang to point the moral in *L'Asino*, Rome; the finger of fate is suggesting "This Way Out!"

The army was no less disorganized than the civil administration. The old officer class, perhaps incompetent and disloyal, but nevertheless monopolists of the military technic of the time, had been replaced by new men with vast enthusiasm but no adequate training. Beside the old regiments of professional soldiers, trained in the stiff and formal eighteenth century manner, marched raw levies of volunteers and conscripts straight from the plow to the battle line. Even the best drilled soldiers were rendered unreliable by the disappearance of the accustomed rigid discipline. Sometimes the soldiers insisted on electing their own officers, as has occurred more than once since the Russian revolution during the present war. Meanwhile the "confederate kings" with their loyal and disciplined armies were converging slowly on the city of Paris and the republican forces breaking and fleeing before them.

What saved France in spite of everything was the blaze of energy and enthusiasm which sometimes bursts forth from the white-hot heart of a popular revolution. As army after army was scattered new armies were raised. Military mistakes were made the basis for new tactical methods. Generals disloyal or treasonable were promptly removed, sometimes by way of the guillotine. All internal disloyalty was stamped out with an energy that we hope the Russian Government can imitate and with a venomous fury that we hope will *not* be copied in the present instance. The tangled question of transportation and supply, the greatest present difficulty of Russia, was set to rights by Carnot, "organizer of victory," a man of the type of Premier Kerensky.

Russia is better off than France was in many ways and may hope to escape both the Reign of Terror and the Napoleonic Empire. Then France stood alone, for altho many individuals in England and the United States sympathized with the revolution, no government ventured to uphold her cause against her innumerable foes. Today Russia has almost the whole world on her side and if she will remain loyal to her allies they can be depended upon never to desert her. Then France was trying a new experiment with no lamp of experience to guide her feet. Today Russia may profit by the knowledge of all the revolutionary movements of the past century. Then the revolutionary idea was championed by a nation, powerful indeed, but small enough to be completely garrisoned and held down if the foe could once destroy the armies in the field. But the present Russian republic is the most unconquerable of nations. Should the Germans burn Moscow they would be as far from the effective occupation of the country as was Napoleon. Should they advance their trenches to the Urals they would find a whole new world lying unconquered before them in Siberia. We do not ask Russia to win great battles in the field or march her Cossacks into Berlin. All that we ask is that she endure, that she abandon none of her hard-won liberties and that she make no separate peace with the common foe. If the armies of free Russia can maintain the republic and at the same time keep on hammering the Germans until a decision is reached in the west, it matters comparatively little where the battle line is drawn. We still hope for Russia's triumphant advance into the heart of Poland. But the whole world will owe Russia gratitude if she will but continue the struggle, in victory or in defeat.

SO FAR, SO GOOD

THE Food Control bill has at last passed both houses of Congress. It has passed in such diverse forms that there is almost sure to be still further delay while the differences between the two Houses are being threshed out in conference. But one thing at least is sure. Whiskey and allied "hard liquors" have received their deathblow, at least for the duration of the war. The House bill contains a "bone-dry" national prohibition clause; the Senate bill contains a clause prohibiting the distilling of alcoholic liquors from foodstuff, and directing the President to buy the stock of distilled liquors now in store. Which one of these provisions will remain when the bill has come out of conference, it is not easy to say with certainty; it is probable, however, that the Senate will have its way rather than the House on this point.

This is hardly logical in a food control bill, for the brewing of beer uses up much more food than the distilling of whiskey. But then it would be too much to expect logic in legislation, for legislation thrives on compromise, and compromise knows no logic.

If only one of the two classes of liquor is to go, it is of course better that it should be the distilled liquors, for whiskey does more harm than beer. Not even a plausible case can be made for the production and consumption of whiskey, gin, rum and the allied alcoholic products of distillation.

The elimination of whiskey for the duration of the war will be a tremendous victory for national efficiency, national thrift, and national decency. Some day beer will go the same way and the victory will be complete.

THE FOOD CONTROL BILL

THE only kinds of food conservation in which some senators take an interest are "pork" for their constituents, the plum tree and peanut politics. If Mr. Hoover would undertake to conserve these foodstuffs we might hear less of senatorial opposition to his appointment as food administrator.

IF WE HAD TO

SO fallen are the American people from their old tradition of boastfulness, so far have we left behind the Fourth of July orator who knew that with one hand tied behind us we could "lick creation," that nearly every person we meet assumes that military efficiency is not only a German invention but a German monopoly and that if we do not win this war our future can only be one of vassalage. The Independent agrees that it would be impossible to exaggerate the importance of victory over Germany. Defeat would compel us to provide for our future security by turning America into an armed camp. This we do not wish to do; it would run counter to all our ideals of personal liberty, all our instinctive good natured carelessness, all our preference for creative instead of destructive activity. But if Germany compels us to master the harsh science of war we can do it and do it on a scale which even Germany cannot rival.

Germany is a nation of less than seventy million people occupying a country smaller than the state of Texas. Its per capita wealth is less than ours and its undeveloped natural resources incomparably less. We share with Germany the stimulating climate of the North Temperate Zone and the bulk of our population is descended from the same racial stock. There is, then, no reason why we cannot if we will outrival any achievement of Germany. The superiorities of Germany, which are many and evident, are such as may be understood and imitated, just as Japan has understood and imitated the civilization of the West. The German people are, as a whole, better educated than we, but illiteracy is so rapidly disappearing in this country and our schools are capable of such improvement and development that a single generation of earnest educational endeavor may wipe out Germany's lead. The German people show greater industrial efficiency than we, but our nation, which has developed to the highest degree efficiency in the individual plant and industry, ought to be able to learn from Germany how to coördinate the different industries of the nation so that each may serve the common weal. Germany claims a more competent government, but it cannot

produce a statesman of broader vision than President Wilson; better diplomats than Root, Whitlock and Gerard; abler administrators than Hoover, Goethals and our Council of National Defense.

What is true of the victories of Germany in the activities of peace is equally true of its triumphs in time of war. Strategy can be studied at West Point as well as in any German military school. We are not handicapped by having to find generalships for Crown Princes; we are free to seek out military talent wherever it may be found. Even the Germans do not venture to deny that there is an almost inexhaustible supply of good raw material for an army among our hundred and ten million people. We are not behind any nation in military invention, and if we have not turned out the engines of war on the same scale as Germany it has not been from the lack of factories and shipyards, but because we were repelled by the cost and cruelty of modern war. Where Germany is most superior to us and the rest of the world is in military organization based on a scientific conscription of human resources. The individualistic American resents rule by card catalog. But there can be no doubt that rather than be dominated by Germany we could and would make every man, woman, boy and girl in the nation devote some time each year to the study of some occupation useful in wartime so that when "the Day" arrived the whole population would with the minimum of friction or confusion turn to the practise of war. Such a universal mobilization would insure that Uncle Sam would have no "dead weight" to pull thru the diversion of labor to useless or even mischievous channels, such as now occurs in every belligerent country and even in scientific Germany. Of course we hope to avoid such a diversion of time, energy and intelligence into military channels. But let not Germany confuse the love of peace with incapacity for war.

HELD UP BY THE CENSOR

IN the British Public Record Office there is a letter that was never delivered. The vigilant British official who intercepted it marked on it "a scurrilous and very wicked letter." It is signed B. Franklin and urges the need of a well disciplined militia in America, chiefly on the ground of self defense, but the writer adds, "And what a glory would it be for us to send, on any trying occasion, ready and effectual aid to our mother country!"

The "trying occasion" is here and the American soldiers are there tho not so ready or so numerous as they would have been if Franklin's plan for military training had been carried out ever since. Franklin was a pacifist. Our present-day pacifists are fond of quoting his: "There never was a good war nor a bad peace." But he was an advocate of preparedness, too. When he went from Boston to Philadelphia he found the latter city less to his liking in two respects, "there being no provision for defense nor for the complete education of youth, no militia nor any college."

SOONER OR LATER

THE President was wise in pardoning the sixteen women who had been sent to jail for their suffrage demonstration at the gates of the White House. It was the only way out of a bad situation. The world does not enjoy the spectacle of educated and refined women, guilty of hardly more than a technical offense, shut up in intimate contact with women who are there because they have led criminal and vicious lives. It does not really matter that these refined and educated women were there of their own choice—that they could have been as free as air if they had been willing to pay fines or indeed to have refrained from committing that technical offense in the first place. The picture is no more attractive to the world because its technic is unimpeachable: because its painters—police, prosecuting officer, judge, jailer—made no flagrant blunders in composition, line or color. The trouble is that it *looks* like a picture of the oppression of womanhood. It bears a haunting resemblance to those pictures of punishment for political agitation which we all hated so much when the background was the old Russia.

The President took the only way out; but we are afraid that he will find that it takes him only part way out. The picketing of the White House is to continue. The women who preferred to go to jail rather than to compromise with their convictions will go to jail again if they must. We suspect that if their demands for the suffrage continue to be ignored they will increase the vigor of their demonstrations and probably the aggressiveness of their methods. What will the President and the Congress do then?

The inherent difficulty of the situation is that the demands of the women are right. Democracy is not democracy when half the people are excluded from participation in government. This fundamental principle has been accepted by both the great political parties in the nation; in fact, there is no political party in the United States, great or small, that has not accepted it. The President himself has acknowledged its validity. Sooner or later the women of the United States are to have the privilege and the duty of voting. The question Why not now? is not an easy one to answer.

THE APPEAL FROM DEMOCRACY

THERE is something very strange, not common to other revolutionary movements, about the activities of the Industrial Workers of the World. Rebels in all ages, whether they were right or wrong, whether they really represented the people or only a small faction of them, have risen against the few in the name of the many. They have appealed to "the masses" for their vindication even when, as in the case of orthodox socialism, their appeal failed to bring all those whom they championed to their side. In our western states we see today a radical labor group at war with the community without even the pretense that they are acting in the interest of the whole people or that under any political forms whatever they could capture and use the machinery of government. Both sides have been lawless, but the lawlessness of the I. W. W. is that of the criminal or conspirator, whereas the lawlessness with which these agitators have sometimes been treated is that of the mob and is itself a proof that the majority is always against them.

The truth is that the I. W. W. does not want the majority to rule, it does not pretend to favor democracy, it repudiates the community. The best known exponent of syndicalism in Europe, the French writer Sorel, finally became a monarchist. The average syndicalist, or industrial unionist, is not, of course, in favor of monarchy, but he often says that he would as willingly live under a kaiser as under the American Government. He does not, like the anarchist, attack government directly as such, he is only indifferent to it because he knows that he cannot make use of it. His methods are the secret destruction of property and the sudden refusal to work at a critical moment in production—the methods best suited to a small minority that intends to coerce a community which is too numerous to be outvoted or outfought. His program is the seizure of all the means of production and distribution by a few thousand determined men with no reference at all to the rights of the trader, the farmer, the clerk, the teacher, the doctor, the independent artizan or even the orthodox trade unionist. These, apparently, must emigrate or starve. It is not a war of labor against capital; it is a revolt of the submerged tenth against the nine-tenths. It is not Social Democracy; it is the Dictatorship of the Disinherited.

THE STORY OF THE WEEK

Germany's Offensive in Galicia

The expected retort to the Russian offensive in Galicia has come. The fortnight which the Russian army consumed in the capture of Halicz and the advance between the Carpathians and the Dniester gave the Germans time to bring part of their reserves into Galicia to strengthen the shattered Austro-Hungarian line. But the German forces were not content to stop the Russian drive, they at once made a vigorous counter-attack which seriously menaced the Russian gains. South of the Dniester the farthest advance of the Russians reached the town of Kalusz beyond the Lomnica River. Here they were halted by the wet weather which turned the region into a great swamp. They could not press their advance and when they were attacked in turn they found it impossible to hold such an isolated and exposed position. Rather than fight with a rain-swollen river behind them, the Russians abandoned Kalusz and retreated to the opposite bank.

North of the Dniester the Germans achieved successes of greater importance. Near the town of Zlochow, directly east of Lemberg, the German army made a determined attack. Had the Russians remained stedfast this might have been repulsed, as previous counter-attacks have been, but one regiment mutinied on the eve of battle and retired from the trenches. This compelled the regiments in neighboring entrenchments to retire as well and a considerable stretch of country had to be abandoned to the advancing Germans. The immediate loss of ground was not of vital moment to the Russians, but there is some fear that it was but a prelude to a general German offensive on the whole eastern front.

THE GREAT WAR

July 16—Eighteen ships lost by British during week. French check German drive in Champagne district.

July 17—Germans recapture Kalusz. Cabinet changes in Russia and Great Britain. Four German merchant ships captured.

July 18—Martial law declared in Petrograd. Fighting renewed before Verdun.

July 19—Chancellor Michaelis addresses Reichstag. Finnish Diet declares for independence.

July 20—Draft numbers drawn in Washington. Kerensky becomes Russian Premier. Germans make big drive north of the Dniester.

July 21—Aviation Bill passed by Congress. French repulse new German attacks.

July 22—Russians lose Tarnopol. Siam declares war on Germany.

The Russian Government met the crisis in a very creditable way. War Minister Kerensky was made Prime Minister with almost the powers of a dictator, incompetent or disloyal officers were removed from command, a full account of the mutiny was given to the public and the new Prime Minister at once took drastic steps to crush anarchy and treason in every part of the military and naval forces of the republic. The present setback may prove a blessing in disguise if it awakens the Russian soldiers and peasants to the fact, already appreciated by the revolutionary leaders, that much which masquerades as radical pacifism is nothing but German propaganda. The Russian offensive, momentarily halted, has already achieved important results. At least forty thousand prisoners, mostly from Austrian or Hungarian regiments, have been taken, together with an astonishingly large number of cannon and machine guns. The positions taken to the south of the Dniester are still held as far as the Lomnica River and Halicz is yet in Russian hands. But the German army may by pressing its present drive win more important victories than the Russians have been able to achieve unless the nation forgets its factional quarrels and unites against the common foe or the western Allies undertake such a vigorous offensive as will call the German reserves back from the eastern front.

Germans Batter French Lines

On the western front the two outstanding facts are that the French and British have for the most part remained on the defensive for the last few weeks, and that the Germans have kept up a persistent but apparently futile hammering at the French lines just north of the Aisne River. Neither fact is easy to explain. The French and British have a probable superiority in both men and munitions to the Germans, they made important advances earlier in the summer when Russia was almost inactive and the Germans were, therefore, able to concentrate most of their reserves in the west, and it would seem that the moment of the Russian attack would be the ideal time to renew their offensive so that Germany would be hard prest on both fronts at once. The probable ex-

Pictorial Press

THE HALF-WAY STATION FROM PARIS TO THE TRENCHES

This is one of the very first photographs to reach this country of the American soldiers in their camp somewhere behind the lines. This contingent, looking very businesslike in new shrapnel-proof helmets, is being reviewed by officers of the French army

planation is that they are waiting to accumulate an overwhelming reserve of ammunition before they make a new drive on any very large scale. Such waiting may be dangerous, however, as the summer, the best time for moving large armies, is swiftly passing and unless a military decision is soon reached the Germans may be able to hold their present line till next spring. In the meantime Germany hopes either to eliminate Russia from the war or strangle British commerce by the submarine campaign.

It is still harder to see why the Germans have continued their daily attacks over so long a period on the French trenches. All of the recent German assaults in the Champagne district have thus far been without result, so far as the gaining of any position of military importance is concerned, and the cost to the French of this incessant battle, doubtless enormous, cannot be greater than the losses of the Germans themselves. The moral effect upon the German soldier of such repeated disappointments must be very unfavorable. Perhaps the Germans are trying, as they tried at Verdun, to exhaust the man power and the reserve of munitions of the French, but the effort to do so is at the same time exhausting Germany. More probably they aim to keep the offensive in order to forestall any general drive on the part of the Allies. How long it will be possible for them to keep up their attacks in the west and at the same time shatter the Russian lines in the east remains to be seen. The French continue to recapture, by slow degrees, the positions they lost before Verdun during the great attack of last year.

Secessionism in Canada

As the conscription bill passes thru the Canadian Parliament the element among the French Canadians which is opposed to the war policy of the Government is talking more and more openly about resistance to military service. On July 6, the Canadian House of Commons accepted Premier Borden's resolution, passing to second reading the bill for compulsory military service by the decisive vote of 118 to 55. The Conservative party lined up solidly behind the bill and a large number of English Canadian Liberals deserted their leader to support it. Sir Wilfrid Laurier, the leader of the opposition, proposed an amendment asking for a referendum on the question, but the suggestion was rejected by a majority of 49. Several days later Premier Borden introduced a resolution to extend the term of the present Parliament for another year. The House of Commons approved this resolution by a vote of 82 to 62, but there may nevertheless be an early general election, since the administration is in doubt whether it would be safe to avoid an election with so narrow a majority approving its postponement and feeling running high against the Government among the French Canadians.

Two Catholic papers, *La Croix* and *L'Idéal Catholique*, have come out boldly for revolution if it is the only alternative to conscription. A writer in the latter paper suggests that Quebec secede from the Dominion of Canada, become an independent French republic, and impose tariff duties on all commerce coming down the St. Lawrence. That any attempt to secede during wartime would encounter the armed opposition of the rest of Canada and of the British Empire and that the fate of De Wet's revolt in South Africa and the Sinn Fein movement in Ireland show what the result of the conflict would be does not seem to have occurred to these agitators. One of them, Elie Lalamière, claims to have several hundred men drilling under an ex-officer in the United States army "to be prepared if they come to take us from our homes" for compulsory military service.

Crisis in Catalonia

The Spanish monarchy still holds its place in spite of hostile movements of every sort. The greatest peril which has ever confronted the government since the execution of the anarchist Ferrer in 1909 has, apparently, been safely passed. The delegates from Catalonia, the province on the eastern coast of Spain centering in the city of Barcelona, demanded a promise of home rule from the government. When the cabinet refused to grant this, they announced a meeting at Barcelona to consider the next steps to secure for Catalonia the desired local liberties.

On July 19 the Catalan delegates attempted to hold their convention at the Fine Arts club of Barcelona. The governor of the province entered the assembly and declared: "If this is a representative meeting it is seditious. If it is a meeting simply of citizens during the suspension of the constitutional guarantees and without authorization, it is unlawful." Having impaled the delegates on the horns of this dilemma, the governor bowed them out of the hall. The government had taken such precautions that resistance was useless and the meeting quietly dispersed. This ended, tho probably only for the time, the attempt to secure for Catalonia a measure of local self-government.

Aviation Bill Becomes Law

The passing of the $640,000,000 aviation bill is one of the best pieces of rapid emergency legislation achieved by Congress. It was delayed for discussion for a longer time in the Senate than in the House of Representatives, which passed it almost without debate, but the opponents of the measure were unable to secure a single amendment. The only point of controversy in the Senate was the provision that drafted men might be used in the aviation service. This clause was used by Senator La Follette, a bitter opponent of conscription and indeed of the whole war policy of the Government, as an opportunity for reopening the general question of compulsory military service. He predicted that the draft would be the main issue before the public at the next general election. Senator Gronna of North Dakota seconded the speech of Senator La Follette, as he has usually done on questions of foreign or military policy. Senator Vardaman exprest sympathy with the Canadians who were opposing conscription in their own country. But the opponents of the bill did not attempt to filibuster and, after a brief debate, the anti-draft amendment was defeated by 66 votes to 12. Then the bill went to the President, not only without amendment but without the comunication to Congress or the public of the details concerning the expenditure of this huge appropriation which is designed to give us the lordship of the air. Rumor estimates the number of aeroplanes which will be built at 22,000, but Senator Chamberlain declared that this estimate was much too low.

Senate Votes Food Bill

The long debated food control bill has been approved by the Senate by a vote of 81 to 6. The obstinate minority who fought to the last ditch included Senators Reed and Hardwick, Democrats, and France, Penrose, Sherman and Sutherland, Republicans. The reason that the vote against the bill was so small, in spite of the bitter and indefatigable fight against it on the floor of the Senate, was that many who were at first opposed were won to the support of the measure by the adoption of radical amendments which completely altered its provisions. Instead of a single food administrator there will be a Board of Food Administration, consisting of three members, to be chosen by the President. There is little doubt, however, that Mr. Hoover will be appointed chairman of the Board. Another interesting amendment creates a Congressional joint committee on war expenditures, consisting of three Democrats and two Republicans from each branch of Congress. The minimum price of wheat, guaranteed to the farmers by the Government, was raised from $1.75 to two dollars a bushel. Still another amendment gives the President power to regulate the production, distribution, apportionment and storage of coal and coke, to establish wage rates in the coal industry and to fix prices and buy and sell coal and coke on behalf of the Federal Government. Many minor changes were also made in the food control measure. The Senate hopes to persuade the House of Representatives to accept its amendments, but there is no doubt that the prohibition section will have to be remodeled in conference as the fixing of a statutory price for distilled liquor commandeered by the Government is held to be contrary to the constitution. One section of the bill as accepted by the Senate prevents any person in the employ of the Government from executing any contract with the Government in which he is pecuniarily interested. This is intended to curtail the powers of the advisory commission of the Council of National Defense

Porto Rico Goes Dry Porto Rico has exercized its newly acquired power of self-government to establish prohibition thruout the island. At the election on July 16 a hundred thousand Porto Ricans voted in favor of prohibition and about sixty thousand against it. San Juan, the capital, and fifty other municipalities voted on the dry side of the question, and only twenty-one small towns gave majorities for the saloon. At the same election, Felix Cordova Deavila, the Unionist party candidate, was chosen resident commissioner at Washington and the party also carried five out of the seven senatorial districts, the other two going to Republican candidates. Santiago Iglesias, the Socialist candidate for senator-at-large, polled more than twenty-three thousand votes. This did not suffice to elect him, but it greatly encouraged the Socialists, whose party vote three years ago was only forty-three hundred.

Drafting the National Army On Friday, July 20, Secretary of War Baker conducted the drawing of 10,500 numbers in the national draft lottery, the numbers corresponding to similar arbitrarily assigned numbers in the individual districts. Every registered man was supposed to know his number, so that by study of the newspaper lists of the numbers in the order in which they were drawn he could determine his liability to early conscription. The numbers first drawn will be those of the first men to be summoned for military service, but, since all the numbers were drawn, the men lower down in the list will be liable to later conscription if there are not enough eligibles among the men first selected to fill the quota assigned to the particular locality concerned. The process of drafting will not stop until 687,000 eligible recruits have been secured. Unless volunteering for the regular army and the National Guard shows a rapid increase, many of the drafted men will be assigned to duty in these organizations. The remaining recruits will form a great national army which will begin training some time in the month of September at the sixteen training camps now being completed in the different sections of the country. Owing to a mechanical error in the system of numbering used in some districts an ingenious system of drawing the numbers in groups of thousands was abandoned at the last minute and the whole of the 10,500 numbers were drawn one at a time.

Congress has been stirred to bitter sectional controversy over the assignment of quotas to the different localities. The law provided that each state had to furnish recruits in proportion to population. But the registration reports in June varied so widely from the previous census estimates that the administration decided to take the registration figures as the basis for determining population. This gave certain northern factory towns, where many men of draft age have come to work, an impossibly large "population." But this was not the chief complaint, since it was evidently not unjust to conscript in proportion to that part of the population liable to compulsory military service even if this result was reached by an evasion of the letter of the law. A greater hardship was worked by estimating population according to the number registered rather than the number eligible. Thus districts with a very large alien registration, at present exempt from service, would have to furnish their full quota from the number of the registered citizens. This, again, puts an extra burden upon the citizen population of the northern cities where the foreign element is largest. This double grievance was denounced by some northern papers and politicians as deliberate favoritism to the South.

News Conservation Of all American products that which we are least anxious to have reach Germany is information. Since Congress has so far refused to establish a censorship of newspapers and periodicals, the administration has decided to compromise on a rigid supervision of cables and wireless telegraphy. The American press will still, of course, be cautioned as hitherto not to print specific military information such as the movements of troops and the sailing of ships, but no general censorship is contemplated. Mail will also pass freely, since in any case it could hardly reach Germany without passing thru the British or the French censorship. But newspaper reports cabled abroad will be censored in the United States. The secret service will investigate the case of persons sending cable messages where there exist any circumstances of suspicion. Particular attention will be given to attempts to "smuggle" information to our enemies by way of Mexico or other Latin American countries.

As a further precaution, President Wilson has issued a proclamation prohibiting any German insurance company to do marine or war risk insurance business on American shipping. It has been found from experience that insurance companies knew so many vital facts about our merchant marine thru doing war risk business that it was dangerous to permit enemy aliens to engage in this service.

"AMERICA FIRST IN AERONAUTICS"

The Aerial League of America, just organized to rouse a country-wide demand for the slogan quoted above, has chosen as president Rear Admiral Robert E. Peary, who is chairman of the National Aerial Coast Patrol Commission, and who believes that "command of the sea and command of the land are worthless—are in fact impossible—without command of the air"

New Chancellor Addresses Reichstag On July 19 Chancellor Michaelis addrest the Reichstag on the progress of the war and the state of the nation. He discussed the origin of the Great War and declared that if Russia had not threatened Germany by mobilizing the army Germany would never have made war. He defended the use of the submarine as a weapon of war against Allied merchant shipping on the ground that the British had established an illegal blockade. He insisted that "the submarine war is accomplishing all and more than all it is expected to," but he refused to set a date for the end of the war by this method. He paid high compliment to his predecessor, Chancellor von Bethmann-Hollweg, and gave an optimistic survey of the military situation on all fronts.

The Chancellor intimated that Germany, while unwilling to make a new proffer of peace, was open to any overtures on the part of the Allies that did not menace the future security of the Empire. His phrases were studiously vague and have been interpreted in many different ways. The Reichstag, however, has voted endorsement of the resolution repudiating all idea of "forced acquisitions of territory and political, economic, and financial violations." The majority was significantly large, 214 to 116. Apparently the Chancellor and the Reichstag are working at cross purposes and the political crisis is not yet over. The internal difficulties of Austria-Hungary are greater than those of Germany. Several political leaders among the Czechs have declared for a separate peace and it is very possible that the Austrians may make some concessions to this nationality to reduce the rapidly growing disaffection in Bohemia.

Enemies Within the Camp The case of the stranded I. W. W. agitators deported from Bisbee, Arizona, has aroused considerable indignation. Their lawless conduct in terrorizing all who attempted to run the copper mines was met by equally lawless action on the part of the authorities. Without legal formality they were forced to leave Bisbee, where many of them had their homes, and no provision was made for their care on

Photograph by Ernest Douglas

A CARLOAD OF TROUBLE

When the I. W. W. got too "rambunctious" in Arizona the citizens took matters into their own hands, arrested some twelve hundred trouble-makers in the mining camps of the state and shipped them, packed in freight cars, over the boundary into New Mexico. This photograph was taken in Jerome, Arizona, where two hundred and fifty business men and miners cleared the town of seventy-two rioters, or "wobblies" as they call them, in the course of one morning

the cars which took them across the state border. Other towns were determined not to let them enter and as a result they were for many hours stranded with no home but a train. Finally, they were taken under the wing of the American army and cared for at a military encampment near Columbus, New Mexico. President Wilson exprest his deep concern at the arbitrary action of the Bisbee authorities. Sinister rumors of I. W. W. plots are reported from many western states and some of their leaders, angry over the Bisbee incident, have assumed a threatening tone toward public officials.

Already the precedent of "deportations" has been followed up. At Flat River, Missouri, a mob of native American laborers forced some seven hundred aliens to leave the lead mining districts. Their grievance was that employers were daily discharging Americans and putting aliens in their place at lower wage rates. The situation is parallel to the race riots of East St. Louis, except that the immigrant labor in this case was European instead of Afro-American and that no one was killed when the miners forced their new competitors to leave the district.

A most horrible rumor comes from Kansas where German agents are reported to have been distributing court plaster impregnated with tetanus germs among the farmers. Federal chemists and bacteriologists are now investigating the truth of this accusation. It will be recalled that several months ago bandages were sent to the Red Cross spread with ground glass. Here, too, German agency was suspected, but the source of the bandages could not be traced.

China Simmers Down to Normal

The republican army has taken the headquarters occupied by General Chang-Hsun and the imperialists in Pekin. With the fall of the capital, the attempt to restore the Manchu dynasty in China has, for the present at least, wholly failed. During the assault on Pekin a few foreign residents were injured by stray bullets. Aeroplanes were of use to the Chinese in the capture of the city. Now that the monarchist movement is safely out of the way, observers of Chinese affairs are busy accounting for its rise and progress. According to the Japanese, German agents financed General Chang-Hsun and his fellow conspirators.

But the reëstablished republic is not without difficulties of its own. President Li Yuan-Hung has refused to resume his office, partly because his administration was unpopular with many even among the republicans and he could not be certain of parliamentary support, and partly because he found the post of President too dangerous a one. Shortly before his resignation one of his private guards ran amuck and killed and wounded several men, and this incident is said to have wrought greatly on the fears of the President. Vice-President Feng Kuo-Chang will probably take his place. The real ruler of China for the momen is Premier Tuan Chi-Jui, whose energetic efforts brought about the speedy restoration of the republican Government and who is believed to favor the entrance of China into the Great War on the side of the Entente Allies. There is still much political jealousy between the representatives of the northern and the southern provinces, which will make it difficult for Premier Tuan Chi-Jui to form a satisfactory ministry even if it does not lead to fresh insurrections in outlying parts of the republic.

The New Russian Crisis

The Russian Government is steering a troubled course between the anarchists who are working for an immediate cessation of the war and the furtherance of the revolution until Russia is purged of all "bourgeois" elements and the Constitutional Democrats who approve the revolution but think that it has gone far enough and that the great task of the present time is simply to win the war. By adopting a policy of complete home rule for the Ukraine or South Russia the Government offended the Constitutional Democrats and five cabinet ministers of that party resigned. This leaves the Government almost wholly in the hands of the Socialists. The greater menace comes, however, from the extreme left. The Petrograd anarchists made a sudden demonstration against War Minister Kerensky and compelled the Government, radical Socialist tho it is, to proclaim martial law and police the streets with Cossacks. German agents are still in the background inciting insurrection, tho it is probable that the anarchists are unconscious rather than conscious tools of the Kaiser.

Perhaps the greatest menace confronting the statesmen of Russia is the tendency of racial units to take this favorable opportunity to secure independence or a measure of home rule not far short of it. The Ukrainians have a promise of autonomy and the Finnish Diet has passed a measure which will reduce Russian authority in the province to a mere name. It is impossible to blame either nationality for taking advantage of the confused affairs of Russia to place their liberties beyond the reach of any possible reactionary movement in the future, but at the present time such action is a serious embarrassment to the revolutionary Government. The Finnish independence movement is in the hands of the Socialists and is opposed by the more conservative parties who hope that their national rights may be secured without departing from constitutional methods or antagonizing the Russians.

German Merchant Ships Intercepted

Seventeen German steamers attempted to sail from Rotterdam to Germany thru the British blockade. Of the first group of three one was wrecked off the Dutch coast. Of the second group of fourteen not one succeeded in reaching a German port. A fleet of British destroyers intercepted their voyage and shelled them as they ran the blockade. Four steamers surrendered to the British, four others were sunk, three were stranded and the three others succeeded in returning to Rotterdam. This action proves that the British blockade of the German coast is effective and not merely existent on paper. The Dutch complain that the British destroyers in attempting to head off the German ships passed within the three mile limit from the Dutch coast. The British say that their ships were four miles from shore.

There is increased apprehension that the German submarine blockade of the Allies may, after all, be succeeding. A newspaper report comes from London with the consent of the British censor that the world is losing 1,600,000 tons of shipping every month, or nearly three times as much as is now built in the same length of time. These figures, however, are impossible to reconcile with the official reports of losses issued by the British Government. These do not give the details of tonnage lost, but if we count the ships of more than 1600 tons announced as destroyed as having an average of 4500 tons, which is more

than the average tonnage of the larger ships of the British merchant marine before the Great War, the loss each month will not exceed 365,000 tons. Since the majority of ships now passing thru the German submarine war zone fly the British flag the total loss to the world's shipping cannot be more than five or six hundred thousand tons unless the British official reports omit a large part of the actual losses. On the other hand, if the London rumor is wholly baseless it is hard to see why the censor permitted its publication and why there has been so much popular dissatisfaction with the conduct of the Admiralty, leading to the recent shake-up in the cabinet.

The week's official report of losses is distinctly encouraging. During the week ending July 15 eighteen ships were sunk, fourteen of them being of over 1600 tons. This is much below the average for the recent months of unrestricted submarine warfare and follows a fortnight of similar reassuring reports.

In the Stock Market At the beginning of the week, on the 16th, there was a reduction of prices, those of railroad shares excepted, in the New York Stock Exchange market. One cause of the decline was an advance of the interest rate on call loans to 10 per cent. This was due to a report showing that the surplus of the banks, on account of withdrawal of funds by the Government to take up temporary certificates, had fallen to the lowest point reached under the Federal Reserve system. Traders were in doubt as to the meaning and effect of changes in the German Government. Some thought there might be a division which would shorten the war. On this account the prices of steel and munition company stocks were deprest, Steel Corporation losing nearly 3 points on sales of 259,000 shares, or almost one-third of the day's total. Railroad stocks were firmly held. The current argument in their favor was that price-fixing by the Government would reduce the cost of their materials and equipment, while it would cut down the profits of metal companies. Motor shares were notably weak. Recovery followed on the 17th, when the call loan rate fell to 6 per cent. The 10 per cent rate had been required only on industrial collateral; 6½ or 7 had been the summit for standard railroad securities. Traders reached the conclusion that there was no movement for peace in Germany and saw plenty of work in munition and steel factories for a long time to come. Net gains for industrials were from 1 to 3 points.

Prices moved downward again on the 18th, and considerable losses in the railroad list caused some surprize. An exceptional decline of 5½ points for St. Paul shares was not explained. There was renewed weakness in motor company stocks. Sales of Maxwell were made at 31¾; in January last the price was 61¾. Steel Corporation's loss was 1⅜. And on the 19th the decline continued. There was no agreement as to the causes of depression, but the wrangle in the Senate over the Food bill, the quarrel which was delaying construction of ships, and alarming dispatches from London about the loss of ocean tonnage, had some effect. Railroads, coppers, industrials and motors all went down, as a rule, but St. Paul recovered nearly half of its five-point loss. On the 20th the market was a narrower one. Traders were deeply interested in the selective draft numbers. The rate for call loans ranged between 2½ and 5 per cent. For a large ma-

Underwood & Underwood

IT'S NOT ALL WORK IN THE TRENCHES

The Tommies, who like music with their meals, are enjoying impromptu "pops" furnished by a Highlander, whose ability to play the piano doesn't depend on keys

Kadel & Herbert

BUT IT'S NOT ALL PLAY

One of the grimmest and most dangerous jobs in trench warfare is that of the "trench-cleaners," who are sent ahead when a German line is taken to search out any soldiers hiding in the captured dugouts and either take them prisoners or shoot them if they try to resist

jority of the securities there were net gains. Industrials were advanced by the speech of Michaelis in Berlin. Railroad shares were almost stationary. For Steel Corporation an addition of 2⅛ was shown. More than one-fourth of the Exchange's transactions in the five days had been in the shares of this company. But motor stocks continued to fall. While the familiar assertion to the disadvantage of motor companies that new taxes must reduce their profits and cut down their sales is frequently heard, especial emphasis is given now to the greatly increased cost of all their raw materials and the delayed delivery of metals which they must have. They are required to pay two or three times the old prices for steel, copper, aluminum, leather, cotton and rubber.

House of Windsor Reigns in England

The present passion in British court circles for obliterating all traces of German tradition has involved even the name of the reigning royal house. With the unanimous indorsement of the Privy Council, King George V issued a proclamation announcing "that as from the date of our royal proclamation our house and family shall be styled and known as the House and Family of Windsor and that all descendants in the male line of our grandmother, Queen Victoria, who are subjects of these realms, other than the female descendants who may marry or may have married, shall bear the said name of Windsor!" By the same proclamation the British monarch renounces on behalf of himself and his family "the use of degrees, styles, dignities, titles and honors of the Dukes and Duchesses of Saxony and the Princes and Princesses of Saxe-Coburg and Gotha and all other German degrees, styles, dignities, titles and honors."

During the past few months there has been a very weak but persistent republican movement in England, based less on dislike of monarchy as such than upon fear that the royal dynasty, of German origin and bound by innumerable ties of marriage with various Germanic royal families, might at some time in the future show German leanings. Several newspapers demanded that as a concession to English war feeling members of the British royal family divest themselves of all German titles and honors and cease the practise of marrying into German royal circles. The House of Windsor will be the first purely English royal house since the Norman conquest, as the Plantagenets were Norman-French, the Tudors Welsh, the Stuarts Scotch, William III a Dutchman, and the Hanoverian and Saxe-Coburg-Gotha lines German.

British Cabinet Shuffled

The British cabinet has again been reorganized with the object of taking the round pegs from the square holes and putting them in more suitable positions. The most important change is the ousting of Sir Edward Carson, the Ulster leader, from his office as First Lord of the Admiralty. Sir Eric Geddes, a man unknown in politics but with a remarkable record as a railroad executive, takes his place. The change may be caused by a desire to hurry up the war against the German submarines. Sir Edward Carson, however, obtains a new post of equal importance and power if of less exclusive responsibility. He becomes the fifth member of the British "war cabinet," which makes the final decisions on details of war policy. The other members of the war cabinet are Prime Minister Lloyd George, Earl Curzon, Lord Milner and Mr. Henderson, a Labor member of Parliament now on a mission to Russia. Except Lloyd George and Mr. Henderson all of these men are Conservatives in politics. Sir Edward Carson takes the place left vacant by Andrew Bonar Law, Chancellor of the Exchequer and leader of the House of Commons, who found that to hold three important posts at the same time was beyond his strength.

The most criticized appointment is that of Winston Spencer Churchill as Minister of Munitions. Mr. Churchill is easily one of the most brilliant men in British public life and was second to none in popularity among the ministry at the opening of the war. But, as First Lord of the Admiralty, he was held responsible for the disastrous expedition to the Gallipoli peninsula in the first year's campaign against Turkey, and for sundry other strategic blunders, and he left office under a cloud of reproach. One of the British papers greets his return to power by saying that while the unsinkable ship is not yet discovered at least the English have invented an unsinkable cabinet minister. He takes the place of Dr. Addison, who becomes minister "without portfolio." Edwin Samuel Montagu, a former member of the cabinet, succeeds J. Austen Chamberlain as Secretary for India. Mr. Chamberlain resigned because the investigation of the Mesopotamia failure revealed incompetence in the India office.

HOW COAST DEFENSE OFFICERS PLAY THE GAME

The "harbor" is spread out on the table and a naval expert maneuvers the "enemy fleet" to a strategic position. Then the curtain is drawn aside and it's up to you—if you're an officer of coast artillery—to point out at a minute's notice just how you would save the day!

ERIC GEDDES, ENGINEER

LLOYD GEORGE MADE HIM, AT FORTY-ONE, FIRST LORD OF THE ADMIRALTY

BY PRESTON SLOSSON

WHEN the little Welsh lawyer who directs the destinies of the British Empire overhauled his cabinet and put some of its most distinguished and aristocratic members where they could do less harm to the nation's war machine, he found that he had left a vacancy where there should be a First Lord of the Admiralty. According to all precedent he should have stopped up the gap with some lawyer-politician with a long string of votes at his command, such a man, for instance, as Sir Edward Carson, who had just been ousted from the position in question. But Premier Lloyd George has the habit of doing the unexpected and he determined to place at the head of the biggest navy in the world some one capable of understanding the problems of the biggest war in history. He scanned with closest care the list of "available" men for the office, then threw it aside and appointed a young engineer who had won his spurs (granting for the sake of argument that an engineer has spurs) on an American railroad.

Twenty years ago the Baltimore & Ohio lost a capable apprentice engineer who had just come of voting age. Eric Geddes had been in the employ of the corporation for only three years, subsequently to one year in the Homestead Steel Works of Pittsburgh, but he had done so well that he found work waiting for him when he returned to his native land of India. Here he was set to building railroads thru the heart of the jungle and at last was rewarded, in the way such men like to be rewarded, by being placed in charge of the roads he had built. After six years' experience in India England discovered that he was needed in the mother country and he entered the service of the North Eastern Railroad Company, one of the most important British lines. Railroad men knew him well and admired him greatly, but he was still as far from *Who's Who* as when he left an English school to make his fortune in America.

The Great War brought him his chance as it did to many another Englishman. Lord Kitchener called upon the railroads of the nation to carry soldiers and supplies unceasingly from all parts of Britain to the great ports of embarkation. The North Eastern Railroad did its part so quietly and effectively that the general public did not realize the burden of transportation which war conditions had placed upon the railroads. But Lord Kitchener understood. He knew from his African campaigns that God is on the side not of the biggest but of the swiftest battalions, that a soldier who is not where he is needed is for practical purposes not in existence, and that saving an hour in the transportation of munitions and supplies may mean saving days of fruitless battle in the trenches. He retained Eric Geddes in the service of the War Department to supervise the transportation of munitions from the factory to the front. After the big drive on the Somme, Geddes was sent to France to reorganize the railroad system of the country, which had become frightfully congested in the attempt to supply all sections of the long entrenched line which ran from Switzerland to the sea with the necessities of war. He remained in France for a while with the dignified title of Director General of Transportation.

After this his rise was rapid. The British ministry discovered that somebody was needed to take care of a number of vexatious details in the administration of naval affairs that few persons seemed ambitious to tackle. They created a new office, Controller of Shipping, and shoved Eric Geddes into it with the rank of Vice-Admiral, apparently on the theory that anybody who could run a railroad could learn how to run a fleet. At all events, Mr. Geddes could. Altho he had never before had anything to do with shipping he worked up his department to such a point of efficiency that everybody acknowledged that he was fully competent to head the navy, tho few thought that any British prime minister would have the courage to step outside precedent and appoint him to the position. But the British Government had, in the meantime, greased the way for his promotion by making him a knight. What might have been beyond the reach of plain Eric Geddes was possible for Sir Eric Campbell Geddes, and even the most conservative papers in England applaud the appointment of the new First Lord of the Admiralty.

This is the story. What is the moral? The obvious lesson is that during the stress of war the best man comes to the top even if, like Lloyd George himself, he started his career a long distance below. But there is more to it than that. It is not impossible in modern England for a coal miner to rise to the position of cabinet minister if he follows the usual political path and shows conspicuous ability in Parliament and in minor administrative offices. The remarkable thing about the appointment of Sir Eric Geddes is that a man was chosen for high political office whose whole career has been as far outside the circle of party politics as it well could be. As a boy, Sir Eric had intended to enter the army, but when he abandoned that dream to become an engineer no one, least of all himself, suspected that to him would one day be intrusted perhaps the most important task of a great war, for it is largely to the British Admiralty that the world looks for an antidote to the submarine menace. His appointment means to England what the appointment of General Goethals as our shipbuilder means to America, that the engineer has come into his own. No one is so constantly occupied with the problem of getting the utmost value for the least expenditure of wealth, time and effort as the engineer. The individual engineer may or may not be efficient, but efficiency is the ideal of his profession and the public recognition of any member of the profession is a public acknowledgment of the ideal.

The point at which the engineer is usually least efficient is in self-advertisement. He can often command a good salary, because the world cannot do without him, but only in one case in many thousand is he given the honor which his faithful, thoughtful service of the commonweal has earned. Eric Geddes was the exception, and it is a pleasure to record his case and to give the credit to our British allies who knew a good man when they saw him. As W. S. Gilbert might have put it:

He ran those engines so carefulee
That now he is the ruler of the King's
navee!

MEXICO REBUILDING

BY DAVID LAWRENCE

WASHINGTON CORRESPONDENT OF THE NEW YORK EVENING POST

MEXICO has had a presidential and congressional election, the first free expression by the people since 1911 when Madero was elected. That single sentence connotes a great deal. It spells an achievement after six long years of internecine strife of whose peaceful issue governments the world over, including our own, had all but despaired. It vindicates the uncompromising and resolute purpose of the Constitutionalist Party to restore constitutional order so summarily interrupted by Victoriano Huerta in the enforced resignation of Madero and the dissolution of the legally elected Congress. Venustiano Carranza, successor to Madero as the exponent of liberalism and himself the first to raise the banner of constitutionalism in battle, is today President-elect of Mexico, a remarkable climax to the struggle of his party for military and now political supremacy of Mexico.

What is the true condition of affairs in Mexico? The answer to that question can be as varied as there are observing eyes and differing viewpoints. Facts *per se* are insufficient on which to base a judgment. Facts unrelated to a deplorable past or future opportunity are meaningless. Only by a comparison of Mexico's condition today with that of a year ago, of two years ago, of three years ago and so on, can the progress of our neighboring people toward a settlement of their vext problem be correctly assessed. Facts mean little to the mind that is predisposed to view all in property values. There have been tremendous losses. Revolution is a costly affair. But inspected as an evolution, as a series of natural steps in the gripping struggle of a people for self-mastery, Mexico is a state reborn. Her trodden fields and torn railroads are not symbols of retrogression. They are mute evidences of the price that Mexico has paid for emancipation from autocratic rule, the benevolent militarism of Diaz that terrorized the people by its tyranny, but only until the masses could mobilize for inevitable victory.

The United States, always deeply sympathetic with the cause of liberalism everywhere, stood apart, suffering many a material wrong, swallowing now and then an affront to pride, but patiently expectant that out of it all would emerge a better Mexico. Recently, as the joint commission of Mexican and American representatives seemed to be unable to reach an agreement, the newspapers of this country predicted another period of strained relations. Conditions in Mexico had been described as awful. Starvation was said to be everywhere threatening. Villa was reputed a factor of strength in the north; Zapata and Feliz Diaz were marauding in the south. Carranza, it was averred, had only nominal control. The American commission and thru it the United States Government was plainly discouraged.

SUCH a view of the Mexican problem was due, first, to a lack of correct information, since most of our official representatives in Mexico had been withdrawn, and second, to a natural inclination to regard the physical facts of the moment without that analytical perspective which only years of careful study of the governmental problem in Latin America could contribute.

I was one of those imprest by the stories of suffering and general economic disintegration in Mexico. I went to Mexico ready to find people dying on street corners, eating horse-flesh, and expecting that every train that set forth on a journey, including my own, would be blown up. I journeyed via Laredo to Mexico City, stopping also at the temporary capital, Queretaro. I did not of course find Mexico normal. It was unlike 1911 and 1912, to be sure, when I had previously visited. There had been no opera bouffe revolution. Unmistakable marks of its deadliness were to be seen here and there, but, frankly, the picture I saw was one of absolute tranquillity and contrasted with what I had been told I would see.

Along the railroad line a few burnt stations bore testimony to the ravages of revolution. The cities themselves were intact. The same beggars were at the stations contorting their faces and exhibiting bony forms to appeal to the traveler's sympathy. But these were normal characteristics. Trains, to be sure, did not run on time; they were often eighteen and twenty-four hours late, but recollections of some journeys in the United States during the winter had dispelled my own hopes of railroad punctuality anywhere. Freight was moving. Pullman cars were not as neat as in the old days, but they were habitable and, if one had to travel, they afforded a better resting place than the box cars of a year or two before.

In Queretaro, a country town, street venders had food aplenty and even delicacies. The municipal market was piled high with foodstuffs. Schools were in session. Stores were doing business. The town was well policed. Saloons were open only a few hours a day. There was an atmosphere of bucolic calm about the place which made the words "chaos" and "anarchy" and similar phrases, fed to the American public at breakfast, seem curiously alien. The Constitutional Assembly was meeting in a theater. The sessions were well attended. The delegates had been chosen in an election the significance of which, it is true, was not generally appreciated because with its millions of illiterate Mexico is not yet a newspaper reading nation. But *comparatively* speaking, it is only by comparison that the situation can be understood, there was more interest in that election for the Constituent Assembly than in the matter-of-fact, artificial electoral affairs conducted quadrennially by Diaz to perpetuate himself and his group. The Constituent Assembly reformed the Constitution and made provision for the resumption of the constitutional order that had been viciously interrupted by Huerta. The new Constitution is a progressive document. It is far from perfect and its application will be attended by numerous difficulties, but the Constitutionalists came into power on a radical platform. Some

A CARRANZA CROWD—CHEERING THE INAUGURAL

of the provisions of the Constitution will have to be revised as experience teaches the Mexicans. But it is ever thus with all radical legislation if it aims, as does this Mexican document, in the right direction—the betterment of living conditions, the development of education and true democracy.

The Constitutionalists as a party are united in their purpose—to give the people a voice in their own government. Personal feuds and personality controversies are indigenous to Latin-America. They have troubled Mexico in the past. They will be vexing in the future. But the path of the transgressor has been beset with obstacles. Government by the few will not be so easy hereafter, nor government by duress. These ideals are not yet fulfilled. Progress toward their realization, however, is slow but sure. Everything moves slowly in Mexico. When it is considered that Venustiano Carranza was recognized as *de facto* executive of Mexico only eighteen months ago and that he has brought about an election for federal congress and state offices thruout the republic, his success, viewed in terms of tropical motion, is little short of phenomenal.

THE ARCHITECT OF REBUILT MEXICO
President Carranza taking the oath of office before the deputies of the constitutional government

GOVERNMENT in Mexico, as elsewhere, is a question of public confidence. So long as the United States seemed reluctant and dubious, so long as other nations appeared to doubt the capacity of the *de facto* government, merchants and business men generally in Mexico were similarly disinclined to buy stock or engage in new enterprizes. But the United States at the psychological moment righted itself. We withdrew the Pershing expedition as an exhibition of our friendliness for Mexico and we dispatched Ambassador Fletcher as an expression of renewed hope in the capacity of the Carranza Administration. Both steps have won for the United States the gratitude of the Mexican people. The Mexican Government appreciated these acts. The effect on Mexico's internal business was instantaneous. Business men who had been expecting armed intervention to result from the failure of the joint commission's parleys and who had hesitated to go forward have been disillusioned. The Government of the United States means to continue friendly, to render moral support to the government under Venustiano Carranza.

In the last few weeks, State Department reports have brought word of gratifying improvement in conditions thruout the republic. Many mines have resumed operations. Railroad repair is proceeding rapidly. The money situation has been stabilized by the abandonment of paper money and the use only of gold and silver coin. Mexico is on a gold basis. The mints are working overtime coining money of small denominations. A foreign loan will come with the return of stable conditions and inauguration of the new Congress.

Mexico City itself is being slowly brought back to normal. On my own visit there I was pleasantly surprized to find that stores were doing business, that the streets were crowded with people, that taxicabs and motors were dashing to and fro, that theaters and cafés were going and that at five o'clock in the afternoon one could drop in at Sanborn's drug store and get some tea, ice cream and other delicacies much as one might get in the tea salons of Washington at that hour of day. I walked alone on the streets at night. No one molested me. Nor did I hear of anyone else being molested. Prohibition, by the way, is effectively enforced in Mexico City, that is, the saloons are permitted to do business only at certain hours of the day and never at night. Every street corner has its policeman plus lantern—the same guardians of law and order that Mexico City has employed for years.

I met and talked with Venustiano Carranza and his two leading generals, Pablo Gonzales and Alvaro Obregon. Each seemed to have at the time of my visit a sort of Missouri attitude toward the United States. They didn't think the Pershing expedition would be withdrawn. They had waited so many months; many promises had been made, but so many seemingly impossible conditions had always been attached. I imagine they were truly surprized when *without conditions* the United States withdrew Pershing and sent an Ambassador to present his credentials. Official and unofficial reports since then have brought news of a steady development of good feeling for the United States.

After many disastrous experiences in northern Mexico, the *de facto* government has finally found a competent general to handle the Villa bandits. He is Gen. Francisco Murgia. He is fast running the bandits down. This emphasizes Mexico's real weakness. She is lacking in efficient personnel. The members of the old regime were all exiled. They abused the trust imposed in them. They no longer have public confidence. So the Constitutionalist party is administering the government with an inexperienced group of men. But they will learn. They have shown in a year a capacity for instruction which augurs well for the future, tho to be sure they often have been convinced of error and imprudence only by costly experience. Yet this is frequently at the bottom of our own legislative ills or fluctuations in foreign policy—a changing administration.

Mexico is working out her problems in her own way. Watchful waiting is a phrase that has bred many a sneer. Inflammatory stories, garbled press reports from border towns, and a subtle appeal to patriotic sensibilities have from time to time bombarded American patience. The impulse to thrash Mexico has been intermittently in our veins. Armed intervention has been advocated by some with a nonchalance attaching to a summer maneuver or innocuous excursion. Fortunately, the President has not been dissuaded from his original purpose to give Mexico a full and free opportunity to conquer herself as is by our own doctrine the inalienable right of every sovereign people. The European war and the Zimmerman intrigue have taught a thoughtless public what armed intervention might have meant, resisted as it most certainly could have been by German reservists and the funds of a German colony loyal to the fatherland. Mexico does not yet enjoy complete peace. Roving bands are still pouncing upon small garrisons in isolated towns. But there is no organized political opposition to the *de facto* government. It will take a year, perhaps more, to reconstruct railroads and restore domestic tranquillity as it was known in the old days. But Mexico is going steadily forward, not backward. Mexico is only rebuilding.

Washington, D. C.

FORT NIAGARA, THE HAPPY CAMP

BY HERBERT REED

JUST a year ago I stepped on board the U. S. S. "Kentucky" to make a naval training cruise. To me came a gray old bos'n's mate. Said he: "You're in for a good time here. This is a happy ship." And it was. So the other day, swinging down thru the gorge and turning at last into the road to Fort Niagara itself, I was on the *qui vive* for signs of the temperament of the encampment—something as intangible as the atmosphere of the happy ship, but none the less unmistakable. Nearing the post I encountered the advance guard of a battalion of these Pennsylvanians, going out on a hike that was to include a bivouac for the night, and later the main body, swinging and singing, singing and swinging along the dusty road. And both the swinging and the singing were good, indeed. These men, somewhat stockier in the main, I thought, than the New Englanders and New Yorkers at Plattsburg, whence I was but newly come, had that complexion of ruddy bronze that marks the man approaching the pinnacle of physical fitness. They were already at the pinnacle of mental cheeriness.

Things had been well with them from the start. And that was the reason for the air of content about the whole place. These men had been going thru the same work that marked the program at the other camps, but, it seems, there had been a noticeable absence of the many little irritations (a great many of them unavoidable) that had troubled Plattsburg. At the very outset there had been less of that terrible standing in line that so irks the civilian learning to be a soldier. The encampment was not half the size of Plattsburg. In Colonel Miller it had one of the ablest of the camp commanders—a man who seemed to me in the course of my little talk with him to have his very evident mental vigor well supported by a certain serenity.

Men become just as weary here as they do elsewhere, there were probably at the start just about the customary average of inconsolables; but somehow nothing of that sort seems to thrust up out of the happy mass spirit. That word mass leads me now to a consideration of a wartime athletic method of instruction in use here which, while fundamentally different from that of Major Koehler's, has had wonderful results of its own. I dwell so heavily on this subject because any army officer in the world will tell you that physical condition is the factor of first importance in warfare, and that all other things being equal it will win. The system of body building at Fort Nigara is known as "mass athletics," and it has been developed to a remarkable degree by George W. Braden, physical director of the army Y. M. C. A.

Under the Braden system men are

"AN AIR OF CONTENT ABOUT THE PLACE"

trained in bodies as large as 1200 at a time. The basic principle of the exercizes is the teaching of running, jumping and leaping (hurdling) and the use of the body and arms in the carrying positions. The jumping is done over ropes held at three hights, knee, midthigh and hip. This nomenclature makes it easy for the holders of the rope to find the correct hight without attempting to estimate feet. It is a well-known fact to those who follow athletics closely that the average man does not know how to run. Most of the men here would have laughed at any such statement before their arrival. Now they laugh no more.

All this orderly physical upbuilding, which has the greatest military value, is supplemented by the tactful fostering of informal play at tennis, quoits, volley ball, basketball and baseball. It is just a case of helping along what Dean Briggs of Harvard calls "the play impulse." In addition there have been formal teams with a director in each company who meets once a week with his fellow directors and the chief to lay out a program for the next seven days. There are five sports managers under each director. Sixteen baseball teams have been carrying on a schedule that will be concluded with the passing of the camp. One of the features of the Memorial Day program was a real novelty in the form of a "mass pentathlon," in which twenty-five men from each company, 375 in all, competed at once. The scoring was progressive. In the first event, the standing broad jump, the combined distance of each team counted, the second man taking off from the heel prints of the first, and so on. The second event was a medicine ball throw, the scoring being done by the same method. The pentathlon was concluded with a piggy-back race, a line relay and a company tug-of-war.

There is, of course, little time for athletics, and the time will rapidly grow less, because of the increasing demands of the purely military instruction, but if this mass athletics were to be shut off right now it would have left its stamp on the student-officers. Looking it all over I must say that in constructive athletic training of military value Fort Niagara bears unmistakable signs of being ahead of Plattsburg by a considerable margin, and this in spite of the fact that for one top-notch college athlete here there are three or four at the other encampment.

This whole matter of athletics and "welfare" as it is called was rather slow in getting under way, and is only just now beginning to gain impetus. As I write the encampment is anticipating the arrival of Raymond B. Fosdick's commission, which had been to Plattsburg just before I left. The "welfare" has already been pretty well cared for here, and about the athletics I have already written. The commission's representative at Fort Niagara (he has been here a month) is Floyd A. Rowe, the University of Michigan's famous four-mile runner, and athletic director at Ann Arbor. The commissioners left behind them at Plattsburg. Lawson Robertson, trainer of the Irish-American Athletic Club and the last Olympic team. This means, I think, that there will be a sudden burst of boxing and wrestling, two sports that have proved of immense value in the training in the British and the Colonial camps. Robertson also plans to put in swimming, rope-climbing and wall-scaling, all of military value, and give to the men who attain a certain standard, a bar inscribed "qualified athlete," just as a decoration is given to a qualified worksman.

All these plans are in their trying-out stage, and are expected to bear their greatest fruit in the cantonments for the drafted men where there will be less weariness due to a large amount of "book" soldiery.

Just a last word about the spirit of this camp which it is hoped will develop into the "soul" of the New Army (it was Grant who always maintained that every army had a "soul"). A battalion returned today from a ten-mile hike which followed a night encampment which in turn had followed a ten-mile hike. He had been on sentry-go at night between the hikes, and because the guard had forgotten to relieve him, had been up all night without sleep. Yet he considered it a huge joke and was as cheerful as any of his comrades, altho very tired and very, very sleepy. When men begin to really laugh at hardship they begin to be soldiers.

Would you call it a "put-up" job—this task of making the fruit and vegetables that would be wasted this summer, available for next winter's food? At any rate (to extend the pun) it's a job that has been put up to the women of New York City and they are volunteering by the hundreds at the Municipal Canning Kitchen to peel peaches and shred cabbage and stone cherries and attend to all the details that encumber the successful preserving of anything from marmalade to sauerkraut. The director of the canning kitchen is Miss Nellie Johnson, in the photograph below (at the right), talking to the business manager, Mrs. W. H. Lough. The Boy Scouts are proving their usefulness at "kitchen" work, too

The Chinese republic has come back with a snap that suggests its backing by might as well as right, and that promises well for its future. Once the republican forces had waked up to the situation they mobilized their fighting strength in short order, attacked the Monarchist troops who were holding Peking and forced the surrender of three thousand soldiers under General Chang Hsun in about two hours. The troops resisted to the last the capture of the Temple of Heaven, photographed below, where the young Emperor took refuge when his abdication became necessary. But the Temple of Heaven proved no shelter from the artillery of the republic, and President Feng-Kno-Chang (at the left), is now in power

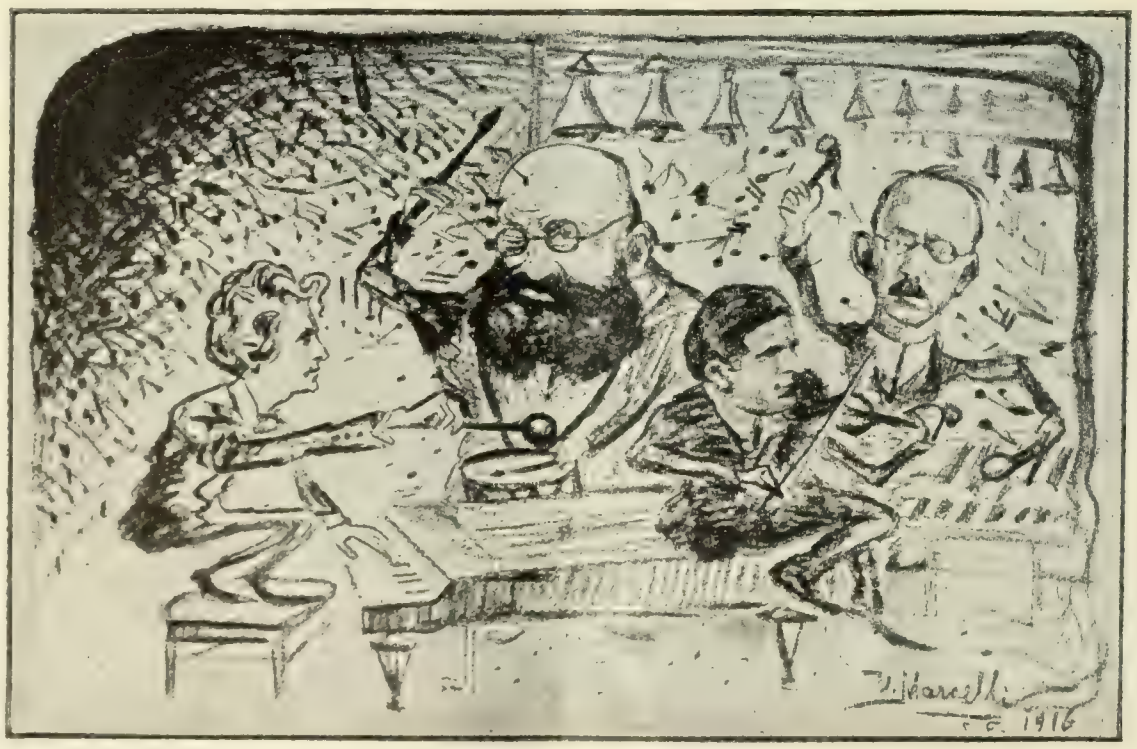
A PLAY BOY GROWS UP

BY CHARLES L. BUCHANAN

AUTHOR OF "FUTURIST MUSIC"

WHEN Percy Grainger came to this country two years and a half ago I was instinctively, unreasonably, I might almost say petulantly prejudiced against him. I refused to take seriously a musician whose reputation—so far as I knew—was built upon a rearranging of other people's music. It was all very well to sit down after dinner and listen to Gabrilowitsch—exquisite lyricist—play the "Irish Tune from County Derry," but to place this golden haired extravaganza, this Playboy of the Musical World, in competitive juxtaposition with the enormous and peremptory activities of Ornstein, Schönberg and Stravinsky—well, that was quite a different matter.

I met Grainger. I found him not only the most amusing and ingratiating musical personality of our time, but, precisely, one of the most extraordinary and radiant human beings I have ever met. I have testified on numerous occasions to my abundant interest in the sum-total of his activities (he is unquestionably one of the world's greatest pianists), but in all that time I have never written a line in praise of the sheer musicianship of the man—the question of his abstract esthetic worth apart from all inveigling graces or adulterations of an extraneous and ulterior nature. Possibly I have erred on the side of an overcautiousness. Perhaps I have set too stringent a guard upon enthusiasm, unconsciously fearful lest my friendship for Grainger deflect and impair the validity of my judgment. However this may be, I looked upon Grainger as a singer of wistful, frugal songs, a mouther of symphonic slang, a knockabout comedian of the concert hall, a rampant adolescent who would throw an English music-hall tune into violent alliance with an Irish folk-melody. When I heard his suite "In a Nutshell" I was bewildered and amused. "It is alive," I said in reviewing it, "alive with the exorbitant ardor of youth—youth kicking its heels and flourishing its arms and prancing about and hurtling over obstacles in an explosive sheer joy of living." I did not take it very seriously. The majority did not take it very seriously. Why? Well, I think the only possible explanation lies in the fact that Grainger has been taken for granted. He is associated in the academic consciousness with pretty little dance tunes. He is either indiscriminately gushed over or stupidly and unjustly ignored. In a word, he has not been subjected to the same impersonal scrutiny that is usually accorded the work of the contemporary musician. Composer of two of the most vital symphonic compositions of our time, he is still looked upon as the composer of "Mock Morris" or "Molly on the Shore."



It is possible that when Mr. Walter Damrosch and the New York Symphony perform Grainger's latest composition, "The Warriors" (music to an imaginary ballet), a new estimate of Grainger will be formulated. This music performed under the personal direction of Grainger himself at this year's music festival at Norfolk, Connecticut, may hold its own with any symphonic composition of modern times. From the indications that Grainger had given me thru the medium of his extraordinary pianistic abilities I had formed a pessimistic opinion of this work. I had heard, so it seemed to me at the time, a precious, fragile voice breaking in shrill and impotent falsetto. It had seemed to me a sorrowful deterioration of a talent eminently lyrical, a dishonest aping of other manners and modes of expression, a spurious kind of sound, a premeditated attempt to compete with the unnecessary and hideous cacophony of Ornstein, Schönberg and Stravinsky.

Well, from one orchestral hearing of the work I commit myself to the following impressions. In "The Warriors" Grainger has written a sort of thing that everybody is writing today, only he has written it better. I will not say that it is a great piece of music. But how many contemporary compositions are great? To me, the sound that Grainger brings out of an orchestra is the most beautiful sound that the contemporary orchestra has to give us. I say this deliberately. I shall be ridiculed, no doubt, but for my part I rank Grainger's "Warriors" ahead of any symphonic composition I have heard in recent years. To my view, this is faint praise, and I dare not say more than this. But I never supposed I should be able to say half so much. It is more vital than Loeffler's "Pagan Poem." As a contribution to instrumental experimentation it is incomparably far and away ahead of any modern music with the possible exception of Stravinsky's immediate output. At times I heard a sensuous beauty in it that music has not offered us since "Parsifal." Harmonically it stands in a class by itself, for it represents an adroit and exquisite reconciliation of contemporary excess to potency of appeal. Grainger as a blender of tones is unequaled in modern music.

The ultimate esthetic worth of Grainger I leave to others to determine. But this I do say: Grainger, taking him all in all, is an inestimable influence in the effete and oversophisticated activities of modern music. His frank externality, his maintenance of the common and universally comprehended forms of musical speech, his noisy, crude physical exuberance mark him apart in the acute overpreciousness of modern music. He has avoided the dominant mistake that contemporary music—all contemporary art, for that matter—is making, of confining himself to a set idiomatic form, of inflicting upon himself a premeditated manner of expression not indigenous to the matter in hand.

His means of expression shift with his moods, and his moods are many. For Grainger himself is as human as Falstaff, as unhuman as W. B. Yeats; as precious and elusive as Debussy, as dynamic as John Philip Sousa. As poetic as any poet, he can be as practical as any plumber. He is one of the rarest, most sensitive dreamers of our age, but he is an active dreamer. A delightful, youthful, fantastic creature, who has amused us with his droll discrepancies and acrobatic impertinences, may have become, for all we know, a great creative musician.

THE NEW BOOKS

A PRESENT PROBLEM

Paul Kester has written a novel on the race question in the South which has great human interest for us and would probably receive more attention at this time if it were not that we are all thinking first of the war. But we must not forget the problems of democracy facing us at home, and no one of these is more important than the problem of right and justice in our relations with the colored people.

His Own Country is valuable, first of all, because it presents both sides of the situation in the South. It tells us how the negro feels and how the white man feels thru the behaviour and conversation of the several characters. A white negro boy, Julius Caesar, born in slavery, resolves to make a place for himself in the world in spite of his race. He has a fine mind and after the slave days are over goes to Canada and becomes a physician, marries a white woman, and returns to "his own country," Virginia, as a rich man, to buy the property which once belonged to his masters.

For a time people suppose that he is a white man, but when they discover that he is the boy Julius Caesar grown up, one of his sons, a fine lad, is about to marry into an old Southern family. Much ill feeling and injustice and bloodshed result and much suffering for all concerned. It is a story of red blood in conflict with blue blood—and the result is bloody. The story does not offer any solution for the race problem but it does present the tragic situation fairly and humanly.

His Own Country, by Paul Kester. Bobbs-Merrill Company, Indianapolis. $1.50.

FAIR TRADE

According to W. H. S. Stevens in his book on *Unfair Competition*, the trust problem in the United States has thus far been complicated by the problem of unfair competition. Only by eliminating unfair methods of competition will it be possible to arrive at any basis for a decree in the case of competitive organization as compared with organization where practically monopolistic conditions prevail. In order to lay before us clearly the unfair practises which have thus far interfered with the legitimate development of competition, Professor Stevens discusses such subjects as local price cutting, the establishment of bogus "independent" concerns, "tying" contracts, blacklists, boycotts, rebates, preferential arrangements, etc., all of which tend to interfere with productive efficiency and consequently prevent a condition of fair trade. The book is based upon court records and the proceedings of the Federal Trade Commission. It is clear and concise in its statements and is altogether hopeful of better conditions to come.

Gilbert H. Montague, the author of *Business Competition and the Law*, on the other hand, is disposed to be pessimistic. His view of the recent activities of the courts in dealing with the cases which have arisen under the Sherman Act, the

Not Confections

But Whole-Grain Foods

Here are titbits which are used like nut-meats. Chefs garnish ice cream with them—girls use them in candy making. Boys at play carry bags of Puffed Grains and eat them like confections.

Yet these are whole grains—wheat or rice—with every food cell exploded. For one hour they are toasted in terrific heat, then they are shot from guns.

They are scientific foods, invented by Prof. Anderson. A hundred million steam explosions occur in every kernel. Digestion is made so easy, so complete, that every atom feeds.

You see brown bubbles, crisp and flaky, puffed to eight times normal size. You taste delightful morsels with a toasted almond flavor.

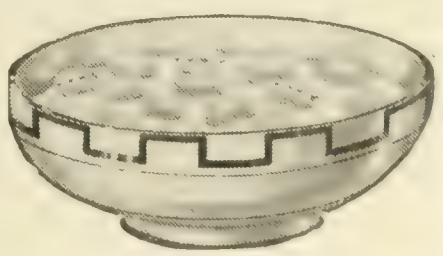
But what children get is whole-grain nutrition, without any tax to the stomach. They need it as much as they like it. They get too little whole-wheat food, with its phosphates and its vitamines. And what they get in other forms cannot digest like Puffed Wheat.

Puffed Wheat

Puffed Rice

and Corn Puffs

Each 15c Except in Far West



Serve these Puffed Grains in every summer milk dish. Make them the morning cereal. Mix them with your berries.

They are better than part-grain foods, you know, with part of the food cells broken. And certainly folks like them better than any other form of these grain foods.

For variety's sake, in these hot months, keep all three kinds on hand.

With Berries

In Milk

(1019)

YOUR HOTEL *in* NEW YORK

WHEN you come to New York, make the Hotel Astor your home. It is more than a mere stopping place. It is New York epitomized.

Situated in the very heart of the metropolis, the Hotel Astor is the logical scene of New York's most important functions. Here Big Business meets for consultation. Here are held receptions for distinguished foreign visitors and ambassadors. The Hotel Astor is chosen for great National festivities.

Whether you need a single room or an elaborate suite, you will obtain at the Hotel Astor the utmost in comfort. From the magnificent roof garden to the cool orangerie and the numerous lounges, promenades, writing rooms and restaurants you will find a spot to fit your every mood. The cuisine and service are superb.

Do not run the risk of marring your visit by accepting less than the Hotel Astor offers you—nor waste time in an effort to obtain more elsewhere.

BROADWAY, 44th and 45th Sts., NEW YORK

Clayton Act and the investigations of the Federal Trade Commission is that of a lawyer who has acted largely as counsel for the defendant. His book gives little evidence of an attempt to understand the new economic tendencies; it offers little encouragement to the group of industrial leaders who are trying to develop the newer laws of competition; it is rather a *caveat* to the merchant, warning him to beware lest he be enmeshed in the intricacies of a more or less unreasonable law.

A third book, *The Morals of Monopoly and Competition*, by Homer B. Reed, approaches the same subject from the point of view of the moralist and the historian. A change in business practises and morals is taking place. Ten years ago we were told by a great captain of industry that it is fair to get out of the consumer all that you can, that the ethics of business was not worth two cents to the merchant. Today, the same man is conscious that he owes an obligation of fair dealing to the public which he can scarcely refuse to pay. Professor Reed shows that in the short span of one decade both in the field of transportation and in industrial enterprises it has ceased to be a question of charging what the traffic will bear and has become a question of doing business so that prices will yield a fair profit while competitors and public alike are given a fair chance to live.

Unfair Competition, by W. H. S. Stevens. University of Chicago Press. $1.50. *Business Competition and the Law*, by G. H. Montague. G. P. Putnam's Sons. $1.75. *The Morals of Monopoly and Competition*. by Homer B. Reed. George Banta Publishing Company, Menasha, Wisconsin. $1.25.

REFORMED PIRATES

If there be in the United States a young ladies seminary maintained on precisely the same model as such institutions existed—before the war—in England, *British Exploits in South America*, by W. H. Koebel, can be safely recommended to the lady principal as containing not a single word likely to flush the cheek of her most modest pupil. Not only is the style of the author unquestionably genteel, but the material is handled in such a way that even "racy" situations never exceed the bounds of elegant refinement. Since the author perforce must introduce "true blue" British sea-dogs and buccaneers, one feels he has achieved a triumph in divesting them of the slightest suspicion of rum, and never exploding on his pages an improper swear word. When the round shots flew thick and fast along the Spanish Main, or a dreadful gallows is trundled on the palm decorated stage, it seems these gallant old chaps were always careful of their company manners, possibly with an eye to future record in Mr. Koebel's book.

We gather that the wives and daughters of emperors, kings, presidents and ambassadors never forgot they were ladies first, and knew how to weep at appropriate moments. Possibly readers will weep, too, when they read how an ousted Empress of Brazil moved the jolly tars of a British warship to tears, tho herself solaced by the reflection that she had got her trunks safely aboard. All this is very charming, as is also the glimpse we get of Queen Elizabeth. That imperious dame is in this work positively so sweet that we now cannot believe she did any such thing as wilfully order the chopping off of the naughty Earl of Essex's head. It must have been an unlucky mistake—for the Earl of Essex.

We are willing to accept Mr. Koebel's word for most of this, because we never met personally most of the people he writes about; but there remains one on whom we are indeed sorry to shut the door of the

young ladies' classroom. Don Rosas of the Argentine, picturesque dictator tho he may have been, was not a nice man from whatever side you look on him. The author states that after his flight from the Argentine he took refuge in Southampton, England, where he resided until his death "much respected." Now, we happen to know that thirty-five years ago an unsavory odor still clung to the house he occupied. The stories then current about him, if but one tenth true, left nothing attached by way of social or other respect. For veracity's sake, the halo had best been omitted from the head of Rosas. It's quite likely they haven't forgotten him yet in Southampton, where no discreet lady principal would have permitted the mention of his name.

British Exploits in South America, by W. H. Koebel. The Century Company. $4.

VERSES AND PLAYS

White Fountains, by Edward J. O'Brien, is a book of odes on the themes of the body and the spirit written in the effective rhythm of the old Gregorian chants. A number of very good short lyrics are included in the volume. (Small, Maynard & Co., Boston, $1.)

Chocolate Cake and Black Sand is the noticeable title of a volume of three plays for children by Samuel Milbank Cauldwell. Very whimsical and gay are these, with all sorts of amusing turns and twists and a mingling of old nursery tales with very up to date nonsense. (G. P. Putnam's Sons. $1.50.)

Thomas Kettle's *Poems and Parodies* are specimens of vigorous, enthusiastic verse on questions of general interest to all and of especial interest to Irishmen. They are not "poetry for poetry's sake" but will interest those who think as the author thought. He died at the front in France. (F. A. Stokes Company, $1.)

Helen McAfee's able preface to her edition of *Pepys on the Restoration Stage* explains the importance of his first hand observations of the decade following the Restoration—a period of new life for the drama, marking its transition from the mediaeval to the modern stage. (Yale University Press, $3.)

Kate Douglas Wiggin has succeeded where many have failed. *To Mother* is a collection of verse that contains neither the sentimental nor the banal, nor does it ever descend to doggerel however well intentioned. A book that one need not apologize for sending to anybody's mother. (Houghton, Mifflin Company, $1.)

An uncommon example of the art of translation is found in Eleanor Bontecou's rendering of certain *Masterpieces of Modern Spanish Drama*. Delicate shades of meaning are preserved in masterly fashion. Even the unapproachable Catalan, Guimerá, has been caught and held for the enjoyment of the English play-reading public. (Duffield & Co., $2.)

Lights at Dawn, by Aristides E. Phoutrides, is a volume of literary verse, smoothly and carefully written and showing excellent human feelings. Dr. Phoutrides is an instructor in Greek and Latin at Harvard University. The first poem in the book, "The Dawn from the West," is a poem in the spirit of America First! (The Stratford Company, Boston, $1.25.)

The Man Who Saw, by William Watson, is a volume of verse, largely in a vein uncomplimentary to Kaiser Wilhelm II and full of the spirit of the great war. Many of the poems are bitter denunciation of what the Germans have done. Others are written in praise of Belgium and King Alfred. Others commemorate battles and events of the war. (Harper & Bros., $1.)

In his *Sindbad, a Lyric Phantasy*, which poetically recalls Sindbad's "adventures with beauty and the peacock lady in the castle of the forty thieves," Percy Mackaye proves himself more the poet than the

Are We Selling Our Health for a Mess of Pottage?

HEALTH is the natural birthright of all, but many of us have sold it, often as unwisely as Esau, for a mess of pottage. Even if our stomachs are not openly quarrelsome and our bodies torpid, the chances are that the artificial conditions of modern life have exacted their toll. Few of us really know what radiant, efficient, creative living means. There are days or weeks that drag for lack of energy, if not days or weeks of actual suffering.

Yet perfect health is the condition in which we should abide—the perfect health that we have occasionally tasted, perhaps after an outing in the woods, when we have eaten food we could not ordinarily digest, and returned home with the gladness of a child, to sleep the sleep of absolute rest. For a time bodily functions were perfectly performed, the rhythm of nature restored. We would all give much to be able to maintain that high-water mark of efficiency and joy.

90% of Illness Due to Wrong Food

That this condition is possible for practically every man and woman, sick or well, is the claim of Eugene Christian, the well-known food specialist. He states that 90% of all illness may be traced to improper feeding, and has proved it by a practice extending over twenty years. During this time thousands of people have come to his office in New York. Most of these cases have been desperate ones—persons who have tried all manner of drugs and other remedies. They come in misery and skepticism, and depart in health, singing the praises of corrective eating, the sole method of treatment used by this man who preaches the gospel of health.

There is a wise old maxim to the effect that "It is not what a man eats but the amount he assimilates that nourishes him." The mere consumption of food—even "good, nourishing food"—does not necessarily mean abundant health and vitality. Articles of diet must be wisely selected and wisely combined if we are to be properly nourished and properly charged with energy. But as a matter of fact, so ill-chosen are our daily foods that we not only fail to benefit by their brain and body-building elements, but actually clog our systems, so that we are unable properly to eliminate the waste. The accumulated waste in turn generates poisons which are absorbed into the blood, gradually lowering our efficiency, sapping our vitality, and frequently resulting in some chronic intractable disease.

Food Poisons

We hear much in these days of auto-intoxication, and many of the older generation laughingly class it with appendicitis and nerves—a sort of makeshift for lack of a better diagnosis. But the fact is that scientists are well aware of the serious harm that is done by poisons generated in the system. Metchnikoff, the great French scientist of the Pasteur Institute, claimed that the putrefaction in the lower intestine is responsible for premature old age and death, and recommended a diet composed largely of sour milk, not a palatable viand at best; and Eugene Christian has traced some fifty well-known ailments and diseases to improper combinations of food.

Happily, however, Christian does not recommend either fasting or unsavory diet—he says that most of the foods we are eating are all right, only we do not know how to combine them. The various articles we take at one meal cannot, of course, be digested separately; consequently if we eat articles that do not chemically combine, there is apt to be trouble—acidity, fermentation, gas or distress of some sort.

And since the stomach is the fire-box of the body, when it is out of order other of the vital organs—the heart, liver, kidneys, nerves, brain, etc.—necessarily become affected. Even the teeth are affected by acid stomach, pyorrhea or receding gums being the result.

In fact, Christian claims that most so-called diseases are really only symptoms of disturbances in the digestive tract, and that by correcting these, the "symptoms" necessarily vanish, and just as the wrong combinations of food will destroy health and efficiency, so will the right combinations correct disturbances, even those of long standing, by removing the cause. If we will only give Nature half a chance she will do her share toward producing the results. Health is obedience to natural law. Disease is only the absence of health.

But corrective eating does not mean starving one's self or even restricting one's diet to a few articles. It simply means getting the right combinations of foods at the right time—delicious meals that bring pleasure while they are being eaten and cause no discomfort afterward.

Nor is it only the sick who benefit by Eugene Christian's lessons in corrective eating. The well profit just as much. The human machine may seem to be running perfectly, yet its *efficiency* may be increased.

What to Eat for Health

There have been so many inquiries from all parts of the United States from persons seeking the benefit of Eugene Christian's advice, cases which he is unable to handle personally, that he has written a course of 24 lessons, telling exactly what to eat for health, strength, and efficiency. This course is published by The Corrective Eating Society of New York City. The lessons are written in simple language and every point is explained so clearly that there is little chance for misunderstanding. Reasons are given for every recommendation, and every statement is based upon results secured in the author's many years' experience.

But the lessons do not merely tell you why you should eat correctly and what the results will be; they give actual menus for breakfast, luncheon, and dinner; covering conditions of health and sickness from infancy to old age for all occupations and seasons. They tell you what to eat if you wish to gain flesh and what if you wish to reduce, how to correct a multitude of bodily ills, and how to feed your children so that they may never know such ills.

A few of the chapter headings are as follows: How to Select, Combine, and Prepare Foods; How Wrong Eating Causes Sickness; What to Eat and What to Omit for all Stomach and Intestinal Disorders; Emaciation—Its Cause and Remedy; Obesity—Its Cause and Remedy; Nervousness—Its Cause and Remedy; Constipation—Its Cause and Remedy; Auto-Intoxication—Its Cause and Remedy; Digestive Harmonies—How the Business Man Should Eat; How to Measure Food Values—A New and Simple System; What to Eat for Nervousness, Low Vitality, Anaemia; What to Eat for Colds, Influenza, and La Grippe; etc., etc., menus being given in each instance.

If you would like to see the "24 Little Lessons in Corrective Eating," simply write the Corrective Eating Society, Inc., Department 47, 443 Fourth Avenue, New York City, and they will mail you a set for examination. It is not necessary to enclose any money with your request. The lessons will be sent for five days' free examination with the understanding that at the end of that time you will either remit $3, the small fee asked, or return the lessons. You take no risk and if the more than 300 pages yield but one single suggestion that will bring greater health, you will get back many times the cost in personal benefit—yet hundreds write the Society that they find vital helpfulness on every page. Merely tear out and mail the attached form instead of writing a letter. It is a copy of the official blank adopted by the Society and will be honored at once.

CORRECTIVE EATING SOCIETY, Inc., Dept. 47, 443 Fourth Avenue, New York City

You may mail me the 24 Lessons in Corrective Eating for examination. 5 days after I receive them, I will either send you $3 (full payment), or remail them to you.

The West's Leading School for Girls

Eastern Advantages in the West. Everything First-Class, In addition, Denver's Climate. Address for Information.
Dr. J. D. S. RIGGS, Principal, 1405 Marion St., Denver

TENNESSEE

MARTIN COLLEGE, Pulaski, Tennessee

A Junior College with Preparatory Department. Moderate Rates. Modern Buildings and Equipment. In the Blue-Grass Hills of Sunny Tennessee. Careful Supervision. Box 1. W. T. WYNN, President.

dramatist, for *Sindbad* ends with all its "first fine frenzy" of inspiration, fancy, visualization, lyricism, naïveté, whimsicality, in dramatic structure gone, lost in dull verbiage, vanished in its middle act. (Houghton, Mifflin Company, $1.25.)

The Modern Library is another step in the very right direction of putting good books into inexpensive form. Light in weight, of convenient pocket size, with large, clear print and limp leather bindings of pleasant green or blue, they are most agreeable small books. The publishers' general purpose is to include "books that have already won for themselves a position as classics." The latest additions are Maeterlinck's *A Miracle of St. Anthony*, Strindberg's *Married* and Dostoyevsky's *Poor People*. (Boni and Liveright, 60 cents each.)

ALL SORTS OF ADVICE

Mrs. Norton's Cook Book does not go into dietetics, nor economics, nor decoration, nor household advice. It is simply a collection of clearly written, tested, recipes, hundreds of them. A useful book that does not pretend to the position of "the lady from Philadelphia." (G. P. Putnam's Sons, $2.50.)

A book packed with common sense is *Women and Work*, by H. M. Bennett, manager of a collegiate bureau of occupations. Every girl thinking of a future job, and every woman who has to do with advising other women about work, will find of value this study of the many problems involved. (D. Appleton & Co., $1.50.)

Of advice to the housewife, good, bad and indifferent, there is no end. Most of it is indifferent. When one gets a book that deals with so inclusive a topic as Mabel Hyde Kittridge's *The Home and Its Management*, wisely and practically, basing its suggestions on dependable data, one hastens to recommend it. Directions for 300 inexpensive dishes are added. (The Century Company, $1.50.)

Thetta Quay Frank's essay, *Household Management in Wartime*, deals with food values, budgets and solutions of the service problem. American housewives are so used to advice introduced by genial assurances of their ignorance, stupidity and selfishness that the laying of most national defects on their kitchen door stones will not in the least affect their appreciation of these very practical and suggestive pages. (G. P. Putnam's Sons, 75 cents.)

RELIGIOUS THOUGHT AND WORK

Professor Husik's *History of Mediaeval Jewish Philosophy* is the first discussion to appear in any modern language. The author shows his ability to do pioneer work of this type by the skill with which he handles the obscure and intricate subtleties of his theme. He deals exhaustively with Mediaeval Jewish rationalism but omits all reference to mysticism or the Kabbaka. (The Macmillan Company, $3.)

A thoughtful little book by Sherwood Eddy, with the title *Suffering and the War*, treats of the question, "Do we still believe in a friendly universe and in the goodness of God"! It is a searching, yet reverent discussion of the fact of suffering; its purpose, result and philosophy. The conclusion is well exprest in the words: "It is an honor to share God's pain." (Longman's, Green & Co., 36 cents.)

F. C. Dadmun, in *Children of the Father*, the opening volume of the New Beacon Course in Religious Teaching, draws from many literatures, tho mainly from the Bible. The lessons are varied and the hand work interesting and good looking. A book well adapted for home use when the regular church lesson courses do not seem to fit. (Beacon Press, Boston, $1. Pupil's Note Book, 25 cents.)

The Great War puts out of the question any adequate celebration of the 400th anniversary of the Reformation and but a handful of books relating to Luther are coming out. *Leaders of the Lutheran*

Reformation is among these, a modest but interesting collection from the pages of *The Lutheran*, studies by different writers of the personality and work of Melancthon, Chemnitz, Spalatin and other great figures of a great day. (Lutheran Publication House, 1716 Arch Street, Philadelphia, 75 cents.)

Church workers will find uncommonly suggestive William G. Ballantine's short essay on *Religious Education for the Coming Social Order*. He has mighty sensible ideas as to how the Sunday schools can teach true patriotism and internationalism, and so do their part in putting an end to international anarchy. (The Pilgrim Press, Boston, 25 cents.)

Among the popular religious volumes that have recently appeared none is more attractively presented than the series of sermons by Dr. Jenkins entitled *The Man in the Street and Religion*. It is an exceptionably readable and suggestive demonstration of the proposition that everyone is religious at heart, coupled with a delineation of the kind of Christianity which will appeal to the average man. (F. H. Revell & Co., $1.25.)

American theologians will receive with interest the volume on *The Jesus of History*, by T. R. Glover, the best known English scholar in the new field of Religious *geschichte;* and will be pleased at his staunchly evangelical conclusions. The prolix and involved presentation, however, make the argument difficult to follow; and one lays down the work with a sigh of disappointment, at the little this eminent scholar has contributed to our knowledge or understanding of Jesus. (The Association Press, 75 cents.)

THE PUBLIC WEAL

New editions of the Debater's Handbooks on *Prohibition, Immigration* and *Capital Punishment* have been issued. These contain the latest data and extracts from recent articles and speeches. (H. W. Wilson Company, White Plains, New York, $1.25 each.)

Commercializing of Leisure sets forth the possibilities of community control of amusements. Mr. J. P. Sizer wastes much fire on that perennial target, the Puritan, on the Y. M. C. A. and on other activities, but his description of present conditions and plans for improvement are sane and inspiring. (Richard G. Badger, Boston, 75 cents.)

Carl D. Thompson has prepared a concise argument in favor of *Municipal Ownership of Public Utilities*. It recounts the spread of the system in Europe and in the United States, the objections to private ownership, the gains to the public and to the worker by city ownership. Useful to the upholder of either side of the question. (B. W. Huebsch, $1.)

Outlines of Applied Sociology, by Prof. Henry Pratt Fairchild, presents the leading sociological problems and points out their relations to one another and to the major interests of striving human beings. There is a discussion of leading schools of reform—or reaction—and a selected list of references for further reading. The outlook is liberal, and the book a helpful guide to the student, whether in class or in the school of practical affairs. (The Macmillan Company, $1.75.)

A special series of social relations is discussed in *Conditions of Labor in American Industries*, by Lauck and Sydenstricker. Facts and figures about wages, seasonal and other irregularities of employment, relations between employers and workers, fluctuations in the nominal and real wages, and so on, are derived from the material gathered by these experts for the United States Industrial Relations Commission. While significant data have been presented most effectively, the authors do not attempt to draw conclusions. A valuable reference book for educators, social workers, and all in any way engaged in handling employment problems. (Funk & Wagnalls Company, $1.75.)

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. **Absolute safety is the first requisite and adequate and uniform return equally important,** and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of $5,000 by a man aged 67 would provide an annual income of $618.35 absolutely beyond question or doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

HOW THEY DO IT

BY PIERRE MILLER

This spectacular story of air fighting, the one phase of war in which individual daring remains the controlling factor, was translated by William L. McPherson and published in the New York Tribune.

IN what you are going to read there is nothing but the reproduction of an actual experience. No fiction—no embellishment. Only cruel and hard reality.

Major P——, who had just inspected the hospital units of a cantonment, was about to reënter his automobile. He was walking along with his nose in his notebook, dragging one of his boots after the other out of the clinging mud of the roadway. He was thinking of nothing in particular except the tedium of the trip back to general headquarters—over a familiar route, against a keen north wind whose sting he could already feel in his nostrils. Coming from a depot for the wounded behind the lines he was to make his way to another point in the rear. That was all.

His mind was not occupied with the details of the inspection which he had just made—and made in a rather superficial fashion. There was nothing out of the ordinary run to report. Everything was going along about as usual—not too well and yet not too badly. The war would last. He didn't even wish to guess how long it would last, judging that problem to be insoluble and any mental effort expended on it to be uselessly disturbing. One must do his best from day to day and think as little as possible of things not brought to one's immediate attention. That was the attitude of mind he sought to cultivate, gratefully taking lessons from the thousands of simple soldiers with whom he came in contact, who had acquired instinctively that philosophy of acceptance which he could attain to only by a powerful effort of the will.

SUDDENLY the sound of a cannonade, very near him, made him lift his head. An artillery duel—so far from the contact trenches, so far from the enemy? At that moment his hand touched the door of his auto. The chauffeur, his nose in the air, deeply interested, said to him:

"They are firing at a German aeroplane, Major."

Then looking up into the sky (which was very clear that day because of the north wind) in the same direction in which the soldier was looking, he saw an enemy observer. It was a biplane flying at a hight of 1500 to 1800 meters, not seeming at all disquieted by the little fleeces of white smoke which, with a faint, far-off sound, burst into view about its insect body—a body like that of an exaggerated dragonfly. All the gunners of the cantonment and of the surrounding district were firing incessantly at that aërial target.

The major shrugged his shoulders. He had seen the same thing a hundred times before and knew that a hit from the ground was rare—almost impossible. It was as if one should try to shoot a pigeon with a rifle. Such spectacles were good for the blues. But, for himself, he was blasé. He was skeptical, so far as results went. It was good powder thrown away—much, too much good powder. Let the enemy fliers spy on our lines, so long as our fliers also spy on theirs.

"Let us start," he said to the chauffeur. "We have forty kilometers to go."

Wrapping himself in his great coat, he took his seat, and the chauffeur got out to crank up. But the cranker remained motionless in his hands.

"Major," he said with shining eyes, "there's another machine coming—one of ours—to give the Boches a fight."

The cantonment was situated in a spreading valley. On one side the hills which dominated it were wooded; on the other side they were bare. On that side there had once been tilled fields—long ago, in an epoch which seemed infinitely removed, lost in the shadows of time—before the war. The French machine had mounted like a sparrow hawk from some hiding place in the dark, motionless woods. It resembled a hawk, a bird of prey, rapid and direct, intrepid and slender. So very slender! Much smaller than the enemy, who had not seen it coming at first and now attempted to escape, like a wild duck or a heron which flees before a falcon unhooded by the hunter.

"IT is a new model," cried the chauffeur, who was very excited. "I saw it once before at X——. They showed it to me. It is driven by a single operator, who maneuvers his machine gun with a special device, so that he doesn't have to lose his direction. Ah, that is marvelous! That is marvelous! And how fast it goes! He could give the Boche a handicap of thirty kilometers an hour."

The frail machine, the man who was its brain and the deadly mitrailleuse were all one beautiful welded unit. They dashed ahead, filling the imagination with a sense of almost illimitable ferocity. The pursued bird knew now that it was much too late to flee, that there was no time left to escape. It sought to defend itself. It also was armed, and one could hear the crackling of its machine gun. But the pursuer disdained to respond. It commenced to mount in great, sweeping circles—to mount whirling, as does its brother, the hawk, when it wishes to dominate and swoop down upon a sparrow. Not that the French machine wished to swoop down. Simply by taking advantage of its superior climbing power it avoided the fire of its antagonist.

"Look at the Boche!" shouted the chauffeur. "It is as if he was weighted down. He cannot put a bullet into the Frenchman now—not a single one. Ah, if only I were not so old!"

All the automobile mechanicians—all who know how to tinker with a motor—when they have spent some time at the front, dream of becoming aviators. The thing which they drive disgusts them, because it cannot leave the earth.

And when the hawk-like machine had reached the hight of its flight, determined in advance to the second, it inclined its body with a cold and cruel precision, pointed its beak, the muzzle of its mitrailleuse, toward the doomed sparrow and began to fire. The other also continued to fire, but at random and to no purpose, headlessly, like a bird squawking from fear.

All at once the French machine ceased firing and took again to planing—deliberate, silent, sinister and certain, like the

hawk which waits and watches. It had accomplished its work. It had now only to wait. That it knew.

The big German dragon-fly tilted desperately and, on the right side, the double wing suddenly broke. One could hear nothing; it was too high up. It broke, in horrible silence. Undoubtedly the pilot attempted to restore the machine's balance, for the frame tilted sharply on the other plane; and then, on the other side, the double wing broke. One saw the vast pinions come together like a closing fan. And the machine fell—fell like a stone. No; rather like a poor, wounded bird, crippled by a gunshot wound.

THE major thought no longer of returning to general headquarters. He said to the chauffeur:

"Did you see where it fell? Can you track it down?"

"In the woods, in the woods!" cried the chauffeur, turning his crank. "Certainly I can find it."

He drove like a madman. Reaching a crossroads in the forest, he stopped.

"It is in there. We must get out," he said, pointing to a spot in behind the big weather-browned trees.

Some soldiers, too, coming from no one knew where, ran ahead of them and showed the way.

Thru the vault of interlaced branches the dead aeroplane had bored a passageway like the track of a huge meteor. One of the two men who had flown in it—probably the mechanician—had disappeared under the motor, which had plowed deep into the earth.

They loosened this heavy mass and it fell sidewise on the ground.

"Cover it up!" cried a soldier, putting his hands over his eyes. "Cover it up!"

The mechanician had had his two thighs severed, as if by some huge ax, by the weight of the motor. The trunk of his body was only a gaping, frightful, pulpy mass, with a heart exposed which still beat. Some one threw a cloak over the corpse.

"And the other one?" said a soldier. "There were two."

They found the body of the other German some feet away. The branches had caught him in falling and torn him from his seat. One saw his breast rise and fall like a forge bellows. Then he expired. The soldiers drew out their knives. They wanted to divide among themselves the buttons on his uniform.

"These men died bravely," said the major. "Respect their remains!"

And because he had shoulder straps on they obeyed him.

"How cold it is!" exclaimed one of the soldiers.

And their teeth began to chatter—there in the presence of the dead.

"And what became of our flier?" asked one, in order to break the spell cast by death.

"He has not yet come down," answered a comrade. "Maybe he thought there was another job for him to do."

The next day, having decided to pass the night in the cantonment, the major saw the aviator return. The victor of the evening before left his machine in the fields and came into the hospital to warm his hands. He was a child, hardly nineteen years old, with cheeks as downy as a peach and innocent eyes.

"Well," said the major, "you brought one down yesterday, didn't you?"

"Oh," he answered carelessly, "it was my twelfth."

And he warmed his stiffened fingers nonchalantly over the stove.

Health Wanted

THE home tragedies of peace—sickness, accident and death—and the big tragedy of war, with its mounting cost of food, have developed a long waiting list for

SEA BREEZE

our summer fresh air home for children and babies, tired working girls, mothers and grandmothers of the tenement.

In war—in peace—our youth must grow into healthful, fit manhood and womanhood.

Sea Breeze gives hundreds of city children their one chance in the year for fresh air, good food—health.

Allow 60 cents a day or $4 a week for each one whom you will send as your guest, and send the amount to George Blagden, Treasurer.

MONTPELIER VERMONT

WAR WITHOUT TAX

on Food, Labor or Industry

Will you think or pay? The Nation creates all land values—justice demands their use for National Defense—not for private gain. Tax on land values alone with no other taxes whatever will provide entire annual national budget—even five billion dollars. Will force idle land into use. Increase crops. Stimulate industry. Reduce taxes for 95% of the people. Will not raise prices or reduce production.

Booklet free. NATIONAL SINGLE TAX LEAGUE, Cincinnati. Dept. K

Keep Your Dollars Busy

Now as never before, it is important that your money be kept at work in legitimate enterprises. You will benefit by consulting The Independent Investor's Service before buying securities of whose merit you are uncertain.

MR. PURINTON'S WAR SERVICE QUESTION BOX

Miss G. P., New York. "I am a school teacher of ten years' experience. Am thirty years of age. Have thought seriously of enlisting as a nurse in the Red Cross, but have had no experience in nursing. What do you advise?"

Utilize your experience in teaching. Stay where you are, line up all your boys and girls for a collective as well as individual form of patriotic service, and thus extend your war power a hundred-fold. Read every answer in the War Service Question Box; ask yourself how each might apply to you or your pupils; carry out any idea that seems to you workable. To waste your knowledge and influence as a teacher, merely to study for a nurse, would be, in our opinion, a mistake both economic and patriotic.

Miss E. M. S., Michigan. "I am a teacher in a town of three thousand. I wish to interest young people of high school age in patriotic service. They are capable, but without initiative. Can you advise me?"

The production and conservation of food supplies offers the greatest national opportunity for enlisting boys and girls. Every boy in your town should be working a farm or home garden this season; and every girl should be canning, drying, or otherwise preserving the foods that the boys grow. Certain crops may be planted late—and now is none too soon to think about next year's gardens. For literature, apply to your State College of Agriculture; U. S. Department of Agriculture, Washington, D. C.; U. S. Department of Labor, Washington, D. C.; Mayor Mitchel's Food Supply Committee, 71 Broadway, New York; The Mayor of Amherst, Amherst, Massachusetts; and Countryside War Garden Bureau, 119 West Fortieth, New York.

See War Question Box answer to Miss E. M. D., Maryland; create permanent efficiency organizations of the young folks in your charge.

Mr. C. S. C., New York. "I have served four years in the National Guard, and wish very much to continue to serve my country at this time of need. But my eyes are weak and I fear I cannot pass the Federal examination. Would it be possible for me to enter any other branch of the service? I am a licensed chauffeur."

You might become an ambulance driver; obtain information from Bureau of Medical Service, American Red Cross, Washington, D. C.

We think, however, you should restore the weak eyes to normal duty, and continue service in line with your preference and experience. Why waste four years of knowledge and skill? Trained men are too valuable.

Mr. G. O. B., West Virginia. "I am superintendent in charge of operations for a large paving brick company. Believe I possess a capacity for handling and organizing men. Age thirty-six. Able to work to the highest efficiency. Would like to qualify for a position on some commission offering a wide field of usefulness."

Your problem is to mobilize the facilities, resources and employees of your company. Write the Council of National Defense, Washington, D. C., for instructions, with request to be assigned to a national board of consultation or coöperation where you can serve best. Apply to National Institute of Efficiency, Union Trust Building, Washington, D. C., for list of patriotic organizations. Note results of the Community Contest in Patriotic Work recently conducted by *The Countryside Magazine*, 119 West Fortieth street, New York; see how the most effective action may be organized in your community. Found a War Efficiency Library, with special incentives for use by all your workers; see list of books in Independent of June 2, 1917. Suggest to officials of your concern that they watch columns of The Independent for patriotic news; put up a war bulletin board, and tack on clippings that inform or inspire.

Miss E. M. D., Maryland. "After reading article 'What Can I Do?' our class at normal school have a desire to know what we can do. Very few of us have had opportunity to do anything but attend school, but we would like to know how to apply our knowledge, so as to be of use to our country. We wish to put your answer on the bulletin board."

(a) Organize a personal thrift campaign, to aid you, your family, your community, over the war crisis. Obtain information from American Society for Thrift, 30 North Michigan Boulevard, Chicago; or from National Education Association, Secretary Durand W. Springer, Ann Arbor, Michigan.

(b) Everybody work, this summer. Let boys help most in food production, girls in food conservation. Boys find what other boys are doing by writing for literature of Boy Scouts of America, 200 Fifth avenue, New York; of U. S. Boys Working Reserve, details from William B. Wilson, Secretary of Labor, Washington, D. C. Girls find what girls can do by writing the Camp Fire Girls, 461 Fourth avenue, New York; also Girls National Honor Guard, 34 West Twenty-eighth, New York; also addresses in reply to Miss F. L. B., Nebraska, War Service Question Box; also reply on food canning, published in first group of war answers.

(c) Everybody watch The Independent, all summer. It will publish Question Box answers and special articles of particular interest to your people. Write us for more detailed counsel if needed.

Dr. B. B., Missouri. "I would like to get literature on the raising and marketing of poultry, especially squabs."

Literature of Majestic Squab Company, Adel, Iowa; of Plymouth Rock Squab Company, Melrose Highlands, Massachusetts; of R. H. Barnes, Greenfield, Massachusetts; of Charles C. Gilbert, North American street, Philadelphia. See also *Poultry Advocate*, Syracuse, New York; and "Poultry Guide Book" from Model Incubator Company, 38 Henry street, Buffalo, New York.

Miss M. M., Minnesota. "Please tell me where I can get (a) the names of the Governors of the United States, and (b) a book on Wilson's administration."

(a) From your Secretary of State, or from a current almanac sold by almost any large news or book store.

(b) Just before the last Presidential election the National Democratic Committee issued a number of eulogiums calling attention to the merits of the Wilson administration. The Republican National Committee issued tracts and tomes calling attention to the faults of the Wilson administration. The leading lights of both parties in your vicinity could point the way to these volumes. You might get copies very cheap, second-hand, from local statesmen, now the election is past.

Mr. A. K., Canada. "Please direct me to periodical or other literature that might be helpful to an Industrial Training Board contemplating the erection and equipment of a new building, in a city of about 12,000 inhabitants."

Building Age, 239 West Thirty-ninth; *Building Management*, 119 West Fortieth; *Architectural Record*, 119 West Fortieth; *Architecture*, 527 Fifth avenue; *Hoggson Magazine*, 485 Fifth avenue; *American Architect*, 50 Union Square; all New York.

The Architectural Book Publishing Company, 31 East Twelfth; Architectural Catalog Company, 366 Fifth avenue; Building Trades Index Gompany, 340 Madison avenue; all New York; and Society of Building Commissioners and Inspectors, Secretary F. W. Fitzpatrick, 4200 Sixteenth street, Washington, D. C.

Mr. I. A. S., Texas. "I am reading your *Efficient Living*, a very valuable work, and one that I have long wanted. On page 73 you refer to a standard book on diet. (a) Where can this be obtained? (b) Where can I secure the labor-saving appliances mentioned in your recent article on the Efficient Housewife? (c) Do you know as to the reliability of the American School of Home Economics, advertised in The Independent?

(a) There are many standard books if by "standard" you mean popular and mostly true; there are no standard books if by "standard" you mean wholly applicable and reliable. See Question Box answer 344, in issue of November 13, 1916.

(b) We mentioned scores of appliances—which do you want? These would generally be advertised in women's periodicals, such as *Ladies' Home Journal, Delineator, Good Housekeeping, Ladies' World, Housewives' Magazine.* Write us more in detail, or look up advertisements.

(c) We never guarantee reliability of any institution. But we understand this one does meritorious work, and it surely has fine people connected with it.

Mrs. W. E. C., Colorado. "Where can I get literature that will help me in caring for and training two nervous, high strung boys of seven and three years, one tubercular and perhaps the other? I want something more than general suggestion, or a faddist's pet theory."

Obtain from your physician or local health officer a set of literature of the National Association for Prevention of Tuberculosis; a main object of the Association is to provide instructions for the home care of children with tubercular tendencies. Apply to your Board of Health for modern hygiene bulletins and other publications. Write Efficiency Publishing Company, Woolworth Building, New York, for list of special books of value, such as Dr. Charles Brodie Patterson's "The Will to Be Well," and Dr. William Lee Howard's new book on "Breathing." Ask Dr. Benedict Lust, Butler, New Jersey, how he cured himself of consumption.

Locate nearest branch of the Boy Scouts, talk over your problem with the Scoutmaster. Consult American Institute of Child Life, Philadelphia; also School of Mothercraft, Riverside Drive, New York. Read *Mothers Magazine*, Elgin, Illinois. Get book catalog and copy *Physical Culture* from Physical Culture Publishing Company, Flatiron Building, New York.

Mr. W. B., Ohio. "I am over military age, and want to do something for my country. The Secret Service appeals to me. To whom should I apply for entrance?"

Apply to the Chief, William J. Flynn, Secret Service Division, U. S. Treasury Department, Washington, D. C.

Mr. N. B. R., New York. "Will you kindly suggest some good books on factory management and operation? I am much interested from reading one of your articles on factory efficiency."

Among the good books are the following: "Work, Wages and Profits," by H. L. Gantt, Engineering Magazine Company; "Factory Costs," by F. E. Webner, Ronald Press Company; "Principles of Scientific Management," by F. W. Taylor, Harper and Brothers; "Motion Study," by F. B. Gilbreth, D. Van Nostrand Company; "The Modern Factory," by George M. Price, John Wiley and Sons; "Engineering of Shops and Factories," by H. G. Tyrrell, Engineering Magazine Company; all New York. One of the most recent and comprehensive works is the "Library of Factory Management," in six volumes, a compilation of experiences of more than a thousand manufacturers; published by A. W. Shaw Company, Wabash avenue and Madison street, Chicago.

Miss V. S. A., North Dakota. "I am a domestic science teacher in the high school, and wish to organize a home canning club. Where can I obtain directions for this work, details as to methods, books, and so forth?"

Your object is admirable. Every teacher of domestic science in the United States could, and should, be of superlative help to the Government by leading such an enterprize. It is well known that in many sections of the country more food rots on the ground than is eaten, simply because facilities and forethought are lacking to preserve it. Here is a great field for all women teachers living in the country or small town districts.

You may obtain special bulletins and other literature from the U. S. Department of Agriculture, Washington, D. C. The Agricultural Extension Department, also the Home Economics Department, of your State University, would probably assist you directly, by personal correspondence or the visit of a professional organizer to your locality. Write also American Home Economics Association, Station N, Baltimore; National Housekeepers' Alliance, Washington, D. C.; Housewives' League, 25 West Forty-fifth street, New York.

New bathroom fixtures worth knowing about

EACH fixture in its own way reflects the best current thought on modern bathroom comfort and sanitation.

A. Lavatory. Vitreous China or Solid Porcelain, with wall brackets of the same materials.

B. Bath. Light Weight Solid Porcelain, equipped with Thermostatic valve which controls both temperature and flow.

C. Water Closet. Quiet action, yet flushes *thoroughly.* Flush operated by a push-button valve concealed in floor.

D. Dental Lavatory. A vitreous China fixture of appropriate shape and height. Supplies mixed water to the nozzle and cold water to the flushing rim at the same time.

E. Scales. Platform countersunk in floor. Weighing mechanism concealed in wall. Dial face flush with tiling.

PROSPECTIVE builders will find it an advantage to visit our showrooms below—accompanied by the architect or plumber. Or, write for Mott's 138-Page "Bathroom Book" giving full descriptions and prices of modern equipment, and showing floor plans of 22 model bathrooms, mailed for 4c.

PEBBLES

Watchword for potato growers: Let us spray!—*Passing Show.*

"Eat Less Bread" is the way the posters have it, but "Eatless Bread" would not be inaccurate.—*London Opinion.*

If any good is to come of the convention, both parties must halve their difficulties. In fact, Ireland must drop her Ire.—*London Opinion.*

"Why do you object to your son's smoking?"

"Because he smokes my cigars."—*The Lamb.*

Cohen—Hands up, or I'll shoodt!

Quick-witted Burglar—Fifty dollars for de gun!

Cohen—Sold!—*Efficiency.*

Quite good results in the sterilization of polluted drinking water have been obtained by the use of sulphoridichloraminobenzoic.—*Chemical Journal.*

"What is it, do you suppose, that keeps the moon from falling?" asked Georgine.

"I think it must be the beams," replied George softly.—*Burr.*

First Mosquito Fleet Seaman—What's that wriggling object off there near the horizon?

Second Ditto—Guess it must be a nervous wreck.—*Widow.*

"Who are our rear guard?" asked the commanding general as the retreat was assuming the proportions of a rout.

"Those who have the worst horses, sir," replied the aid without the slightest hesitation.—*The Lamb.*

The One—They've took Mrs. Green's 'usband for the army.

The Other—Took 'im? Why, 'e's got one leg shorter than the other.

The One—So 'e 'as; but that don't matter, yer see, because the ground's so uneven in France.—*Tatler.*

Here is an examination on Child Lore devised by a librarian in Chicago. Can you pass it?

1. For what person or persons was the wool of the black sheep destined?

2. Describe maneuvers of the French army as recorded by Madame Goose and give number of men in the French army.

3. Give short biographical sketch of Solomon Grundy and mention seven important events in his life.

4. What was the net results of the efforts of the royal forces (both infantry and cavalry) to restore Humpty Dumpty to his former estate? Do you see in this any lessons as to the failure of a militaristic system?

5. Describe the coöperative expedition of Jack and Gill and the ensuing catastrophe. From the point of view of emancipated womanhood ought Jill to have preceded Jack down the hill?

An English militant crusader strolled into a barn where a young man was milking a cow. With a snort, she asked, "How is it that you are not at the front, young man?"

"Because, ma'am," answered the milker, "there ain't no milk at that end."—*Atlanta Journal.*

Many amusing incidents occurred to relieve the monotony of the tedious task of sorting the New York State census blanks. One which occasioned much amusement was a blank bearing the following questions and answers:

Q. In what business are you engaged? A. Barber shop.

Q. What work do you do? A. Shave and cut hair.

Q. In what capacity or position? A. Standing up.—*Westchester County Commission of General Safety Record.*

At the farmers' conference in the country store the talk drifted to the work done by the various wives of the committee present.

"Wal," contributed Uncle Ez, "my wife is one in a million. She gets up in the mornin', milks seventeen cows, gets breakfast for ten hard-working men before six o'clock, by heck."

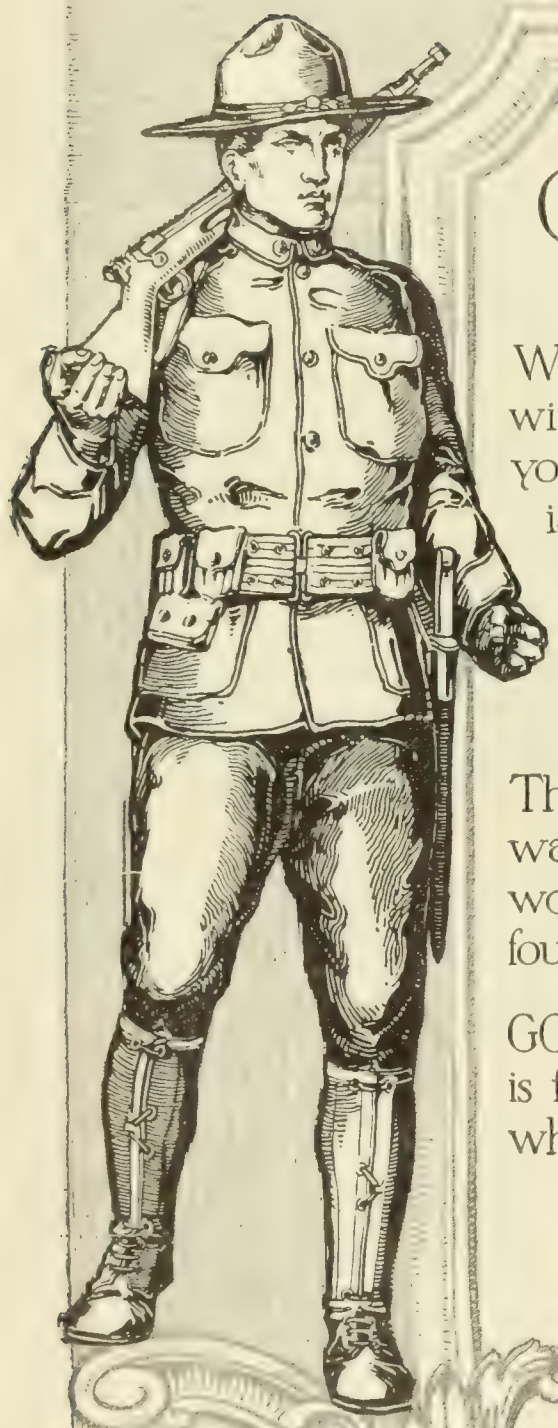
"She must be a very robust woman," volunteered the commercial traveler who happened to be present.

"No, stranger, she ain't whot you'd call so strong; she's more pale and delicate like. Gosh;" with a burst of enthusiasm, "if that woman was only strong, I don't know the work she couldn't do!"—*Everybody's Magazine.*

THE FOOD FIGHT

Under this head, every week, The Independent will print some vital part of the information which is being circulated by the Department of Agriculture to aid American housekeepers in their patriotic and intensely necessary work of conserving food.

SCHOOLHOUSE kitchens where canning can be rightly learned and efficiently done are helping Washington, D. C., to use its surplus of foodstuffs in the best possible way and are bringing to hundreds of women an opportunity to add wisely and economically to the food resources of their own households. Instruction in up-to-date methods, criticism of home-canned goods, and supervision in the work done at the school itself are all provided by skilled teachers. The finished products, of course, go into the pantries of the women who participate in the work.



The equipment provided by one public-spirited woman, who fitted up such a school kitchen at her own expense, cost $82 and consisted of the following articles: five blue and white enameled dishpans, about 22 inches in diameter; three 18-inch saucepans, blue and white enamel; two 12-inch saucepans, blue and white enamel; two quart measuring cups; twelve paring knives; two teakettles; twelve yard-square pieces of cheesecloth; twelve towels; six two-burner gas stoves; one vegetable slicer; one steam canner. Such an outfit could easily be obtained by the women of any neighborhood, and their coöperative efforts, with or without a paid instructor, would have a direct bearing on the food problem of the United States.

For full information about recent improvements in canning and drying processes, consult these bulletins, to be had on application to the Division of Publications, United States Department of Agriculture:

Farmers' Bulletin 839, "Home Canning by the One-Period Cold-Pack Method" (designed for use in the North).

Farmers' Bulletin 853, "Home Canning of Fruits and Vegetables" (designed for use in the South).

Farmers' Bulletin 841, "Drying Fruits and Vegetables in the Home."

GERMAN BLUNDERS

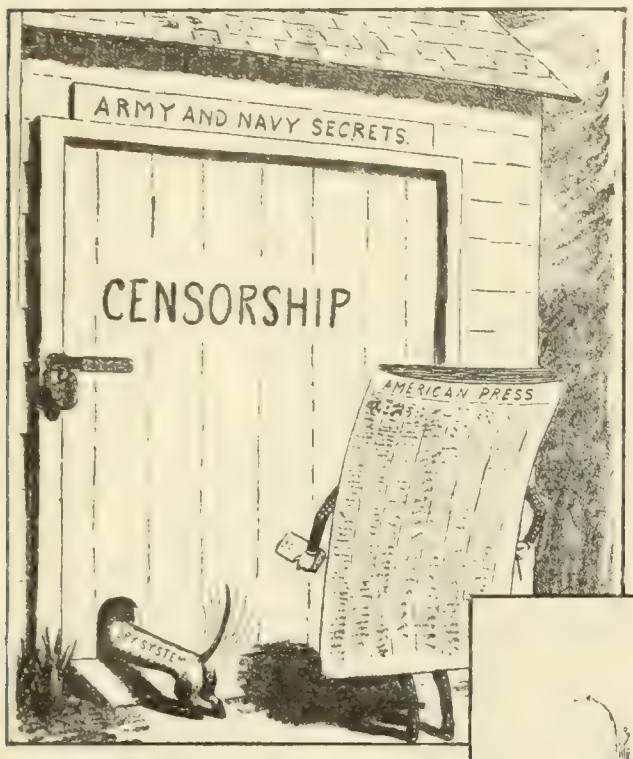
JUST now we are being fed up with British blunders. Every Englishman who comes over says: "We did this at first. Don't make our mistake." The recent report of the committee investigating the Bagdad expedition shows such scandalous mismanagement and incompetence in command as to make Mesopotamia a cursed, instead of a blessed, word to English ears. The report of the Gallipoli fiasco last year was also enough to discourage any people—except the British. It is enough to alienate any allies—except ourselves. We better than any other people ought to understand and allow for it, for we have the same habit of washing our dirty linen in public. It is the custom of democracy. That monarchies like Germany do not make the same disagreeable display does not mean that they have no dirty linen. It means rather that they never wash it. But because there is no such sharp criticism and frank exposure in Germany there has grown up a superstition of German efficiency and inerrancy that needs to be demolished. To overrate an enemy is about as dangerous as to underrate him.

Most of Germany's blunders will not be disclosed till after the war, many of them not till after the secret archives and the memoirs of the chief actors come to light after most of us are dead. But some of her blunders are so glaring that we can see them even thru the battlesmoke.

First among them—the biggest blunder that any nation ever committed—was precipitating the Great War. The defenders of Germany urge that she was not solely or chiefly to blame, but no one questions that she could have prevented or at least postponed the war if she had not wanted it, that she could have called off Austria and made terms with England if she had wanted to. No one questions now that it would have been to her advantage if she had made any sacrifice to maintain peace. No victory could now compensate her for the losses she has already sustained. Germany had everything to lose and little possibly to gain by war. She was prosperous and outstripping her trade rivals. Her last bone of contention with England—the Bagdad railroad—had been removed by an agreement that gave her all she had a right to ask.

But the German generals who had devoted their lives to the study of the problem miscalculated the chances, overestimated their power, underestimated the resistance, misunderstood the temper of their opponents for all their elaborate spy system. In carrying out the plan they made egregious errors. They ran short of shells in the first few weeks. They lost days in Belgium for which the stubbornness of Liège cannot account. It was a psychological mistake to burn the library of Louvain and shell the cathedral of Rheims, and shoot Edith Cavell.

In fact the German armies took the wrong road at the start. Going thru Belgium was not the easiest way. We have Premier Lloyd George's authority for saying that England would not have gone in if Belgium had not been invaded. If the 42-centimeter howitzers had been at first trained on Verdun instead of on Liège, its forts might have crumbled as quickly.



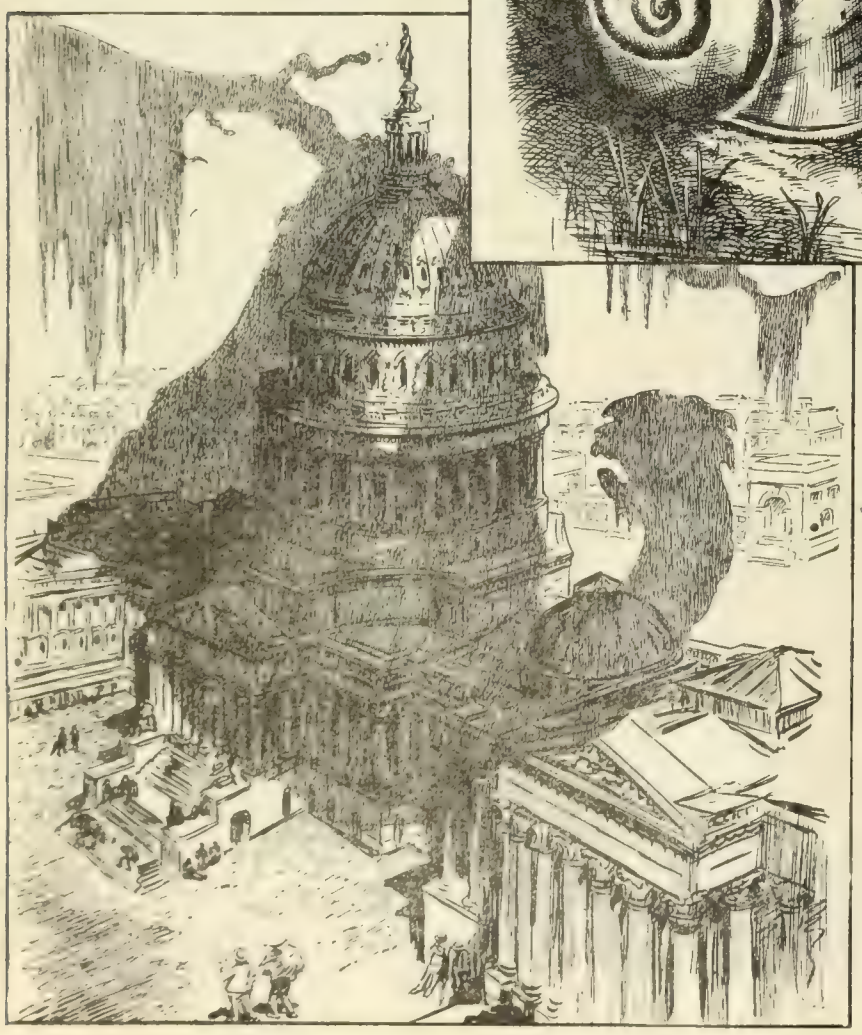
Then there was the conspicuous blunder, not yet explained, of the delay of the Crown Prince to bring his army into its appointed place in the line converging upon Paris. This compelled General von Kluck to swing his army to the left to cover the gap instead of heading toward Paris, and gave Joffre his chance to strike at the weak point on the Marne, September 5. Of all the commanders of the eight German armies that invaded France, none remains in power except the Crown Princes, who are irremovable no matter what mistakes they make. Of the names that figured in the German despatches in 1914, scarce one now appears except Hindenburg. We know why the British removed Sir John French and the French removed Nivelle, but we can only surmize why neither Moltke nor his successor, Falkenhayn, is Chief of the German General Staff.

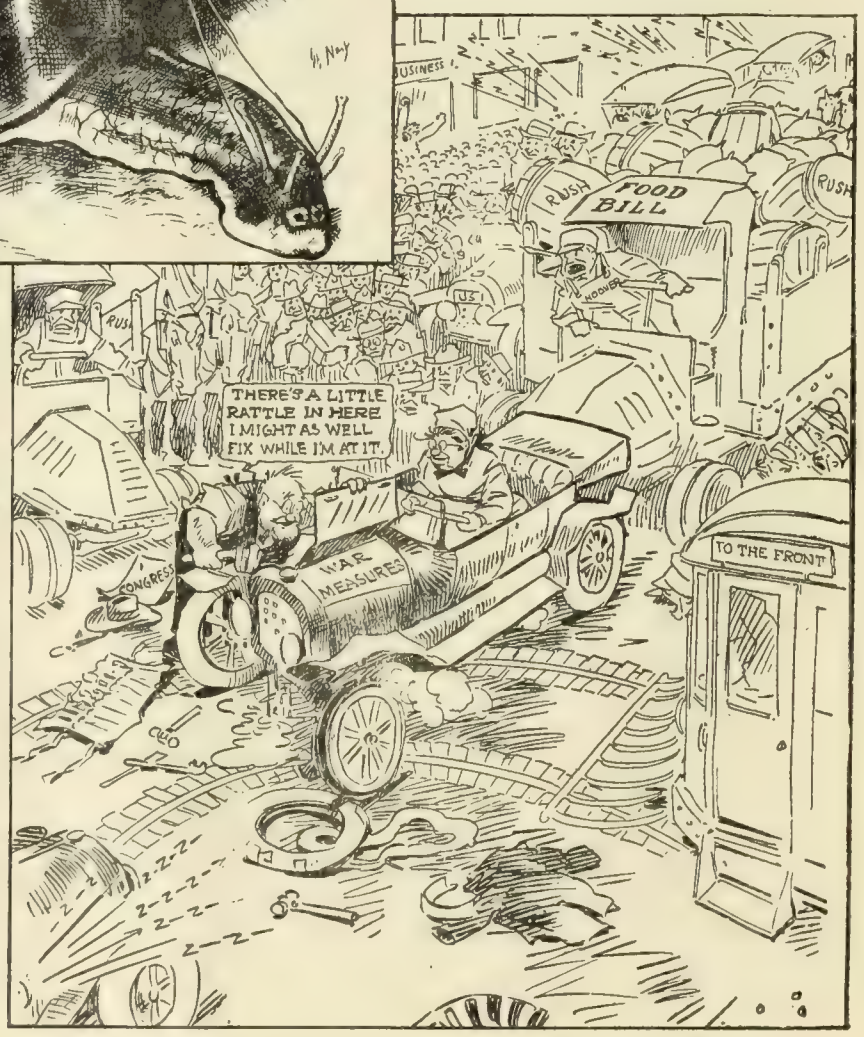
Before the battle of the Marne, or even after it, the Germans might easily have reached the English Channel at Calais, which they have since vainly sacrificed hundreds of thousands of men to reach. At the siege of Antwerp they carelessly left an exit between Ghent and the coast thru which the Belgian and British forces made their escape. Their persistence in the attack at Verdun was a frightfully expensive mistake. The confidence that the Germans placed in the Zeppelins has proved to be altogether unwarranted. The careful calculation of the calories needed by the German people and the complicated system of distribution turned out to be wrong, and Batocki, the renowned food dictator, vanished from sight. In some places there was plenty, in others famine. Last year a quarter of the potato crop rotted in the ground and trainloads of fruit spoiled.

These are a few conspicuous instances of German mismanagement. The list could be indefinitely extended, for anybody can point out mistakes after they have been committed. Anybody can backsee what Napoleon or Grant could not foresee. Our object is not to prove the Germans inefficient, because they obviously are not. It is because they show such disconcerting efficiency that we have occasionally to remind ourselves that they are after all mere human beings in spite of their inhuman behavior. We are not fighting jinns or giants. We should not believe what the Germans say of themselves any more than we should believe what the British say of themselves. That is where the Germans made their mistake, in believing the British when they said, by the mouths of Kipling, Wells and the like, that England was suffering from fatty degeneration of the heart and capable of nothing but muddling. If it comes to a comparison of courage—has Germany the courage to publish in the midst of war any confession of faults like the Gallipoli and Mesopotamian reports?

CARTOON COMMENT

THE WAR IN WASHINGTON





To point the pencil of criticism at the Capitol is a favorite occupation of American cartoonists—for one thing, of course, it's a necessary phase of popular government, and for another, there never seems to be any lack of material for the cartoonists to draw from. Just for fun, and likewise for information, we publish on this page one cartoon first published nearly fifty years ago. Can you tell it from the ones that illustrate the happenings, or lack of happenings, of the last ten days? At any rate, "The Lightning Speed of Congress" drawn by Thomas Nast for "Harper's Weekly" when the Forty-fifth Congress was "deliberating" seems to fit the present situation exceedingly well; even in these days of motor efficiency Uncle Sam is sometimes forced to ride the snail. The two cartoons at the top of the page emphasize a couple of weak spots in national management. Nelson Harding of the Brooklyn "Eagle" presents an effective illustration of the spy problem in "The Closed Door" (at the left). A question of even

more concern to Mr. Everyman is that of the Food Control Bill; Rehse of the New York "World" reproves our "Overloading the Trailer!" In the lower left corner of this page W. A. Rogers of the New York "Herald" shows "The Shadow of Sloth" lifting from the Capitol. Ding's drawing for the New York "Tribune" of the tangle in national affairs while Congress, "The Oblivious Mechanician," stops to fix a rattle in the engine, strikes the keynote of a democracy's difficulties in war

THAT "RICH MAN'S WAR"

"THIS is a rich man's war and a poor man's fight" is the stock phrase of the anti-war agitator and few people have taken the trouble to investigate its fallacy. But a moment's reflection should convince anyone capable of thought that a war fought by means of compulsory military service is not only the poor man's fight. In fact, the proportion of poor men who will be exempted by the selective draft is very much greater than that of the rich. The average son of Croesus, aged twenty-two, is at college or doing nothing in particular or learning the ropes in a business office. The average poor boy at that age is hard at work on the farm or in the factory and stands a good chance of being exempted. The average wealthy married man has a wife with an independent income. The average poor man of family has dependents who must look to him for support. He, too, may be exempted. The average well-to-do man is physically fit because of his outdoor sports and hobbies, he stands less chance of exemption than the ten-dollar-a-week clerk or the factory operative who tends a machine indoors the whole day long.

How about the first clause of the phrase. In what sense is this a rich man's war? For every wealthy man whom war makes wealthier it ruins ten. This war is a conflict between the political system known as democracy and that which rests on hereditary caste, deciding which of the two shall dominate continental Europe to begin with, and afterward the world. Who has the more at stake? The rich man in a feudalistic system can purchase honors and dignities; if he finds political conditions oppressive he can buy his way into the ruling class or spend his life in travel. His chief interest in free government is altruistic. It is the poor man who would be helpless in the grip of Kaiserism. It would not be wholly accurate, but it would be much closer to the truth, to say that "This is a poor man's war and a rich man's fight."

INDEMNITIES AND ANNEXATION

IF the war is to be concluded on the basis of "no indemnities or annexations" we trust that Germany will not only restore the annexations she has made during the war but also the indemnities she has already exacted. While in occupation of Polish, Russian, French, Belgian, Rumanian and Serb territories the German military governors levied huge fines on the civil population, removed machinery to Germany, confiscated or destroyed private property and compelled unremunerated labor. If there are to be "no indemnities" these war indemnities cannot in consistency be retained.

A WARLORD'S CHUMS

"TELL me whom you go with and I will tell you what you are." If there is any lingering doubt in the mind of any one that a German victory would be a menace to the world it is sufficient to study the elements in each nation which are consciously or unconsciously working in the German interest. We do not refer to Germany's formal allies, altho the Turkish alliance alone would discredit any cause, but to the Kaiser's partizans in the Allied or in the neutral countries.

In Russia who is for war with Germany? The ablest and most honest moderates, such as Milukoff and the Constitutional Democrats. The ablest and most honest radicals, such as War Minister Kerensky and the rest of the existing Government. Who is for peace with Germany? The reactionary bureaucrats of the old monarchy who repeatedly endeavored to betray the Russian cause to the enemy until the revolution put a stop to their unpatriotic intrigues. The anarchists who are trying to disrupt the republic and enthrone mob law. Those who gave Russia the worst government in the world are hand in glove with those who wish Russia to have no government at all, when it comes to questions of foreign policy.

In Spain who is pro-Ally? The young King and the Liberals. Who is pro-German? The court circle, which boasts of being more royalist than the King and presents an unyielding front to every movement for reform. In Greece? A statesman like Venizelos favors the Allies and an incompetent autocrat like the ex-King Constantine the Germans. In China? Germany backs a conspiracy to restore the Manchu dynasty. In Ireland? The constructive statesmen of the Nationalist party support the war. The Sinn Fein, futile and impractical dreamers allied with dynamite plotters, are for the Germans. What type of man did Germany select as a friend in Latin America? Huerta!

In our own country what is the record, apart from this war, of the majority of congressmen who attack the Allies or defend the Germans? Read their speeches in the *Congressional Record.* See how much of sound logic, good feeling or broad sympathy with human progress they contain! Try and verify some of the "facts" they allege. Look over the pro-German newspapers and magazines, or those that were so before we entered the war. How many of them represent the best of American journalism? How do the radicals of the nation line up? For America, such Socialists as Charles Edward Russell, William English Walling, Phelps Stokes, John Spargo, W. J. Ghent, Congressman Lunn; the remnant of the Progressives, and the Wilson Democrats. For disloyalty, the I. W. W., Alexander Berkman and Emma Goldman! One might pity the Kaiser for the friends and allies which he has been forced to cultivate, for even he cannot be proud of them.

HINDENBURG VERSUS HOOVER

THE various phases of the great world war and even its spirit and genius have from time to time been succinctly exprest by contrasting some of its striking events, personalities and characteristic types of thought among the peoples engaged. Germany backed Austria in what she claimed to be a struggle for Order as opposed to Anarchy. A favorite antithesis was voiced in the cry of Pan-Slavism versus Pan-Germanism. In the early stages of the conflict men spoke of Von Kluck versus Joffre. Later they pitted Kitchener against the Kaiser. More recently the allied nations have rallied to the slogan of Autocracy versus Popular Government.

The conflicting forces, methods and hopes of both sides may now be symbolized in two names which call to mind dominating personalities and designate characteristic policies and urgent problems of the war. Particularly from the standpoint of America and free democracy the struggle has become a contest between Hindenburg and Hoover, and what they respectively represent. Germany recognizes the fact that her cause is lost unless the frightfulness and destructive power of her great war chief, backed by the organizing ability of his subordinates, are able to thwart in the near future the growing, consolidating might of her opponents. On the other hand, the Allies are pinning their faith to the creating and conserving administration of food supply until their superiority in men and munitions shall accomplish the desired end.

The whole question now resolves itself into this: Will the destructive power of Hindenburg applied thru submarine and airship deplete the moral and material strength of Germany's opponents before her armies are driven back upon German soil? Or will the succor of Hoover sustain the allied forces until their victory is won? It is a conflict of destruction against conservation. The issue depends upon

the ability of the world to conserve its resources in the presence of the Central Powers running wild in the work of destruction. Can the allied nations hold out until the German Government is beaten or the German people starved into revolt?

It is thus apparent that every one may have a part in deciding the war issue. Some may help in battering down the military defenses of the Kaiser, others in creating and facilitating the transport of military supplies, and all the rest in saving food and stimulating its production. Every "wheatless" or "meatless" meal adds to the strength of Hoover in this mighty world conflict. Every useless luxury in eating gives Hindenburg a better chance of winning the fight for frightfulness and destruction. He who adds by his own toil a bushel of potatoes to the world's food supply has aimed a blow at the German military idol. The housekeeper who wastes or destroys, the speculator who disturbs the markets, and the workman who hinders production or easy distribution are all traitors to the cause of Hoover. All must help one side or the other. Choose ye this day whom ye will serve: Hindenburg or Hoover.

SHARE IT WITH THE BOY IN THE TRENCHES

GENERAL PERSHING has asked the people at home for reading matter for his men. He also respectfully but firmly reminds them that soldiers are quite as intelligent as civilians and that the man in France or on the high seas is no more interested in the 1897 files of The School Girl's Friend, than he was before he enlisted. What the soldier wants is current magazines just as soon after they are published as possible. With two simple motions you can give him what he wants. First, stick a one-cent stamp over the notice in the upper right-hand corner of the cover of this copy of The Independent—you will find the color scheme particularly cheerful; second, as soon as you've read it yourself, hand the copy to any postal employee. Repeat the process every week. The Post Office Department has agreed to see that all magazines bearing that notice and a stamp are placed in the hands of our soldiers and sailors at the front. There is a pleasant, mildly romantic mystery about the transaction. It is also pleasant to find anything which is at once so easy and so worth while. The one-cent stamp in the corner of your magazine should become a national habit.

ARE YOU A COLLOID ?

CHEMISTS tell us that there are two kinds of substances. The crystalloid type makes a solution easy to filter and handle, and separates out of the solution as definite, solid crystals. The colloidal type cannot make up its mind whether to dissolve or precipitate, but sticks around the filter paper as a gummy, gelatinous mass. We all know people whose minds work in each of these two ways.

The crystalloid is a dogmatist. His opinions are clear, sharp and unmistakable. He excels in definitions and rejoices in creeds. He can tell why he believes in sublapsarianism or the single tax or some particular kind of proportional representation and in just which respects he differs from the heresies of the gild Socialists or the Old Two-Seed-in-the-Spirit Predestinarian Baptists. In the Middle Ages, when crystalloid minds were thought to be the only kind worth calling minds at all, he could give an absolutely water-tight proof of his contentions on such subjects as "When Balaam's Ass Spoke Was There a Change in Its Vocal Organs?" or the equally lucid question "If a Man Were Converted in the Middle of a Desert Could He Be Validly Baptized in Sand Instead of Water?"

But the extremer sort of crystalloids are scarce today. The colloid has come into his own. He rejoices as much in vagueness and ambiguity as the crystalloid rejoiced in dogma and definition. You may recognize his species by his favorite phrases, each one a cover for an evasion of thought:

"I have a religious *faith* but not a *creed*."

"While recognizing Society we must not forget the Individual."

"My views on the subject of free speech are simple. There should be Liberty but not License."

"I care nothing for mere forms of government. We should have a True Democracy which should at the same time be an Aristocracy in its Highest Sense."

"Of course we may be right in fighting Germany. But at the same time it seems to me that there ought to be a Higher Way."

The way in which the colloid handles religion is one of his greatest triumphs. He never ventures on anything so crude as denial, he will admit that miracles "are true in a sense" and that "there is something in" Mormonism or Christian Science, but neither will he affirm. It may be true as he says that "all religions are alike at bottom," but if you ask him to tell what the common element is it becomes apparent that he has never sounded deep enough to reach bottom himself and simply takes for granted that it is there. One young clergyman of this sort is said to have exhorted his congregation: "You must repent, as it were, and believe, more or less, or be damned—to a certain extent!"

Perhaps the time has come for a little revival of lucid thinking. Perhaps what our creeds require is restatement rather than watering down. Perhaps the chief cause of human misunderstanding is not that people have different views and insist too much upon them but that they will not think out their ideas and find exactly what they mean and whether it is really a thought or only a misleading phrase which divides one sect or party from another. On the whole the modern reaction against making the pulpit a mere fencing ground for logicians was a good thing, but a pastor should sometimes feed his sheep on solid, "chunky" truth. The sheep get tired of having nothing to eat but the pleasant, flower-scented breezes of the summer morn.

THE COUNTRYSIDE

THE countryside is the secret of efficiency for millions of Americans. That is why summer vacations and suburbs were invented. To be sure, the man who first moved his house out into the edge of the open country and went back and forth every day to his work in the city did not call it efficiency; but he was seeking the best, happiest and most comfortable way of life for himself and his family —and if that is not efficiency what shall we call it?

So today the commuter, wasteful tho he may seem to his city colleague who spares himself the hour or two of daily travel, is after all acting in exact accord with sound principles of personal efficiency. No time is wasted which buys temporary release and eventual reconstruction for fatigued bodies and minds.

As a matter of fact there are so many interests in the life of the normal man or woman which can never be satisfactorily developed except on the countryside, that The Independent, in devoting a special section every month to the problems of life in the great zone between the city and the farm, and to the house and its furnishings, the garden and garage, both in the city and on the farm, is only rounding out its own program of greater growth for individuals and communities and plain folks.

To the readers of The Countryside who join this week The Independent family, we are glad to say that the special kind of service for which they have learned to look in their own magazine will not only be continued thru the new channel, but will be strengthened and broadened by its contact with the broader work of The Independent.

THE STORY OF THE WEEK

Air Raids on Paris

Germany has resumed its air raids on the French capital. Since the visit of a hostile Zeppelin in January of last year Paris has been free from aerial attack, altho during those months London was frequently raided. On the night of July 27 several German aeroplanes dropt bombs on railway stations and military establishments of Paris. The French report does not admit either material damage or casualties. The following night the raiders had better luck. Four bombs struck a Red Cross hospital, killed four of the hospital staff and wounded some of the patients. It is thought that these raids were only "feelers" to test the practicability of later attacks on a much larger scale.

On the morning of July 22, a large flock of German aeroplanes visited England but did not venture as far as London. Eleven persons were killed near the coast and a larger number injured, but the anti-aircraft service drove the raiders away with effective artillery fire which brought down one plane over the Channel. British aeroplanes chased the hostile squadron but failed to overtake it. The noteworthy feature of the recent bombardments of French and English cities is that the Zeppelin seems to have been wholly abandoned in favor of the aeroplane, which the Germans have come to regard, with the rest of the world, as a more effective weapon for bombing.

THE GREAT WAR

July 23—Kerensky appeals to Russian army for support. Russians attack north of Pinsk. Twenty-four British ships sunk in past week.

July 24—Germans drive Russians beyond the Sereth. Canadian House of Commons passes conscription bill.

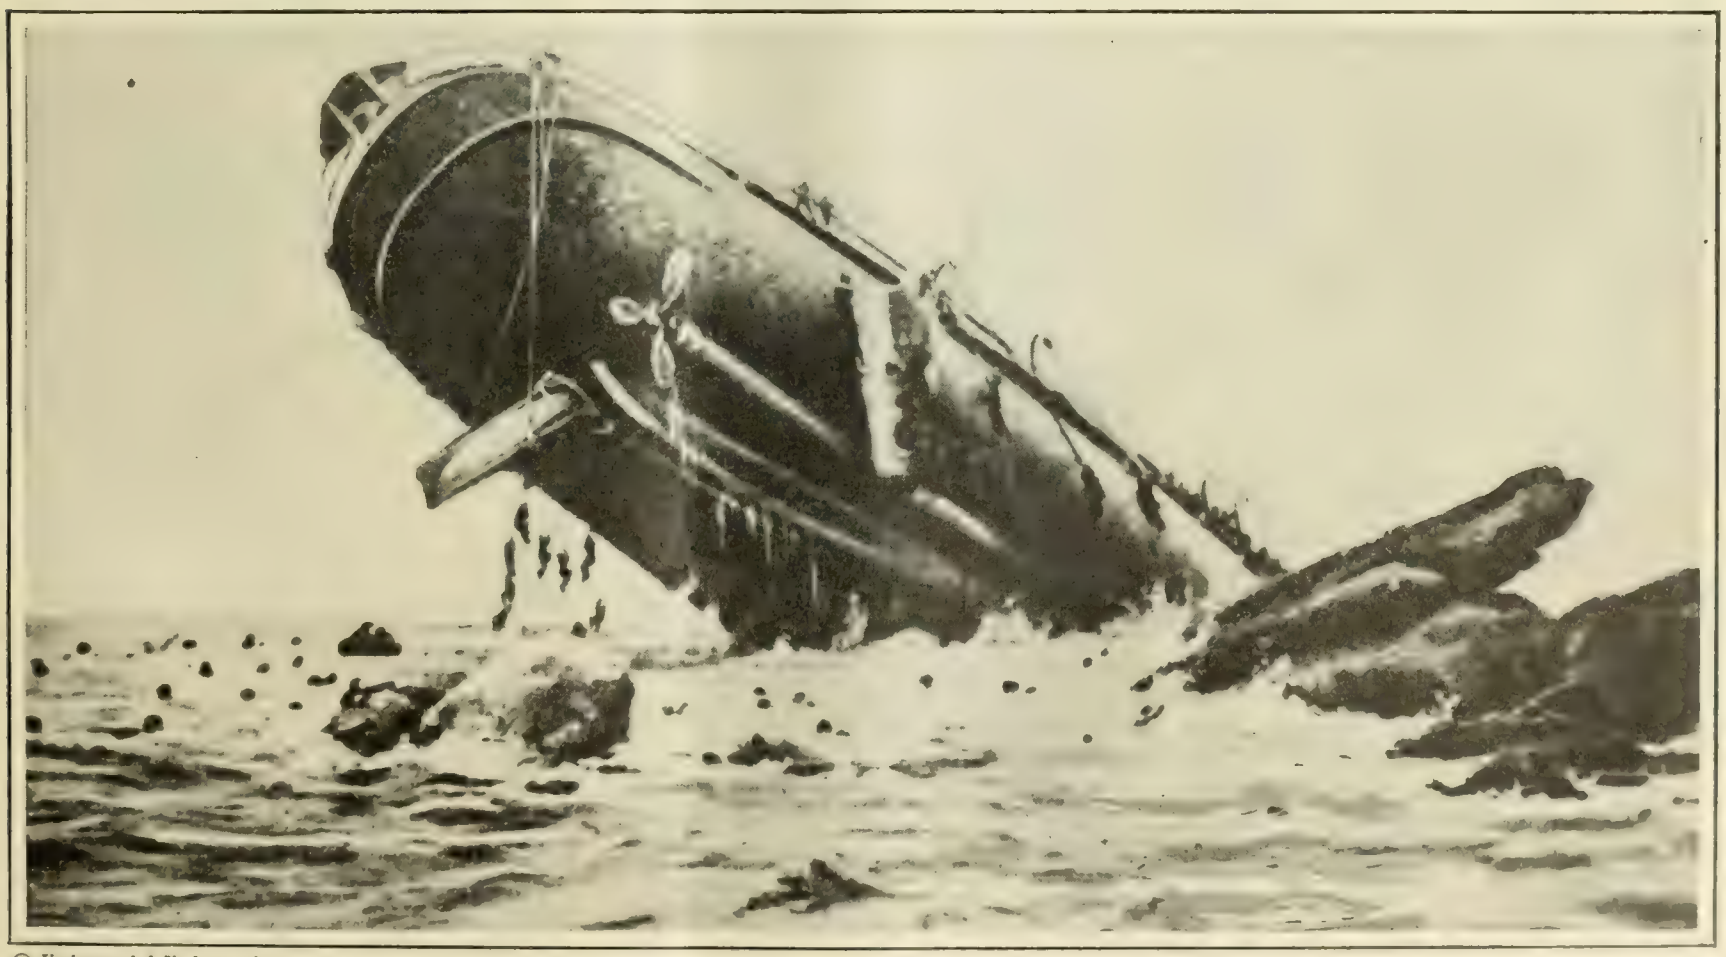
July 25—Russians lose Stanislau. Heavy cannon duel in Flanders.

July 26—British House of Commons votes down peace resolution. Battle on Craonne Plateau.

July 27—Russians begin to retire from Czernowitz. Rumanians make gain. Entente Allies announce evacuation of Greece except Macedonia and Corfu.

July 28—German aeroplanes drop bombs on Paris. Arrival of more American troops in France announced.

July 29—Chancellor Michaelis accuses France of planning conquests in Germany. Russians retire beyond Galician border.



The German Revolution Postponed

The attempt on the part of the German Reichstag to wrest peace and democracy from the reluctant rulers of the nation seems to have died away to mere grumbling, tho doubtless it was prophetic of more serious crises in the future. The new Chancellor, Georg Michaelis, has skilfully avoided committing himself to the Reichstag policy of "peace without annexations or indemnities" while at the same time appearing sufficiently sympathetic to get the necessary war credits voted. The spokesmen of the Entente Allies are unanimous in interpreting his speech on the war aims of Germany as a sign that the imperialists and Pan-Germans are in full control of the situation, but the Germans themselves seem divided in their interpretations. Several radical newspapers express their anger and disappointment with astonishing frankness, but the majority Socialists in the Reichstag were so pleased by the Chancellor's conciliatory tone that they supported the vote for war credits.

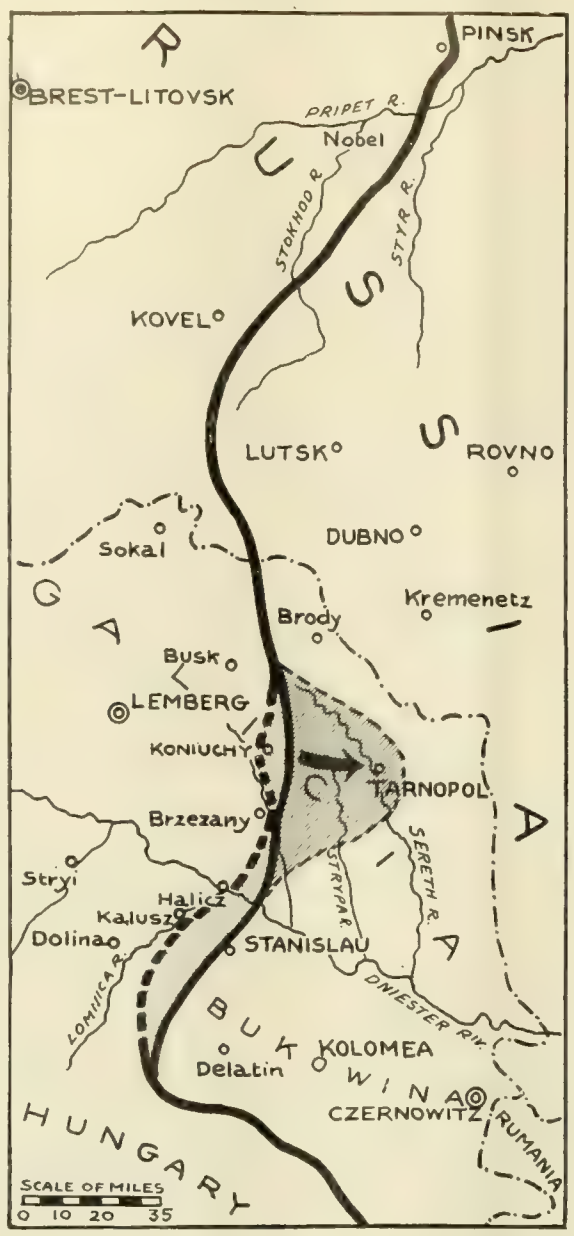
Philip Scheidemann, leader of the Socialist majority, has exprest the willingness of his party to share the responsibilities of government if a parliamentary system of government for the Empire were adopted. The new Chancellor has not the slightest idea of introducing the idea of parliamentary responsibility into his government, but as a partial concession the Kaiser invited the leaders of all the principal parties of the Reichstag to a personal conference at the residence of Dr. Helfferich, Secretary of the Interior.

Artillery Duel in Flanders

In striking contrast to the sweeping advance and subsequent rapid retreat of the Russians is the absence of important gains for any belligerent on the western front. The British have been content for several weeks past to hold their positions, but they have now

© *Underwood & Underwood*

THE SINKING OF A TRANSPORT



This British ship, torpedoed in the Mediterranean, was run on the rocks in an effort to beach her. This photograph shows the crew and soldiers sliding down the life ropes and in the water. Nearly all on board were saved

developed an artillery fire so intense and continuous that it probably foreshadows some new attack. The German cannon are replying as best they can and are sweeping the country far to the rear of the opposing trenches in the hope of interrupting the arrival of supplies. The British seem to have achieved, however, a definite superiority in artillery and also in the air. Many aeroplane duels in recent days have resulted favorably for the Allies. The British have also sent out raiding parties to make local attacks on the German trenches under the cover of night, but they have not yet ventured to resume their general advance. Firing is most intense near the Belgian coast, at the northernmost extremity of the western front, and it is here that the next offensive is expected.

The Germans continue without remission to assault the French positions on the hights north of Craonne. Hardly a day passes without several such attacks, but every one thus far has crumbled to pieces under the fire of the French artillery and only a few have even reached the first line trenches. There seems no military gain to be hoped for from these incessant attacks which is worth their cost. In the Champagne district the Germans are keeping up a violent bombardment. Over sixteen thousand shells fell in the city of Rheims during a single fortnight and only about five thousand of its inhabitants have ventured to remain out of a peace time population of 115,000.

The Great Russian Retreat

The German drive along both banks of the Dniester has continued thruout the week with almost uninterrupted success. Indeed the Russian retirement may not unjustly be compared with the great Russian retreat in the early days of the war when General Hindenburg conquered Poland, occupied Courland and drove the Russians almost out of Galicia, with the difference that the former disaster was due to inferior equipment and incompetent administration, whereas in the present instance the chief difficulty is the failure of military discipline. The greater part of the Russian army is still loyal and stedfast, but a few disaffected regiments have been able to throw the whole line into confusion and compel the rest to join their retreat. In a few days it is possible that for the first time since the beginning of the Great War the Germans and Austrians will have completely reconquered Galicia and Bukowina. North of the Dniester the Russians evacuated Tarnopol, to the south of the river Stanislau, and finally even Czernowitz, the chief city of Bukowina. Worst of all, the losses of the Russians on the defensive probably exceeded those of the Germans on the offensive. Loyal regiments that attempted to make a stand were swept away by the German artillery fire, and regiments that refused to fight were cut to pieces as they retreated. The artillery, as the least mobile branch of the army, suffered most severely, and a large proportion of the Russian field cannon are now in the

THE TWO GALICIAN OFFENSIVES

This map of the July fighting in Galicia shows by the dotted area the territory gained by the Russians in their advance during the first part of the month. The shaded portion shows territory taken by the Germans in their recent counter-attack, still going on in the direction indicated by the arrow

hands of the enemy. Three Czech regiments that had previously deserted to the Russians suffered themselves to be killed to the last man rather than surrender and face a court martial for treason to the Austrians.

To relieve the German pressure on the Galician army the Russian commanders ordered counter-attacks at other parts of the line. But these attacks were frightfully costly and were not always supported as they should have been by the soldiers. A statement from Petrograd about one of these attempted offensives shows clearly that the demoralization of the army is due to sedition rather than cowardice: "Southwest of Dvinsk our detachments, after strong artillery preparations, occupied German positions on both sides of the Dvinsk-Vilna Railway. After this success entire units, without any pressure on the part of the Germans, voluntarily returned to their original trenches." Apparently the soldiers made their charge and took the German trenches as a sort of demonstration of what they could do if they chose. In a northern sector of the battle front a battalion of young women volunteers went into action and shamed the men by their valor and devotion.

Only at one point did the Russians win any success to counterbalance their heavy losses. The combined Russo-Rumanian army in Moldavia, after months of almost total inactivity, has begun a vigorous drive at the southern extremity of the eastern front. This unexpected attack resulted in the capture of several villages, a large number of prisoners and a considerable quantity of artillery and munitions of war.

The White Elephant Joins the Alliance

The kingdom of Siam in southeastern Asia, one of the few independent nations in the whole continent, has declared war on Germany and Austria-Hungary. Since Siam is tucked into a corner between British territory to the west and French colonies on the east it could hardly strike out an independent path in diplomacy or venture to offend its powerful neighbors, but the break with Germany seems to have come on Siamese initiative rather than from French or British suggestion. The Government has seized nine enemy steamers totaling 19,000 tons. The Siamese Government states that its object is to "uphold the sanctity of international rights against nations showing contempt for the principles of humanity and respect for small states." The chief, almost the only, military importance of Siam's declaration of war is that it deprives Germany of convenient neutral ports and puts a stop to the anti-British and anti-French agitation carried on among the natives by German agents. The Allies now control an unbroken coastline from the Mediterranean to China.

The population of Siam is more than eight millions and its area about that of Spain. The army and navy are inconsiderable in size, but are of the European type.

War Industries Board Organized

President Wilson has approved the formation of a War Industries Board of seven members to have supervision of all national purchases of munitions, foods and army or navy supplies of every sort. This powerful board will be directly under the authority of the Council of National Defense. Frank A. Scott, present chairman of the general munitions board, will assume the chairmanship of the new board, and with him will be associated Lieutenant-Colonel Palmer E. Pierce on behalf of the army, Rear Admiral Frank F. Fletcher, representing the navy, Robert S. Lovett of the Union Pacific, Bernard M. Baruch, Robert S. Brookings, and Hugh Frayne of the American Federation of Labor. This organization does not do away with the advisory commission to the Council of National Defence, but it relieves its subsidiary committees of the independent responsibility which they have enjoyed. It is another step in the direction of that administrative centralization which is so necessary in war time. Mr. Baruch, Mr. Brookings and Mr. Lovett will make foodstuff purchases in consultation with Mr. Hoover.

The Submarine and Its Prey

During the week ending July 22 twenty-four British merchant ships were sunk. Only three of these were of less than 1600 tons apiece. This is about the average number of large ships, and much less than the average number of small ships, sunk in each week since the end of February. The figures for the previous three weeks, however, have been so low that the reported losses indicate an increase of submarine activity during the week. Fifteen vessels were unsuccessfully attacked. Not a single French merchant vessel was lost during the week.

There have been a number of recent estimates of tonnage lost. The British Government does not state the tonnage of vessels sunk by submarines, but apparently the Germans have accounted for about a quarter of the British merchant fleet of over 1600 tons, not reckoning the damage done to neutral ships or those in the service of the other Allies. German estimates put the tonnage destroyed in the five months of February to June inclusive at nearly four and a half millions. The average is almost nine hundred thousand tons a month, rising to a crest in April with over eleven hundred thousand, but showing a marked decrease thereafter. Lord Beresford estimates the destruction of British, Allied and neutral shipping since January at four million tons, or nearly 670,000 a month. Whether the British or the German figures be accepted, and in the absence of authoritative official statements the reader is free to believe whichever he thinks the more probable, the situation is sufficiently serious.

Dictator Kerensky

Russia has now a master. The provisional government has made Kerensky not only Prime Minister but dictator with virtually absolute powers so long as the present emergency lasts. Premier Kerensky has reorganized the cabinet which is now chiefly composed of Socialists and other strongly radical elements among the revolutionists. The Workmen's and Soldiers' Council has issued a proclamation reciting the disasters which have befallen the army, ascribing them to "those who have spread discord in the army and shaken its discipline," pointing out that the soldiers who fled were in many cases rewarded by being annihilated by the enemy's fire during their retreat, and declaring that "if this costly lesson has taught you nothing, then there will be no salvation for Russia." This remarkable document ends with the following appeal:

Fellow-soldiers: You want a durable peace. You want your land, your freedom. Then you must know that only by a stubborn struggle will you win peace for Russia and all nations. Yielding before the troops of the German Emperor you lost both your land and your freedom. The conquering, imperialistic Germans will force you again and again to fight for your interests.

Fellow-soldiers at the front: Let there be no traitors or cowards among you. Let not one of you retreat a single step before the foe. Only one way is open for you—the way forward.

Fellow-soldiers in the rear: Be ready to advance to the front for the support of your brothers, abandoned and betrayed, fleeing from their positions in the regiments. Gather all your strength for the struggle for a durable peace, for your land and your freedom. Without wavering, without fear, without disastrous discussions, carry out all military commands. At the time of battle disobedience and wavering are worse than treachery. Your ruin lies in them, the ruin of Russia.

Fellow-soldiers: You are being watched by those who work for Russia and by the whole world. The ruin of the Russian revolution spells ruin for all. Summon up all your manhood, your perseverance and sense of discipline and save the fatherland.

The Dictatorship in Action

The provisional government quickly showed that its demands were meant to be taken literally. The anarchistic faction of Lenine, the so-called "Maximalists," have been forced to surrender the strongholds which they seized early in the revolution and turn them over to the government. Some of these anarchists have been arrested on the suspicion, which in many cases seems to have been justified, that they were traitors in German pay. In several instances the crowd put to death suspected traitors before the authorities could intervene to save them for trial. The death penalty has been restored and effectively used against deserters in the army. Kerensky declares that sooner than permit a collapse of the Russian army and the popular government he will pursue a policy of "blood and iron." General Korniloff, the hero of the Galician campaign, has turned his artillery on retreating troops and punished their disloyal cowardice by massacre. Courts martial, on which soldiers as well as officers will be represented, will try future cases of misconduct in the army. Newspapers fomenting resistance to the revolutionary government will not be permitted to appear.

Central News

CASSIDY AND THE KING

The smallest workman in the British Isles, likewise the proudest!—for John Cassidy was singled out for special approval by King George during the recent royal inspection of English shipyards. "I'm a rivet catcher, Sir," he said in answer to the King's question, and he cheerily endorsed the latter's suggestion that he was a good one, too

The Finnish situation remains uncertain. Finland is proceeding with its new government, virtually independent of any tie with Russia, as if Russian consent were in no way necessary to establish the validity of Finnish Home Rule. The Russian Provisional Government, on the other hand, does not recognize the right of Finland to secede or even to establish an independent constitution before a Russian constitutional convention is held for the whole republic. Fortunately, the promise of autonomy to the Ukraine has won for the Russian Government the loyalty of the Ukrainians and especially the devotion of the Cossack regiments, which are largely recruited from that part of Russia.

The Balkan Conference

The Entente Allies which are especially interested in the Balkan theater of war began a secret conference in Paris on July 25. As the purpose of the conference is military rather than diplomatic the United States will not take an active part in it. Of course the very secrecy of the discussion is a stimulus to rumors about the questions to be discussed. Some foretell that it means an abandonment of the entire Balkan war plan of the Allies and the transference of the armies at Salonica to some other battle front, perhaps the French. The present conference was agreed upon in April and the date of its meeting set for July.

Premier Venizelos has made public the following statement, defining the diplomatic position of Greece:

The reassembling of parliament, which was dismissed by the arbitrary action of Constantine, is the formal resumption of democratic government and the will of the people, in line with the ideals and principles of which the United States gives a conspicuous example. No longer have we a royal autocrat ruling by the divine right of kings and not responsible to the people, but rather a constitutional monarchy in which authority is exercized within strict limits. We look to the United States for continuance of powerful support in working out our own destinies. Greece is now aligned with the Entente Allies.

Since Greece is now controlled by a wholly pro-Ally government, the Entente powers have abandoned all their control over the politics and internal affairs of the nation. No doubt Greece hopes that the Paris conference does not also imply the withdrawal of military support, since Greece alone could hardly resist a new German drive like the ones that steam-rollered thru Serbia and thru Rumania. The Serbian Government has moved its temporary

capital from the island of Corfu to the Greek city of Salonica, which is also the headquarters of the Allied armies in the Balkans. This would seem to forecast a new offensive from Salonica northward into Serbia rather than the abandonment of the city as a military base.

Irish Convention Meets The Irish convention to arrange a program of Home Rule which will be as satisfactory as possible, or perhaps, better said, as little unsatisfactory as possible, to all sections of Irish opinion met in Dublin on July 25. After two days' session and organization the convention adjourned till August 8. Henry E. Duke, Chief Secretary for Ireland, presided over the opening meeting and Sir Horace Plunkett was chosen chairman. Sir Horace Plunkett was the founder of the Irish Agricultural Organization Society, and is credited with doing as much as any living man to increase the prosperity of the Irish people. His nomination met the unanimous approval of the convention, which will probably be unanimous on very few points. The ninety-five delegates represent every phase of Irish opinion that has shown willingness to enter the conference.

The chief difficulties of the Irish convention will not come from within, since wide divisions of opinion are moderated by a spirit of good feeling among the delegates, but from those Irishmen who refuse to have anything to do with a Home Rule conference under British auspices. The Sinn Fein stands aloof and conducts an active propaganda for an independent Irish republic. At present they are attempting to secure the election of one of their faction to Parliament for the constituency of Kilkenny, hoping to repeat their recent success in East Clare. Every success in an election for the Sinn Fein helps discredit the Nationalist party, which is willing to accept Home Rule, and strengthens at once the position of those who would use violent methods to separate Ireland from the British Empire, and of those who would oppose any change in the existing constitution of the United Kingdom.

OVER THE TOP!

An American Red Cross dog making a record jump. These dogs are trained to carry messages and to go out under fire as well as after the battle in search of wounded

WHAT THE REGISTERED MAN SHOULD DO

Unless you have already done so, find out at once your red number. You can learn this at the registration headquarters in your local exemption district.

Lists printed in the daily papers and also on file in your exemption district will tell you in what order your number was drawn.

The quotas for the different districts of the country have also been published. Men will be called in the order in which their names were drawn until the local quota has been filled. Remember that every registered man may be called if necessary to secure the required number of eligible recruits. If your number was drawn before enough other numbers had been drawn to fill the quota of your district it is certain that you will have to report for examination; if your number was drawn before twice as many other numbers had been drawn as would fill the quota of your district it is probable that you will have to report; but in any case you may have to.

You should be notified by mail when and where to report for physical examination if you are wanted. If there is the least doubt about mail reaching you, look up your district headquarters and inquire whether your number has yet been reached. The responsibility is placed on you.

Take your physical examination before you apply for exemption. If you pass this, and wish to be exempted or discharged for service, file your claim with the local exemption board within seven days of your call and you will have ten days in which to make your claim good.

British Finance The House of Commons has voted a new war credit of 650,000,000 pounds ($3,250,000,000). This is the nineteenth war credit asked of Parliament since the beginning of August, 1914, and the grand total comes to over twenty-five billions, including advances to the Allies and dominions of Great Britain of more than a billion. Mr. Bonar Law, Chancellor of the Exchequer, estimated that the average current war expenditures of the British amounted to about $35,000,000 a day. In his speech Mr. Law declared that it was an open secret that the British resources in America had become nearly exhausted when the United States entered the struggle, and that the extent to which the Allies could afford to purchase supplies in the United States depended upon our ability to make loans.

The Canadian Government has decided to introduce an income tax to finance its new military policy of compulsory service. Hitherto there has been no Dominion income tax aside from taxes in the individual provinces. Incomes of unmarried persons over $2000 and of married persons over $3000 are taxed at 4 per cent, and in addition there is a supertax in the bill rising to as much as 25 per cent on incomes over $100,000. Local taxes and money contributed to war charities may be deducted from reported income. There is also a 4 per cent tax on corporation and joint stock company incomes of more than $3000. The estimated yield of the new taxes is from $15,000,000 to $20,000,000. Finance Minister White stated that thus far in the war Canada has spent about $623,000,000 and has loaned more to the mother country than she has borrowed from her. The opposition, including some who objected to conscription, received the income tax proposals with favor.

House of Commons Rejects Peace Resolution In spite of the discouraging situation on the Russian front and the admitted menace of the German submarine campaign, the statesmen who direct the destinies of the British Empire are still as opposed as ever to a peace without victory. On July 26 a resolution looking toward an immediate peace was rejected by 148 votes to 19. The small vote on the resolution was even more significant than the majority, for it indicated that most of the members of the House did not consider the debate on the resolution important enough to require their attendance. James Ramsay MacDonald, who moved the resolution, is a Socialist and an extreme pacifist. He could not carry with him even the Labor party vote but he was supported by a few Liberals, such as Charles Trevelyan, and a few of the Labor representatives, such as Philip Snowden. Mr. Snowden denounced the British Government as the most obstinate opponent of peace, protested against helping France to win back Alsace-Lorraine, and accused the United States of entering the war at the instigation of capitalists and financiers. The supporters of the MacDonald resolution based their case on the Reichstag declaration in favor of peace without annexations or indemnities.

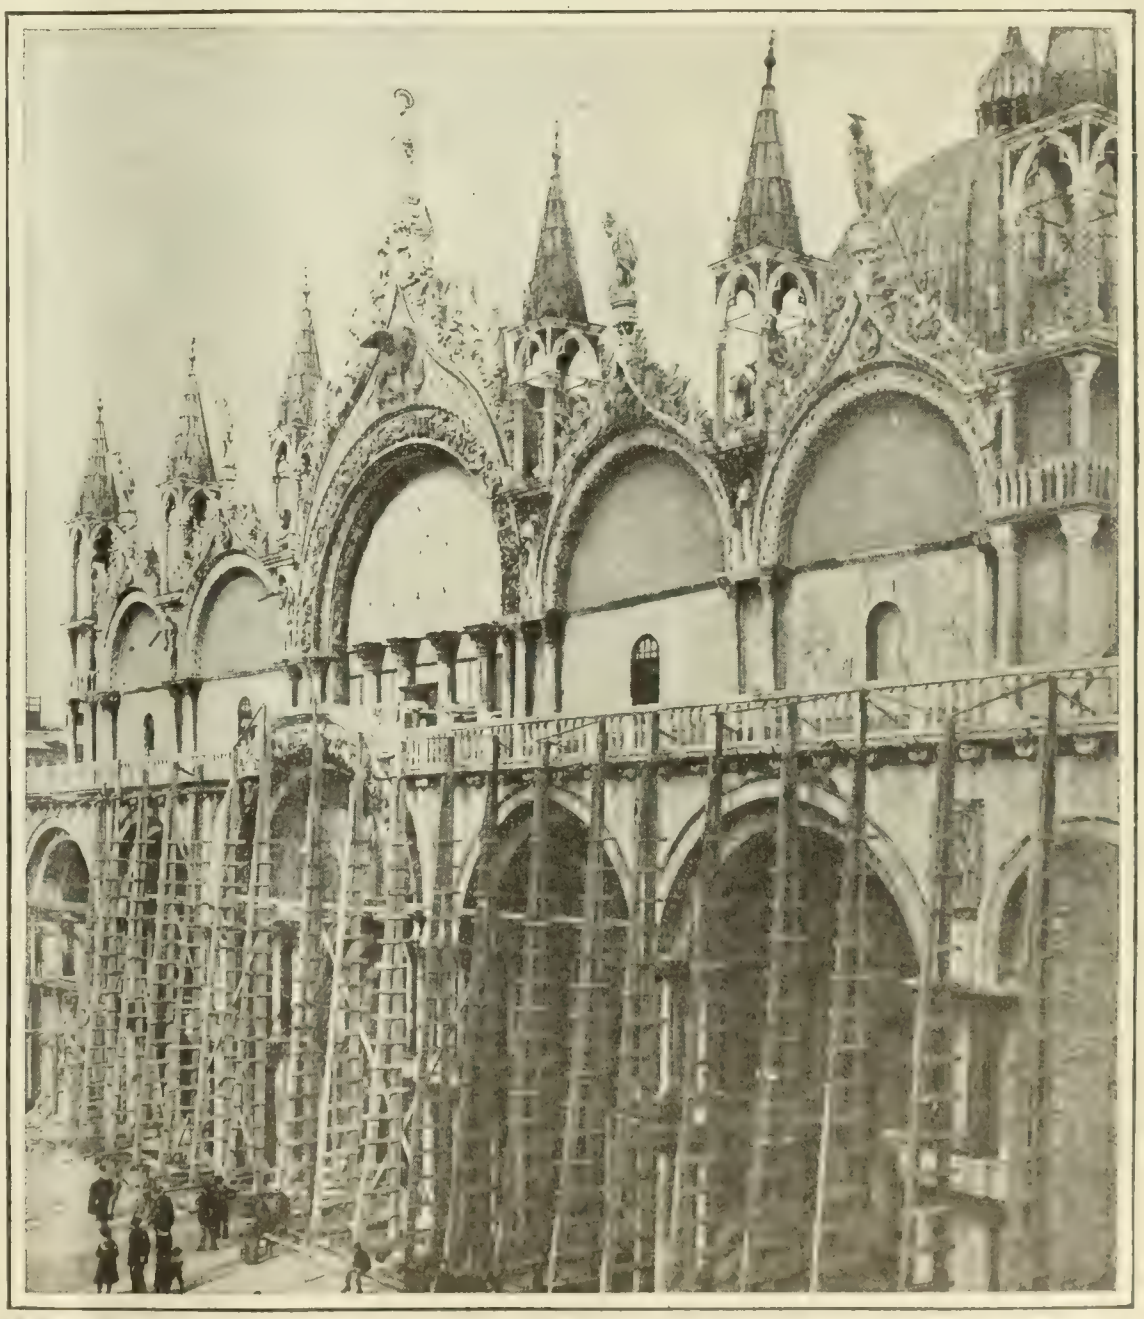
Andrew Bonar Law, Chancellor of the Exchequer, and former Premier Asquith replied on behalf of the Government. Mr. Asquith pointed out that the Reichstag resolution could only be regarded as a pious wish for peace since its terms were vague and indeterminate, and the real rulers of Germany had not stated their position at all. He said that he welcomed the opportunity to discuss with the new Russian Government and with the United States of America the basis of a permanent peace, and that nothing but good could come of a plain restatement of the Allies' terms, but he added that

"no peace is worth having which would restore, under some thin disguise, the precarious *status quo ante bellum* and would leave countries like Belgium, Serbia and Greece at the mercy of dynastic intrigue or under the menace of military coercion." Mr. Bonar Law declared that the war had become a question of staying power and that the Allies were certain to win, in spite of the Russian defeats, if they did not encourage the enemy by showing signs of faltering. The debate in the House of Commons apparently foreshadows a more definite statement of peace terms than any yet published by the Allies.

Peace Talk in Congress

The Reichstag peace resolution has found its reflection in the Senate as well as in the British House of Commons. Senator Lewis of Illinois declared that Chancellor Michaelis's speech to the Reichstag was proof that Germany was eager for peace. He asserted that a truce might now be possible and a final end to the war within the six months if the Allies would meet Germany in a spirit of conciliation. Several Senators replied, denying that Chancellor Michaelis had shown any desire for peace except on German terms which would be as intolerable to the United States as to any other of the Allies. Senator King pointed out that the new German Chancellor had indorsed the administration of his predecessor, von Bethmann-Hollweg, and all of the public crimes which the German Government had committed. Senator McCumber declared that Government employes in North Dakota had been guilty of treasonable speeches and that he hoped the President "will be as active in putting traitors out of the post offices as he was in putting out Republicans." Senators Swanson of Virginia and Lodge of Massachusetts insisted that to accept terms of peace offered by Germany would be equivalent to defeat. Senator Borah, in a long address, while strongly opposing an immediate peace, thought the time had come for the formulation of "the terms and conditions upon which we are fighting the war, and the terms and conditions upon which we would cease to fight it." He declared that America should fight solely because Germany had invaded our rights and that our Government should not emphasize the purely European aspects of the war, such as the readjustment of national boundaries.

The Big Bill Ahead of Us



Secretary McAdoo has astounded Congress by submitting estimates requiring the expenditure during the current year of more than $5,000,000,000 in addition to all that has hitherto been appropriated. The greater part of this must be met by new bond issues, but since there is a strong sentiment in favor of raising part of the sum by taxation the whole war revenue plan elaborated and discussed by Congress will have to go into the melting pot. The taxes planned by the House of Representatives, and the revisions contemplated by the Senate, are both so inadequate that new sources of income must be found or existing taxes be very greatly increased. Some financial authorities question whether it will be possible to float a new war loan so soon after the close of the Liberty Loan unless the rate of interest is raised from three and a half to four per cent.

What is most remarkable is that the requested $5,000,000,000 appropriation does not include new loans to our Allies. There will be further loans, however, before the end of the year, and Congress must somehow provide for these needs as well. No nation at any period since money and war were first invented has spent as much in one year as the United States will spend during its first year of participation in the Great War. The requested appropriation of more than $700,000,000 for pay of the army suggests that a second drafted army will be raised within the year. The big surprize of the army estimates, where everything is on an unprecedented scale, is an appropriation of nearly $2,500,000,000 for the armament of fortifications. It is only a few years since one hundredth part of this sum was considered a liberal appropriation for the purpose. Either the Administration must have military information, not generally known to the public, making the protection of our shores a matter of immediate necessity, or else it is taking this opportunity to place our system of coast defense on a permanent and scientifically complete basis. This sum is believed, hower, to include some large guns for use in France.

President Wilson has exprest his displeasure at the amendment inserted by the Senate into the food control bill for a joint congressional committee to supervise and investigate war expenditures. This section, he wrote to Chairman Lever of the House Agriculture Committee, "is not only entirely foreign to the subject of the food administration bill in which it is incorporated but would, if enacted into law, render my task of conducting the war practically impossible."

River and Harbor Bill Passed

The River and Harbor Bill, carrying appropriations for nearly $28,000,000, passed the Senate on July 26. It now goes to conference, but there is every prospect that the conferees will reach an agreement without difficulty since both branches of Congress have approved the bill and the amendments in the Senate do not greatly alter its character. Like most appropriations of its type the River and Harbor Bill is based on the dis-

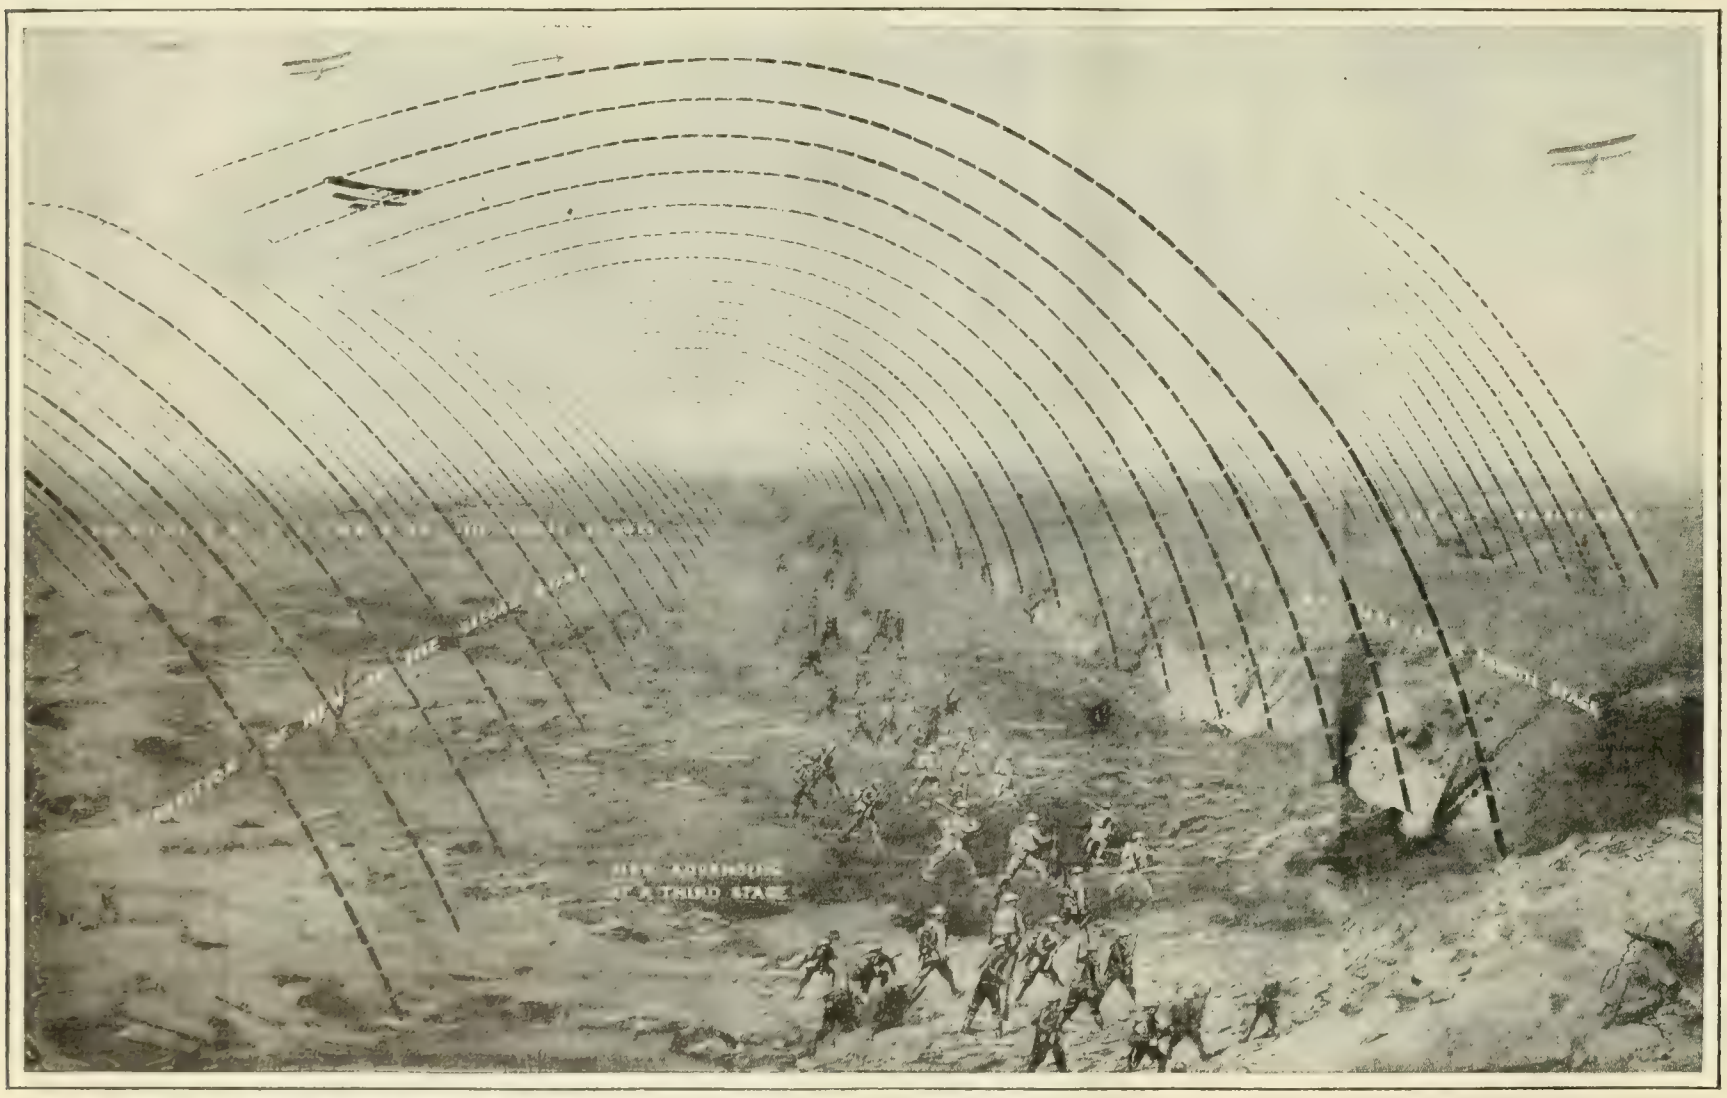
MUST A CATHEDRAL BE BOMB-PROOF?

The Italians have put into effect the lessons learned from Rheims and Arras, and have built up an elaborate bomb defense around St. Mark's in Venice. Already German airmen have made some attempts to bomb the cathedral, but they have accomplished no serious destruction

tribution of public money among different localities in order to win support from all sections of the country as represented in Congress. Fifty Senators voted in favor of the bill and only eleven declared themselves opposed: Senators Ashurst, Gore, King, Pomerene and Shaforth, Democrats, and Senators Borah, Brady, Kenyon, La Follette, Smith of Michigan and Smoot, Republicans. The bill not only makes appropriations for river and harbor improvements, but authorizes the Government to acquire the Cape Cod, Chesapeake and Delaware Canals, and provides for the establishment of a federal waterways commission of seven members to be chosen by the President at a salary of $7500 each.

Altho the bill was passed as a war measure, an amendment offered by Senator Kenyon to place the detailed expenditure of the appropriation in the hands of the President and to confine it to projects of national defense was refused and another amendment which he offered, reducing the appropriation to $15,000,000 and voting it as a lump sum, was defeated by 45 votes to 17. This, in the view of the opponents of the measure, proved the insincerity of the claim that the appropriations were in the interest of preparedness. Senator King, of Utah, led the Democratic opposition to the measure. When Senator Hale, of Maine, defended a special appropriation for Portland harbor on the ground that the British ambassador had approved it as a war measure, Senator King charged the British ambassador with "impertinence" in venturing to discuss an American political question.



Goethals and Denman Out

President Wilson has settled the long-standing and wearisome shipping controversy between General Goethals and Chairman Denman of the Shipping Board by accepting the resignations of both men. For a long time, and in spite of general criticism, the President refused to interfere in the dispute or take sides with either man. The chief question at issue was whether the Government should devote its attention mainly to the creation of an emergency fleet of small wooden ships which could be built early enough to sustain the Allies during the threatened shipping crisis of next winter, as Chairman Denman advocated, or to large, permanent steel vessels in accordance with the building program mapped out by General Goethals. There were also many minor questions, such as the proper price to pay for steel. Because of the dispute over prices manufacturers had to take a chance and build without knowing what would be considered a reasonable profit. In this condition of uncertainty all work, whether on steel or wooden ship construction, progressed slowly and inadequately.

Rear Admiral Capps succeeds Major General Goethals as general manager of the Emergency Fleet Corporation. For a number of years he has had experience as chief of naval construction and had much to do with developing the more recent models of the American battleship. Edward N. Hurley, formerly of the Federal Trade Commission, replaces Chairman Denman of the Shipping Board. In place of Captain J. B. White, who also resigned from the Shipping Board, the President has selected Mr. Bainbridge Colby, one of the leaders of the National Progressive Party and a lawyer of high distinction.

Race Riots in Pennsylvania

Race riots, similar to those which disgraced East St. Louis, have occurred in Chester, Pennsylvania. The trouble began, or at least became critical, with the murder of a young white man by several negroes. In revenge a mob of some five hundred men forced their way past the police into a part of town settled by negroes. One black man turned on his pursuers and shot a leader of the mob who promptly fell dead in the street. But this incident instead of intimidating the crowd added fuel to their fury and increased their numbers until the city authorities were no longer able to cope with the situation. The mob then raided a street car on which were two negroes, bombarded the car with stones and shot one of the negroes as he fled. Another death occurred a few hours later when a policeman was killed by a negro while trying to quell a local outbreak.

HOW TO TAKE THE GERMAN TRENCHES

This diagrammatic view of British soldiers attacking under cover of barrage fire shows four stages of the advance, tho of course in actual attack it is uninterrupted, the men following just after the "monstrous moving carapace of metal." As a British soldier describes it: "As soon as our men left the trenches our gunners laid down a barrage in front of them and made a moving wall of shells ahead of them, a frightful thing to follow, but the safest. It was a wonderfully scientific barrage that dropt in front of the advancing English battalions; it curtained the ground we were sweeping over, and it countered the waiting German batteries beyond the ridge"

TWENTY-FOUR TO FOUR

A TRIAL BALANCE OF THE GREAT WAR AFTER THREE YEARS

BY PRESTON SLOSSON

OF the three years of the Great War, that of 1916-17 has been most eventful. During the first year the important campaigns included the German conquest of the greater part of Belgium and of a corner of France, the Battle of the Marne, the Russian advance in Galicia and East Prussia and the beginning of the Russian retreat thru Poland. The German colonies were all annexed, with the exception of German East Africa, where fighting still continues to this day, and futile attempts were made at Gallipoli and in Mesopotamia to break the military strength of Turkey. During the second year, a deadlock in the west, and disastrous for the Allies elsewhere, Russia was expelled from Poland, Courland and the greater part of Galicia, and Serbia and Montenegro fell before the advancing armies of the Central Powers. Italy, France and Great Britain could accomplish nothing but resistance, and the only favorable omen for the Allied cause was the German failure before Verdun. The third year was marked by four events of outstanding importance: the Russian revolution, the intervention of America, the abandonment by Germany of a large part of her conquests in France, and the renewal of ruthless submarine warfare on a most menacing scale. Three of these events were favorable to the cause of the Entente Allies, but the fourth was hailed by Germany as a prelude to an early victory. The story of the third year of the Great War has been divided into individual campaigns, preceded by a general summary of the war considered as a test of endurance and of the "staying power" of the two belligerent groups.

THE TEST OF ENDURANCE

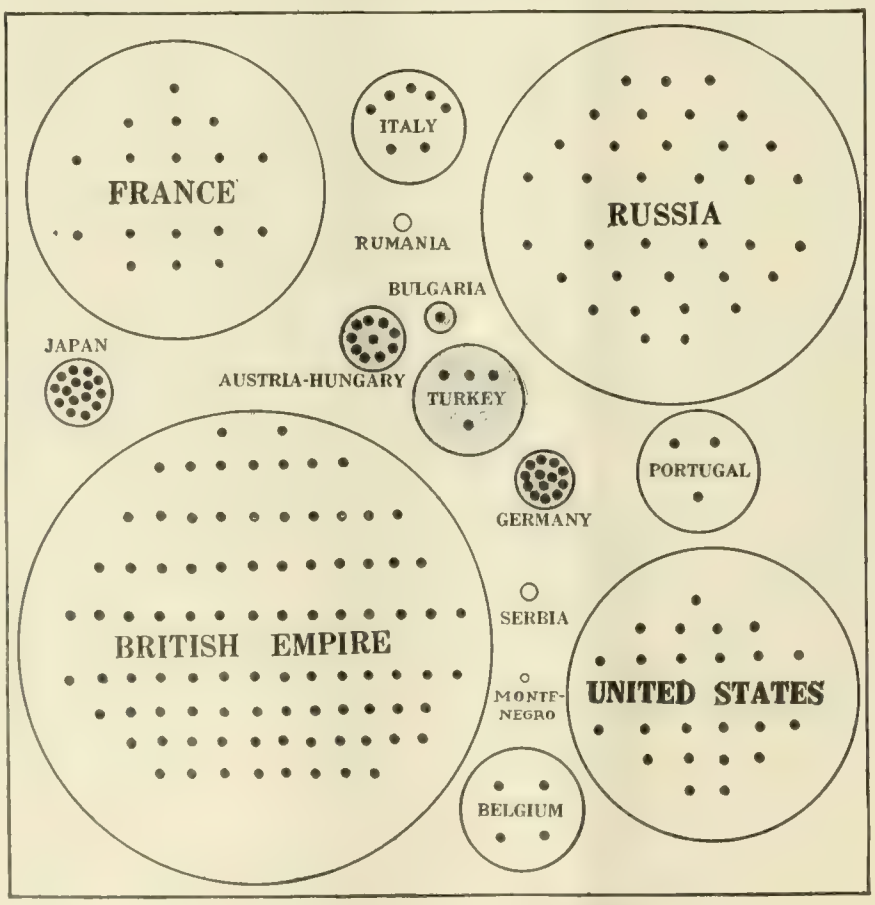
DURING the third year of the Great War it became clear to every belligerent that victory would incline to that side which could afford to suffer longest the strain which war imposed upon the armies and the civilian population. The possibility of a decisive victory in the field was not excluded, but the methods of trench warfare and the facilities afforded by the aeroplane for detecting the maneuvers of the other side made such victories impossible except against an enemy whose numbers, supplies or military spirit had been seriously diminished before the battle. On the other hand, it was no less evident that economic exhaustion would not of itself end the war unless supported by vigorous military action. The Central Powers, cut off from trade with the Allied and neutral world by a three years' blockade, have not yet run short of any necessity of war. The German counter-blockade of the Allies has so disappointed the hopes of the German people that its relative failure is considered chiefly responsible for the present political crisis within the Empire. The sinking of merchant ships by submarines continues far more rapidly than the vessels can be replaced, but not rapidly enough to create a food crisis in England this year, and by 1918 the British hope to have a much larger area under cultivation and to have the assistance of the new American merchant fleet now building. With the other Allies the greatest danger is not insufficiency of food, but the difficulty of securing adequate railroad transportation. The loss of merchant tonnage is unknown, as the British Government, which is the greatest sufferer from the German submarine activity, publishes only statistics of the number of vessels sunk and does not mention particular ships. Various estimates place the total destruction at from 500,000 to upward of 1,000,000 tons a month. Probably six or seven hundred thousand is about correct.

THE COUNTRIES THAT HAVE BROKEN WITH GERMANY

Belgium	*Japan*
British Empire	Liberia
Bolivia	*Montenegro*
Brazil	Nicaragua
China	Panama
Cuba	*Portugal*
France	*Rumania*
Greece	*Russia*
Guatemala	San Domingo
Hayti	*Serbia*
Honduras	*Siam*
Italy	*U. S. of America*

Names *italicized* are of countries actually at war.

THE belligerent nations are enduring the financial drain on their resources even more successfully than the economic effect of the naval blockades. The great loans which are yearly floated are still as a rule oversubscribed within a few weeks of their issue, and the crushing burden of war taxation is still willingly borne by the taxpayers. The warring nations have not even resorted to the reckless printing of unredeemable paper money which in previous great wars has been the usual expedient of governments in financial distress. Of course the economic strain is not unfelt. Quite apart from the heavy taxes; the steady increase in prices, the growing scarcity of capital for industrial enterprizes and the rising rates of interest bring home the huge cost of the war to the public. Estimates differ as to the cost of the war, but it seems likely that the direct cost to the governments concerned for the whole three years must be placed at over $90,000,000,000, or an average of considerably more than $82,000,000 a day. This estimate makes no allowance for the United States, which has still to spend the greater part of its first year's war budget, or for the neutral nations which have had to expand their armaments to protect their neutrality. As time goes on, the cost of war tends to increase with the larger forces put into the field, the growing interest on national loans, and the enlargement of munitions factories. A day's war today costs the world two or three times what it did in the autumn of 1914. The Entente Allies, as might be expected from their greater numbers and vaster aggregate wealth, are spending two dollars to every dollar spent by the Central Powers. Great Britain alone is spending some $35,000,000 a day, but this figure includes loans to her allies.



Besides economic pressure and financial loss there is a third element in belligerent endurance, the loss in man

AUTOCRACY DEFIES THE WORLD

The black portion of this map shows the territory now dominated by the Central Powers. The line-shading indicates territory held by the Allies; and the dotted countries are those which have severed diplomatic relations with Germany, but are not actually at war. The white parts of the map indicate all that is left of neutrality

power. This is not a mere question of population, for it is doubtful if the population of any of the larger belligerent nations, with the possible exception of France, can show an absolute decrease during the last three years. But in this war the cost in lives falls almost wholly upon the physically fit young men, who alone can endure the hardships of incessant trench warfare. Moreover the battle lines are stretched over so many hundreds of miles that either side can compel a general retreat if it can so reduce the number of enemy effectives as to prevent the sending of reserves to strengthen any part of the line which may be selected for attack. The number of killed can only be guessed at, but it seems to be somewhere near the five million mark. A much smaller number, perhaps only one and a half million, have been so seriously wounded as to be useless thereafter at or behind the front. The total number of wounded is about three times as great as the number killed, but the majority of those who survive recover sufficiently under the excellent care afforded by modern military hospitals to see service again in the trenches, and many others can be used to replace uninjured men in civil employment and so release them for the trenches. The death list from disease is notably small in the present war and can be considered important only in the Balkan and Turkish campaigns. The number of killed, wounded and missing among the Entente Allies is fully two-thirds greater than the losses of the Central Powers. Russia has lost the most heavily, both in casualties on the field and in number of prisoners taken; Germany and France come next in respect to casualties, the German losses probably somewhat the greater, but neither has had so many prisoners captured by the enemy as Austria-Hungary, whose casualties have been comparatively light. France, with about two and a half million men on the western front, not reckoning the French contingent at Salonica, seems to have reached her maximum military strength; but England still has many hundreds of thousands of men in training; Italy has employed only a part of her military effectives, and the United States and Russia are practically inexhaustible sources of man power, provided that these nations can solve the difficulties of transport and supply. Germany and her allies are still keeping large reserves behind the battle line to reinforce each new German offensive or ward off each new hostile attack. It is apparent that if the war is to be decided by the number of casualties alone, many months of battle lie ahead of us and the final blow may be struck by the American army when it is increased to the proportions of the gigantic military establishments of continental Europe.

FOR PURPOSES OF COMPARISON

In this chart showing the territory and population of the belligerents each dot stands for five million people and the size of the circles indicates the total territory now in possession of the countries named without considering the gains or losses in Europe during the war. The Central Powers are shaded. The Allied Powers have about thirty times the territory and more than six times the population as well as the advantage of being able to draw supplies from the outside world

THE ALLIED OFFENSIVE IN THE WEST

July 1, 1916—Somme valley offensive started.
July 26, 1916—British occupy Pozières.
September 4, 1916—French capture Soyécourt.
September 26, 1916—Combles and Thiepval taken by Allies.
October 24, 1916—French regain lost ground before Verdun.
November 13, 1916—British open offensive on the Ancre.
March 17, 1917—Baupaume captured; beginning of general German retreat.
April 9, 1917—Canadians storm Vimy ridge near Arras.

The entrenched war frontier which extends from the Swiss boundary to the ocean has for nearly three years been the scene of the greatest, bloodiest and longest continuous military action in human history. Until the summer of 1916 neither

side, in spite of many costly experiments, was able to advance its position sufficiently to gain any strategic advantage, but not a day passed without either assault or cannonade on some part of the long line. The "battle" of the Aisne became a "campaign" and finally a "siege"; the trenches were elaborated from mere ditches into fortifications and winter encampments; the superiority in numbers and munitionment passed from the hands of the Germans to the Allies, but all these changes made no change in the war map. The spring drive planned by the French and British was postponed till July because of the earlier German assault on the fortified city of Verdun, which required all the resources of the western Allies to repel.

During the first two weeks of July the British and French acting in concert had forced back the German line on both sides of the Somme for an average distance of nearly four miles, but their progress was much slower after the Germans rallied their reserves to halt the advance. The Allies strove not only to push the German line farther to the rear but to widen the zone of battle as well. To effect this purpose, the British hammered constantly at the German entrenchments around Thiepval in the valley of the Ancre, while the French bent the German line south and east near Soyécourt. But in spite of every effort winter found the British and French still short of the two towns, Bapaume and Peronne, which had been the objectives of the advance along the Somme. During the campaign in the Ancre valley the British introduced for the first time the use of "tanks," or armored automobiles carried on caterpillar tractors.

In the spring of 1917 the German military authorities decided that they could no longer afford to maintain their old positions in the face of another Allied drive. With skill and secrecy the German forces were withdrawn to a shorter and better located line of entrenchments running just west of St. Quentin, La Fere and Laon. While retreating the Germans so thoroly devastated the country that the Allies could not for many days occupy all the positions which had been abandoned and bring up their artillery and supplies for a renewal of the attack. After the British and French had dug their new entrenchments they repeated with some success their former tactics of striking at the points where the new German position joined the old. At the extreme south of the new German line the French captured Craonne, and east of Arras the British made a considerable advance and within a few days took more than thirty thousand prisoners.

General French of Great Britain
General von Moltke of Germany
General von Kluck of Germany
General Rennenkampf of Russia
Grand Duke Nicholas of Russia

RUMANIA INTERVENES

August 29, 1916—Rumania declares war on Austria. Rumanians enter Hungary.
August 31, 1916—Turkey and Bulgaria declare war on Rumania.
October 6, 1916—Kronstadt recaptured by Austro-Hungarian forces.
October 23, 1916—Mackensen takes Constanza.
November 21, 1916—Rumanians lose Craiova.
December 6, 1916—Fall of Bucharest.

Of all the campaigns of the past year the most encouraging to the Central Powers and the most disappointing to the hopes of the Entente Allies was the four months' contest which ended in the elimination of the Kingdom of Rumania from the list of active belligerents. Rumanian intervention had ever since the beginning of the Great War been one of the main objects of diplomacy. The fact that the Rumanians of Transylvania had many grievances against their Hungarian rulers and the encouraging example of the Russian successes in Galicia induced Rumania to join the Entente Allies and begin an immediate invasion of Transylvania. The armies of Austria-Hungary were already hard pressed on the Galician, Italian and Balkan fronts, and it was expected that the intervention of Rumania, which was said to have the largest and best army in southeastern Europe, would decide the fate of the Hapsburg monarchy. By the end of August the Rumanians had overrun a large part of Transylvania and taken the important city of Kronstadt.

But at the same time that the Rumanians were spreading their conquests westward a combined force of Germans, Bulgarians and Turks entered the Dobrudja, a coast land lying between the Danube and the Black Sea, and prest northward until they had taken the railroad line which reaches the sea at Constanza. To meet this new peril, the Rumanians had to withdraw their army of invasion from Transylvania and they were soon confronted by a double attack; General von Mackensen pushing swiftly thru the Dobrudja and General von Falkenhayn leading a counter-invasion from the west. Caught between these two armies, the Rumanians only saved their army by abandoning their capital and the whole southern half of their country. Russia sent aid, but for some unexplained reason the Russian forces arrived too tardily to

"IF YOU WANT TO WIN YOUR BATTLES, TAKE AN' WORK YOUR BLOOMIN' GUNS"

save the situation. Rumania still holds out against its foes in the northern province of Moldavia, but the rich agricultural region of Wallachia, "a land of corn and oil," is now supplying the Central Powers with the grain necessary to forestall a famine and the petroleum necessary for motor traction.

THE RUSSIAN REVOLUTION

November 24, 1916—Stürmer resigns Russian premiership.
March 11, 1917—Czar declares Duma adjourned.
March 12, 1917—Duma declares Czar deposed.
March 15, 1917—Czar abdicates throne.

It is a common saying that the Crimean War freed the serfs, the Japanese War created the Duma, and the Great War overthrew the Romanoff dynasty. In each instance the test of war showed as nothing else could do how autocratic rule had demoralized the civil government and impaired the efficiency of the army and so lent weight to the demand for reforms. The first great Russian offensive, which had swept forward to Königsberg and Cracow, ended in the loss of all Russian Poland and Courland. The second Russian offensive soon came to a standstill while Rumania was overrun and the promised aid from Russia did not arrive. The transportation system of the country became so badly entangled that munitions could not reach the trenches or foodstuffs reach the cities. Added to all this notorious inefficiency was the rumor of treason; the pacifistic Czar and the pro-German court were generally believed, it is impossible to say how justly, to have negotiated a separate peace. Popular anger sometimes found vent, as in the assassination of the reactionary court favorite Rasputin and in the forced resignation of Premier Stürmer, but the Czar and his advisers refused to concede anything to popular

TWENTY WEEKS OF THE SUBMARINE
This line indicates the number of British ships sunk during the weeks ending on the dates mentioned

clamor and finally ordered the adjournment of the Duma.

The attempt to dismiss the Duma came at a crisis in the food situation. Hunger riots broke out in Petrograd which the troops refused to suppress. The Duma declared itself the provisional government, and the Czar promptly resigned the throne to his brother, the Grand Duke Michael. But the Grand Duke Michael refused to become Czar unless a popular plebiscite declared him Russia's choice, and so the provisional government remained republican in form. The new government imprisoned the Czar and his reactionary advisers, restored the national liberties of Finland, abolished the legal discriminations against the Jews, reformed the harsh discipline in the army, freed all the political prisoners in Siberia, and called into consultation a Council of Workmen's and Soldiers' Delegates. The army not only supported this sweeping program of reform, but showed a disposition to carry the revolution farther than the Duma desired, and, until the Socialist deputy Kerensky became Minister of War, there was real danger that military discipline would wholly disappear. Even the inspiration of early victories did not prevent some regiments from deserting their duty when the Germans began their counter-attack. The progress of the war was further hampered by the tendency of some parts of Russia, notably Finland and the Ukraine (Little Russia), to proclaim their virtual independence from effective control by the Petrograd government.

THE THIRD RUSSIAN OFFENSIVE

September 8, 1916—Brusiloff halts at Halicz; culmination of second Russian offensive.
July 1, 1917—Russians take Koniuchy; beginning of third offensive.
July 10, 1917—Russians occupy Halicz.
July 19, 1917—Germans begin counter-attack.

After General Brusiloff's advance in Galicia had been checked by the combined armies of Germany and Austria-Hungary, the battle line of eastern Europe from Riga to the Carpathians remained unaltered and almost quiescent until the following July. The winter weather would in any case have checked military operations, but it is certain that the Russians could not have made a very vigorous drive even if the weather had been favorable, since they had largely exhausted the store of ammunition with which they began the campaign and were also hampered by the disloyalty and incompetence of the civil administration. After the deposition of the Czar the Russian revolutionists were divided into

Kadel & Herbert

The "entente cordiale" between the United States and France grows more real every day as American troops continue to go overseas and to enter with enthusiasm upon their task of helping win the war. The poilu's attitude toward Sammee is best illustrated, perhaps, by the poster in the center of this page. Its welcome is unmistakable, but it does not stop to say so. From the troopship to the battle line the poilu points the way; this is the time when only actions count! The line of French soldiers at drill, photographed above, focus the thoughts of France. The Americans on the transport below are just getting into "a French seaport." The censor has painted out the name of the ship, we can't tell you, either, which troops these are; but their anonymity makes it somehow easier to see in this group of eager soldiers the essence of American willingness and determination

The keystone of fighting America. West Point Academy has graduated in all nearly 6000 officers for the United States Army. This is the entrance to Cadets' Barracks; on the hill in the distance is West Point's famous chapel

"We must build ships, not talk about them!" The new chairman of the Shipping Board has struck the right note to satisfy the national impatience after weeks of futile controversy over the case of wooden ships vs. steel. President Wilson gave former Chairman William Denman and Major-General Goethals, recently General Manager of the Emergency Fleet Corporation, plenty of time to settle their differences or to effect a compromise; his acceptance last week of the resignations of both men clears away the tangle for a fresh start on our ship-building program, which now will probably emphasize the importance of steel ships, but will include wooden vessels, too. The photograph below shows a picturesque point in the building of the forest fleet; there are approximately a million feet of lumber in this particular ship. Above is one of the most essential units in steel ship-building, a riveter fastening down the heavy deck plates

Here are the men whose job it is to help us win the war by putting on the seas more cargo-carrying tonnage than German submarines can take off. Rear-Admiral Washington Lee Capps (at the left), who succeeds General Goethals as General Manager of the Emergency Fleet Corporation, was formerly Chief Constructor of the Navy. The skeleton or "basket" mast, distinctive of United States battleships, is one of his inventions. Edward N. Hurley, Mr. Denman's successor as chairman of the Shipping Board, was appointed to the Federal Trade Commission in 1913 and later became its chairman

OUR WAY WITH ALIEN ENEMIES

AT THE INTERNE CAMP SOMEWHERE IN THE UNITED STATES THE OFFICERS AND CREWS OF GERMAN LINERS ARE ENJOYING A VACATION AT UNCLE SAM'S EXPENSE

BY EARLE HARRISON

The administrative personnel of the big ocean liners has been transferred very largely to the Interne Camp. The purser of the "Vaterland," for instance, and the chief steward of the "Prinzess Irene" (left and right above) are in charge of feeding all the men in camp

It's vacation all the year for the officers and crews of the German ships taken over by the United States Government. About twenty per cent of them are paid to do the work of the camp; the others study or go in for the various sports—croquet has a good-sized following

The group of officers in the center have helped to organize classes in English, history, mathematics, engineering and so on. But they haven't let their studies interfere unduly with their recreation; the Interne Camp manages to combine the two very pleasantly indeed

WHEN the United States Government took over all the German ships in this country, the question facing our officers in Washington was, "What shall we do with the officers and crews?" It was obvious they could not be kept at Ellis Island, except, perhaps, for a short time, until some suitable place could be found.

Early in June our country was offered a property in the Appalachian Mountains, then being used as a resort. The location was ideal; well in the interior, away from large towns and cities, yet accessible to food and other supplies. The property had a large hotel upon it capable of housing from seven hundred to a thousand persons, and, altho somewhat out of repair, ready for immediate use.

After careful consideration, this property was leased, and within a few days several hundred German officers and men were sent there. The work of altering the property, and afterward, the care of the Germans, was placed in the hands of United States immigration officers, who have proved themselves thoroly efficient.

Among the Germans interned are expert mechanics, steam and water fitters, electricians, carpenters and, last but not least, splendid cooks. According to international law interned officers and men from the enemy's ships cannot be compelled to work, therefore in order to utilize the usefulness of these men, our Government offered $20 a month to those who volunteered for work. The immediate response solved the labor and help problem.

All the food is prepared and cooked by the chefs and cooks from the transatlantic liners; the plumbing, which was in bad condition, is rapidly being put to rights by ship engineers, and the laundry is operated by stewards who are experts, having done work of this kind aboard ship.

The food is procured in a rather unusual manner; instead of the Government, it is the Hamburg-American Line, thru its well organized purchasing department, which does the buying, the United States reimbursing the Line at exact cost, no charge being made for the use of the purchasing department. In this way foodstuffs are bought cheaper than would be possible otherwise, and there can be no cause for complaint from the Germans, as they get just what they are accustomed to eating.

Altho the Government pays all who work $20 per month, this amount is not given them in cash; they are not allowed to have large sums of money in their possession, so each worker gets $3 in cash and the $17 balance is placed in the Postal Savings Bank to his credit.

Roughly estimating, I should say twenty per cent of the interned men in this camp are working for "Uncle Sam." The other eighty per cent, composed largely of officers (some of them of the highest rank in the Hamburg-American Line and the North German Lloyd Line) occupy their time in study or at games, sport and light work which they do purely for exercize and amusement. Of course the Government pays nothing for the planting of flower beds, cutting or rolling the grass, cleaning out the swimming pool or building the summer houses.

There is no objection to the interned Germans using the swimming pool or playing tennis or croquet, in fact it is encouraged, but such work as is necessary to keep the pool and grounds in condition is up to the Germans, if they intend to take advantage of these pleasures, made possible by the character of the former use of the property.

The camp was scarcely a week old before the Germans had arranged classes in English, history, mathematics, engineering, etc. Among themselves they

The interned Imperial German Band recently raised $4000 and gave half to the German Red Cross and half to the American

have chosen their leaders and instructors who carry out this work. Special attention is given vocal music, and under the direction of an experienced leader fine concerts are given. There is also an exceptionally fine band, one of the three of the Imperial German Government's; it has been in China for fifteen years, coming to this country some time ago en route to Germany, but was unable to get any farther than New York, and is now interned. During a tour of several American cities, prior to our entrance into the war, this band raised $4000, half of which was given to the German Red Cross and half to the American Red Cross for use on the Mexican border. In addition to the vocal concerts the band plays twice a week, on Thursday and Saturday, the repertoire consisting of all kinds of classical and popular music. The chorus confines its program to hymns and folk songs.

The Government allows newspapers (American) to come to the camp, also allows letters and telegrams to be sent and received, but of course these are opened and censored, and must be written in English.

I have slept and eaten in this camp, have talked to the officers and men, seen them at work and at play, and from all I have gathered I am convinced they are contented, altho for appearance sake they champ at the bit, lamenting the fact that they are unable to join the Kaiser's forces.

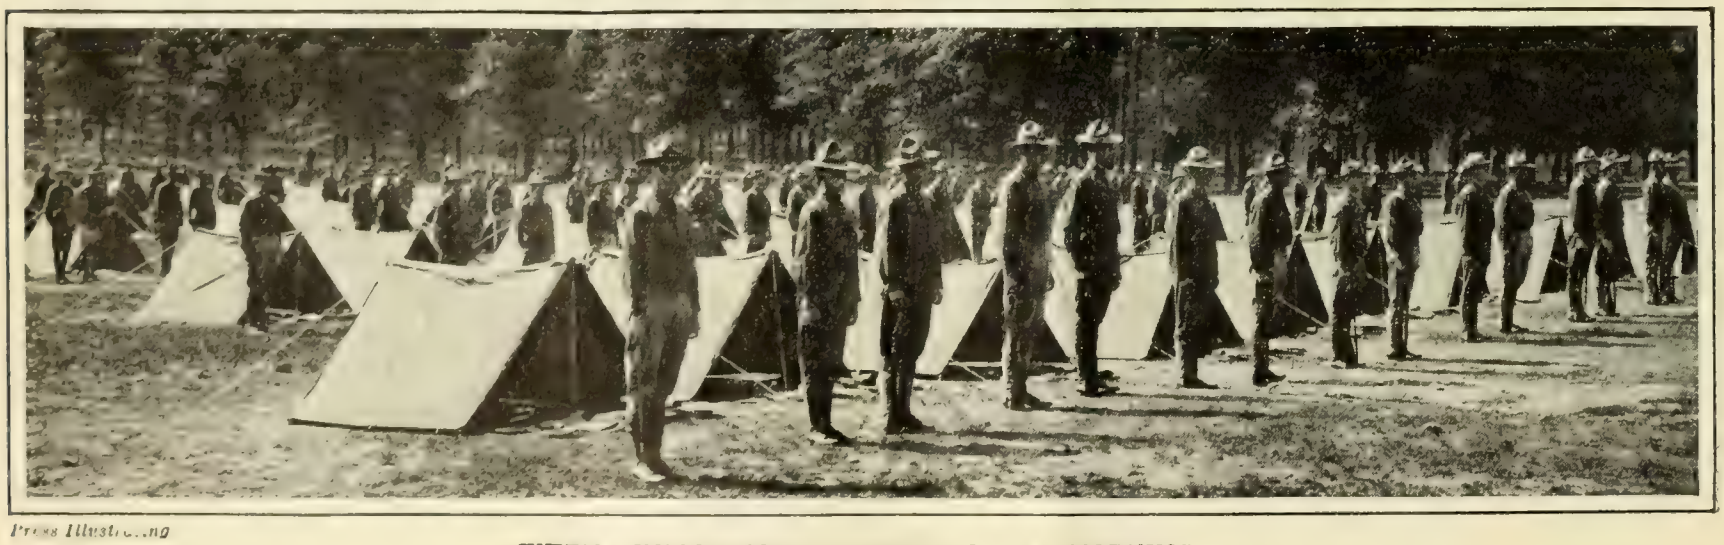
It is not possible for any officer or man to complain of his food, since it is provided by his own people and cooked to his own taste. It is equally impossible to complain of his room or surroundings; he has more room space, considerably more, than he is accustomed to aboard ship, and the surroundings are perfect—they are the works of Nature at her very best.

There is a diversity of occupations at the Interne Camp, ranging all the way from laundering to teaching mathematics. A good number of the men have made the most of these excellent facilities for acquiring skill at some outdoor work on land—gardening, of course, is the most profitable and popular; but there are times when the men prefer to sit and talk, or perhaps just sit

PITCH-PIPE AND POMP AT NIAGARA

BY HERBERT REED

RAIN passed away at last from saturated Fort Niagara, leaving the "happy encampment" to the growing grind of the last days of training for the Pennsylvanians who are to lead the new hosts—to the dusty hike, the tests of endurance under a blazing sun which in itself is a large factor in the final determination of fitness for the great task in hand. And with the new light on green lawn at the post and the bush country of march, countermarch and bivouac, came almost (but not quite) by chance, a new light on the dull drive of the work. For the workaday encampment turned for the time being from the drab pounding of the uphill road to the commissions that lie just over the brow of yonder slope, to the blazonry of formal function with its dash of color, to the resonance of brass music and the reverberation of that swinging, mass singing that all Topside has been clamoring for and has not known how to achieve. The Russians came, and with their advent, everything that was latent in the military sense came to the surface. There was pomp, and there was sound. It is more particularly of the sound that I am to speak this time, of its effect and of its causes; but for the moment let us take up with pomp.



ALL the quiet, persistent, dull work of the army officers who had been making the leaders of the New Army, came to the surface that day, to meet with unmistakable appreciation on the part of Lieut. Gen. Vladimir Roop and his entourage (a word rapidly regaining ground these days), not to mention Colonel Miller, the camp commandant, and Major Averill, the jolly cicerone of the visitors. Down from their heavily policed automobiles descended the Russians, resplendent not in the Verestchagin manner, but merely by comparison with the O. D. cotton of commandant and command, the while yokel and city man alike carefully forgot to uncover lest some one should discover that the band was playing the Russian National Anthem. Proceeding thence to the parade ground the visitors reviewed some sixteen hundred men who, had they been encased in the gray and white duck of West Point, would have done honor to that famous institution. It is no part of my plan to make invidious comparisons, but if Plattsburg has any such review as that in its system, it has not been my good fortune to witness it. The situation was just a little tense, for here were really hard worked men, in some cases men a little worried about what the immediate future had in store for them in the way of service to their country; but as is always the case with men in whom the seeds of subconscious discipline have been planted, they came up to the mark handsomely.

CAME then, the dramatic touch. A few sharp commands and the regiment formed three sides of a square. To the center of this stage, which was no stage at all, an orderly called a stocky, broad-shouldered man in citizen blue, armed only with a pitch-pipe, long years of experience in handling men, and a determination evident in every move. Just prior to his advent the Russian general had addrest the officers-to-be in resonant English—this talk to the troops a custom that has been prevalent in all the history of the Russian arms, and that comes to us just at this time rather happily when the stress of public and private utterance is on the linking of the new democracy and the old. The cheers died away, the stocky man in blue, hat removed so that the patch of white just over his forehead stood out like a plume, raised both hands, gave the key, and with a sudden gesture swept the 1500 into the swinging rhythm of "Pack Up Your Troubles in Your Old Kit Bag." From brick-walled barrack after barrack the echoes came winging on the wind that swept in evenly from the lake, rolling in on the throng of spectators in their July finery, and the visitors from overseas. Every one caught the spirit of the thing, the Russians, a musical people, perhaps more keenly than the others. The song swelled and mounted, that volume of sound that is so stirring when it is built of men's voices alone. It was an open-throated song, a splendid song, that happy mass effort for which all Topside has been waiting—and the country, too. It was unexpected, unanticipated alike by conductor and chorister. It was unrehearsed, and it was guiltless of staging beyond that of opportunity, which has always been the finest setting that could be asked. Song after song was called for by the man in blue with the little pitch-pipe and the one accusing finger on either hand which in all these years has been wont to level itself like a rifle at the laggard voice. But on this day there was no laggard voice.

I have said that this great good moment with its democratic significance came not quite by chance—for there had been slow, steady building up to that moment. As in every situation of this kind, success in the mass is always the result of some personality thrusting up to gather the fruit of quiet, unremitting, undiscouraged labor. This time the personality was that of the quiet but commanding man in blue. Something of a coup in the mass singing line he had planned for the following day, it seemed, but opportunity came riding in with the Russians and he and his fifteen hundred were on the spot to seize it.

I like to feel, and I am confident in so feeling, that that day's singing will go ringing down thru encampment after encampment until it reaches the outermost fringe of those shadowy millions of whom I spoke in the first article of this series. We like to feel that we are not *thrusting* arms upon these our fighting men. They have taken to arms without compulsion other than the honest urge within them. Thus too, they have taken and will take to this singing, for it is deep down within them, especially at this time. It was because the song impulse is deep down in these our fighting men that the man in blue of whom I have spoken was able to achieve the triumph of Fort Niagara's big day in the public view.

WHEN "INSPECTION" SOUNDS IN THE MORNING

THE TASK OF THE "TALENT"

BY CHARLES M. SHELDON

One of the best known clergymen in the country, pastor of the Central Congregational Church of Topeka, Kansas, and author of "In His Steps," Dr. Sheldon is also a popular Chautauqua lecturer and speaks from experience of the platform end of this American institution.—THE EDITOR.

I could write a library on the fly-infested, mosquito-haunted, bathless and comfortless hotels of the United States of America. The circuit of the Coöperative Chautauqua Association covers some fifty towns mostly in Illinois, Indiana and Ohio. My own schedule has put me into twenty-four towns in twenty-one days including one extra date in Virginia. It has involved some five thousand miles of travel, and if there is anything more designed to strike the Chautauqua lecturer with deep gloom and homesickness than the average hotel of the small towns in the Middle West, I do not know what it is. The broken fly screens, the ragged curtains, the dirty wash-bowls and pitchers, the grimy towels, the filthy soap, the suspicious looking bed, the cracked looking glass, the dim irreligious little electric light, the sticky salt cellars, the unnamable coffee, the unspeakable toilet arrangements, all conspire to give the traveler who has to be in a new town every day a feeling of physical and mental depression which he can overcome only by accepting the average hotel as a part of the program of a lecturer's life. The Chautauqua management is not to blame for these hideous conditions. But somebody is. I wonder that the great army of Gideons does not do something. And I also wonder if the great Chautauqua crowds of cultured, intelligent, well-housed people living in the well-to-do town ever realize that the man up there on the platform, or the "Talent" doing its best, has just come out of a hotel room into which no one of the Chautauqua people would ever put a guest. At one town of 4000 population, I spoke to an audience of 3500 people, and outside the tent was a line of automobiles half a mile long. The town was rich in beautiful homes. And I had come out of a "hotel," the "best" in the place, where my room did not even contain a chair, and the only place I dared lie down was on the *outside* of the bed.

Illustrations drawn for The Independent by W. C. Morris

I LOSE HEART

Of course, the reformer should be able to rise above his surroundings. That is true. When it comes to the hotel in the small American town, I not only rise above my surroundings but I get up as early as I can and "check out." I confess I have as much courage as most men, and I believe we can get rid of the saloon and bad politics and war, but when it comes to reforming the hotel in the small town, I lose heart.

The program of the Chautauqua includes entertainment, instruction, drama, music, and just plain lectures. I am in the last named class. All the people on the program are known collectively as the "Talent" and so spoken of by the Chautauqua "Bureau." We are booked for a regular date, at a fixed hour, afternoon or evening or both. The reason for the particular booking is a mystery to the "Talent" which the "Bureau" does not explain.

For example, I am at this writing in Mattoon, Illinois, 171 miles south of Chicago. Last Sunday I was in Arcola, fourteen miles north of Mattoon. But Monday I was in Freeport, Illinois, 113 miles northwest of Chicago. I jump from Freeport to Mattoon, going thru Arcola, where I was last Sunday, to come to Mattoon for Tuesday. This makes double travel, and it is constantly happening. The Chautauqua

WHAT MAKES A TOWN GOOD ?

BY J. HORACE McFARLAND

PRESIDENT OF THE AMERICAN CIVIC ASSOCIATION

THE answer to the editor's question may be made in several ways. A community may be "good-looking" and yet not be good, but as I see it, a really good community is sure to be good-looking. Some commentators would consider a town good if it made a strong response to the Billy Sunday impulse, even if it was as ugly as the usual revivalist's "tabernacle." (I wonder how these gentlemen venture to take that word from the Bible to describe the hideous structures they seem to like, without paying any attention to the design obvious in the book of Exodus to make the tabernacle of God a thing of notable physical beauty and attractiveness?)

Let us visit a town which the American Civic Association would call good. It will need to be a composite of many communities, to be sure; but all we are to see may be found in some one of the many American cities, towns or villages which are more or less "good."

We arrive in the good town, on our first visit, by railroad. The entrance of the railroad is thru a pleasant street, apparently, for we see no unorderly back-yards, no piles of manufacturing waste, no sign-plastered buildings in various stages of decrepitude. (The quantity of signs on a building is usually in proportion to its value; the more ramshackle and tumble-down the stable or shop, the worse its eruption of civic smallpox of signs! Is it not curious that apparently sane business men will pay real money to thus advertise their wares on the most decrepit and loud-smelling shacks?)

The agreeable entrance into the good town has taken the train past busy manufacturing plants, but they are orderly, and good to look at, avoiding the waste and inefficiency of messy surroundings. The railroad itself is clean and "slick" along its right-of-way, which is not decorated with discarded material, waste paper or junk. It transports us to a spacious station, thru which we pass in appreciation of the greenery of the surroundings that speak loudly of good management and courtesy.

But it may have been easier to arrive in Compositeville by way of the trolley car, which passes us along thru cleanly suburbs to the central district. The trolley poles were almost invisible because they had been designedly fitted into the tree-scheme of the streets. The arrival was at a well-located trolley terminal, where we found shelter and information, provided as a business-like part of the transportation service.

The central "square" or plaza in this good town is not a repository for municipal junk in the way of old cannon, curious iron fences and "fountains," or other memorials of bad taste. There is a monument, to be sure, commemorating a notable bit of local history, but it is of dignified design, suitable to the place it occupies, well supported by the right trees and shrubs, and not encumbered with encroaching poles, either for flags or wires. These townsmen think that their town expression ought to be simple and appropriate.

BY the radiating streets in the good town we are at once advised that the city-planning has been wisely done, for the people rather than for the "real-estaters." It is just such planning as, if applied by a capable architect to the problem of a home, would produce satisfactory, healthful and convenient living conditions.

The detail of these streets interests us. It is evident that in this "good" town there is more thought for the comfort and happiness of the people than for the prosperity of the paving companies, the makers of cast-iron, the sellers of electric current. The streets are reasonably wide, and they have been made less costly to the people as a whole by two items of thoughtful provision. A building or "set-back" line in the residence streets provides equality of light and open space inside the property line, thus effectively widening the channels thru which must pass not only traffic but the air and light which are requisites for health.

The other item of forethought is evidenced in the harmonious relation of the sidewalks, the grass plots in which are planted comfort-giving trees, and the smoothly paved roadway for vehicular traffic. Compositeville has not made the common error of paving by random, without reference to the eight-foot lines of traffic which the wise city-planner considers. In the business districts, too, there is consideration for the pedestrians, and the sidewalks, free from intrusion by steps or other projections, are ample.

A model street arrangement of sidewalk, grass plot, light fixture, tree and house foundation planting

These streets are well furnished, we observe. Where there are trolley lines, the poles are, as in the entrance streets, practically concealed by the trees. There are no other poles, for electricity, in common with gas, water and complete sewerage, is carried under the street surface.

The lighting standards, simple and graceful, but unobtrusive, are designed to give even illumination at low cost, and, of course, there are no swinging electric arc-lamps. These people want illumination, and not a mere display of raw light!

All the other street furnishings of curbing, sewer, inlets, fire-alarm boxes, trash receptacles, etc., are in keeping.

THE residents of Compositeville have easy access to playgrounds, parks and social centers. An acre of open space has been provided for every hundred of the population, and the playgrounds are carefully equipt and as carefully maintained. Consequently the open air habit prevails, and home gardens are plentiful and beautiful. The modern schools—all having ample and well-fitted play spaces about them—are year-round social centers as well; for these wise people believe in keeping their property in use. The saloon has gone out, and its place is much more than taken by these centers, where there is organized provision for recreation.

Of course Compositeville drinks pure water, for the town controls the supply, which is filtered so as to free it from impurities and disease germs, and its safety is assured by daily bacteriological examinations.

Pure milk is assured, too, and the public markets are kept clean.

There is a fine spirit of coöperation in Compositeville. The churches preach a seven-day and not a mere Sunday Christianity, and their pulpits talk town economics, just as Moses first discussed them on the plain before Sinai. The town is liberal and friendly, for it is a happy place in which to live and work. It is cleanly, and of course it is sightly. It is not afraid to pay, thru just taxation, for its efficient service; which, its residents realize, is the cheapest thing they buy between the cradle and the grave.

Compositeville is, as I thus bring together its elements, all economic, all business-like, a good town

Multiplier onions "before and after"

VEGETABLE RESERVES FOR WINTER

BY HUGH FINDLAY

THIS is the season of the year when we must bring up reinforcements to occupy the freshly made trenches between the rows of vegetables that have done and are still doing their duty.

The successful war garden ought to produce two or three crops per season. There is still time to get a late crop, maturing during October, except in gardens so far north that killing frosts may be expected early in that month. The dates given on this page are for the latitude of New York City. For every hundred miles north or south add or subtract from five to eight days.

But the time for raising this crop *from seed* has gone by, except in the case of late spinach, turnips, etc. The war gardener who has not provided adequately for the latter end of his garden by sowing in June and July must buy his seedlings now—and that is well worth doing.

LATE BEETS

AUGUST 1 is not too late in the North to sow such varieties as Detroit Dark Red and Crosby's Egyptian Beets. The soil should be made fine and loose as well as rich; much depends on this preparation. Rows twelve inches apart, the plants thinned from two to three inches apart, with the seed planted in drills about one inch deep, will insure proper growth and development so that the crop may be harvested by the latter part of September. Frequent cultivation and a little nitrate of soda just before a rain applied two or three times during the growing season is advisable.

LATE CABBAGE

WITH a little special attention, a late crop of cabbage may be successfully grown at this late date. Month-old seedlings should be purchased; they will mature, in good soil, by October 15. The Flat Dutch, Autumn King and Danish Ball Head are the best three late varieties. The plants should be healthy and stocky and may take the place of any early crops if the soil is cultivated again and more plant food is added in the form of decayed manure. If you are fortunate enough to have part of your garden clay loam, that is the place for your cabbage. The late varieties require more room than the early sorts; 24 by 36 inches will be ample space for the crop to mature to full size.

Before transplanting, which should be done on dull days or in the evening if possible, water the cabbage bed heavily if you have your own seedlings ready, so that the soil will adhere to the roots when the plants are removed.

There is no operation so important in the culture of cabbage as cultivation; this should be done frequently after 10 a. m. and before 5 p. m. If the plants are getting sufficient moisture and plant food, the foliage is brittle in the early morning and in the evening, but during the heat of the day there is little or no danger of breaking the foliage with your implements. Cultivate every week and do not be anxious if the cabbage does not head before cool weather sets in. It is a cool weather crop, and can stand from 5 to 10 degrees below freezing. In fact, some of the varieties do not start to head until cool weather. If a few heads have not matured before the first severe frost, cover them with sufficient soil to keep them from freezing and they run a fair chance of heading even then.

LATE CELERY

FOLLOWING early peas, lettuce or radish, transplant such varieties as Giant Pascal, Winter Queen or Boston Market. The soil should contain a good deal of decayed vegetable matter in the form of manure and should have, above all, a liberal supply of moisture all the time. Celery cannot stand a drought. Muck soil is, of course, ideal, but a high grade celery may be grown on a garden loam if fertilizer and moisture are added. This is late to introduce late celery into your garden, but stocky plants, about twenty-five days old, will mature by October if they have favorable conditions and special care.

On transplanting cut back a little of the tops and roots. Water freely after planting in the open. The planting distances are extremely variable and depend to a large extent on the methods of blanching. If boards are used the rows may be two feet apart and the plants set six inches apart in the rows. If banking with soil is the method followed, the rows should be at least three feet apart.

The one requirement that should be followed to the letter is to keep the celery growing vigorously from the time of planting until it is time to store it. In small gardens where manure is available, cultivate several times until about September 1, then mulch the rows with manure, keeping it away from direct contact with the stems, of course. The rain, or watering if necessary, frees the plant food, and the straw acts like a sponge, holding the moisture. Wherever liquid manure is available apply a weak solution once a week; be careful not to get it into the heart of the plant, but at the roots. If the plants are slow in growing and appear a little yellow and sickly, apply a little nitrate of soda and water freely. Keep a dust mulch between the rows.

SPINACH

A bed of spinach may be started early in August. Manure a strip of land very heavily with decayed horse or cow manure, mixing it very thoroly with the soil, which should be made fine by raking over the surface. The space should be about four feet wide and any length desired. Draw the trenches one inch in depth and the rows twelve inches apart, making four rows to the bed. After planting and covering the seed, press down the soil and give the bed a thoro watering. As soon as the plants appear above ground, cultivate at least twice each week until frost, when such a variety as the New Zealand should have reached full growth.

This variety of spinach can stand severe drought and a considerable frost—but not a severe frost. The plant grows vigorously during the clear, cool days of fall and becomes very hardy with the increasing cold. Just before the hard frosts begin to come, cover the bed with a little clean straw or other litter. As the weather becomes more severe increase this to a depth of from three to five inches. Throw a few branches over the straw to keep it from blowing out. If by chance a few warm days set in, it is advisable to remove carefully some of the litter so that the plants may have air (but they should not be exposed to the sun). The straw and branches catch and hold the snow which is an added protection. The spinach keeps beautifully during the winter and becomes tender by early spring. Before the frost is out of the ground the litter may be removed and the spinach cut. If plunged into cold water it is ready for cooking in an hour. This crop supplies the table with one of the most healthful foodstuffs before anything in the open garden has started to grow.

MULTIPLIER AND EGYPTIAN ONIONS

THE multiplier sets are usually planted in rows twelve inches apart, the sets four inches apart in the rows. In the North, where the winters are severe, a mulch of straw or manure will insure proper protection. This should be removed as soon as spring arrives and the onions allowed to mature. It takes about six weeks for these onions to mature sufficiently before freezing weather. Because of its hardiness, the Egyptian tree onion is most desirable in the North; this variety should not be mulched until after the ground is frozen.

LATE TURNIPS

THE soil for the late turnips, like all of the root crops, should be a sandy loam and very fertile. It takes from six to nine weeks for the turnip to mature. After the early crop of sweet corn has been removed, pull up the stalks, cultivate the soil, and apply a little well decayed manure, working it well into the soil. Then sow the turnip seed in rows twelve inches apart, and about one inch in depth. Thin the plants to about two inches apart in the row. There is no advantage in having the turnips large before storing them away for winter; the large turnips are usually tough and full of fiber. Such varieties as Aberdeen, Purple Top, White Globe, and White Milan are good keepers and will mature before the severe frost if sown in August.

A WAR BUDGET FOR THE HOUSEHOLD

BY STUART CHASE

There is just one way, in countryside or city, to accommodate the family income with maximum efficiency and minimum hardship to the extraordinary condition created by the Great War. That is to know what you are spending and plan your future expenditures on the basis of that knowledge—in other words, to make a household budget and make it work. We asked Mr. Chase to discuss the puzzling things which happen to the family budget in wartime because he has already written very clearly and helpfully on the budget and because he brings to the subject the equipment of an expert public accountant.—THE EDITOR.

WAR raises havoc with the household budget; at least it does with mine. We have just compiled our expenditures for the six months ended May 1, 1917. We find that we have spent just $295 more than our budget permitted us to, and by the same token we have spent $294 more than for the same period a year ago; that is for the six months ended May 1, 1916. We live in a six-room apartment on the outskirts of Boston and the family consists of three, the baby being nearly two years old. Here are the figures:

TABLE I

Two Adults and Child

Six months ended May 1, '16	May 1, '17		% Increase
	Actual Expenses	Budget	Actual	1917
Food	$168	$185	$266	58
Shelter	297	300	313	5
Clothing	164	200	224	36
Operating	246	250	334	35
Advancement	211	150	243	15
Total	$1,086	$1,085	$1,380	27
Income	1,150	1,250	1,305	13
Surplus	$64	$165		
Deficit			$75	

NOTE.—We have eliminated from the 1917 figures a maid whom we did not have in 1916.

Food has cost us 58 per cent more than it did a year ago, in spite of the fact that for the past three months Mrs. Chase has paid cash for all her groceries, thus saving 5 per cent over the old method of monthly bills. Meat, furthermore, has entirely disappeared from our table. Fifty-eight per cent is a cruel increase, but it is not incompatible with the figures as reported by the *New York Times Annalist* for substantially the same period. The *Annalist* index number shows the fluctuations in the average wholesale price of twenty-five food commodities selected and arranged to represent a theoretical family's food budget.

For April 24, 1915, the index number is 154
For April 22, 1916, the index number is 166
For April 21, 1917, the index number is 270

The increase from April 22, 1916, to April 21, 1917, is 63 per cent! Dun's index figures show increases from April 1, 1914, to April 1, 1917, as follows:

Dairy and garden products... 84 per cent
Meat ..... 46 per cent
Foodstuffs (general) .....105 per cent

It is only too evident that the increases in our own food budget must be reflected in the food budgets of the country.

Our item for "shelter," which includes rent, gas and electricity, has not increased proportionately. Our rent of $45 a month has not been advanced, but it is safe to say that while we do not suffer in this regard our landlord's profits are being drastically cut by the increased cost of coal, and the suburban householder suffers likewise. The *Coal Trade Journal* states that the average retail price of anthracite range coal in New York was $5 a ton in January, 1915, and $8.75 in January, 1917.

Our clothing item has advanced 36 per cent over last year. This is due in part to the greater outlays for our small son, who has been crawling thru rompers at the rate of one a week or thereabouts, but Dun's index figures show a 49 per cent increase in all clothing since 1914.

Operating expenses include service, laundry, health, telephone, carfare, lunches, and sundries. The increase is 35 per cent, but a part of this is due to a large dentist bill.

"ADVANCEMENT" IN WARTIME

NOW we come to perhaps the most debatable item in the war budget. You will note that we allowed only $150 for "advancement" ("advancement" includes recreation, education, books, periodicals, gifts, charity, club dues, etc.), and we spent $243! Undoubtedly we could have kept it down to $150, but the fact remains that we did not. We did not have the grit to sacrifice the moderate extras that our middle-class standard of living had accustomed us to. We continued to buy books, to subscribe to magazines, to take a winter outing in the mountains, to go to an occasional concert and play (unfortunately the local stock company in a fit of incomprehensible sanity is playing Shaw and Galsworthy, Ibsen and Oscar Wilde this year) and to donate recklessly small checks for unpopular causes, such as suffrage and the Consumers' League, all of which was quite human perhaps, but from the standpoint of the budget, a wanton extravagance.

"Advancement" is the vital point of the war budget problem. One has to eat, of course, and one has to be clothed and sheltered, operating expenses must go on, but one can retrench on luxuries. And now that *our* country is at war, it becomes not only a personal necessity but a patriotic duty to eliminate waste and extravagance.

At the time of writing, Congress is still debating the details of the revenue bill, but certain broad principles are already discernible and reasonably sure of enactment. Seven billions are to be raised by bond issues, and about two billions by taxation within the coming year.

There are four things which the latter is certain to include:

1. An increased levy on individual incomes.
2. Increased taxes on business profits of over 8 per cent.
3. Increased taxes and new taxes on luxuries.
4. New taxes on necessities.

Each of these enactments, except perhaps the second, is going to affect the household budget vitally. Let us consider them in turn.

TAXES IN THE BUDGET

IF your family income is $3000 a year, and perhaps if it is only $2000, you will be required to pay a tax of 2 per cent thereon, or from $40 to $60 a year. If your income is over $10,000 a year, you will be required to pay a continually rising supertax until at the $500,000 point the Government will demand from 40 to 50 per cent of your entire income. Taxation of this type is an operating expense (house and land taxes belong in "shelter"), and accordingly those who receive $3000 or more a year must be prepared to allow for a considerable increase in the items in their budget classified under this head.

The tax on excess profits will cut down the dividend income of many a family, but it should not operate to increase the family expenditures.

Taxes on luxuries may include alcohol, tobacco, amusement tickets, soft drinks, musical instruments, automobiles, etc. Every family, even the very poorest, expends some part of its income for these luxuries and comforts. Some of them, such as tobacco and automobiles, have attained the dignity of practical necessities. The laborer's pipe and the Ford are permanent institutions. Even under the strictest régime it is doubtful if more than a handful of us can escape some expenditure in these directions, and the moment the tax is laid by the Government, that moment will the industry taxed "shift" it, as the learned economists say, to the consumer, which means that the war budget goes up another notch.

Taxes on necessities will probably include freight rates, passenger tickets, postage, sugar, petroleum, denatured alcohol, etc. The effect will be the same as in the case of luxuries. The railroad or the sugar trust will shift the tax to the consumer by raising the price of its commodity, and the budget again suffers.

In addition to all this, Congress may increase the tariff, levy an inheritance tax, and institute various stamp taxes.

In revising the budget, then, we have two

Edwin Levick

War and the budget. More and more of us now are going to turn our backs to the butcher shop———

Paul Thompson

and our faces to the income tax window. The Government is getting interested even in $3000 incomes

factors to consider: the increased cost of living due to war in general and the specific taxes now to be levied because of the entry of the United States into the war. The first we have already borne, the second we are about to bear. Uncle Sam requires billions of dollars to put this country on a war footing, billions which cannot be met out of the air, but only out of your pocket and mine—out of the family budgets of the nation.

REVISING THE BUDGET

IN those dim years before August, 1914, Mr. Earl G. Manning, of Boston, prepared a budget made up of actual figures furnished by thousands of thrifty Americans. It is given here in Table II. This table has formed the basis of all my budget making, but, like so many other things since war began, it is today antiquated. To follow it *in toto* would be to encourage financial suicide. A new budget must be drawn. Where the family receiving an income of $1000 spent 30 per cent of it for food, it must now spend perhaps 45 per cent; where the $5000 family spent 14 per cent for food, it must now spend 22 per cent. And note how the war burden bears proportionately harder on the poor than on the well-to-do. The greater the share of the family income spent on bare necessities, the more grievous the burden of war. For the poor, luxuries and advancement must be almost forced out of existence. For the well-to-do, these expenditures must be drastically curtailed. Taking into consideration the new factors of High Cost Living and War Taxation, I have ventured to prepare a revised war budget. (Table III, below.)

TABLE II

Yearly Home Budgets of Families Averaging Two Adults and Two Children

Prepared by EARL G. MANNING

Income of	$1,000		$2,000		$3,000		$4,000		$5,000	
Food	$300	30%	$450	22%	$550	18%	$675	17%	$725	14%
Shelter	200	20	400	20	500	17	600	15	700	14
Clothing	100	10	250	12	325	11	500	12	650	13
Operating	150	15	350	18	550	18	625	16	750	15
Advancement	100	10	250	13	450	15	600	15	775	16
Total	$850	85%	$1,700	85%	$2,375	79%	$3,000	75%	$3,600	72%
Income	1,000	100	2,000	100	3,000	100	4,000	100	5,000	100
Savings and Insurance	$150	15%	$300	15%	$625	21%	$1,000	25%	$1,400	28%

The $1000 family with only a 5 per cent outlay for "advancement" is going to overspend its income. The $2000 family should break about even. Above $3000 a small surplus should accrue, but here enters boldly a new factor which has long hovered in the background; namely, war philanthropies. Red Cross, special relief units, children's aid (child delinquency has increased 38 per cent in England due to the absence of fathers at the front and mothers in munition factories), support of war widows and orphans, camp inspection, etc., will all call for, nay insist upon, volunteer financial support. The "advancement" account of the $3000-and-over family will have to bear the brunt of these appeals. For this reason I have allowed almost as much for "advancement," in the $4000 and $5000 classes, as did the old Manning budget.

TABLE III

Yearly Home Budgets for Wartime of Families Averaging Two Adults and Two Children

Income of	$1,000		$2,000		$3,000		$4,000		$5,000	
Food	$450	45%	$675	34%	$825	27%	$1,015	25%	$1,000	22%
Shelter	220	22	440	22	550	19	660	17	770	15
Clothing	140	14	350	17	490	16	750	19	975	20

Advancement	50	5	115	6	300	10	500	12	700	14
Total	$1,040	104%	$2,000	100%	$2,885	96%	$3,755	94%	$4,760	95%
Income	1,000	100	2,000	100	3,000	100	4,000	100	5,000	100
Surplus	....		....		$115	4%	$245	6%	$240	5%
Deficit	$40	4%								

WHAT ARE WE GOING TO DO?

IT is plain that the household budget has some trying years ahead of it. Even if the war happily ceases within a few months, the burden of taxation necessitated by the preparations already made will continue for an indefinite period; and even if Mr. Hoover succeeds in stamping out food speculation, and in conserving the food-supply on an efficient basis, it is doubtful if he can do more than hold prices at their present level. The budget is up against it any way. Each family will have to work out its own problem, but it is perhaps possible to suggest a few general methods that may be employed. We can strive to eliminate waste: we can cut down on luxuries; we can grow more food.

While I confidently expect that countless amateur gardens are going to cost more in seeds, fertilizers, labor, muddleheadedness and arnica than they can possibly realize in anemic beans and battered cabbages, certain it is that the home-garden movement as a whole has great possibilities of increasing food-supply and thereby reducing food costs. In respect to home-garden accounting, perhaps the simplest method is to charge all gardening expenses having to do with the production of food to the general food account, and credit this account with any product sold, no entries being made for actual home consumption. If the total food account for the year 1917 *with* a garden be compared with the total food account for 1916 *without* a garden, the loss or gain due to the activities of the hoe can be roughly computed after allowing for the general increase in commodities consumed other than home-grown ones. For the expert who scorns this rough and ready method, I suggest a separate "home produce" account, subdivided into the various crops, if necessary, to which all garden expenses such as seeds, fertilizers, labor, spraying, utensils, etc., be charged, a cost per unit (bushels, pounds) of the finished crop being established; this unit cost being used as a basis for charging the budget food account with the product actually consumed by the household, and also being used as a basis for securing a reasonable profit on all products sold to outside individuals. Those desiring further enlightenment should write to the Department of Agriculture for their bulletins on farm accounting.

WASTE

THE United States Department of Agriculture estimates that $700,000,000 of food is wasted every year in this country, not including the waste due to alcoholic beverages. The department itemizes this waste under five heads:

1. Edible food thrown into the garbage-pail.
2. Spoiling of food due to careless handling and storing.
3. Careless cookery.
4. Waste in preparation.
5. Over-generous serving of food.

Professor Harry Ward declares that every year $20,000,000 of food is left on plates, to be thrown away because people cannot eat it. One slice of bread wasted every day means the loss of twenty-four loaves a year. Fat is an expensive and necessary food, but you and I have paid the plumber unconscionable sums to remove the same from our waste pipes. Waste is the problem of the American woman—her all-important problem today. The scandal of the national garbage can is hers to quiet. The reek of it she must, and will, subdue.

Allied with the waste problem is the problem of luxuries. But while we can sanction whole-heartedly the instant stoppage of waste, we have to move more softly in the matter of luxuries. Suddenly to cease buying any jewelry, any expensive millinery, any limousines, any opera boxes, or any "movie" tickets, would prove disastrous to the general business of the country, however excellent its effect on the character of the individual. Billions of dollars of capital are invested in the manufacture of luxuries (there is over a billion in moving pictures alone). Some millions of workers are employed in these industries. We cannot throw them out of employment tomorrow without inviting panic and revolution. Furthermore, a moderate production of luxuries is necessary to any sort of civilized life.

On the other hand, it is clear that there is too much money invested and too many workers employed in the production of baubles, surfeits and poisons that serve no rational human need, and only succeed in polluting and perverting our national life and character. These things, the product of grave injustices in the distribution of wealth, ought to be eliminated, and we should be prepared to undergo a little momentary economic hardship during the transition period. To grow maudlin about the poor worker and the poor capitalist is to shirk the whole problem of social reconstruction.

The problem that confronts us then is to eliminate progressively the more bizarre and the more vicious elements of luxury, selecting with some care the kind of business that we propose to support, or condemn, thru the voting power of our dollars. Here is a practical example: Mr. A is accustomed, let us say, to spend $2 for a theater ticket and $2 thereafter for a roof-garden cabaret and the refreshments that match. His war budget forbids him to buy *both* luxuries. Which shall he give up? The roof-garden, of course. We can do very well without roof-gardens and cabarets, but the theater is an intimate part of the national life and should be sacrificed only under dire necessity.

The war has given us the unique opportunity to revolutionize the whole economy of luxuries; to destroy the vicious, to encourage the necessary, to make wholesome and strengthen immeasurably the goods of the nation. Reflect for a moment on the word "goods." Literally interpreted it marks the beginning and the end of all sane spending, in peace no less than in war.

HOW TO CHOOSE FURNITURE

An excellent Hepplewhite sofa in which the proportions of contour and the decorative details are thoroly true and consistent

BY H. D. EBERLEIN AND ABBOT McCLURE

BUYING a piece of furniture is, in a way, comparable to getting married. The purchase made and the piece installed in your house, you have it "for better, for worse" and the chances are that it will stay by you for the rest of your natural life. One cannot overemphasize, then, the necessity of a rigid preliminary analysis of a contemplated purchase to the end that enduring satisfaction may result from our choice.

It is clearly impossible to lay down a precise set of empiric rules, of universal application, for testing the suitability of every piece of furniture that may ever happen, under any circumstances, to require our consideration. An attempt to do so would be a preposterous piece of quackery, equally offensive and impracticable. The same piece of furniture may be absolutely right and suitable for one place and its attendant conditions and absolutely wrong for another, in just the same way that pajamas are eminently appropriate to wear when one is going to bed but wholly inappropriate when one is going to a dinner party. The utmost that can be done is to define certain fundamental principles or canons of sound judgment which we may employ to determine the intrinsic merit of a piece and its fitness for its intended environment and, after that, trust to the individual's common sense to arrive at a conclusion in which he or she may repose a reasonable confidence of rectitude. And the presentation of such a set of canons or fundamental standards is the object of this article.

THE DOUBLE STANDARD

THE prospective purchaser of furniture, intent upon a wise choice, must judge of its suitability from two points of view. First, it is necessary to consider the inherent qualifications as indicated by *design*, by *structure*, by the distribution of ornament and by the *materials* employed. Second, it is quite as essential to keep fully and constantly in mind the character of the setting in which the furniture is to be placed, especially with reference to *scale*, to the *dominant architectural lines* and to the *nature of the background*. These two bases of judgment, conscientiously and rigorously employed, will prove valuable safeguards in avoiding costly mistakes which one will repent at leisure, and in securing, instead, pieces which will bring with them an increasing sense of satisfaction.

It is scarcely to be expected that the finer and subtler characteristics of furniture design should make the full appeal of which they are capable unless the individual himself possesses a considerable degree of special and accurate knowledge of furniture and has thus a sufficient basis for making comparisons, but the more salient features of design, judged solely on their own merits, can readily be analyzed sufficiently to enable the ordinary observer to exercize an intelligent discrimination, provided he sets about it in a fairly systematic manner. To begin with, in judging soundness of design in furniture, we must assume toward it much the same critical attitude as we should toward a piece of architecture and base our verdict upon considerations of composition and mass, of the relation of structural lines of support to mass and to the material used, of the logical distribution of ornament and of the method of employing material. This general ground of criticism applies equally whether the piece under examination be elaborate or simple.

PROPORTION

IN the process of analysis our first concern is with *proportion*, in other words, with the mass and composition or, to put it in still another way, with symmetry which, as its etymology indicates, is merely the quality of "measuring together" or displaying consistent measurements. A painter would allude to the analogous quality in a picture by speaking of the "drawing," while an architect would speak of a building's "scale." Primarily, the proportions of a piece of furniture should satisfy the eye and there should be an obvious reason for its design. It should not appear top-heavy nor clumsy. The visible means of support should *look* adequate to holding up the weight imposed. In the secretary bookcase at the foot of the page the mass of the body looks too heavy for the light, spindly legs. If the legs were of iron, it would be a different matter, but we know they are of wood and that, judged in terms of wooden construction, they are probably physically as well as apparently insufficient. Consequently, we say the piece is ill-proportioned. On the other hand, a piece should not be clumsy so that its lines convey the impression of dull, dead, gross stolidity nor should it present a ponderous base merely to support a light superstructure. From what has been said it follows that a piece should be consistent in its physical composition and distribution of mass. It should likewise be harmonious in line and not display totally diverse and antagonistic conceptions of design in its several parts—to suppose an extreme case, for the sake of example, a cabinet with an Adam top of delicate rectilinear lines and refined detail with a heavy, curvilinear and robustly proportioned Queen Anne stand with cabriole legs and shaped stretchers.

This secretary bookcase is faulty in its proportions because the mass of the body and superstructure appears too heavy for the legs, which do not look adequate to support the weight that is imposed upon them

STRUCTURE

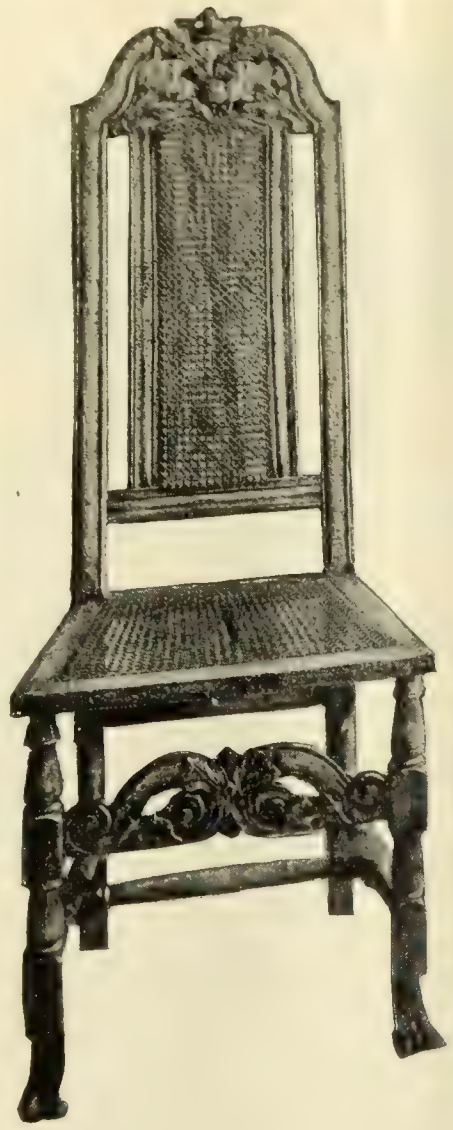
OUR second major concern is with structure. The paramount importance of structural strength and durability should need no emphasis. Good, honest joinery with dovetails, mortises and tenons and kindred devices is so different from specious "sticking together" that bare mention of the fact is enough to put a purchaser on guard. Inasmuch, however, as chairs are especially likely to disclose any structural defects they may have after brief usage, it is well to remind the reader that the point of greatest stress in a chair is the junction of seat and back and it is advisable to require obviously staunch construction in this particular. It is also preferable that seat rails be mortised and tetoned into the legs, as in the Chippendale chair on the next page, rather than that the seat frame be merely dowelled to the tops of the legs, as in the Spanish chair. Properly placed stretchers, of course, add to the stiffness and strength of the chair frame.

ORNAMENT

DISTRIBUTION of ornament should be logical and serve to emphasize lines of structural significance, important features of the contour, or spaces and surfaces visibly intended for decoration, as in the credenza on the following page. The application of ornament should never be meaningless, whimsical or excessive as it then loses all character and only cloys the eye.

MATERIAL

THE material employed should be honest. In other words, it should be what it appears to be and not an imitation of something it is not. An imitation is always open to the charge of cheapness and deception, regardless of its money cost. A piece of birch or gum furniture that is honestly and visibly birch or gum is more dignified than and infinitely preferable to a piece of

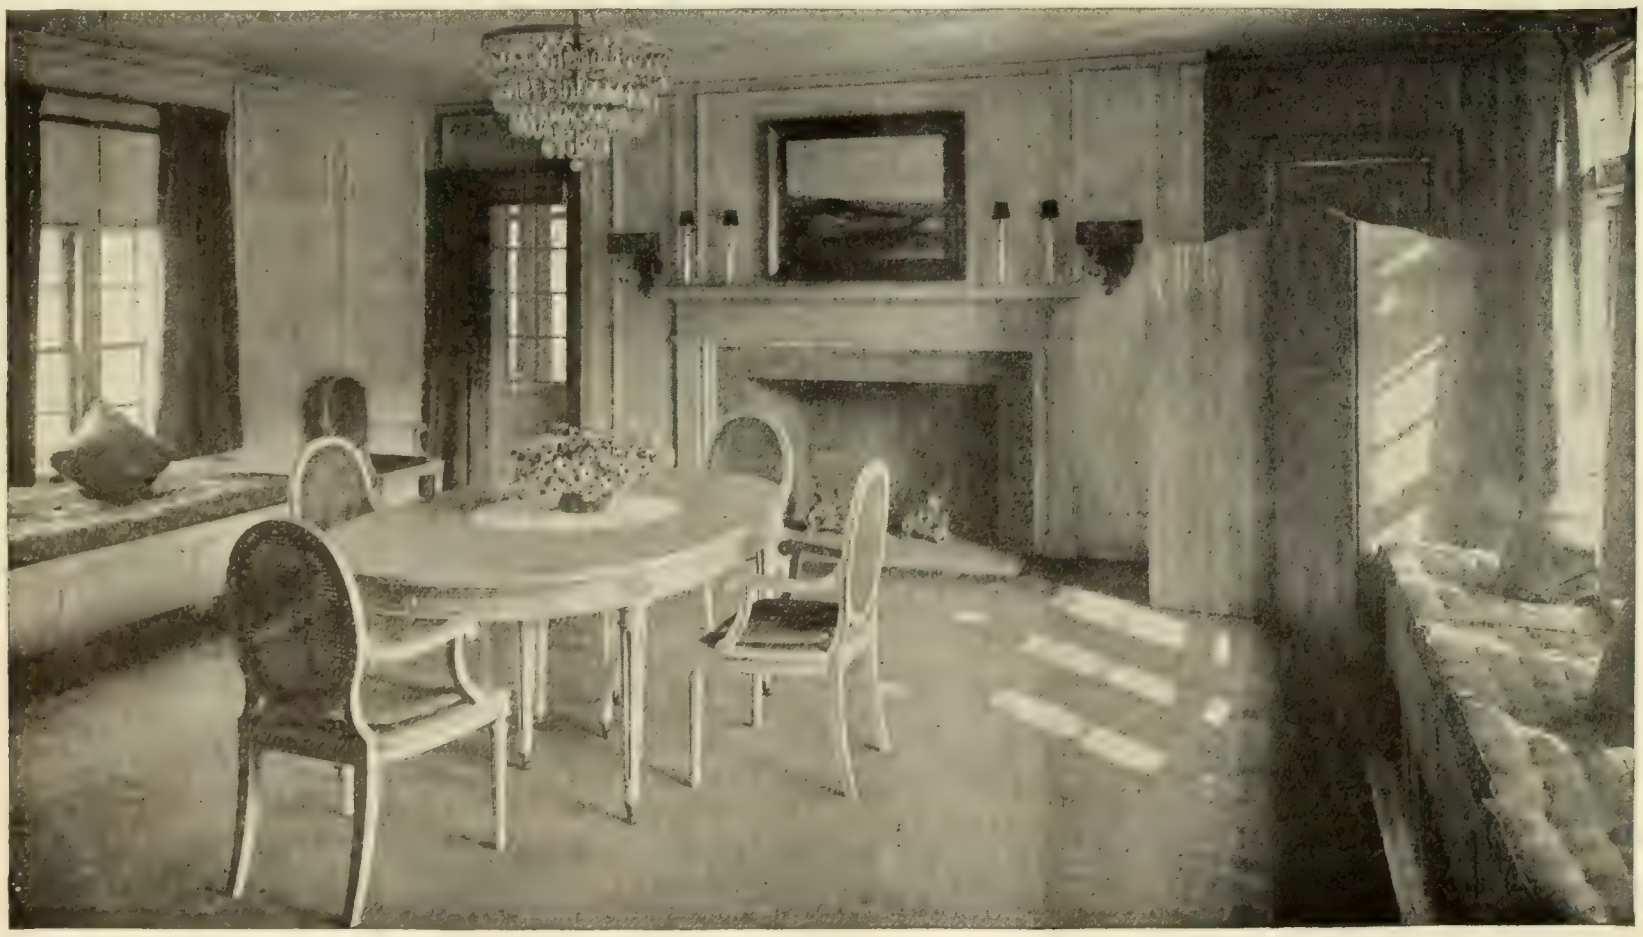


An example of admirable structure; the junction of seat and back calculated to meet stress; the seat-frame, mortised and tenoned into the legs; and the whole structure stiffly braced with stretchers

birch stained to stimulate mahogany—an intrinsically cheap and unworthy deception altho it may cost more dollars. The public at large is badly in need of revising its current notions in this respect. It must learn to accept and esteem materials for their inherent qualities and rid itself of the too prevalent false notions of relative cost and excellence. Until it does, it will continue to be gulled and pay roundly for the privilege of being gulled.

ENVIRONMENT

THE second point of view, concerned with the intended environment of the furniture, requires that pieces be in scale with their setting—that a small piece be not dwarfed and made to look picayune by being placed where a piece of great bulk is evidently needed and that, on the other hand, the size of a large piece be not exaggerated by putting it in cramped quarters. Besides preserving this relative connection between furniture and setting, it is desirable that there be some point of correspondence, some common ground, between the dominant lines of the architecture and the lines of the piece to act as a link binding the elements of the composition together. The texture of the background, too, should be taken into account. It is impossible here to multiply instances, but one example will serve for suggestion. It will be found that the rich old Italian and Spanish walnut furniture looks best against a background of tapestry or some other rich-hued and full-textured fabric, or else against the austere contrast of a stone faced or rough sand-finished plaster wall. Against ordinary wall paper it would look utterly out of place.

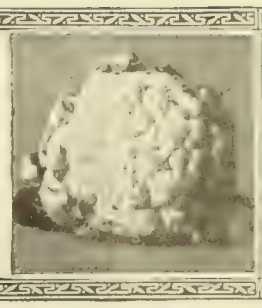


The fault of construction in this old Spanish chair is that the seat-frame is set upon the legs and merely dowelled to them so that stretchers are absolutely necessary to give it the requisite stiffness

The foregoing tests, truly applied, will settle many a vexing question. One needs only to add in conclusion a word of caution anent reproductions and adaptations. Insist rigorously that reproductions be accurate and real reproductions, not only in *pattern* but in *exact dimensions;* require that adaptations be true to the spirit of their alleged prototypes, especially in the particulars of proportion and ornamental details.

This Italian credenza shows a logical distribution of ornament because the carved decoration emphasizes the lines of structural significance and the essentials of contour

Johnston Hewitt Studio



Furniture should be in harmony with the texture and the dominant architectural lines of its background

What To Do in August

A GARDEN GUIDE BY HUGH FINDLAY

PROFESSOR OF HORTICULTURE IN SYRACUSE UNIVERSITY COLLEGE OF AGRICULTURE

IN THE WAR GARDEN

Late Peas After removing summer beets, turnips or other early crops, cultivate thoroly and work in a little well decayed manure. A little bone meal added to the manure is a lasting plant food. Rake the soil very fine where the furrow is to be drawn and plant the seed in a trench 3 to 4 inches deep. Pack the soil firmly over the seed with the back of the rake. Do not soak the seed in water before planting. The most satisfactory varieties for late planting are Early Morn, Prosperity and Little Marvel (dwarf).

Beans Sow string beans twice during the month but not later than the 15th. The kidney, wax and even bush lima beans will mature before frost if the plants are kept growing vigorously. The soil should not only be rich in plant food but in humus so that it may retain moisture. After the beans are dropt in the furrow, a liberal supply of water may be added and the seeds then covered. This is best done in the evening. The best two varieties for late planting are, Early Valentine (green podded), and Refugee (yellow podded).

Lettuce Start a new seed bed in some shady place. Allow the plants to develop three or four leaves and then wet the bed thoroly before transplanting to the open, where the soil should be very rich in plant food, especially nitrogen. This is best supplied in the form of well decayed horse manure. The faster lettuce matures the more tender the foliage will be. One of the best varieties for fall is the Grand Rapids (loose leaf). Many of the smaller plants may be transferred to the hot-bed later in the season.

Onions If you find that the onions are not developing a bulbous growth at the base of the leaves, add a little nitrate of soda and water the onions freely in the evening. If the tops are turning brown and the bulbous growth is well developed, pull or rake out the onions; let the leaves dry. Clean off all dried material before crating the onions for winter.

Early Celery Early celery should be matured sufficiently by August 10. The best method of blanching at this season is by the use of boards. Lay the boards flat on the ground and place one edge near the plant. Lift the board into position and stake it so that it can not shift. Celery banked with soil during the hot weather has a tendency to decay at the heart. Keep the late celery growing and well watered.

Cantaloupes and Watermelons Place a shingle, piece of broken flower pot, or flat stone under the fruit so that it may ripen evenly thruout. A little weak liquid cow manure, best applied just before a rain, will help greatly in the final development. If the muskmelon breaks away from the stem and the stem end is a little soft, the fruit is ripe. If there is a crunching sound when you give a quick downward pressure on the side of the watermelon with both hands the melon is ripe. Do not break the skin. Keep the melon in a cool place for two or three days and the flavor is improved.

Pests If the aphis (green fly) puts in its appearance on any of the tender growths, such as lettuce, dust the foliage with tobacco dust. The cabbage worm may start in early on the winter crop. Sprinkle a little white hellebore, one ounce to a gallon of water, or a little powdered arsenate of lead. If the foliage of the asparagus is disappearing and you find short furrows eaten out of the tender growths, dust the plants, when the dew is heavy, with powdered arsenate of lead. The asparagus beetle is not hard to control if checked in time. Cabbage aphides are controlled by tobacco dust or a tobacco solution. These insects are usually found on the leaves close to the ground and on the under side.

Cultivate Keep the land cultivator busy this month. Some of the best crops are produced during a dry season, all on account of diligent cultivation. It seems useless to stir the soil that seems loose but there is nothing more valuable to the garden in August than a dust mulch. Gardens that are cultivated every day during the dry period show a marked increase in production and many times a crop of weeds is destroyed before they reach the surface.

THE FLOWER GARDEN

Perennials Make a chart of your perennial garden and list the plants. Do not trust to the labels or your memory. Remove all withered flowers from the perennials so that the strength that would naturally go into the production of seed may go into the root and crown of the plant, and in this way insure a fine growth and free bloom for next year. If the seed of delphinium, phlox, Canterbury bell, carnation, digitalis and hollyhock is planted this month, they will bloom next year.

Cuttings This is the month to select the strong, vigorous growths of antirrhinum, fuchsia, geranium, coleus, heliotrope and other soft wooded plants and make cuttings. Use a sharp knife and make a clean cut at the node. The cuttings should be placed in sand, watered freely and shaded. They should root within three weeks. Do not allow the cuttings to remain in the sand after the roots appear, shift them to three inch pots. Give the propagation bed plenty of ventilation during the night and protect it from the direct rays of the sun during the day.

Fall Bloomers Add to the soil, preferably before a rain, a free application of fine bone meal and phosphate and stir it in well. If you can secure liquid manure add it to your asters, cosmos, chrysanthemums, calliopsis and other fall bloomers. Apply this in the evening in a very weak form and then water the plants freely.

The Rose Apply a liberal supply of manure to the teas and hybrid teas, water to the roots and insure a "Feast of Roses" before frost. The aphis (Aphis Rosae) is a prolific breeder during the warm weather. Spray the first one you see with black leaf 40. The rose hoppers or thrips (Tettigonia Rosae) are bad this month. After they prey upon the leaves the foliage assumes a sickly yellow appearance. Spray with a solution of whale oil soap, and dust the underside of the foliage with white hellebore before the leaves dry. The latter part of the month watch for mildew on your tea roses and dust the foliage with flowers of sulfur.

Gathering Seed If you have allowed a few of the seed pods to develop, now is the time to gather them. Seed of dahlias, poppies, pansies and sweet peas should be kept in a dry, cool place. A tin can is most satisfactory, since it keeps out mice. Make a few small holes in the lid before storing the seed.

WAR GARDEN BUREAU

The Independent-Countryside War Garden Bureau, 119 West Fortieth Street, New York, will answer your garden questions freely and promptly and will give you expert advice about any of your garden problems. The dates given on this page are for the latitude of New York City. For every hundred miles north or south subtract or add from five to eight days.

IN THE GREENHOUSE

Carnations All the carnations should be shifted from the field to the greenhouse this month. The benches should be filled with a garden loam, decayed sod and horse manure mixt and considerable lime added. Water the plants freely after transplanting and sprinkle lime on the surface of the bed. Spray the plants on bright days with a strong force of clear water.

Chrysanthemums Keep the early chrysanthemums cool, the soil moist, and the foliage dry. Apply a little weak liquid cow manure to the late varieties and keep them growing. Watch for mildew. Dust the foliage with sulfur and paint the pipe with a paste of sulfur. If the petals of the early varieties have not appeared, fumigate the house now and then by burning tobacco stems so as to keep in check the green aphides and white fly.

Compost Heap Clover-sod from a fine garden loam is the best for general purposes. Invert the sod on a well drained place, add six inches of decayed horse manure and six inches of sod and soil until the heap is at least four feet high. Cover the entire heap with inverted sod and allow it to stand for at least two months. If the manure is at all dry moisten it before adding it to the heap.

FRUITS AND BERRIES

Strawberries Potted runners if shifted to a permanent bed this month will yield a crop next year. The soil should be a sandy loam with a liberal amount of humus incorporated. On removing the plants from the pots loosen the tips of the roots so that they may spread and come in contact with food and moisture. Be careful not to bury the crown of the plant in transplanting.

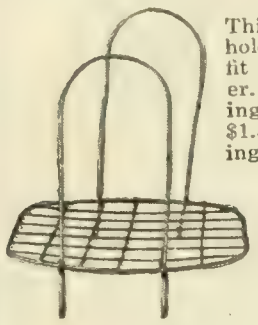
Apples Pick the harvest apples before they are dead ripe. They have a better flavor and keep longer. If by chance you have failed to destroy all the codling moths you will find many small apples on the ground. Rake these together and destroy them. This is the month when the fall web worm is at work. If you find bunches of leaves, brown and loosely webbed, remove and burn the leaves which contain nests. Spray the tree with arsenate of lead.

Currants and Gooseberries Cultivate thoroly and add to the soil a liberal amount of bone meal. The lack of moisture thru neglecting to make a dust mulch may materially decrease the crop for next year. If the currant aphides are found on the underside of the leaves, spray with black leaf 40. The first indication of this pest is when the leaves begin to turn yellow.

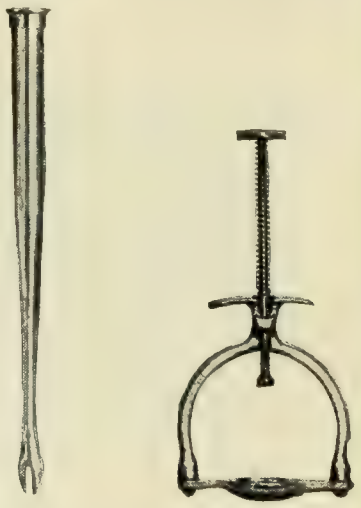
Countryside Canning

Preserving and drying vegetables or fruit will be an experiment for scores of housewives this year, but neither process is hazardous even for beginners if due care is exercized in following instructions which the Department of Agriculture is glad to furnish. The Countryside Shop, 119 West Fortieth street, New York, will be glad to buy for you any of these articles or to answer questions. Five photographs courtesy of New York Tribune

This slicer does very casually a task which would keep an army of canners busy, and prepares potatoes, beans and fruits for drying in a trice. Its price is $1.89

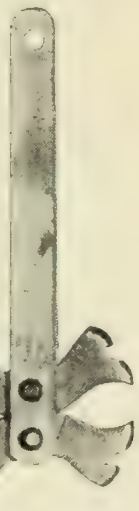


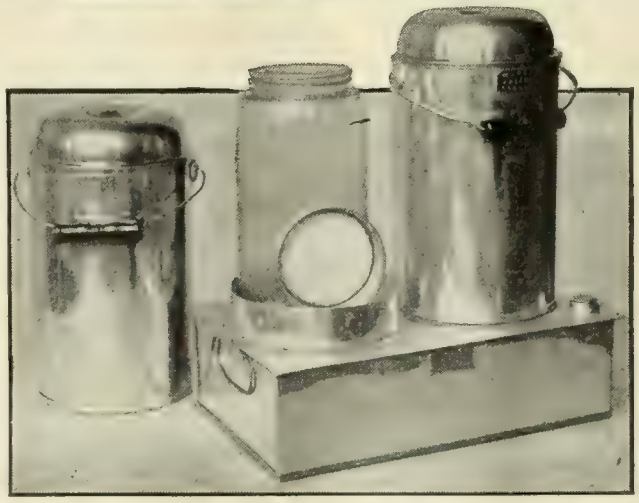
Paper containers for dried vegetables and fruits are inexpensive, easy to store and come in a multitude of shapes and sizes. From 3 cents up



With just a twist and a turn this most convenient can sealer fastens the cover with no fuss and no solder and the very best of results. The price is $10

This small pressure canner is made of durable aluminum. Its results are quick and sure enough, compared with older methods, to justify the initial expense, where canning is to be done in any quantity. Price $15 to $25 according to size. The jar lifter is only 30 cents



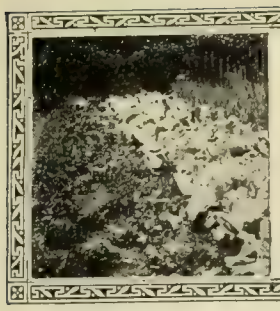


This rack for holding jars will fit into any boiler. A rack holding six jars is $1.50; one holding eight $2.50

Two efficient tools that will save many stained fingers and much time are the small pitter, effective in season and out for hulling, pitting and removing seeds, price 25 cents, and the peach stoner, price 35 cents

Freshly sealed jars can be given a final tightening that will save burnt fingers with this simple implement—and it will also loosen the refractory cover of a jar that comes down from the shelves in the winter. 10 cents

Below is a simple arrangement of wooden trays with wire bottoms for the drying vegetables, placed in front of an electric fan. With this method results are expeditious and satisfactory. Tray without legs, $1.19



This small preserver is a compact outfit, consisting of a boiler and rack which will hold eight jars. Price $4

A sterilizing outfit which makes it possible to put up vegetables without the usual long period of cooking. It takes from five to fourteen minutes. Price, 2 or 3 cylinders, $6

The dryer on the right dries by heat and is merely a double-bottom tray, with water between decks which is kept at the boiling point. Small size, 18x26 inches. Price $6. Its capacity is 162 bushels

From Garden to Table

BY ANNA BARROWS

INSTRUCTOR IN FOODS AND COOKERY IN TEACHERS COLLEGE

"THE wolf is at the door of the world. It is our problem in this country to keep it away. The food supplies of the world are decreasing and a year from now will be still further decreased." These words recently spoken by the Federal Food Administrator, Herbert C. Hoover, make a direct appeal to every man, woman and even the children of the United States. Are we all doing our part to avoid unnecessary waste by eating in moderation those foods which are most abundant, and by taking care that nothing is wasted from the garden in which we have been "doing our bit"?

Salting Down There are several ways of caring for surplus foods. Nature's way is to evaporate all possible moisture, and thus preserve the seed, the supply of food for next year's plantlet. This method has been that of the primitive people the world around for centuries. Later the use of salt was found efficacious, and probably later still the value of spices, sugar and vinegar were discovered. Salt used in moderation was found to regulate fermentation, as in the case of sauer-kraut, and many vegetables were once preserved in that way. The Bureau of Chemistry of the United States Department of Agriculture has been making some investigations in this direction. Instructions are available on application to the Bureau of Chemistry, Washington, D. C.

Canning Special investigations of canning processes have been made by the United States Department of Agriculture, and the bulletins are available to all applicants. Moreover, each state sends out agents to help its people can their products. For any desired information on the subject of canning write to your own state agricultural college or to the States Relation Service, Department of Agriculture, Washington, D. C.

Every empty jar must be filled this season, and canning means simply killing all bacteria in foods and keeping all others out, or *sterilization*. This cannot be accomplished if the food is not thoroly heated thru or if the jars are not airtight. Canning powders are unnecessary and should never be used; their ingredients are unwholesome. Sugar is not a necessity.

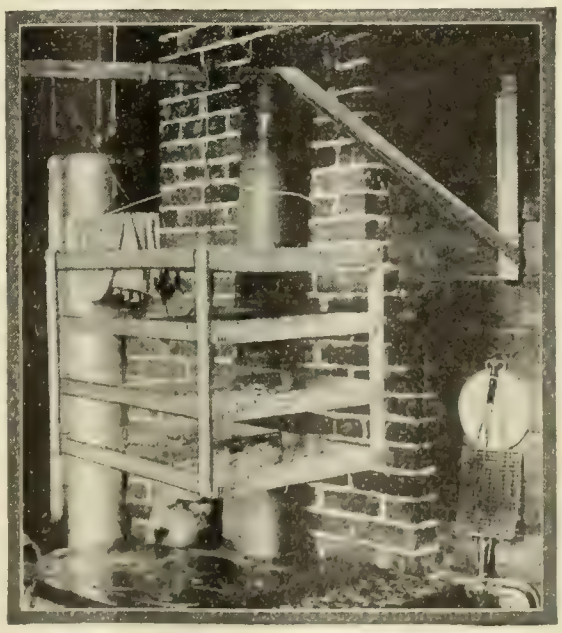
The simplest plan for most housekeepers is to do a few jars at a time when the vegetable is at its best; this will not require much extra time if it is done along with the getting of dinner.

Drying Since the present occupation of a large part of the world is the primitive one of warfare, it follows of necessity that the women and children must also revert to the earliest methods of planting and conserving the foods to sustain themselves and the men at war.

The need of great stores of food and the probable shortage of both tin and glass for canning makes it imperative that we teach ourselves what our remotest ancestress seems to have learned by observing the effect of the sun's rays on the fruits and vegetables which are 75 to 95 per cent water. Bacteria thrive best in a watery medium, and women who never heard of bacteria found out that foods kept only when water evaporated.

This way of preserving food fell into disrepute partly because many of the housekeepers of the past were careless in their methods, not knowing the dangers from contact of dust and flies with food. The great convenience of serving from the can without waiting to soak dry tissues has appealed to the more rapid life of the twentieth century. If we must now revive this old method of food conservation, there is no reason why it should not be done with all the sanitary care that the present age demands. This method has one decided advantage over canning. Evaporation reduces the space needed for storage of the original bulk in glass or tin by about nine-tenths. That means one paste board box instead of ten jars or cans.

All the patented devices for this process come within three classes: first, those in which the trays of material are placed in a heated compartment on fixed ledges; second, those in which the trays are mechanically raised as the drying progresses, and, third, those in which steam is used to hasten the process.



Any housekeeper who studies her own conditions carefully can imitate these plans on a small scale. Either electric fans or kerosene stoves may be set to work in the process. The tin oven may be placed over a single kerosene burner turned low, or it may be set on the coal or wood range with an "after dinner fire," or the large oven may be used with the door half open.

Any person capable of using carpenter's tools can construct a rack that will care for a large amount of material during the season and which may be hung so as to utilize the heat just under the ceiling.

The Process Each vegetable must be studied to find the best treatment. Some need little preparation beyond inspection and cleaning, others must be cut in thin slices, and here mechanical slicers or shredders are helpful. Most of the food choppers press out too much juice from raw vegetables. The food must be spread in thin layers at first; later two or three layers may be put on one rack. The heat must not be too great at any period, but may increase as the water passes off, up to about 140° F. If this temperature is applied at first there is danger that the outside may dry, leaving moisture within, and thus the food will not keep well.

Yet sometimes it is advisable to scald or even half cook a tough fibred vegetable before attempting to dry it, otherwise the process of soaking or cooking will be long. If scalded in salted water the color will be "fixed" just as salt sets colors of fabrics in the laundry. This is apparent in the case of carrots. Dipping in salt water will prevent some fruits from discoloring; about one tablespoon of salt to one pint of water is sufficient.

The thicker the sections of substance the longer the process. After it is nearly dry it may be put in a sugar bag or flour sack and hung in a warm place to finish the evaporation.

It is not difficult to make at home a drying rack like this which utilizes surplus heat

A screened porch away from the dust may be relied upon in an emergency when a large amount is to be dried, the sun is quite as effectual as the artificial heat and the wind helps in disposing of moisture here as it does in the street after a rain. Part may be started over the range and part in the air and the two exchanged.

Even greens may be dried satisfactorily. In a recent experiment two pounds of spinach were used. About one-fourth of a pound was lost in washing and trimming off roots; when fully dried greens weighed less than three ounces. Some of this spinach was rubbed thru a strainer, just as I have long been in the habit of saving surplus parsley, and just as herbs are commonly prepared. A tablespoonful of this dried and sifted spinach, soaked a short time in water, added to milk and thickened and seasoned, made a delicious cream of spinach soup.

The care of the finished product is important. It must be kept from dust, insects and moisture, better in small lots than large. Save all clean pasteboard boxes, cereal cases, etc., for this purpose.

The main points to remember are that everything must be fresh and clean and the whole process as rapid as possible, without excessive heat to cook or to discolor the food.

When dried foods are to be served ample time must be allowed to restore the water which has been driven out. Soak from twelve to twenty-four hours in cold water, then cook until tender, usually in the water in which the vegetable has been soaked, except in the case of highly flavored vegetables, where the water may be used in soups and fresh water added for the cooking.

Vegetables Instead of Meat

SULTRY August brings the garden to the hight of its abundance; the meat bill can now be reduced to its lowest point. Vegetables are not merely accompaniments and flavorers for meats. Some of those in perfection this month are superior meat substitutes, notably corn and beans.

Beans and Beans The bush string beans come first of all, then the white wax, the black wax, the "Refugee," the "Lazy Wife," the long green pods which grow on the poles, or perhaps the broader green pods of the old-fashioned cranberry variety, or the horticultural. With the last two a combination of the tender pods cooked with the shelled beans makes an excellent dish. Many of the special string beans may be shelled, if there are more than you need in the earlier form. The bush cranberry and horticultural will be ready to shell some time before the lima varieties. The delicate little Sieva requires time for picking and shelling, but is well worth all it costs. The big Dutch runner or butter bean is another late type. If you do not care to grow such a variety, it is an advantage to have the same kind planted at intervals of a fortnight, until it can no longer escape the frosts.

The soy beans will doubtless come into use in this country as they have in China and other densely populated lands; they have a considerable percentage of fat, and do not need the addition of pork or oil like the ordinary bean. The United States Department of Agriculture is publishing information regarding their cultivation and use.

The general plan of cooking shelled beans is the same whatever the variety, but the time required may be longer for some than

for others. Where the skin is especially tough the beans may first be parboiled, as for baked beans, in water to which a small quantity of soda is added, about one-fourth teaspoon to two quarts of water. After cooking for half an hour or less drain this water off and add fresh hot water. Then the beans should cook for about an hour, or until tender but not mushy. Salt is best added after the cooking process is nearly completed. The water may be allowed to evaporate at the end and be served with the beans or be saved for soup. Butter or cream is the best dressing for shelled beans.

Any surplus of cooked shelled beans may be used for soup, croquettes or salads. But they are also excellent served cold for supper if they were well buttered for dinner.

The Mexicans rely upon tomatoes, onions and peppers to give flavor to beans, and we may use them separately or together. These flavor vegetables are mainly water, and need the solider bean to give them substance. The peanut is a near relative of the beans and peas, and peanut butter may be used to dress beans for salad, or in place of other fats, when they are made into soup.

The composition of the cooked shelled bean is not very different from that of the dry bean soaked and stewed. Since it contains considerable protein it is ranked as a valuable meat substitute. It also carries enough starch to take the place of the potato in that respect.

Corn

Another substantial vegetable is sweet corn. It may appear in every course from soup to dessert. Its general composition suggests that of the potato, but it has the advantage of rather more fat and protein, and thus comes closer to meat. By successive plantings the season may be extended from July to October in most of our country, and it should be used freely while it lasts.

Experience is needed to select the ears, and it is always safe to open the husk slightly and notice the size of the kernels. In some localities worms attack the corn and elsewhere the birds make free with it. Such ears must be carefully trimmed before cooking. Roasted corn is especially connected with out-of-door feasts, but it may be served in the house as well. All cooked corn left from one meal should find a place at another in soup, fritters or pudding.

Corn is best when the passage from garden to kettle is direct, when the corn is gathered, husked and put directly into a steamer or into boiling water, cooked for a short time and eaten immediately. Sometimes it is advisable to leave the inner husks on and, after removing the silk, draw the husks around the ear and steam.

Succotash, that excellent combination of beans and corn taught the white men by the Indians and still retaining its Indian name, is not used as much as it deserves to be. It is never better than when straight out of the garden. The two vegetables are usually cooked separately and then combined, or after the beans are nearly done the corn cut from the cob may be added, and the whole cooked half an hour longer.

A chowder made from corn is a good substitute for a fish chowder and is made in practically the same way. Fry scraps of pork and onion, which have been run thru the meat chopper, then add about equal amounts of cut corn and cubes of potato, cover with water and cook gently until the potato is tender, then add milk, let it boil a few minutes, season and serve. Pork scraps and the liquid fat extracted from them are an excellent accompaniment for corn which has been cut from the cob, and supplies the fat needed in a rather less expensive form than butter. Grated or chopped corn seasoned and held together with egg makes an omelet not to be despised, and with a little milk and flour may be fried in much or little fat, as fritters.

Dried Corn

Before corn canneries were as common as they are now, each household dried any surplus of sweet corn for winter use. Tho the corn may be dried without first cooking it, it is better to cook it enough to harden the milky juice. Cook a few extra ears with the dinner supply each day and after that meal cut all that is left from the cobs, spread it on plates or shallow pans and dry it in the oven with the door open. Thus all the corn will be of about the same age, and the work will be done more easily than if you tried to dry a large quantity at once. To use the dried corn in winter, soak it over night, and cook it very little. Or if it is needed in a hurry, grind it thru a coffee mill or pound it, cover with cold water and heat slowly, add milk to make a soup and season.

The Useful Beet

A most useful tho prosaic vegetable is the beet. Here again it is an advantage to have several varieties, the bright red, the paler or even whitish, and some that are almost orange. Beets may be planted both early and late, and never should be allowed to grow too large. Beets are sweetest and best when no larger than eggs. At least an inch of the tops should be left on and the skins should not be cut or broken, tho they must be thoroly washed. Put them in boiling water, salted or not according to preference, and cook half an hour or more, but do not pierce them with a fork until they are nearly done, for some sweetness will be lost every time. When tender, drain, dip each beet in cold water and slip off the skin. Then they may be served whole or sliced or diced. Young beets may be baked, retaining all the sugary juices. It is well to put a little water in the pan with them to prevent burning. A cream of beet soup is made in the same fashion as the familiar cream of tomato. The greens cut while thinning the rows are delicious and may be used for salad or reheated in a little fat when there are any left over.

Any surplus beets may be kept in the cellar like potatoes, but as they become woody and require several hours to cook tender canned beets are much to be preferred. They are boiled, peeled, put in jars, the spaces filled with salted boiling water, and the jars subjected to heat again for an hour or more before closing. A safe rule is never to use beets for canning that will not easily enter a quart jar without cutting. Pickled beets are readily prepared by filling the spaces in the jars with spiced vinegar.

The Poultry Yard in August

BY E. I. FARRINGTON

AUTHOR OF THE HOME POULTRY BOOK, THE COUNTRY HOME MONTH BY MONTH

OWING to an active propaganda instigated by the State Experiment Stations, the tendency to dispose of poultry flocks all over the country has been checked to some extent. Indeed, in some sections poultrymen have begun to increase their flocks, having in mind the probability of unusually high prices for both eggs and market poultry next spring. If one is so situated that he can feed his poultry cheaply it may pay him to keep over his old hens, and even to raise chickens now, in order to provide meat during the winter and spring. If egg production is sought, however, hens that are over two years old should be disposed of as soon as they stop laying or begin to moult.

At the same time expenses still remain so high that a profit cannot be shown at the present time except by careful management. It is very important that the amateur poultry keeper who has to count the pennies should provide for winter by stocking up with a large amount of root crops and greens. There is still time to plant turnips; tho they are not the best of vegetables for poultry, they are easily raised and can be used to advantage. Swiss chard, kale and rape can also be planted now for fall feeding. It is particularly advisable to put in a few rows of kale now, using the dwarf varieties, because it is so hardy that it will keep green and fresh until frost has killed down everything else in the garden. If the season is not too severe it will remain in fair condition until Christmas. If the poultry keeper has a little land available it will be wise for him to sow it to winter rye. Indeed it may be that he can sow rye in the vegetable garden, choosing spots where the early crops have been removed. Rye can be sown up to the middle of September, and the garden will be improved by its presence. All thru the winter, whenever the snow is off the ground, the hens can be allowed to feed on this rye, and it will also offer good pasturage in the spring before being plowed under.

At the same time it is well to save all the lawn clippings, for they can easily be dried if spread in the sun for a few hours, and then packed away in barrels or bags. Care must be taken to keep them in a place where they will not mildew.

AT the present time beef scraps afford more nourishment at the price for which they can be obtained than almost any other kind of poultry food. Of course beef scraps must not be fed too liberally, but when they are used recourse can be had to grain products in the cheapest form. Even laying hens will do well if kept on bran and beef scraps, with a little whole corn and a liberal amount of vegetables and green stuff.

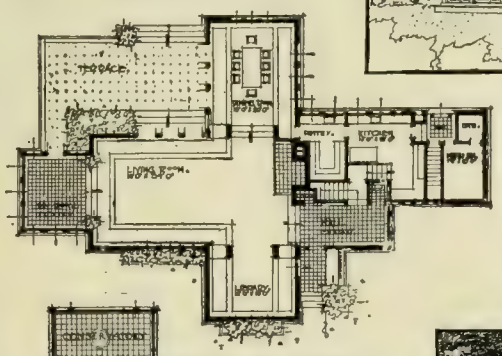
It is important to keep the pullets growing as rapidly as possible now in order that they may come into laying before cold weather is established. Otherwise they are not likely to lay until spring. One way in which the pullets may be kept growing without a setback is to separate them from the cockerels.

It is also important for the chickens to have room enough so that they will not crowd at night. When the birds pile up in a corner, some of them are sure to suffer. Indeed this is one prolific cause of roup and colds in the fall. Many times the chickens will begin to roost quickly if perches only six or eight inches from the floor are placed in their houses. Occasionally, however, they seem very tardy about learning the purpose of these perches, and then it may be necessary to put some of the youngsters on them for a few nights. Being imitative creatures, they may also be taught to roost by putting a bantam or other small hen in the pen with them.

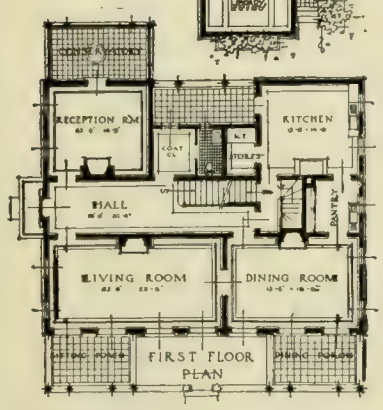
August being a warm month as a rule, lice multiply rapidly then unless the houses are kept in a very sanitary condition. It is a good plan to give them a coat of whitewash, adding a little carbolic acid. Lice congregate in great numbers under the perches and in the nests, if their coming is not prevented. The easiest way to eliminate them is to paint the perches and nest boxes with carbolineum once a month.

IF the birds are confined to a small yard, this yard should be spaded up at least once a week, and lime scattered over it. The simplest way in which to keep a small yard comparatively sanitary is to plow it up with a wheel hoe. If the yard is big enough so that it can be divided and one half used for growing a green crop like oats, while the chickens use the other half, two objects will be accomplished—the yard will be kept fresh and clean, and green food will be supplied with but little effort.

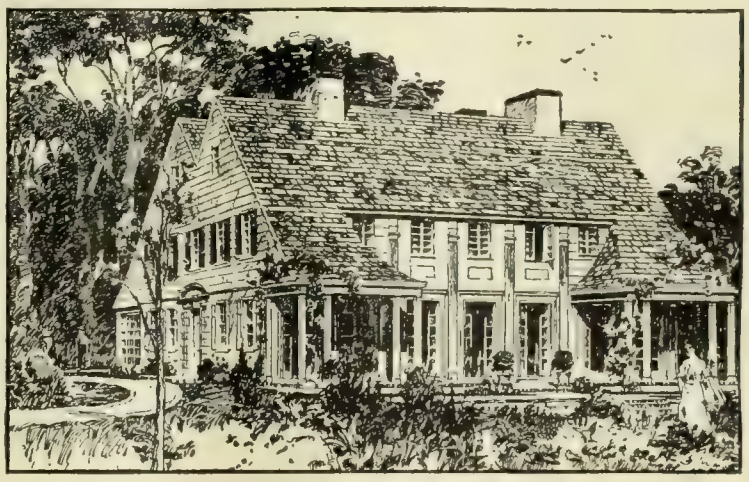
The Wooden House



Altho the low cost wooden dwelling is easily the most universal problem in the field of architectural design, regrettably few are the product of architectural offices of the first class. Many are built, but few are properly designed to exhibit any trace of genuine craftsmanship. Work of this sort requires the most careful consideration on its practical and economic sides, but that is not enough; it should also receive the most careful and distinctive touch in design.

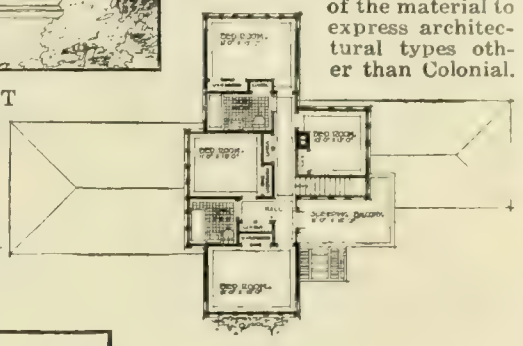


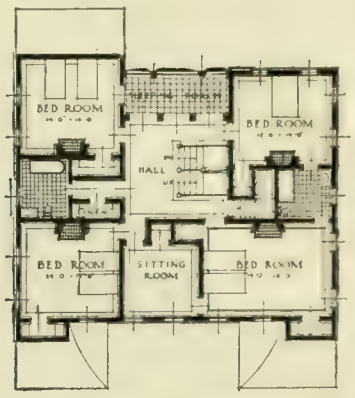
An unusually successful architectural competition for a wooden house to cost $12,500 was recently held by the White Pine Bureau. It resulted in many new and original solutions of the problem of the house of average size. Four of these are presented here as showing those practical values and esthetic interests which they undoubtedly contain for the prospective home-builder. Wood has been used here consistently and the designs demonstrate the possibilities of the material to express architectural types other than Colonial.



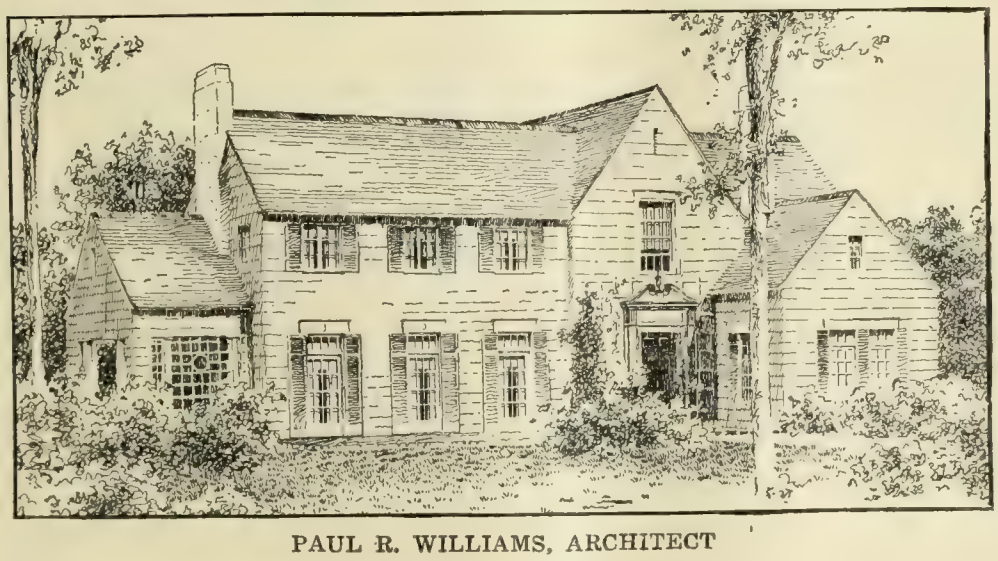
RUSSELL BARR WILLIAMSON, ARCHITECT

These designs indicate the possibility of obtaining a house better in arrangement and more distinctive in design than has been deemed possible for the expenditure of a limited amount. The "Prairie" style of architecture is exemplified in the house above. The emphasis of the horizontal lines tends to lower its hight, making it seem to hug the ground.

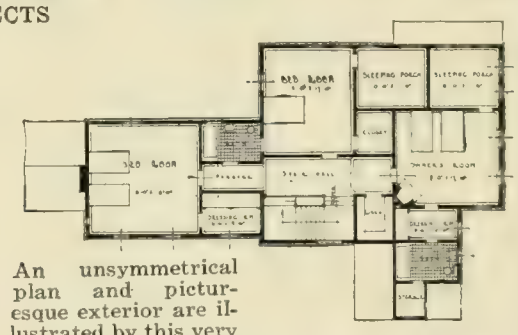


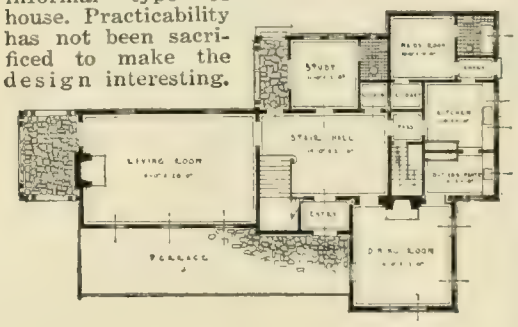


The influence of English architecture is seen here. The side entrance with double gable composes happily with the more formal treatment of the garden elevation. The service quarters are well isolated.

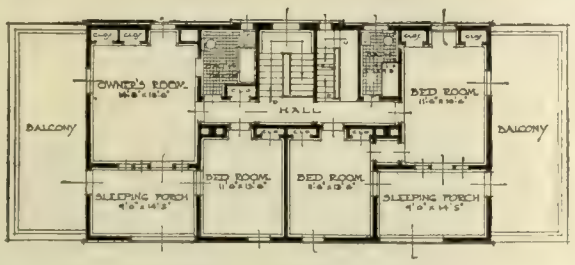


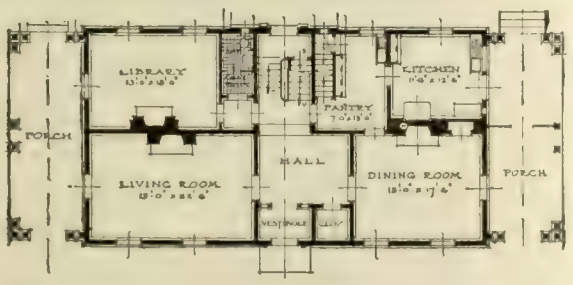
SCARFF, LAPIERRE AND YEWELL, ARCHITECTS





The bedroom arrangement is interesting and convenient.





PAUL R. WILLIAMS, ARCHITECT

An unsymmetrical plan and picturesque exterior are illustrated by this very informal type of house. Practicability has not been sacrificed to make the design interesting.

Here the recessed sleeping porches have been made a feature of the design and have been incorporated in an attractive and novel manner.

BRANSON VANLEER GAMBER, JR., ARCHITECT

THE PLAN OF YOUR PLACE

BY HAROLD A. CAPARN

FORMER PRESIDENT THE AMERICAN SOCIETY OF LANDSCAPE ARCHITECTS

IT will hardly require a second thought to show that efficiency in the outdoor home, like efficiency anywhere else, will depend most of all on personal efficiency. Without it a well-designed layout, labor-saving appliances and first-class conditions and materials are futile. They are like a finely adjusted piece of machinery with an ignoramus to run it.

It does not matter as far as results are concerned whether this personal efficiency consists in the ability to get others to do the work or in doing it oneself; in selecting and paying and directing others to do it, or in doing it with one's own hands.

In these days, when labor is so scarce and expensive and often actually unobtainable, personal efficiency of the kind that does things by the effort of one's own brain and hand, that does not depend on others, is more valuable than ever. Furthermore, anyone who gives up leisure time to the raising of food products is so far doing his bit, for he is helping to set someone else free to serve at the front or making munitions.

If there is one thing that is being discovered far and wide it is the necessity of *learning how* to dig and tend the garden. It soon becomes clear that one person is much more skilful and efficient with garden tools than another, and that this skill does not depend much on physical strength.

The fact is there is no such thing as competent unskilled labor. All labor is skilled in its way and efficient in proportion to its skill. The laborer who in the past has been rather looked down upon by the uninitiated because he could operate a hoe or direct a plow with a steady nerve and unexhausted strength thru a long day is now the envy of many who wonder how he does it. For the average citizen who spends his days in an office is apt after ten minutes of operating a hoe to feel an irresistible desire for a rest and a drink and an explanation to anyone who will listen of the appalling exertions he is making. He may be an athlete able to win a prize fight or tennis championship, he may be in perfect physical condition and yet be unable to curb his impatience and lack the stamina to dig for a couple of hours running.

Personal efficiency in the outdoor home is primarily mental. Before one's physical powers can be put to effective use in farm work, they must be controlled by a steady nerve and a mind concentrated on the job, that can ignore the temptation to drop the tool, to stop and rest and fuss and fidget and put off exertion until tomorrow. And the motions of the hand and body and tool must have been studied until there is no badly directed or superfluous stroke, no lost motion of mind, muscle or implement, and every one is calculated to produce the greatest result by the least effort. This is the ability that the handy man has who works so rapidly and whom all your neighbors are trying to hire.

IF you can acquire enough of this personal efficiency to make your work seem easy to yourself and look easy to others you will not only have become a skilled workman producing the most and best results with the least effort, but you will have a fitness of mind and body that will prolong the life and enjoyment and efficiency of both.

But this personal efficiency is not enough in itself. It may be and often is wasted partially or entirely on a bad plan, for want of a good scheme of action well thought out beforehand. And the waste or misdirection of good effort is so much worse than of indifferent or bad effort. Your personal efficiency will fail to count and be lost in proportion as it is directed on a bad layout, if your lawns, trees, bushes and plants are not where they will do the best work in making the yard look like a home, and will grow best and be most easily tended, if your vegetables are in poor soil and exposures or are placed so as to waste space or impede each other's growth.

The average small place—your place—could be more useful and beautiful and consequently more efficient if it were well laid out. Perhaps your place is so laid out now, but if so it is one among a thousand. More probably the house is not placed to best advantage; the lawns are not as good as they should be in form, size, situation or quality; the roads and walks are not as simple and straightforward as they should be; they are too many, too long, too wide; they do not deliver the visitor to the front door and the grocer and the boy with muddy shoes to the back door as easily as they should; the trees, shrubs and flowers are not as well chosen, as well placed, or as well grown as they might be; unnecessary space is given to drying clothes; the parts have no proper relation to the whole, and in consequence the whole is not doing as much work as it should.

Still more important today, when one's own garden patch is needed to contribute something to the national resources, probably the vegetable garden is not as efficient as it ought to be in production or in looks. It may not be placed right; it may be getting in the way of other uses of your place; or other uses may be needlessly encroaching on it.

THE reason for all this lack of efficiency is not hard to find. The average owner does not know what to expect of his valuable morsel of real estate. He has let chance and the builder decide how it should be divided up; he has set out a few things this year and a few more the next, and shifted them around to see how they would look; and generally he has gotten nowhere in particular at considerable total cost. And all for the lack of proper planning, without which efficiency is impossible.

So, in getting the most out of one's outdoor home, as in other things, foresight is better than hindsight. You can get more out of it whether of productiveness in the back yard or beauty and fitness in the front yard by putting more into it of forethought. Before you begin you should know just where everything in it is to go and why. And remember that it is never too late to begin to improve.

In this Hand-woven Seamless Aubusson Carpet, imported by W. & J. SLOANE, the beautiful Louis Seize design is composed of a soft cream ground, enlivened by delicate chintz colorings, with inner and outer borders of rose. Size 12 ft. x 8 ft. 6 in. Price $650.

Hand-Woven Aubusson Rugs

The vivacity of the French supplies the most desirable motif for the dainty furnishings of the Drawing Room, Music Room and Boudoir.

To complete such a room the ideal floor covering is the Hand-Woven Aubusson Carpet.

Superb examples are to be found in our stock; and, notwithstanding the war, such carpets especially designed by our French artists for particular schemes of decoration, are now being made abroad.

Skilled advice—the result of long experience—is at your service.

Improper Trimming Ruined this Tree

Trimming, *correctly done*, is good for trees, good for their appearance and good for their health—in fact, necessary for most trees.

But—*incorrectly done*, it is positively dangerous, yes ruinous.

Thousands of trees are lost every year because their owners did not realize the degree of expert knowledge necessary in successful tree trimming.

The fine old tree in the picture to the right was "trimmed" by somebody who had little or no conception of the scientific requirements of the work.

Fungus spores entered the unprotected wounds left on the tree and decay set in, rapidly disintegrating the internal cell structure of several of the largest branches until nothing but weak shells remained.

Then the inevitable happened!—a severe storm blew up, the weakened branches gave way, and the tree was ruined.

No matter what the condition of your trees may be—whether they need merely a little scientific trimming or whether they require thorough treatment for decay and disease—it is dangerous to entrust them to anything less than tree surgery of *proved* worth. Remember, also, that little troubles with trees soon grow into big ones.

The *proved* Tree Surgery

Davey Tree Surgery is *proved* Tree Surgery; it saves trees without guessing or experiment.

Proved by time—by a record of successful performances spanning a generation.

Proved by men of science, such as Dr. H. D. House, New York State Botanist and former professor in Biltmore Forestry School, who writes after investigation that Davey Tree Surgery "measures up to the highest degree of efficiency which training and experience can produce."

Proved by the U. S. Government, which after official investigation, endorsed Davey Tree Surgery as the only Tree Surgery good enough for the trees on the Capitol grounds and elsewhere.

Proved by the success of the Davey concern as an institution, which is today doing a volume of business thirty times greater than the volume of a decade ago.

Proved—and proved best—by Davey clients. Hundreds of estate owners between Kansas City and Boston—prominent men and women whose recommendation you can accept with complete confidence—enthusiastically endorse Davey Tree Surgery.

Write today for FREE examination of your trees

—and booklet "When Your Trees Need the Tree Surgeon." What is the real condition of your trees? Are insidious diseases and hidden decay slowly undermining their strength? Will the next severe storm claim one or more as its victims? Only the experienced Tree Surgeon can tell you fully and definitely. Without cost or obligation to you, a Davey Tree Surgeon will visit your place and render an honest verdict regarding their condition and needs. Write today.

FOR SAFE

FOUR TYPICAL LETTERS FROM HUNDREDS WRITTEN BY SATISFIED DAVEY CLIENTS

From J. B. Pierce,
American Radiator Co., Boston, Mass.

"I wish to express my entire satisfaction with the work performed by your man."

From A. G. Reeves,
The Reeves Bros. Co., Alliance, Ohio.

"I am very much pleased with the expert manner in which your men have handled the trees on my farm. Should they require any further attention, you can rest assured you will be called upon."

From Henry Abels,
Secretary, Franklin Life Insurance Co., Springfield, Illinois.

"The work done by your representatives on the trees surrounding our home office building is very satisfactory. We think it not only improves the appearance, but will greatly prolong the life of the trees. I consider your method of treatment very beneficial and distinctly worth while."

From Mr. R. Alger,
Vice-President Winnesheik County State Bank, Decorah, Ia.

"The men who handled my work were very courteous and good workers. It is certainly gratifying to see people who understand their business and are willing to work, operate on a job of this kind."

PITCH-PIPE AND POMP AT NIAGARA

(*Continued from page 164*)

What he has done he has done without compulsion, without military authority or command, merely as one of the outposts of Raymond B. Fosdick's commission which plans to make life just a little more worth while for men who are of necessity hard driven toward the leadership of a republic once reluctantly, now cheerily, in arms.

The man? He is Robert Lloyd, baritone for years in California, director of singing, well known from San Diego to Siskiyou, and for thirteen years director of the McNeill Club of Sacramento, one of the most successful of the male choral societies in this country. New York knows perhaps less of him, but he has been about everywhere, it seems, and altho without insignia on sleeve or shoulder is pretty much at the heart of the coming officers of the New Army. When the Fosdick commission undertook to stimulate singing in the encampments it was realized that there was a big problem before the men who were to do the work. The Fort Niagara workday was like that at the other camps, a steady stretch of mental and physical labor from 5.30 a. am. to 9:30 p. m., with a half hour in which to rest a man's bones and skin and brains before turning in. One couldn't command these men to sing. Nor could one say: "This is the singing hour." That the men would sing of themselves was understood. The problem was when and how to help and to lead them. It remained for Lloyd to find his own time. A few minutes here and there in barracks, a moment or two on the range, a few minutes of picking up the hikers here and there, and the thing was started in a small, a slow, but withal a hopeful way. "There was melody here," says the veteran conductor, "and it was for me to make it harmonious. It was necessary to find a point of contact, and we found it in 'There's a Long, Long Trail.' There was for an entering wedge 'Pack Up Your Troubles in Your Old Kit Bag.'"

Just a little more light on the methods pursued by the wily conductor to make a real singing camp at Fort Niagara, and we shall pass next time to a recapitulation of the intrinsically military work. Calls for rehearsals were of little avail and the conductor found that in order to get the men interested he had to get right into the barracks. He popped into one company barracks one night shortly before taps and faced a gloomy situation that might have beaten a less determined and whole-hearted man. Ten of the company had been dropt that day and the situation was, to say the least, depressing. Dauntless, he set the pipe to his lips, however, and began. When he left it was a retreat before the echoes of a happy company giving tongue. Later a rehearsal was attempted. There was a misunderstanding and the men showed up under the trees in the dark instead of in the barracks where the leader could be seen. Instantly he grasped the situation, and taking out his flash lamp led the chorus in the dark. The chorus started 150 strong and finished with 800 or so in the gathering. Just now there is a pitch-pipe in every company. The work is done, and splendidly done, altho it will be continued to the end of the encampment and thereafter, for wherever the officers-to-be of the Fourth Provisional Regiment go in the immediate and even the distant future—the songs of Fort Niagara and all the lilt and helpfulness will go with them.

Fort Niagara, New York

The New Books

Four English Boys

CHANGING WINDS, by St. John G. Ervine, is so very good that one wishes it were even better. Sometimes there is too much of it and one lays the book aside, but always the characters call one back to the story—the events of their lives. The book has to do with one Henry Quinn, an Irish novelist, and his friends made at an English school, Rumpell's. They are a clever quartet, these boy friends, and they resolve that life shall make them great, that they shall get good of life and serve their times nobly. They organize a political society of their own with an especial propaganda, calling themselves "the Improved Tories" and inviting the great and the near-great to come and discuss political and social questions with them, to heckle and be heckled. Particularly interesting to American readers are the author's characterizations of such men as Yeats, Chesterton, Wells and others mentioned in the story, and also the discussions of the Irish question. Then comes the great war and one by one the four who would have been great go off to fight and die. Of course there is also a love story but without any of the sentimentality which the four friends agree to dislike, and which they call "slop"! A book for quiet, thoughtful people.

Changing Winds, by St. John G. Ervine. The Macmillan Company. $1.60.

A Spanish Dramatist

WITH the publication for the first time in English of four plays by Jacinto Benavente, a new planet, or at least a new star, swims into our literary ken. Spanish literature of today is known to very few American readers; undoubtedly this fact is largely due to the wide variance between the points of view of the Anglo-Saxon and the Spaniard, and to the extreme difficulty of rendering into English the Spanish language, with its untranslatable idioms, and its amazing number of cryptic proverbial expressions. Benavente, however, is widely read and widely traveled, and his plays, reflecting his cosmopolitanism, are thus no more foreign to our understanding than is contemporary French literature. He has even made excellent translations into his own tongue of several of Shakespeare's plays.

Indeed, comparisons have been drawn between the great English dramatist, and the modern Spaniard—quite unfounded comparisons. Jacinto Benavente is a shrewd observer of human nature, but his psychology is more brilliant than profound, and the great passions are beyond his power to portray. He is preëminently a satirist. Laughter is his weapon against the faults and follies of society. But tho his satire is cynically keen, it is never bitter, and never constructive. Neither a reformer nor a propagandist, he preaches no doctrine, and offers no remedy for human shortcomings, but is content to impale them upon the rapier of his wit and hold them up to ridicule. Much of the flashing brilliance of the dialog is necessarily lost, but no translation can destroy the charm of his clean-cut lines and subtle characterization.

Your Garden is at its best right now—A riot of vivid color and fragrant bloom, a constant source of delight to you and your friends—

Why not keep it blooming all winter?

KING GREENHOUSES

are winter gardens. They are built to capture every bit of sunlight during the short days and give, in zero weather, practically the same growing conditions which your plants enjoy today.

King Greenhouses are not alone productive and practical, they are beautiful in themselves. The curves and graceful sweeping lines peculiar to the King type of construction can be adapted to fit into and harmonize with any surroundings.

Now is the time to build your winter garden. Just write for our greenhouse literature and tell us what you would like. Our experts, without any obligation, will put your ideas into practical shape and submit plans and estimates.

On Your Summer Tours, Take Home-Comfort With You

Make Tentobed Your Outing Home and save a lot of big, needless hotel bills. Just as comfortable as sleeping at home. Pays for itself the very first tour.

Compactness: Tentobed rolls into a package only 7 in. in diameter and 4 ft. (or 4 ft. 6 in.) long, according to style selected. It will ride in its dust- and water-proof cover on the running board of your car, or in the canoe, without loss of passenger space.

Lightness: Weighs only 37 to 45 pounds according to style selected.

Waterproof: Tent is heavy drill, treated by a special process making it absolutely water-proof and mildew-proof. Unlike other tents, it *will not leak* from touching on the inside. *We guarantee this.*

Mosquito and bug-proof: Tentobed absolutely does away with mosquitoes and insect pests. Openings at both ends provided with bobinet flaps to ventilate but exclude bugs. Lap attached to tent all 'round at bed height, lies under blankets and excludes insects, snakes, etc.

TENTOBED Comes in Three Styles

Style "A"—4 ft. 6 in. wide x 6 ft. 4 in. long—ample room for three people; complete outfit rolls into package 4 ft. 6 in. long by 7 in. in diameter. Price, $40.00.

Style "B"—is 48 in. wide x 6 ft. 4 in. long—extra large bed for two adults; weight, 40 pounds. Complete outfit rolls into package 4 ft. long x 7 in. in diameter. Price, $35.00.

Style "C"—is 42 in. wide x 6 ft. 4 in. long—suitable for 2 medium-size people; weight 37 pounds. Price, $30.00.

Dust- and rain-proof cover included with each outfit at above prices.

Extra tarpaulin, made of same material as tents, which acts as fly over all—furnished for $15 extra with jointed pole. For larger parties, this combination is two tentobeds with tarpaulin.

Our Guarantee: Set Tentobed up on sleeping porch or lawn. Test it out. Sleep in it. Turn the hose on it to test waterproof qualities. Then if you are not honestly satisfied, notify us and every cent of your money will be cheerfully refunded. Could anything be fairer than that?

Send today check or money order and Tentobed will be shipped to you same day

Whether you want to erect a cottage, garage, play house, poultry house or what-not, you'll find "just the thing" pictured in the Hodgson catalog. These houses are shipped to you in painted sections, well finished and all ready to bolt together. You can put up any Hodgson house yourself—in a jiffy. Send for catalog.

HODGSON *Portable* HOUSES

The volume commends itself to a frequent reader of printed plays for one rare virtue, if for no other. These are absolutely free from the ponderous mass of descriptions, suggestions, interpretations and stage directions which encumber the text of so many modern dramas. Neither characters nor settings are described at all, and no directions are given. One is not even told the heroine's age. The play simply begins, and with consummate skill the persons are allowed to differentiate themselves and develop their situations by their speeches alone.

Benavente is a prolific writer, and most of his plays have been successfully performed in Spain. On the surface, his manner has a wide variety. His plays range from social comedy to melodrama, from Madrid society to peasant life. But this variety is more apparent than real. His peasants are not real peasants, but members of *le grand monde* masquerading in poor clothes. The roughnesses and brutalities of life are as foreign to his genius as are the great emotions. Manuel Bueno, in his *Teatro Español Contemporaneo*, sums up Benavente's work in an epigram: "He writes witty and amusing comments on the margin of life."

Plays, by Jacinto Benavente, tr. by John Garrett Underhill. Charles Scribner's Sons. $1.50.

What Is Art?

J. E. SPINGARN, in his *Creative Criticism, Essays on the Unity of Genius and Taste*, makes such thoughtful, original and penetrating argument against judicial and historical modes of criticism and for a freer, impressionistic sort of criticism that recognizes practically no standard of art but that each true manifestation of art creates its own individual standard for itself, that it would take at least several thousand words to talk with him about it adequately. He is not altogether logical, he is perhaps too clever, too little a critic of verse (tho a poet, a creator, himself) yet we cannot readily deny that he is likely enough "on the right track."

Creative Criticism, Essays on the Unity of Genius and Taste, by J. E. Spingarn. Henry Holt & Co. $1.20.

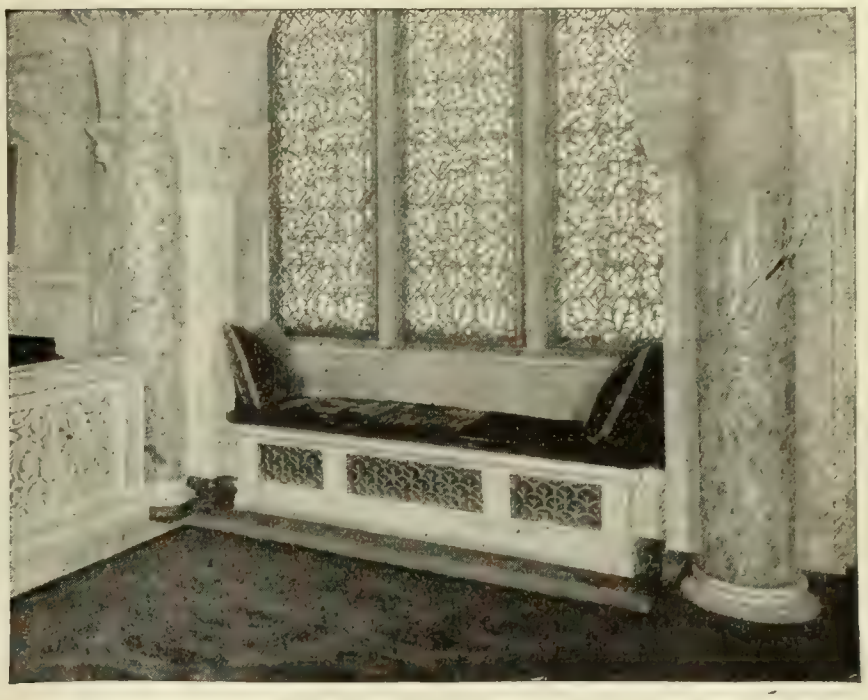
As a Yankee Saw It

ARTHUR GUY EMPEY, a former Sergeant-Major of United States Cavalry, has written one of the very best soldier books of the war in *Over the Top*. Private Empey, as he became in the British service, simply had to go after the sinking of the "Lusitania," and he just as simply packed up and went. On arriving in London it was not difficult for him to find a recruiting station, and, tho refused at the first place because, in spite of his denial, he was held to be a neutral, a sympathetic British sergeant helped him over that difficulty at the second.

Being detailed to recruiting duty, he humorously relates his efforts in trying to round up British slackers. After reaching a training camp he enumerates with frank bewilderment the equipment a British soldier is regulated to carry. Because it is thereafter made abundantly clear that Private Empey is a good soldier in all which the term implies, no reproach is attached to the confession that he felt an uneasy feeling in his stomach when he first heard the boom of the great guns. His tales of the detail to night patrol in No Man's Land, and the adventure to capture a couple of German prisoners previous to the great Somme push, are real war drama, an altogether performance with no star parts so far as Private Empey and his

comrades were concerned. If his chapter on The Firing Squad is one likely to be read seriously by every soldier, there is plenty of soldier fun running thru most of the others. His character drawing of his commanding officer, "Old Pepper," is of the richest vintage of that kind of work. There is only one place where we venture to take issue with the author. In recounting the death of one of his mates, he states that he, "like a great big boob, cried like a baby." Such tender sympathy for a comrade rings true to the very heart of a good soldier.

His words to the boy who may have to go where he "did his bit," may also be taken by fearful relatives. To him is granted "nerve for the hardships, the interest of the work grips him; he finds relief in the fun and comradeship of the trenches, and wins that best sort of happiness that comes with duty done." A Dictionary of Tommy's Slang completes this most excellent narrative.



Over the Top, by Arthur Guy Empey. G. P. Putnam's Sons. $1.50.

The Dark Continent

HERBERT ADAMS GIBBONS, whose former book, "The New Map of Europe," ranks as one of the best popular studies of the background of the war, has since written a survey of recent European imperialism in *The New Map of Africa*. The book, in spite of a few minor errors and inconsistencies, is no mere piece of war time journalism. The author has done a considerable amount of research, which is none the less evident for the fact that he did not choose to besprinkle his pages with footnotes, and he has, thru travel, acquired a first hand knowledge of a considerable part of the regions he describes. The manner in which the story is told adds to the value of the book, the style is vigorous, animated and clear and all the arguments well-put and cogent.

Mr. Gibbons has a very attractive impartiality. Whether the reader agrees with his conclusions or not he can see that the author has no other aim than to find out and convey the exact truth. For every colonizing nation he can find something to say, except for the Portuguese, who have done practically nothing but erect their flag over a large part of Africa and permit foreigners to do all the real work of development. The French have succeeded with their Mediterranean colonies, but the author relates many cruelties of greedy commercial companies in the French Congo which rival the better known atrocities of the Belgian Congo and the German colonies. Most readers will be surprized to learn that "only in Great Britain, among all the European colonizing powers, has there been manifested as much humanitarianism and idealism as in Germany with regard to the establishment and maintenance of a just enlightened colonial régime." The author praises the Germans, French and Belgians for their industry in developing railroads and public works, but he regards the British as, on the whole, the most enlightened, progressive and humane of the colonizers of Africa. On the other hand, he can hardly find words too strong to denounce British selfishness in attempting to shut the Germans out from all opportunity for colonization on the ground that all German expansion was "intrusion." He hopes that Germany may be permitted to retain an African empire after the war.

The general impression that the reader gets from the book is that colonial atrocities are not a matter of nationality, that all white men in the tropics are seized with the temptation to abuse the almost absolute

Grille enclosed window radiator in residence of Arthur Curtiss James, New York. Allen & Collens, Architects.

THE INDEPENDENT CORPORATION
119 WEST FORTIETH STREET NEW YORK

power over life and death which lies in their hands. Only men of high personal character can in these circumstances continue to bear in mind the welfare of the weaker subject races, and Mr. Gibbons ascribes the enlightenment of British rule to the fact that the class of men chosen for administrative posts is unusually good. But he does not draw the conclusion of some anti-imperialists that the African natives should be left to themselves, because, in his opinion, not even the semi-civilized Mohammedan peoples of northern Africa have as yet developed that firm basis of moral character on which alone self-government can be erected.

The New Map of Africa, by Herbert Adams Gibbons. The Century Company. $2.

Newcomers

GRACE ABBOTT, long resident of Hull House, is an authority on her topic, *The Immigrant and the Community*. Hers is an excellent antidote to any vanity we may have as to our generosity to newcomers. Not that much is not being done, for the immigrant, but what is being done is mainly to combat conditions that should never and need never have existed. These conditions, their causes and their results and the way to cure them are stated without attempt at embellishment and without emotionalism.

One cannot read the chapters on the Journey of the Immigrant, the Immigrant Girl, the First Job, the Immigrant in Politics and of the exploitation that meets the stranger still at every turn without hot indignation and shame. That a great part of this exploitation is due to the mercenary among the immigrants themselves but makes our fault one of indifference and inattention, only a degree away from the exploitation itself. A salutary reading lesson this for every American not acquainted by personal work, with the menace in the immigrant population, with its struggles, its sufferings and its ignorance.

The Immigrant and the Community, by Grace Abbott. The Century Company. $1.50.

World State or Master State

SIR CHARLES WALDSTEIN'S *Aristodemocracy*, altho it undertakes a general survey of all social and political problems of the day, is principally a plea for internationalism against a narrow or chauvinistic patriotism. Of course, since the book was written in wartime, Germany is selected as the chief example of overweening national conceit, but the author's discussion of German imperialism is discriminating. He points out, for example, that Nietzsche, who is so often bracketed with Treitschke as the inventor of Pan-Germanism, had a profound contempt for that historian. "There is," Nietzsche said, "history written with an eye to the court, and Herr von Treitschke is not ashamed of himself."

Nothing could be sounder or saner than the author's exposition of the baseless folly of racial pride and national prejudice. Not everyone, however, will assent to all his suggestions for international union. Instead of a league of nations he proposes a world court supported by a purely international army and navy. He suggests that this court be located on some island in the Atlantic and that Latin be made the language of international intercourse. In dealing with other problems than international federation the author is less specific. Altho he proclaims the motto "Liberty, fraternity and inequality" and calls his social philosophy "Aristodemocracy," he appears to concede most of the political demands of complete democracy and even favors a

great degree of socialistic legislation limiting the power of wealth and giving economic security to the poor. The "inequality" of which he speaks seems to be nothing but the realization of each person's individuality in a free environment.

Aristodemocracy, by Sir Charles Waldstein. Longmans, Green & Co. $3.50.

Chautauqua Readings

IN the Chautaqua Home Reading Series are recently issued four very worthwhile volumes. The interesting lectures on *Characters and Events of Roman History*, delivered in this country some years ago by Guglielmo Ferrero, and *Life in Ancient Athens*, the vivacious yet accurate description of other days and other ways, by Prof. T. G. Tucker, are the historical books. *How to Live*, by Irving Fisher and E. L. Fisk, is an excellent, clear, simple exposition of the theory and the rules of personal hygiene. Laura Spencer Porter introduces the reader to *Seven of the Greatest Books in the World*. Her essays give clear, readable descriptions of plots, characters, underlying motives, historical and social settings, and of the personality of the authors. Her chosen seven are the "Odyssey," the "Divine Comedy," "Faust," the "Arabian Nights," "Don Quixote," the "Pilgrim's Progress" and the "Book of Job."

Vaughn MacCaughey has prepared a little book whose very existence points to the unique position of Chautauqua in American life. It is a hand book telling the visitor what stars and what mushrooms are to be seen in the region; what trees and flowers grow round-about, and what geologic dramas the rocks set forth to the knowing eye.

Characters and Events of Roman History, by Gugliemo Ferrero. *Life in Ancient Athens*, by T. G. Tucker. *How to Live*, by I. Fisher and E. L. Fisk. *The Greatest Books in the World*, by L. S. Porter. Chautauqua Press, Chautauqua, N. Y. $1 each. *The Natural History of Chautauqua*, by Vaughn MacCaughey. B. W. Huebsch. $1.

History Down to Date

England in the Mediterranean, 1603-1713, continues Professor Corbett's studies of English naval power, and in this particular volume deals with the influence on the future empire of the control of the straits. A scholarly work written in easy attractive style. (Longmans, Green & Co., 2 vols., $5.)

Scotland, by R. L. Mackie, is a history of 588 closely printed pages, excellently illustrated. The aim is a short, well proportioned account meting equal justice to Highlander and Lowlander, Catholic and Reformer, Jacobite and Hanoverian, Queen Mary and John Knox. Here also the reader will find chapters dealing with social and economic conditions in the various stages of Scotland's history. (F. A. Stokes Company, $3.)

The record of 1916 in the United States is the seventh of that most useful compilation, *The American Yearbook*. This has a full alphabetical index, but the information is arranged in chapters, each topic dealt with by a specialist and covering the year's developments in almost all public activities. The chapters on our international relations and on foreign affairs recount the year's events in the Great War. (D. Appleton & Co., $3.)

Chalfant Robinson has translated and adapted Boudois and Dufayard's *Continental Europe, 1270-1598* for American use. Nearly half of the book is devoted to the history of France. The rest is given mainly to chapters dealing with the political and social development of the German Empire, of Italy, Spain, the northern countries and the Ottoman Empire. Other chapters deal with the history of the church, of the great inventions and discoveries of the fifteenth and sixteenth centuries and with the social

How do *YOU* Kill Weeds ?

The old way has been by hand-weeding—paying excessive labor costs several times during the year.

But, today, owners of estates and homes, as well as leading railroads, municipalities, country clubs, parks, and cemeteries, maintain beautiful weed-free paths, gutters, drives, roads, tennis courts, and rights of way by the use of Atlas Weed-Killer.

One gallon of Atlas clears 600 square feet for the entire season. Apply in ordinary sprinkling can, diluted with 20 parts water. Weeds die a few days after first application—then no more trouble for the entire year. (Compare with costly hand-weeding which must be done over and over again.)

Peony Specialist
Remington Indiana

and industrial development of Europe preliminary and incident to the Renaissance. (Henry Holt & Co., $2.)

The American Historical Association is making accessible invaluable contemporary accounts of the discovery and settlement of America. *Early Narratives of the Northwest* gives the journal of Father Allouez, the voyage of Marquette and Joliet, Tonti's story of La Salle, and several more. A most interesting collection. (Charles Scribner's Sons, $3.)

Constantia Maxwell in *A Short History of Ireland* has presented us with a brief account of the struggle between the Celtic and the Anglo-Saxon races, between the Protestant and the Catholic Churches, in Ireland from the earliest times to the present day. The book is a convenient, not very sympathetic, introductory manual, supplemented by four pages of bibliography. (F. A. Stokes Company, 80 cents.)

The Indian Mutiny is one of the world's great dramas of which the last word has not yet been written. *The Story of the Indian Mutiny,* by Henry Gilbert, however, fails in the broad, impartial view of cause and effect. For example, his slight treatment of the much debated, heroic figure of the famous rebel, Rani, or Queen of Jhansi, falls far below the estimate of her in Kaye and Malleson's still standard work. (T. Y. Crowell Company, $1.50.)

New Novels

Mary Roberts Rinehart's *Bab* is a frothy and amusing story about the pranks of a sub-debutante, her flirtations, and the scrapes into which she gets herself. A sweet meringue! (G. H. Doran Company, $1.40.)

Gertrude Mathews, author of *Treasure,* most whimsical of travel books, has caught a peculiar personality and transferred to paper his imaginings, while on a surveying trip thru Dutch Guiana. The life of the "Bush" is well portrayed by a nature lover and it is a pity that a somewhat unique coinage of words mars the style. (Henry Holt & Co., $2.)

Jerry of the Islands, by Jack London, is a story of the gruesome adventures of an Irish terrier living in the Solomon Islands, where the aborigines still hunt and devour the "long pig" without compunction and with decided relish. Mr. London gives profuse and minute information as to the culinary methods of cannibals. (The Macmillan Company, $1.50.)

Very simple but withal lifelike and wholly pleasant sketches are those in which Edgar Dewitt Jones tells the story of one generation in the country church of *Fair Hope.* Some fine old characters are drawn such as Jacob Boardman, the Modern Enoch, and some quaint customs and incidents are recorded. (The Macmillan Company, $1.25.)

One of the pleasant novels of the year is *Slippy MacGee,* by Marie Conway Oemler. Slippy's other name is prettier, the Butterfly Man. Set in an old Southern community, flavored a bit with old Southern romance and chivalry, this is in fact a wholly modern tale, of a master criminal, a priest and a town boss. (The Century Company, $1.35.)

Reading *Louisburg Square,* by Robert Cutler, is somewhat like spending an afternoon with polished mahogany. It is a story of a charming girl who belonged to the best Boston society and whose New England ideals and finished culture made it difficult for her to choose between two lovers. It is a well written story, but parts of it, perhaps because of the kind of life and characters portrayed, seem a bit stiff and wooden. (The Macmillan Company, $1.50.)

Nalbro Bartley has written in *Paradise Auction* a fine, wholesome story of American life, of a group of young men and women whose lives are happily influenced by a great-hearted and wise mother-woman whom they all call "Darly." It succeeds in being thoughtful without dragging and the

author has a very unusual knowledge of the things that happen in the hearts and minds of women. (Small, Maynard & Co., Boston, $1.50.)

Charles B. Hudson's story, *The Royal Outlaw*, is an imaginatively written and mildly interesting narrative of the adventures of David of Israel in the period before the death of King Saul gave him the crown. The love story of Athomar, David's armor-bearer, adds romance. (E. P. Dutton & Co., $1.50.)

Ernest Thompson Seton's new novel, *The Preacher of Cedar Mountain*, is a thoroly conventional account of the making of a fine preacher and of his contacts with horses and men and women. Mr. Seton writes better about animals than about people but no doubt those who like his work will like his book. (Doubleday, Page & Co., $1.35.)

Lured on by a plausible real estate agent, Laurie, the heroine of *McAllister's Grove*, by Marion Hill, invests her savings in an orange grove which she has never seen. The grove proves to be less valuable and charming in reality than it was in anticipation, but all the men like Laurie and a young English neighbor extricates her from her difficulties. (D. Appleton & Co., $1.40.)

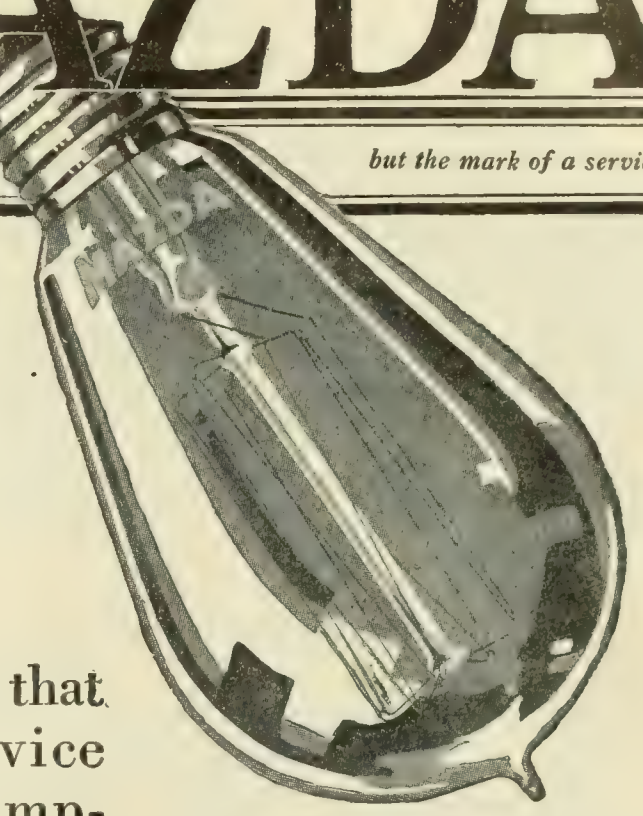
John Masefield's *Lost Endeavour* as a swashbuckling yarn is too poetic, too literary, for adolescents, and too lacking in all consideration that such a fact as woman's existence might sometime conceivably enter into even the minds of pirates, for adults. Also, its Indians are too grotesque and its plot too plotless. But certain remarkable bits of characterization and certain flashes of pure poetry make it all as surely Masefield as any page of Kipling is surely Kipling, London, London, or Meredith, Meredith. (The Macmillan Company, $1.50.)

Of Many Minds

Colored plates and many photographs add to the attractiveness of the pleasantly chatty and at times quaintly imaginative papers on the *Human Side of Trees*, by Royal Dixon and F. E. Fitch. (F. A. Stokes Company, $1.60.)

The third edition of G. L. Johnson's *Photography in Colours* has a full description of the simple Radex process, of Graumont's method of color cinematography, and of Carrara's reproduction of autochromes. (E. P. Dutton & Co., $2.)

Talbot Faulkner Hamlin, in *The Enjoyment of Architecture*, explains technically why we like certain forms, the fundamental rules of construction and ornament such as balance and rhythm, that make for the enjoyment of the slanted roof, the arch, the pediment, etc. (Duffield & Co., $2.)



Five Plays, by George Fitzmaurice, published here for the first time, introduce a new Irish folk-dramatist. Lacking the poetry and the hauntingly beautiful Celtic mysticism of Synge's or Lady Gregory's plays, they nevertheless present the humor and pathos of Irish peasant life with vigor and a certain whimsical charm. (Little, Brown & Co., Boston, $1.25.)

A new issue of the pleasant Wayfarer's Library is a volume of chatty papers on all sorts of topics. Alpha of the Plough, the author of these *Pebbles on the Shore*, was one of a group of well known writers who under pen names were, early in the war, carrying on a series of short essays in the columns of *The Star*. Tho from England in war time these have few hints of war and are written with charm and good cheer. (E. P. Dutton & Co., 50 cents.)

In Mizzoura, *Oliver Goldsmith* and *Mrs. Leffingwell's Boots*, a melodrama for the gallery, what may be called a "dusty historical comedy," and a sporadically jovial "farcical comedy"; *The Gamblers* and *The Lion and the Mouse*, two slightly "stagey," yet respectably wrought, plays of "high finance," are issued with copious typographical errors. The excuse for a glance at these is that the tyro "stage-dramatist" ought to find illumination or disillusionment, or both, in Mr. Thomas' individual prefaces. (Samuel French, 50 cents each.)

MAZDA

"Not the name of a thing, but the mark of a service"

The new light that MAZDA Service throws on lamp-manufacturers' problems is reflected in brighter, whiter light that MAZDA Lamps give in your home

The Meaning of MAZDA

MAZDA is the trademark of a world-wide service to certain lamp manufacturers. Its purpose is to collect and select scientific and practical information concerning progress and developments in the art of incandescent lamp manufacturing and to distribute this information to the companies entitled to receive this Service. MAZDA Service is centered in the Research Laboratories of the General Electric Company at Schenectady, New York.

The mark MAZDA can appear only on lamps which meet the standards of MAZDA Service. It is thus an assurance of quality. This trademark is the property of the General Electric Company.

ALLABOUGH & SON
Woolworth Building New York

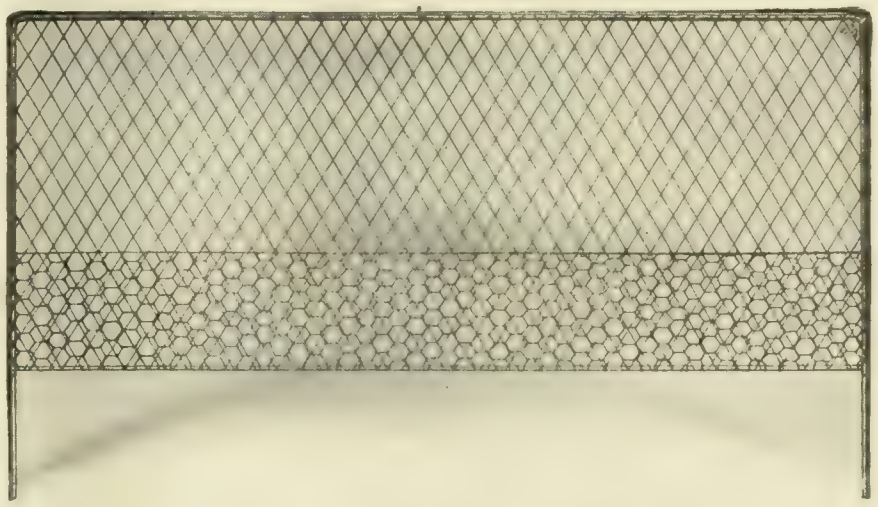
BUILDING A HOME

means very much more than taking title to a plot of ground, and ordering a house of the right size. It means—if you are really building a home to live in with content and comfort—a careful consideration of such matters as the location of the land, the proper spot for the house, the future development of the grounds, the material the house shall be built of, the planning of rooms and all conveniences for each floor, the proper scheme of decoration, the best flooring, the best style of roof, the color of trim and sash, how to heat the house, how much it shall cost, and a hundred and one other questions, all of them important and sure to come up for decision. In the big

COUNTRYSIDE AUTUMN HOME BUILDING NUMBER

of **The Independent** to be published September 1, subjects of importance will be treated in articles of unusual interest. Their timeliness, the authority with which the writers speak, and the very interesting illustrations of interiors and exteriors combine to make this number notably valuable.

THE TEAMWORK OF NATIONAL DEFENSE



IF a democracy depends upon the consent of the governed then the United States at the present moment is a democracy plus. It is requiring of the governed not only consent but advice and coöperation. This war is being waged not by politicians but by the people. It is touching every industry, every profession, every walk of life in the country and from every industry, profession and walk of life the Government has called experts to help in the solving of its problems. That is the meaning of the nine subordinate committees of the Council of National Defense and the fifty-one committees, many of them with large sub-committees, coöperating with the Advisory Commission. The Advisory Commission does not simply exist, it acts. It has already accomplished definite results and put big, vital ideas before the public mind. Creation of a great air fleet has been brought sharply to public attention. The railroads, telegraphs and telephones of the nation have been mobilized. Enormous savings in the purchase of supplies have been effected. And there is a constantly growing list of other achievements.

The Council of National Defense consists, as every one knows, of the Secretaries of War, the Navy, the Interior, Agriculture, Commerce and Labor. The Advisory Commission of the Council of National Defense is a body of seven civilians appointed by the President. They are: Daniel Willard, chairman, president of the Baltimore & Ohio Railroad, transportation and communication; Howard E. Coffin, vice-president of the Hudson Motor Company, munitions, manufacturing, including standardization and industrial relations; Julius Rosenwald, president of Sears, Roebuck & Company, supplies, including clothing; Bernard M. Baruch, financier, raw materials, minerals and metals; Dr. Hollis Godfrey, president of the Drexel Institute, engineering and education; Samuel Gompers, president of the American Federation of Labor, labor, including conservation of health and welfare of workers; Dr. Franklin Martin, secretary general of the American College of Surgeons, medicine, surgery and sanitation.

WALTER S. GIFFORD is director and Grosvener B. Clarkson secretary of both council and commission. And these men have as their assistants several hundred men and women who are leaders in their industries and professions. Among them, for example, are twenty-five railroad and steamship line presidents, seventeen college presidents, fifty or sixty presidents of selling, manufacturing and mining corporations, and countless vice-presidents, managers, directors, etc. From them the Government is getting expert, specialized advice of the very highest quality available and it is getting it at a ridiculously small cost. In the service of the Council and Advisory Committee there are less than a hundred paid employees and almost all of those are clerks and stenographers. More than one hundred men of the most highly trained type are giving their entire time to the Council and Commission without receiving compensation of any kind. Hundreds of others of the same caliber are giving part of their time both in Washington and thruout the country, traveling and working at their own expense.

The Council of National Defense was created by act of Congress in August, 1916, but it was not fully organized for business until March 1, 1917. In the five months

An Up-to-date Poultry Yard IN A JIFFY

Enlarged View of "Buffalo" Portable Section

With "BUFFALO" Portable Poultry Runways, you can build your poultry fence in a few moments' time. One person can erect it. No posts, hammer, staples or other tools necessary. Light, neat and easy to handle. Can be moved to other locations at will. Made entirely from galvanized steel and wire.

The use of the "BUFFALO" Portable Fencing System enables you to rotate yards and change over to new greens as often as desired.

Made in standard size sections as follows:

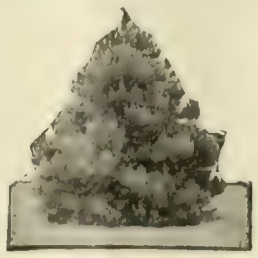
	Price per section
7 ft. long by 5 ft. high	$3.75
2 ft. 6 in. long by 5 ft. high (gate)	1.60
8 ft. long by 2 ft. high	2.00
6 ft. long by 2 ft. high	1.60

View showing arrangement of "Buffalo" Portable Sections

Above prices effective April 1st, 1917, F. O. B. Buffalo, New York, and are for orders consisting of six (6) sections or more.

Above sizes can be shipped from stock immediately. Special sizes in about two (2) weeks' time.

The "BUFFALO" Portable Fencing System is one of the best articles on the market for young chicks or duckling runways and can be used for growing chickens, ducks, geese, etc., as well as for enclosing small vegetable garden plots or dog kennel purposes.



Write us today, for special booklet No. 67-B giving complete details of the construction and use of the "BUFFALO" Portable Fencing System. Send us a trial order, enclose money order, check, New York draft or currency by registered mail and we will send you one of the greatest articles in existence for poultry or dog kennel purposes. A trial order will convince you of the merits of this System.

Are You Too Far Away?

ARE you too far away to make as many trips as you would like to the great stores where you could get ideas on house furnishing and decoration? The Countryside Shop is maintained for the very purpose of serving those who want to know what is suitable, serviceable and satisfactory. The free service of the shop, in connection with the editorial and advertising pages of The Countryside Number of The Independent, gives you an opportunity of coming in close touch with the best offerings in New York.

If you use The Countryside Shop you will realize that this magazine is more than a well-written and well-illustrated monthly visitor to your home—you will know that The Countryside Number represents a service that is of real value—yet is free. Ask any question you want to, when you need help or information, of The Countryside Shop, and we will gladly draw upon our files of information, or when needed, upon the knowledge and experience of well-known experts.

In addition to giving information, we are very glad to make purchases, when this is a convenience to you, of any articles illustrated in our pages. There is at present no charge for this service.

Questions dealing with every phase of country life come to us—questions about poultry, dogs, pigeons, farm buildings, use of concrete, water-wheels, making of roads, planning of grounds, buying real estate, selling houses and places, flower and vegetable gardens, sports, motor boats, automobiles, various community interests, books on special subjects and a host of other topics. Every letter is considered carefully and is answered with attention to the writer's needs.

Send for the Requisition Chart which gives you a list of topics you are very likely to be much interested in. It will help you in many of your plans. We can show you ways of doing things, how and where to buy, how to use, how to arrange and carry out. We are at your service.

The Countryside Shop

Conducted by The Independent

119 West 40th Street
New York City

which have elapsed since that time, it has accomplished a surprizingly large number of definite results and has an even greater number of plans under way. The Advisory Committee does not by any means confine itself to talking. It works actively and concretely.

The first official statement of the Council and Commission was issued on June 25. It is agreeable reading because it is a record not merely of things planned. We have heard so much about what is going to be done. Here are some things which actually have been accomplished.

The Council and Commission are fully aware of the exceedingly important part which aviation is playing and must play in this war. They have created an Aircraft Production Board which is setting out to make 3500 aeroplanes and to train 6000 aviators this year. The board has investigated the source of supply of aircraft of all kinds and the materials which go to their production. Thru the presidents of six military engineer universities, six schools have been started for the preliminary training of aviator cadets. Arrangements have been made for the sending of professors to Toronto to receive instruction in this cadet instruction work. In co-operation with the chief signal officer and the Aeronautical Division, a standard type of aviation school buildings and equipment of buildings has been developed. The board has assisted the division in investigating sites for aviation schools.

OVER 262,000 miles of railroads have been mobilized for the Government's defense by a special committee composed of the leading railroad executives with permanent headquarters in Washington and sub-committees in each department of the country. They have, among other things, issued instructions to the roads providing for the handling of fuel, ore and other Governmental necessities in the interests of national efficiency as distinguished from that of individual roads. They have perfected, in conjunction with officers of the army, a complete scheme of coöperation in the movement of troops and supplies of every description. They have arranged, after many conferences, with the representatives of the Allies and with the Department of Agriculture, for the expeditious movement of food products. They settled the recently threatened national railroad strike. They organized a road commission to visit Russia and recommend methods for the operation of the Siberian railroads. They have undertaken the enlistment of nine regiments of skilled railway workers to assist in the rehabilitation of railroads in France and the operation of the French railways behind the English lines.

The telephone and telegraph companies have been utilized in the same way. The long distance facilities out of Washington have been augmented so that prompt handling of calls is assured even with a large increase in business between army department headquarters, mobilization camps, etc. Special telephone and telegraph wire systems for the exclusive use of the Government have been devised.

The committee on labor have made it their definite purpose to avoid the unfortunate industrial experiences of England during the first months of the war. In response to their request, Lloyd George has sent over four representatives of English labor and welfare work and Canada has also sent representatives to advise and confer with them. The committee has suggested that existing standards—concerning such matters as hours of work, safety and sanitation—should not be changed until the

QUESTION:

If Chamberlin Strip was a good investment when fuel was cheap, how about it now?

Horsford's Cold Weather Plants

Write for Catalog L

You can begin setting hardy plants in August. The earlier kinds will have time to get established before winter. Don't put off planting, but send at once for Horsford's Spring Catalogue and Autumn Supplement of bulbs for fall setting. Many of the wild flowers such as Trilliums, Dogs Tooth Violets, Lilies and other Violets may be set in September. Paeonias in last of August.

F. H. HORSFORD
CHARLOTTE, VT.

need for such action has been determined by the committee. This suggestion has been very generally accepted by both labor and capital with a decidedly beneficial and steadying influence on industry.

The General Munitions Board has already saved the Government millions of dollars by coördinating departmental buying. Before the war the War and Navy departments frequently competed against each other in the open market. Now there is a clearing house for orders that involve material in which a national shortage exists or is anticipated. Where manufacturing facilities are insufficient the board directs its efforts toward the development of new facilities. The Council has completed an inventory begun by the Naval Consulting Board, and now has in its files more than 27,000 detailed reports from the larger manufacturing plants showing their capacity to meet the military needs of the Government.

The Committee on Supplies has also saved the Government large sums by appointing committees of representative and experienced business men thruout the country to assist the quartermaster's department of the army in the economical and efficient purchase of supplies.

The Committee on Raw Materials is another important factor in Government economy. Having as its members representatives of the leading metal, chemical, lumber, etc., companies it has been able to secure special rates. For example, it procured 45,000,000 pounds of copper for the uses of the army and navy at less than one half the current market price, saving the Government approximately $10,000,000. Similar reductions have been obtained in supplies of steel, zinc and aluminum.

The Committee on Coal Production has accomplished very definite results in the procuring and expeditious shipping of coal, results which have been to the interest of civilians as well as of the Government.

WITH a view to greater general efficiency and the release of workers for Government service, the Commercial Economy Board is investigating such men and money wasting matters as the delivery service of retail stores, the abuse of the privilege of returning goods, the practise among bakers of taking back unsold bread from retailers.

The General Medical Board whose personnel includes the foremost physicians and surgeons in the country, has made a careful selection of thoroly qualified doctors for the Medical Officers Reserve Corps. In conjunction with the deans of the various medical schools, graduating classes have been instructed in the special administrative details connected with medical officers work, making some 3500 young medical men of the best type available for the army and navy. The board has also nearly completed the very necessary standardization of surgical instruments and surgical and medical supplies.

Large as are the concrete results which the Commission is accomplishing it is producing even more imposing effects in the realm of public opinion. It is putting ideas into the public mind, valuable ideas—like the necessity for greatly increased aircraft production—about the conduct of the war and of industry during the war. It is doing revolutionary things in the way of transportation regulation and price fixing. It is establishing in the fields of business and politics precedents which are likely to last far beyond the duration of the war. The Advisory Committee of the Council of National Defense is an experiment in government by the people on a hitherto untried scale.

536 Main Street Stamford, Conn.

INDEPENDENT OPINIONS

While The Independent cannot undertake to print all the interesting letters which it has recently received on the race question in America, it is glad to give publicity to a statement from the head of the Tuskegee Institute, the worthy successor of Booker T. Washington:

I send you the following, relative to lynchings for the first six months of the year. I find according to the records kept by Monroe N. Work, head of the division of records and research of the Tuskegee Institute, that in this period there have been fourteen lynchings. This is eleven less than the number, twenty-five, for the first six months of 1916, and twenty less than the number, thirty-four, for the first six months of 1915. In ten instances, thru the bravery of officers of the law and by other means, mobs were thwarted and lynchings prevented.

Of those lynched, thirteen were negroes and one was white. Four of those put to death, one white and three negroes, were charged with the crime of rape. One of those put to death was a negro woman, reported to have been of unsound mind, who in resisting arrest wounded an officer of the law.

I gather from reading negro newspapers and from other sources, that in spite of the notable decrease in the number of victims of mob violence for the six months, the horrors connected with the recent burning at the stake near Memphis has increased among negroes the fear of lynchings and accelerated their migration to the North. ROBERT R. MOTON.

Tuskegee Institute, Alabama

Here is another count in the indictment against the brewer:

An aspect of the beer question I have not found mentioned lies in the poultry situation.

Poultry food is so expensive that at least one county adviser in Connecticut is counseling poultry raisers to kill off their next year's best breeders, the yearlings, as soon as they stop laying. If barley—which next to wheat is the best poultry food—was kept out of the breweries and sent to the poultry men, poultry products would be cheaper next year than they will be.

ALBERT DONNELL.

Jewett City, Connecticut

* *

The following letter brings out a very interesting point, which we commend to the consideration of our readers, that the great evil of growing grain to make into liquor is not that it uses land but that it absorbs the labor of men who might be more usefully employed in the necessary productive work of war time:

I desire to say a word in commendation of your recent editorial on the prohibition of beer. It is sane and sound. If we are called upon to economize and in some case to stint ourselves for the sake of the conservation of food, is it fair and a square deal to use the land and the man-power in the production of grain and then the grain in the making of beer? The use of land and man-power and grain for making drink when needed for the production of food is a crime. Senator Lodge claims that 100,000 men will be thrown out of employment if the breweries are closed down. Labor is scarce. Every man of the 100,000 is needed on the farm. He is not needed in the brewery. The American people will have a scant regard for the grafting brewer who desires an increase of wealth at the expense of the American stomach. One of the amazing facts of our civic life is the impudent disregard by the saloon interest of law, order, and the rights of others. When, however, the least restriction is put upon their nefarious business, we hear from all over the land the sobbing whine of the saloons about personal liberty and the right of the poor man to his glass of beer. They forget the right of the poor man to a full loaf. R. L. LOVELL.

Gretna, Florida

* *

We are glad to publish the following interesting and vivacious letter from an advocate of Irish independence:

Your issue of July 7 contains a cartoon —to say nothing of a "Pebble"—from *The Passing Show*, a London periodical, intending to depict present conditions in Ireland's age-long struggle for freedom. I regard that cartoon as insulting to any man with a drop of Celtic blood in his veins. In it figure the pig and the stage Irishman. The daughters of Ireland are proverbially modest and good-looking, but Reed's representation of Miss Erin is neither. Would The Independent reproduce a cartoon if in it Miss Columbia were so depicted? In brief, the picture is a reflection on the artist's taste and chivalry.

Not only is the cartoon in poor taste, but in a way it is unjust and misleading, too. Ireland is shown as turning her back on the jewels marked "Home Rule," which Mr. Redmond on bended knee—I beg the artist's pardon; there is at least one touch of chivalry in his drawing!—is offering her, for the republican cap the Sinn Feiner holds out.

Ireland, it is true, now spurns the Home Rule Act, which by the exigencies of the war was grudgingly placed on the Statute Book, with a proviso that it should never come into operation!

No democrat dare say that this jewel of an act would give Ireland anything but a modicum of Home Rule. No wonder that Bishop O'Dwyer, of Limerick, Ireland's counterpart of that heroic patriot, Cardinal Mercier, of Malines, says that the act "is a simulacrum of Home Rule."

The Independent, of course, may reply that in cartoons as well as letterpress it aims to give both sides a hearing. That may be; but I cannot now recall a single pro-Irish cartoon that has found a place in the sun of your columns.

Hence I infer you have no Irish exchanges. Is not my inference correct?

A HOOSIER READER.

Notre Dame, Indiana

The Independent, which has for decades advocated Home Rule for Ireland, certainly disclaims any intention to wound the feelings of any Irish sympathizer in copying an English cartoon which would seem to most observers to be rather jocular than insulting. We have even given space in our issue of July 14 to an article by Seumas MacManus in favor of complete Irish independence. We must in all candor admit, however, that since Home Rule, to such an extent at least as the states in this union enjoy, can now be had almost for the asking, it seems to us a very poor time for the Irish to ruin this chance by striving for a separation from the British Empire which they cannot by any possibility obtain. Even the attempt at a revolution would have no other effect than to play into the hands of the Germans, who are, as the Irish are prone to forget, not only the enemies of England but equally of France, Belgium, Italy, free Russia and our own United States of America. Are the Irish willing to ruin the liberties of every country in the world for the difference between a Home Rule Parliament in Dublin and a Sinn Fein Congress?

THE TASK OF THE TALENT

(*Continued from page 165*)

management can doubtless explain the remarkable railroad schedules, but the "Talent" has long since ceased to ask why.

Most of the meetings are held in some park or grove on the edge of the town or, in several instances, as here, five or six miles out; tents are used oftener than buildings, the management paying a lump sum for rental, setting up, etc. Most of the tents are new and very well made, commodious, seating between 1500 and 3000 people.

When one starts to travel, a certain amount of inconvenience and trouble is bound to begin. This summer has been specially trying to Chautauqua "Talent." During my first week the mercury was over one hundred in each of the eight towns I entered. At Bloomington, Illinois, it was 104 in my hotel room at seven p. m. Tents are the hottest things made by the hand of man. And the platform end of the tent is cunningly devised to shut out every possible draft of air. It has been no small task to keep a wilted audience that has been at it all day, in a frame of wild enthusiasm to make a better world along reform lines. The wonder all along has been the audience of men and women who have "stayed by" the program in the steaming heat of southern Illinois.

One distinguished speaker in one town had eighty-one people in his audience, and his share of the gate receipts was $2.60!

I have heard much criticism of the program of the average Chautauqua. Some of it must be sincere and valuable. "Too much entertainment" is the burden of the criticism. If that is general it is a hopeful indication. Our association puts about one third entertainment next to pure reading matter. "Solid stuff" must predominate, is the opinion of the well informed Chautauqua manager who reads aright the minds of the people.

And they *are* serious minded. The average Chautauqua audience in this part of the world will sit for an hour and a half under a tent where the heat is concentrated essence, and listen, without even fanning, to the most serious discussion of great problems. It is a hopeful sign that after a season of "vaudeville" and "entertainment" the Chautauqua cries out for lectures. During the last two years I have met nearly a million people from the platform and no audiences have imprest me as have the Chautauqua people, for earnestness, deep purpose, and an honest desire to face and work out the great issues of American life. They impress me as understanding in a large way the fact that at the present time in world history it behooves thinking men and women to be thoughtful. The Chautauqua that is going to have a future does not need even one-third "entertainment," and the Chautauqua people stand by their organizations loyally. At a number of them I have seen from 500 to 900 season tickets subscribed for next season, all within ten minutes at the end of a two weeks, 104 in the shade schedule.

The average Chautauqua "Talent" sees audiences in the bulk at their best. In the average small town the people who go to Chautauquas and support them by "blocks of five" season tickets are the people who support the churches and believe in the town and raise money for the bandstand and the beautifying of the park and the general "uplift."

But in every small town in America there is an increasing number of citizens

(and they are in many ways brought to the attention of the lecturer) who seem to worry the Chautauqua people a good deal, and afford constant comment over the failure of the Chautauqua program to influence or affect one large group of the community.

Much of the land in the Middle West is worth anywhere from $100 to $300 an acre. Thousands of farmers who have come into possession of this land and now own it in fee simply have "retired" to the small town, renting out their farms on shares or leaving their own children on the farm as "renters."

The effect of this custom on the "retired farmer" himself is rather an astonishing thing. The lecturer gathers from the constant remarks of the platform manager, the local minister, the merchant, the politician and the hotel man that the "retired farmer" is the cipher of the town. He rents a small house, sits on the porch in the summer and in the kitchen in the winter, quite often buys a small automobile in which he rides "around town," and the neighborhood, goes to the movies because they are cheap and easy, pays $5 a year into a church, and sometimes buys a lyceum ticket for the winter entertainment, but reads little, travels less and is generally regarded by the community as a poor citizen, who shuns all civic duties and avoids all community expense.

I am not taking an easy fling at a hard working farmer who, with his harder worked wife, has earned a deserving rest after years of solitary and strenuous physical labor, but if the "retired farmer" all thru the Middle West has the unenviable reputation he seems to have for being a close-fisted, useless, narrow-minded and disagreeable citizen when he "retires" it is very unfortunate for him if true, and the Chautauqua people may well ask, "What value has our program for such a man and what influence can we exert to help such a condition?"

In one town, to my own knowledge, a little group of "retired farmers" refused to support a splendid Chautauqua program because the management charged 50 cents admission to one of its afternoon lecture numbers. And I was told that among the group were men who had bank deposits of $50,000. If the man who did not want to spend his 50 cents for that afternoon lecture reads this account of himself in The Independent I hope he will not cancel his subscription, in case he is a subscriber and has not borrowed the paper from a neighbor!

But I must prepare to pack up my things and catch my train. It is a typical southern Illinois heat, muggy, sticky, collar-destroying, wilting heat. But the "Talent" knows that somehow at 2:30, after a three hours' ride in a steel boiler full of dust and cinders, he must be ready to stand up immaculate and pleasant to deliver his message to a critical platform manager and a kindly disposed audience, just as if he had just come out of some cool garden of the gods, soothed by the frosty zephyrs of the north. That is Chautauqua.

Mattoon, Illinois

A young lady in a Pennsylvania town had inaugurated a bank account, and was inordinately proud of her check-book. She employed it so well that one day there came a notification that she was overdrawn. When she had ascertained what this meant she was filled with overwhelming sympathy for the bank. Accordingly she wrote a pretty letter of apology and drew a check for the amount due.

"This," she wrote, "will put matters right."—*Everybody's.*

Join The Army Of J. R. W. Smokers

Exact Size

Each day finds the enlistments to my army of J. R. W. cigar smokers increasing.

Each day more men are learning of this delightful smoke and are taking advantage of my offer to try five free.

And once they have tried my J. R. W. cigar they are satisfied with no other kind.

You will be the same. For my J. R. W. cigar has a smooth, mellow yet satisfying taste that you find in no other cigar at any price.

I Can Save You 50%

Remember that you cannot buy my cigar at stores. You must get it direct from me.

I have cut out all salesmen's salaries, store upkeep and dealers' profits. I turn all these savings over to you in a superior cigar at a lower price.

And besides J. R. W. cigars are always fresh. There is no standing in cases or on shelves until they lose their fresh taste and their delightful aroma.

Get Five Free

Ten cents to partially cover expense of packing, revenue and postage, together with your business card or letterhead, will bring you five of my cigars to try.

You be the judge. Convince yourself first that my J. R. W. is your cigar.

If it is, send me $3.00 for the full box of fifty. If it isn't, they have cost you nothing.

Take advantage of this offer. Write for these cigars today.

TWENTY-FOUR TO FOUR

(*Continued from page 158*)

two parties on the question of prosecuting the war; some favoring a war to the end against German autocracy and others a speedy peace "without annexations or indemnities." While the Duma and the Council of Workmen's and Soldiers' Delegates debated the issues of peace and war, the soldiers fraternized with their German foes in the trenches, and Germany refrained from breaking the informal truce in the hope of persuading the Russians to make a separate peace.

On the first day of July the Russian army under General Brusiloff and War Minister Kerensky, the Russian "organizer of victory," began its advance on Lemberg. Koniuchy and Halicz soon fell into their hands and thousands of prisoners were captured. Several Czech regiments deserted bodily to the Russians at the first opportunity. Pressing their advantage, the Russian army made an immense forward sweep south of the Dniester as far as the Lomnica River. But the time consumed in these operations enabled the Germans to shift their reserves to the eastern front and block the Russian advance with fresh troops. Directly east of Lemberg they struck the Russian line and, aided by the treason of one of the regiments confronting them, they drove back the Russians on a wide front. Fearing the total collapse of the Russian defense and the loss of all the fruits of the revolution, the Council of Workmen's and Soldiers' Delegates approved the choice of War Minister Kerensky as Premier, and clothed him with all the powers of a dictator. The German drive not only wiped out the gains made by the third Russian offensive but reconquered most of the territory won by General Brusiloff during the 1916 campaign.

THE ITALIAN CAMPAIGN

August 9, 1916—Italians take Gorizia.
August 27, 1916—Italy declares war on Germany.
May 12, 1917—Italians make new drive on the Carso.

The campaign in the mountains of the Austrian border may be summed up by saying that the Austrians have accomplished nothing and the Italians very little. This does not mean that the struggle has been less persistent in this theater of war than in any other; fighting has been almost incessant and the losses on both sides heavy. But the difficulties of highland warfare have barred the Italians from their goal of Trieste, and in the Trentino the opposing armies appear to be practically deadlocked. The Italians have succeeded, however, in taking Gorizia, in occupying the whole Isonzo valley to the south of this city, and in advancing their trenches on the Carso plateau.

It must be remembered in recording the slow progress of the Italian army against Austria that during the past year Italy has diverted many soldiers to join the Allies in Macedonia. The Italians have taken an active part in Grecian affairs, established a protectorate in Albania and undertaken to a great extent the policing of the Mediterranean and the Adriatic. The Italian commission in the United States reported a great development of munitions manufacture.

THE WAR IN THE BALKANS

August 16, 1916—French take positions on the Serbian border.
August 27, 1916—Bulgarians occupy Kavala.
September 27, 1916—Venizelos begins revolutionary movement in Crete.
October 11, 1916—Allies take over Greek fleet.
November 19, 1916—Monastir reoccupied.
June 12, 1917—King Constantine deposed.

NEW MID-SUMMER NOVELS

A New Novel by a New Author

Just Ready

CHRISTINE

By ALICE CHOLMONDELEY

Who can forget Hugh Britling's letter to his father in Mr. Wells' remarkable novel, "Mr. Britling Sees It Through"? ***Christine*** reveals the same fine understanding between a mother and her daughter. Full of beauty and poignant with true sentiment, few will read without tears this story of an English girl in Germany which brings home the ennobling pathos of the great war as few novels have done. ***$1.25***

Alice Brown's New Novel

BROMLEY NEIGHBORHOOD

By the author of "The Prisoner"

Here's a truly delightful romance—in execution and literary ability, some critics rank it higher than Mrs. Brown's "The Prisoner," which was one of the leading mid-summer novels of 1916.

"Excels in rich and glowing interpretation of character and temperament."—*N. Y. Times.* ***$1.50***

"THE GREATEST STORY THIS SPRING"

Ernest Poole's New Novel

HIS FAMILY

By the author of "The Harbor"

"Great in its grasp of life, great in its masterful handling, great in the sincerity of its purpose . . . One of the best things we have read in a long time."—*Philadelphia Ledger.*

"Riper and more significant than 'The Harbor.'"—*Boston Herald.*

"Verily a section of life real and vital . . . worthy the best traditions in American fiction."—*New York Times.*

"A very fine, a very truthful, a very appealing novel."—*Boston Transcript.* ***$1.50***

THE EMPTY HOUSE

Written anonymously, this new novel tells the frank story of one woman's experience in marriage, and how her refusal to have children reacted on her life and temperament.

"Handled without sentimentality, most effectively . . . direct and natural."—*New York Globe.* ***$1.40***

THE MACMILLAN COMPANY, *Publishers,* NEW YORK

"If there are no courts that men can trust, there can be no credits or contracts. If these are not, neither capital nor wages come."

"A clear and wise economic picture of Mexico, beyond any others that I have read." *Dr. Talcott Williams of Columbia University.*

THE MEXICAN PROBLEM

By

C. W. Barron

Author of "THE AUDACIOUS WAR"

A business solution, based on first-hand investigation. Mr. Barron's vivid and illuminating portrayal of Mexican unrest, casts a shaft of light over the whole field of international affairs and throws into sharp relief the fundamental causes of all wars.

INSURANCE

Service of The Independent

W. E. Underwood, Director

This department of The Independent will undertake to furnish on the request of readers any information respecting the business of insurance and the companies transacting it which we have or can procure. We cannot, however, pass upon the debatable comparative differences between companies that conform to the requisite legal standards set up for all, except in so far as the claims made by any of them seem to be inconsistent with the principles of sound underwriting. Address all communications on insurance subjects to the Director of The Independent Insurance Service.

Altho Greece and Albania were neutral countries, they were the theater of the principal campaign in the Balkans after the withdrawal of the British expedition against Gallipoli and the conquest of Serbia and Montenegro by the Central Powers. The object of the Entente Allies was to regain Serbia and Montenegro and thus sever Bulgaria and Turkey from Germany and Austria-Hungary. To effect this purpose they occupied the Greek city of Salonica and gathered there one of the most heterogeneous armies that the world has ever seen. Nearly all of the Allies had contingents on the Salonica front, but the bulk of the army was English, French, Italian and Serbian. During the summer and autumn of 1916 the Allies fought their way to the northern boundary of Greece and the central part of Albania and at last captured the important city of Monastir on the Serbian side of the frontier. In the meantime the Bulgarians occupied the city of Kavala in the extreme northeastern corner of Greece and expelled the Greek garrison. On the whole, the Salonica campaign was a disappointment, since the measure of success it achieved was not proportionate to the size of the army which was withdrawn from other fronts in the expectation of important victories in the Balkan theater of war. Italy has declared a protectorate over Albania and effectively occupied the southern and western parts of the country.

While Greece was furnishing a battleground for the contending powers, it was also torn by civil war. The partizans of the Cretan statesman Venizelos fought on the side of the Allies at every opportunity in spite of the official neutrality of King Constantine and his secretly pro-German sympathies. In order to prevent the Greek King from extending aid to the Central Powers, the Allies acted in the most arbitrary fashion, commandeering ships, blockading ports, occupying garrison towns, supporting the Venizelos revolution, and finally deposing King Constantine in favor of his son Alexander. When King Alexander ascended the throne he made Venizelos again premier and broke off diplomatic relations with the Central Powers.

THE TURKISH CAMPAIGN

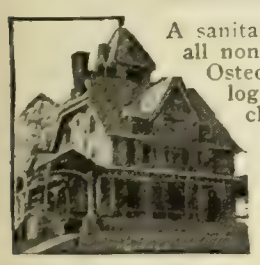
February 26, 1917—British take Kut-el-Amara.
March 6, 1917—British reach southern boundary of Palestine.
March 11, 1917—Bagdad falls.
April 5, 1917—Russians and British effect junction in Mesopotamia.

The vast outlying territories of Asiatic Turkey are the weakest part of the military system of the Central Powers. They are the farthest from Prussia, the heart and soul of the alliance, of all the lands dominated by German arms; they are miserably defective in the means of rapid transformation, and with few exceptions their inhabitants are disloyal to their Ottoman rulers. It is then small cause for wonder that much of this region has fallen into the hands of the Allied nations. Rather should we be surprized that the Russians and the British have not been able to penetrate yet farther into the interior of the Turkish domains.

The British have accomplished rather more. They retrieved their defeat of the previous year at Kut-el-Amara by recapturing the city and continuing their advance thru Mesopotamia to Bagdad. In the west they repulsed a Turkish demonstration against the Suez Canal and organized a counter-offensive which followed the historic route of Moses and the Children of Israel from Egypt to the borders of Palestine. Like Moses, however, they seem to be fated to behold the Holy Land without being able to occupy it. The

New Discovery Removes Constipation!

Says Cathartics Are Dangerous and Habit Forming



THERE is now a new way to remove the cause of constipation, auto-intoxication, and the 95 percent of all human ills which result from intestinal congestion, without the use of habit-forming medicines or vigorous exercise.

This new discovery is founded on one of the oldest and soundest methods of treatment—massage. By means of a device known as the Kolon Motor, concentrated exercise is administered to the colon, which all authorities agree is the seat of constipation. This device, which operates by hand, actually exercises the lazy muscles of the colon and induces regular and natural action with none of the injurious effects of physics, at the same time strengthening the intestinal muscles. The Kolon Motor can be attached to any wall and is instantly adjustable to any height for adults or children. Recommended by physicians and used in leading sanatoriums. Let us send you free a most interesting and helpful book, "Colon Cleanliness," which has just been published, explaining the vital importance of keeping the colon free from accumulations of putrefying, germ-infested, disease-breeding toxins, and showing how and why the Kolon Motor solves the problem for the first time. Address Martin's Method Incorporated, Department 58, 105 East 30th Street, New York. A postal will do, but write today.

H. P. COSTELLO, Mgr.

Arabs have fallen away from Turkish rule altogether and have organized the independent Kingdom of Hejaz under the protection of the British.

On the first day of 1917 the Turkish Government, with German sanction it may be supposed, repudiated all treaties and agreements with Christian powers by which the Ottoman Empire was subject to the supervision of the "concert of Europe." This action places Turkey on an equal diplomatic footing with other members of the society of nations and is probably the only gain that the Ottomans can expect from the war even in the case of a German triumph. If the Entente Allies win the war they are pledged to the liberation of the non-Turkish peoples of the Ottoman Empire, which would confine the Turkish dominions to Asia Minor and place under some new rule Arabia, Mesopotamia, Syria, Palestine, Armenia and Turkey in Europe. Fear of this possibility has tempted the Turkish rulers to countenance horrible massacres of Armenians, Syrians, Jews and Greeks.

PEACE NEGOTIATIONS

December 12, 1916—German Chancellor makes peace overture.
December 18, 1916—Wilson requests statement of peace terms from belligerents.
January 10, 1917—Entente Allies state peace terms in joint reply to President Wilson.
January 13, 1917—Germans reply to declaration of Allies but refuse to state terms. Balfour makes separate statement on the Turkish question.
January 22, 1917—Wilson addresses Senate on "peace without victory."
July 19, 1917—Chancellor Michaelis defines German position.

For more than two and a half years the warring armies of Europe fought without knowing what measure of achievement would be considered a "victory" by the governments whose interests they served. Any number of informal and unofficial peace programs were set forth in the public press of England, Germany, France and other countries, but the statesmen who alone could speak with authority confined themselves to generalities which might serve to arouse but never to satisfy speculation. In December, 1916, the German Government offered to discuss peace with the Entente Allies, and President Wilson suggested to both groups of belligerents that the time had come for an interchange of views and that if terms of peace were formulated the aims of the two hostile groups of nations might not be found to differ so greatly as had been supposed. The Entente Allies refused to entertain the German suggestion of a peace conference, but they agreed upon a joint reply to President Wilson in which they stated the objects for which they were continuing the war.

The Allies' demands comprized the abandonment by the Central Powers of all their conquests during the present war with indemnities to the invaded nations; the restoration of "provinces or territories wrested in the past from the Allies"; "the liberation of Italians, of Slavs, of Rumanians, and of Czecho-Slovaks"; "the enfranchisement of populations subject to the bloody tyranny of the Turks"; the reunion of Poland, and the expulsion of the Ottoman Empire from Europe. These terms apparently still stand as the peace platform of the Allied nations and to them must be added the surrender of German overseas colonies which, altho not mentioned in the note, seems to be demanded by public opinion in Japan, South Africa and Australia.

On January 22 President Wilson addrest the American Senate and outlined his views of the basis of a just peace. He believed that peace should come by common consent, not by victory; that the rights of nationalities to self-government should receive recognition; that the freedom of the

Trade Mark INDEPENDENCE THROUGH THRIFT *Adopted 1916*

A Convenient Simple System for Promoting Thrift

$10. THRIFT BONDS

offer a simple, convenient and logical system for the promotion of thrift, fully matured after five years of careful, conservative investigation of the small investment field.

Thrift Bonds are 3% certificates of ownership in Governmental obligations held by the Equitable Trust Company of New York as Trustee.

They are absolutely safe.

Thrift Bonds will be accepted at par in exchange for Bonds of the Liberty Loan, when issued, with no charge to holders except transportation, premium and accrued interest, if any, at the date of the exchange.

Correspondence with Banks, Employers and Merchants is especially invited.

Metropolitan Hospital Training School for Nurses
BLACKWELL'S ISLAND, NEW YORK CITY

offers a three years course of training. The school is registered by the University of the State of New York, and connected with a hospital of nearly two thousand beds, which gives ample opportunity for a broad, general training.

The Nurses' Residence, removed from the hospital, is homelike and ideally located.

Requirements: At least one year of high school or equivalent. Age limit—18 to 35 years.

Remuneration—$10.00, $12.00 and $15.00 per month; the increase made yearly.

For information address Superintendent, MISS AGNES S. WARD

seas should be guaranteed and every nation given free commercial access to the sea, and that all nations should unite into a league for their common security. These suggestions were at the time unfavorably received by both sides, altho they have found a reflection in the formula of "peace without annexation or indemnities" adopted by the Council of Russian Workmen and Soldiers Delegates after the revolution and by the Social Democratic Party in Germany. By a coalition with members of the Center (Clerical) and the Radical parties the Socialists secured from the Reichstag a declaration which, in general terms, affirmed the idea of an early peace based on the map of 1914 and repudiated all suggestions of an economic "war after the war." Because the Reichstag delayed the vote on the war credits, the Kaiser was forced to remove from office Chancellor von Bethmann-Hollweg, who had held office thruout the war. The new Chancellor, Georg Michaelis, refused to promise the introduction of parliamentary government or to make any definite offer of peace.

THE AMERICAN INTERVENTION

January 31, 1917—Germany declares new barred zone in European waters and inaugurates ruthless submarine campaign.
February 3, 1917—Ambassador Bernstorff dismissed from Washington.
February 26, 1917—President asks Congress for authority to protect merchant ships.
March 4, 1917—Congress adjourns without taking action.
April 2, 1917—President asks Congress for a declaration of war against Germany.
April 4, 1917—Senate declares war.
April 6, 1917—House of Representatives declares war.
April 8, 1917—Austria-Hungary breaks off diplomatic relations with the United States.
April 22, 1917—British and French war missions arrive in America.

The German reply to the peace overtures of the United States came as a shock to the American public, which had believed that peace in Europe was near and that in any case the danger that the war would spread to this side of the Atlantic was safely past. More than once had the German submarine warfare against neutral and enemy merchant ships strained diplomatic relations to the breaking point, but when, in May, 1916, Germany pledged not to sink passenger ships without warning, this promise, altho conditioned on the eventual modification of the British blockade and violated in certain individual instances, was relied upon to enable us to keep out of the war. The Federal Government was better informed than the nation at large and the repeated and zealous efforts which it made to end the war were partly inspired by a well-justified belief that if the war continued much longer Germany would renew her submarine campaign. On the last day of January the German Government announced the establishment of a barred zone in the North Sea, the Mediterranean and the northeastern Atlantic thru which no ships whatever would be permitted to pass in safety.

President Wilson at once dismissed the German Ambassador and refused to renew diplomatic relations with the German Government. His attempted compromize between peace and war, "armed neutrality," was frustrated by the obstinacy of a little group of Senators who in the closing hours of the session talked to death the bill authorizing the arming of merchantmen. When Germany followed the proclamation of ruthless submarine warfare by overt acts against American lives and American ships, President Wilson requested from the new Congress the authority to make war. The Senate by a vote of 82 to 6 and the House of Representatives by a majority of 373 to 50 approved the declaration of war. The action of the United States was soon followed by Cuba's declaration of

war and by the severance of diplomatic relations between Germany and Brazil, Bolivia, Hayti, San Domingo, Panama, Guatemala, Nicaragua and Honduras. All the other nations of South and Central America, in one way or another, showed strong sympathy with the American cause and only in Mexico was there any possibility of action in the interests of Germany.

The German Government knew, and even overestimated, the strength of Mexican resentment against "the Colossus of the North," as Latin-American writers sometimes call the United States, and the German Foreign Secretary, Alfred Zimmermann, counted on the support of Mexico in a war with the United States. He offered the Mexican Government Texas, New Mexico and Arizona as the spoils of victory and further suggested that Mexico detach Japan from the Entente Allies by timely mediation. But the note containing this suggestion was intercepted and its publication had much to do with converting the American public to a belief in the necessity of war.

OUR PART IN THE GREAT WAR

June 5, 1917—Ten million men registered for military service.
June 15, 1917—Liberty loan oversubscribed.
June 26, 1917—American army contingent reaches a French port.

When the German Government resumed its policy of unrestricted submarine warfare it reckoned with the possibility of American intervention but did not consider that it would seriously diminish the chances of victory. Indeed it was freely predicted that the United States would be more of a help to the Entente Allies as a neutral than as a belligerent, because the war might be ended before this country could raise and equip a large army and in the meantime the effort to do so would curtail our export of war munitions upon which England, France and Italy largely relied. This was, perhaps, the most serious miscalculation that Germany made during the course of the entire war.

Congress promptly authorized the Government to borrow $7,000,000,000 for the prosecution of the war and to loan a large part of this sum to the Entente Allies. The first $2,000,000,000 "Liberty Loan" was oversubscribed by about fifty per cent within a few weeks of the opening of subscriptions. The President appointed Mr. Hoover, the man who saved Belgium from starvation, as food administrator and laid before Congress a far-reaching plan of food conservation. To frustrate the submarine blockade the Administration undertook the building of a great merchant fleet of steel and wooden ships and placed the work under General Goethals, the builder of the Panama Canal. A war mission under Mr. Root was sent to Russia to reorganize the transportation system of that country and to assure the people that we would not desert the task we had set ourselves until it was accomplished.

Not content with throwing the financial, industrial and agricultural resources of the nation into the war, the United States began, without delay, to create an army for European service. The men of the country, from twenty-one to thirty years of age inclusive, were enrolled as a body from which as many soldiers as were necessary could be drafted. While arrangements for the draft were being completed, a part of the regular army under General Pershing was conveyed to France and volunteers were enlisted in the regular army and the National Guard to bring these organizations up to full war strength. The National Guard was transferred from state to Federal control and consolidated with the rest of the army.

The Dictaphone is safe from conscription

But your workers are not. Right now they are calling your executives and office people.

This shortage is a very real thing—it is more, it is a serious fact. All right. Hundreds of other business men are not waiting until the shortage becomes serious.

They are insuring *efficiency* in their office. They are dictating to The Dictaphone. The Dictaphone experts will tell you how best to apply it—how to insure maximum production with a reduced force.

Market Place Talks

BY LUIGI CRISCUOLO

FOR RAILROAD STOCKHOLDERS

WHAT may prove to be a formidable obstacle to the aims of those who sponsor the movement for government ownership of public utilities is now taking life in the form of three organizations comprizing owners of railroad securities. The first organization of this type was started a few years ago by Mr. John Muir, a New York broker, who sold to modest investors millions of dollars of stocks in small lots as well as "baby" bonds. This was followed by the organization a few months ago of the more formidable "National Association of Owners of Railroad Securities," by Mr. S. Davies Warfield, president of the Continental Trust Company, of Baltimore, and chairman of the board of directors of the Seaboard Air Line Railway. A few weeks ago Mr. Nathan L. Amster, of Boston, who conducted a fearless and successful fight against the interests in control of the Rock Island System, appeared in the arena as another champion of the rights of security holders.

The work of these various organizations should be watched with great interest by all students of railroad finance as it may mark a new era in corporation finance. For many years the banking element in Wall Street maintained a silent attitude toward all sorts of criticism leveled at them, preferring to be mute rather than enter a controversy which might lower their dignity. The mistake they made has been responsible for the increased use of the term "Wall Street" when there had to be an explanation for a panic or a depression or other crisis. When anything that affected the nation as a whole could not be blamed on anyone else, Wall Street was the dupe.

The time came, however, when bankers were not only willing, but even eager, to be interviewed and quoted widely on all subjects ranging from thrift to the financing of the war and international law. Our foremost bankers made it a point to speak at important gatherings of business men and had their remarks published in pamphlet form for gratuitous distribution to those who were not able to hear them.

For years the railroads were willing to maintain expensive lobbies in the legislatures and in Congress which would endeavor to strangle, if possible, any injurious legislation before it was reported out of committee. They began to find, as time went on and as the public began to take more interest in national questions, that not only was this an expensive means of gaining protection, but that it was not successful against a certain kind of politician who went to Congress for the glory there was in it and who, having no constructive ability, was constrained to adopt socialistic ideas in order to get on the front page of his home town newspaper once in a while. His object was government control, or regulation, or ownership if possible—of all public utilities. To some, this meant more jobs for constituents, while others were actually sincere in their belief that this was the *only* remedy. To all, the cause of their attitude was the spirit of the railroads in the years toward the public and stockholders.

Well, the corporate interests suddenly woke up to the fact that theirs was a losing game unless played fairly. They realized that the press had an influence with the intelligent American and that this intelligent American was making a good living, owned his home, an automobile and a few shares of Pennsylvania, and did not want socialism or any other sort of an "ism." They also realized that every man with an insurance policy or savings bank account had an indirect interest, tho a vital one, in the welfare of the railroads. So they began to beat the demagog by giving him a dose of his own medicine—publicity. And they have succeeded in gaining a great deal of sympathy from the rational American.

THE great extent to which railroad stocks are held by private investors is shown by a recent statement that there are over 96,000 stockholders of the Pennsylvania, 45,000 of whom are women. This is but one example, for if we were to count the stockholders of such railroads as the New York Central, Baltimore & Ohio, Union Pacific, Atchison, Illinois Central and such corporations as the United States Steel Corporation or the American Telephone and Telegraph Company, we would find many thousands of stockholders. The fact that very many own from one to ten shares of such stocks stamps the owners as working people who have invested their savings —let us hope wisely—in what they considered standard securities with a good future.

The National Association of Owners of Railroad Securities announced that the securities of railroads are owned as follows:

1. By individuals outright, numbering 1,000,000, owning over $10,000,000,000.

2. By life insurance companies with 46,000,000 of policyholders in force, representing a total of $1,550,000,000.

3. By savings banks with 10,000,000 depositors, representing $847,000,000.

4. By fire and marine insurance companies, casualty and surety companies, with holdings representing a total of $649,000,000.

5. By benevolent associations, colleges, schools, charitable institutions, etc., $350,000,000, etc.

It is stated that half of our population is interested either as direct or indirect owners of railroad securities and thus intimately concerned in whatever affects the credit or successful operation of the railroads. These people are entitled to have their interests protected even as the nation should be vitally interested in the success of the railroads and industrial corporations. For the prosperity of the nation hinges upon the success of its people's business. Corporations are not soulless octopi but aggregations of many millions of human beings which employ other millions of human beings, and all concerned are economic factors which could not be dispensed with.

We have questions to solve about trans-

portation rates and prices of commodities which involve a great deal of labor in the solving. The question of rates for transportation resolves itself into that of how much money is a railroad entitled to earn upon its capital stock after payment of interest and rentals, or how much upon a fair valuation if one can be fixed. Without going too much into detail, I am quite sure that the reader who is a common-sense man or woman will realize that in these days when industrial corporations are permitted to charge an advance of from 25 per cent to 200 per cent for their products and earn 100 per cent on their stocks, it is not highway robbery for a railroad to *beg* to be allowed to earn 10 per cent so that it can pay 6 per cent dividends and have 4 per cent left for betterments and additions to property.

DURING the past four years, one-sixth of the total railway mileage in the country has been operated by receivers. The cause of this condition has been in part poor management and unwise financing, but, had the Government done its part to encourage development along the lines that would encourage capital to finance the railroads, we would have had better service and the bad condition of railroad finances would not have become aggravated. There has been a tendency in the last ten years to finance permanent improvements to railroads by means of bond issues bearing a fixed interest charge, rather than with stock issues. As the improvements were not immediately productive, we witnessed in many cases a decreasing margin of earnings applicable to dividends, with increasing charges for interest and rentals.

It must be obvious that if standard railroads cannot earn a small matter of 10 per cent on their stocks, the man who has funds to invest will not be attracted by stocks paying 6 per cent which barely earn that, particularly as the Government's attitude has made it appear likely that the margin will decrease rather than increase. We have had states enacting full-crew laws, we have the Federal Eight-Hour law, increasing wages, increasing cost of material and supplies, and added to all of this the attitude on the part of some politicians that when railroads pay large dividends they are robbing either the shipper or the ultimate consumer. Yet, as I have stated, the shipper is permitted to earn as much as 100 per cent without a murmur from the Government. The *Commercial and Financial Chronicle* shows that while the gross earnings of 470 railroads for May, 1917, amounted to $353,825,032, an increase of $45,692,063 or 14.82 per cent over last year, the net showed an increase of only $3,524,718 or 3.33 per cent. This may mean little to the uninitiated, but to the statistician the cause of the decrease is either increased maintenance charges or increased transportation expenses, and in this case it was not maintenance.

To conclude, the railroad stockholder who is not willing to stand for his rights, whether against the Government or the railroads, has no business to be a partner in such enterprizes. The man who will own stocks and not follow the doings of the corporation in which he is a partner must blame only himself when a calamity occurs. For a corporation is composed of many small stockholders who could avert a disaster if action were taken at the right moment to prevent the enaction of a piece of unjust legislation like the Adamson eight hour law. Every railroad stockholder, whether he owns one or a thousand shares, should take an active part in one of the protective organizations which have been formed. The secretary of any railroad company will furnish details, or they will be sent gladly by the writer of this article.

Acid Tests of Investments in War

WE have just published a booklet with the above title, which outlines the precautions that should be taken to ensure safety of invested funds at this time.

THIS little brochure, whose value is out of all proportion to its size, reaffirms those fixed principles of conservatism that many are apt to overlook in such a period.

WE will send this booklet on request to every investor who is genuinely interested, together with our August Investment List. This list describes a diversified variety of sound first mortgage bonds, safeguarded under the *Straus Plan,* which are desirable war-time investments. They net 5½—6%. Write today for this literature, and specify

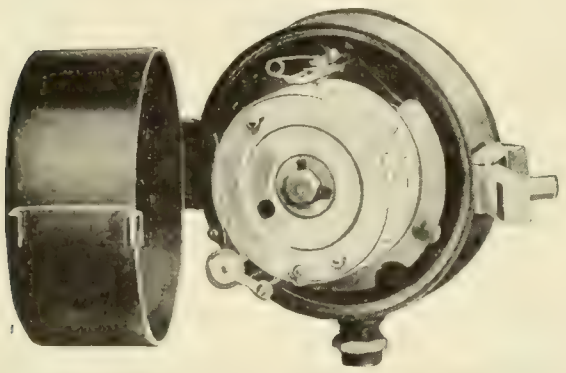
CHECKING UP MOTOR TRUCK EFFICIENCY



BY JOHN CHAPMAN HILDER

DIRECTOR OF THE INDEPENDENT MOTOR EFFICIENCY SERVICE

DO you get the following information about each of your trucks—and could you get it easily if you wanted it at any time?

Exact time the day's work started.
Time consumed in loading.
Actual running time.
Actual working mileage.
Number of stops.
When stops were made.
Length of each stop.
Length of lunch period.
Average speed of trip.
Average speed per day.
Actual speed at any specific time.
Time consumed by traffic stops.
Exact time day's work ended.
Whether truck was moved during the night.

One glance should convince you that this is all highly desirable information for the truck-owner.

THIS RECORDS TIME, DISTANCE, SPEED AND STOPS. IT COSTS $65

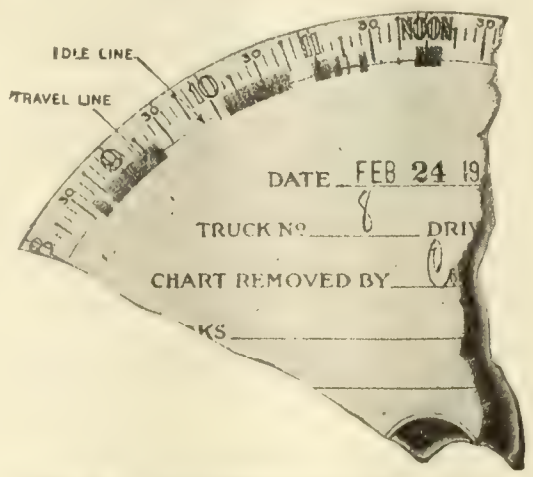
It tells you whether or not your truck is delivering all the work that is in it. It tells you whether or not the truck is being intelligently routed. It indicates whether the garage is too far from your place of busines, whether it is being used for devious purposes by someone else, whether it is a consistent or irregular performer, and, equally important, this information gives you an accurate check on the movements of all your loaders and drivers.

Business men have often found the actual collecting of statistical and analytical information, such as this, has been so expensive as almost to nullify the benefit derived from it. The beauty of the items mentioned above lies in ease with which they may be gathered. The expense of collecting them is negligible.

Illustrated on this page are devices that make the information available. They are travel recorders and time recorders combined. That is, three of them are, the fourth device is a hub odometer, or an instrument to record distances.

With the exception of the odometer, these devices record graphically on paper the exact movements of the truck. Their daily paper sheets are divided into hours and fractions thereof. On one machine both hours and miles are marked on the graph. The others are used in connection with the ordinary speedometer, or, better still, with the tamper-proof, indestructible hub odometer shown here.

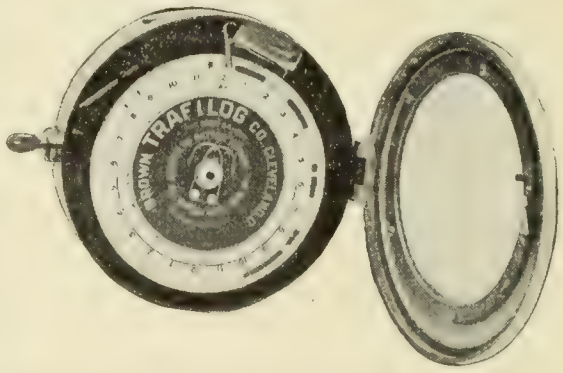
As an illustration of what these daily graphs may prove, let me read from a typical specimen before me:



The truck was moved about from 7:55 to 8 a. m., after which it was idle until 8:30, when it ran for twenty minutes with one stop, lasting five minutes. This brought the time down to ten minutes of nine. From this time till 10:35 the truck was idle. Then it ran for five minutes and stopped for another thirty-five. After this it ran for ten minutes, stopped for ten, ran for five, stopped for ten, ran for fifteen, stopped for fifteen, took two more ten minute spurts and lay down to rest for fifty minutes. Apparently convalescent, the truck ran for five minutes. Then it stood still for twenty, ran another five and stood still for fifteen. Making a heroic effort, the driver at this point ran the truck for fifteen consecutive minutes. Apparently the effort proved too much, for there ensued an idle period lasting one hour and a half. Followed two fifteen minute periods of running, separated by ten idle minutes and again an hour of standing still. It was now 6 p. m. and the truck was in motion until 7, after which it did not move until 9:15 p. m., when it moved for a quarter of an hour and finally called it a day.

HUB ODOMETER—PRICE $20, FOR FORDS $15

By subtracting the number of minutes the truck was actually running from the total time it was in service that day, we find that for just ten and a half hours the truck was standing still. It ran for three hours and five minutes out of a total of thirteen hours thirty-five minutes. An extremely busy and profitable day, I do not think.



In an ideal world it might be possible to do without checks on our workers. Every man would realize his responsibilities to the full. Every truck driver, for instance, would cover his route in the shortest possible time, always stop the engine when it was not needed, never take longer than necessary for lunch, take periodical care of the tires, adjust his carbureter for economical running and any number of other things. But since ours is not that kind of a world, we must check up on almost everything and everybody. And being forced to do it, we should seek the easiest, cheapest and most infallible method.

DIAL OF A $75 TRAVEL AND TIME CHECKER

It would be possible to obtain the information supplied by these recording devices without them. But it would entail a system of complicated cards and forms plus never-ending vigilance to see that they were used intelligently, if at all. The principle of employing machines wherever they can be properly substituted for human labor applies very obviously in this case. With the odometer all you have to do is to put it on and read it daily. With the other instruments all you need do is to see that fresh record sheets are inserted daily. Their stories are so easily read that clerical work in connection with them is only necessary at infrequent intervals.

In the space at my disposal all I can do is to give you a glimpse of the possibilities for time regulation and money saving offered by these instruments. It will pay you to investigate them further.

THIS TELLS THE NUMBER AND TIME OF STARTS AND STOPS—PRICE $75

Some months ago mention was made in this department of the feat of a motor truck in carrying a bulky portion of telescope to the summit of Mt. Wilson. This feat has recently been eclipsed by a truck of the same make, which on July 1, transported the largest reflecting mirror in the world up the same Mt. Wilson trail. Observatory officials, according to a report in The Commercial Vehicle, have been worried for twelve years over the problem of getting the mirror to the top of the mountain, where it will be used in the world's largest telescope. The mirror is practically priceless, since it is doubtful whether it could ever be duplicated. Every pound of material used in constructing the new observatory on Mt. Wilson has been hauled by motor trucks. George D. Jones, superintendent of construction, says that without trucks it would have taken ten years more to complete it.

All business is entering upon a period of war stress and strain. The efficiency, speed, constancy and economy of mechanical power and transportation must be employed to the fullest extent to supplement and supplant man power.

WHITE TRUCKS

WHEREVER these qualities are most in demand, there you will find White Trucks. Their predominant use by Big Business has been uninterrupted from the beginning. Wherever standardized cost records are kept, White Trucks are purchased in ever-increasing numbers. Their long life, low maintenance cost and steady operation show unmistakably in the figures. The harder the work and the heavier the going, the more marked is this showing.

The White Company has had broad experience in truck installation and in the problems of transport, for big or little operations. Our service and counsel is yours for the asking, without cost or obligation on your part. We never urge an installation which does not promise profit to the owner.

THE WHITE COMPANY

JUST A WORD

The photograph of the Nathan Hale statue in New York City, which is published on the cover of The Independent this week, was taken by W. M. van der Weyde.

THE MINE

Patrick MacGill, the author of "The Great Push," "The Red Horizon" and several other stories and poems of the Great War, has written here an unusual description of what it means to the men in the trenches when a mine goes up. The story was published originally in the New York Tribune.

THAT a mine was to go up was common talk among soldiers fighting on the Western front. They spoke of the mine when lying down in their barn billets, and hinted at the many tunnels piled with ammonal and awaiting the spark that would blow tunnels, earth, villages and trenches skyhigh when the hour came. The soldiers spoke secretly, one to another, when nobody outside their circle was nigh.

This mine—"The Mine," as they called it—was up near Ypres, and hundreds of men for hundreds of days had been busy at the making of it. Some day it would go up. When? Nobody could tell; but the soldiers who had visited the Ypres salient wished that it would be their luck to be near at hand when the mine went up to the heavens.

Two English soldiers—Spudhole Bubb, a cockney, and Bowdy Benners, a Devon man—knew of this mine, and often spoke about it when alone in the trenches or in their billets to rear of the firing line. But they never breathed of it when in a café, for, as Spudhole said: "The Boche has his ears glued to every wall in the world. He can tell us what we're up to afore we know ourselves."

Spudhole showed a fatherly interest in the mine. When the Germans retreated toward St. Quentin last spring Spudhole was in great suspense lest they should retire from Ypres "'fore the bloomin 'ole mine went up." About that time he went home on leave, and one day in a railway carriage a man who sat on the seat opposite him leaned over and asked: "They haven't put up the mine at Ypres yet, have they?" Spudhole, with three gold stripes on his sleeve and a D. C. M. on his breast, looked at the man who spoke and said in a fierce voice: "You don't arf give the show away. Who told you that cock-and-bull story about a mine?"

The man smiled and hit his trousers leg with his walking stick.

There was a sharp report, as if wood had struck wood.

"Left my leg out there," said the man.

"Blimy!" Spudhole exclaimed, and the two became the best of friends before the journey ended.

When Spudhole's mine went up at last the cockney had the good luck to be there as witness of the event. All the night of June 6 he had been in the trenches side by side with his friend Bowdy Benners. And all night long they told stories to each other—stories of the many mines which they had seen go up during their long experience of war.

Both men were old soldiers and had seen war in many aspects, but despite this they watched for the blowing up of the mine with strained faces. The trench was crowded with men waiting for the order to charge. Some were visibly excited, and near Spudhole a man was humming a music hall song, his shrapnel helmet pulled well down over his eyes and the hand which gripped his rifle whitening at the knuckles. An air of suspense hung over the whole front, and this air of suspense seemed to be intensified by the loud-voiced barking of the massed guns behind the English lines.

It was a little past three in the morning when the mines (for there were several) went up to the dark heavens. Spudhole with his friend Bowdy went to the parapet and looked over. The land stood on end and the sky went afire. The world shook to its foundations. German trenches and their occupants went heavenward in the glare of hell. Men gaped helplessly at one another; thought was deadened for the moment and understanding gone. The soldiers rocked to and fro on a swaying battle front, just as shipwrecked sailors are rocked on a raft in a stormy sea. The men in the trenches cowered under this stupefying splendor of war.

Bowdy, splendid veteran of a hundred battles that he was, bent low under the parapet and let his cigaret drop into the muck. The rest of the men looked stupidly at one another and were silent. Only one man seemed to keep his spirits up, and that was Spudhole, the self-appointed guardian of the Ypres mine.

He kept his head over the parapet, his hand on his rifle, his eyes lit up with the light of an artist who looks on a completed work. Not being a tall boy and his face being covered with dirt and clay, he resembled the invulnerable dwarf of the combat. The flying clods of earth and fragments of wreckage fell about him, but he was not touched; he played a game of hide and seek with death.

The sound of the explosion died down and Bowdy got to his feet. He fixed his eyes on Spudhole and noticed that the cockney was still smoking his cigaret.

"A whole dozen of them must have gone up at the same time," said Bowdy.

"And the whole damned lot of them stepped off on the same foot," said Spudhole.

THE FOOD FIGHT

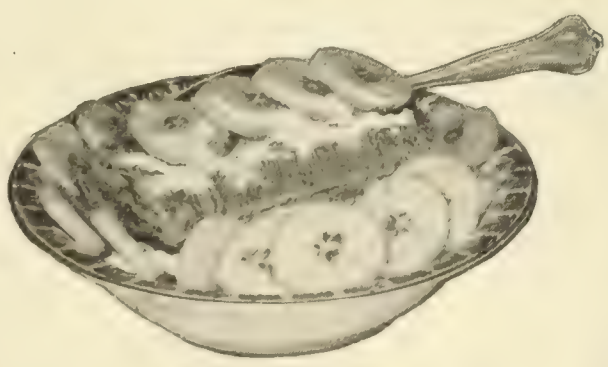
Under this head, every week, The Independent will print some vital part of the information which is being circulated by the Department of Agriculture to aid American housekeepers in their patriotic and intensely necessary work of conserving food.

THIS is the time of year when every garden is producing at top speed, producing, even in the case of the home garden, more than the owner can consume. The natural tendency to ship products to large markets for sale often results in entirely unnecessary transportation. This is a year when all misdirection of energy and effort must be carefully avoided, a year, too, when the strain on shipping facilities is particularly heavy. Therefore the Department of Agriculture is urging communities to consume as much of their local products as possible. Can and preserve your own surplus and buy, can and preserve your neighbor's surplus, instead of letting him ship it away to be canned and then shipped back for you to buy next winter.

"In some towns and cities," says Mr. Brand, chief of the Bureau of Markets, "it would be possible to establish small city markets, to which neighboring producers could bring their surpluses. This has already been done with success in some places. In one little town in New York State a newly-formed 'market club' built a covered market stand, to which producers brought in their perishable fruits and vegetables by auto, by wagon and by hand from the surrounding country. Such a step as this puts new life and activity into the 'war-garden' work, because it makes the growing of fresh vegetables and fruits profitable, at the same time reducing the strain on the transportation systems."

It is estimated by experts of the United States Department of Agriculture that if every citizen coöperated fully in securing the use of local foods, these could be made to take the place on the tables of the nation of at least 120,000 tons of sugar, 1,000,000 tons of flour and 1,200,000 tons of meats.

The Real Food for Humans



Eat whole wheat—the real food for humans—you don't have to live on corn in order that the Allies may have wheat.

There is plenty of wheat for Americans and Allies—but you must demand the whole wheat in all breadstuffs. Eat whole wheat for breakfast—eat it for every meal—but be sure it is prepared in a digestible form.

Shredded Wheat Biscuit

is 100 per cent. whole wheat prepared in a digestible form—something that cannot be said of ordinary whole wheat flour bread.

Shredded wheat is whole wheat thoroughly steam-cooked, then drawn into fine, filmy shreds, then twice baked in coal ovens. Nothing is thrown away—every particle is retained, including the outer bran coat which is so useful in keeping the bowels healthy and active.

Two or three of these crisp, brown loaves of baked whole wheat with milk and sliced bananas, or other fruits, make a nourishing, strengthening, satisfying meal at a cost of a few cents.

Made only by

The Shredded Wheat Company, Niagara Falls, N. Y.

GOOD GOVERNMENT—OR TAMMANY

IN spite of the war New York City is to have a municipal election this fall. This is a matter of the most immediate concern to five million people and of more remote but still very real importance to the rest of the country.

With only three months to election but one candidate for Mayor is seriously proposed. John Purroy Mitchel's claim to reëlection as Mayor of New York is so transcendent that his opponents—the "dark forces" of New York who engage in its politics "for revenue only"—are put to their trumps to find even a plausible candidate to oppose him.

There is just one issue involved in the New York municipal campaign this fall. It is Good Government versus Tammany Hall. There were days when the words "good government"—scornfully curtailed to Goo Goo—connoted in New York impractical idealism and political faddism. It is time that they were revived and renovated; for there are no words that more accurately and precisely describe what the Mitchel administration has given to New York for four years. Mayor Mitchel and his associates have proved that municipal government can be idealistic without being impractical, progressive without being faddy, broad visioned without being visionary, high minded without being inefficient, good without being flabby. What the Fusion administration has given New York is the very antipodes of the thing that Tammany Hall always has given to the city when it could get the chance, and always will, if the people of New York are ever so pusillanimous as to give it the chance again—bad government.

There is but one road to good government before the people of New York today. The other turning leads into the jaws of Tammany Hall. Tammany Hall means extravagance and wastefulness, favoritism, padded payrolls and grafting contracts, government collusion with vice and crime, franchise grabbing, police corruption and demoralization, inefficiency, incompetency, dishonesty, the debauchery of public office for private gain. The motto of Tammany Hall was ineffaceably branded once for all upon its forehead when the puissant and cynical Croker declared in open court as leader of Tammany Hall "I am working for my own pocket all the time."

This is the choice before the voters of New York this fall: Tammany's pocket or the security, the well being and the good name of the people of New York.

The leaders of Tammany Hall are scurrying around in pitiful disorder searching for a "respectable" candidate with whom to oppose Mr. Mitchel. They will doubtless succeed ultimately in finding him. For it is one of the disheartening anomalies of political life that the most degraded political machine can usually discover some man of otherwise "respectable" character and reputation to become its standard bearer.

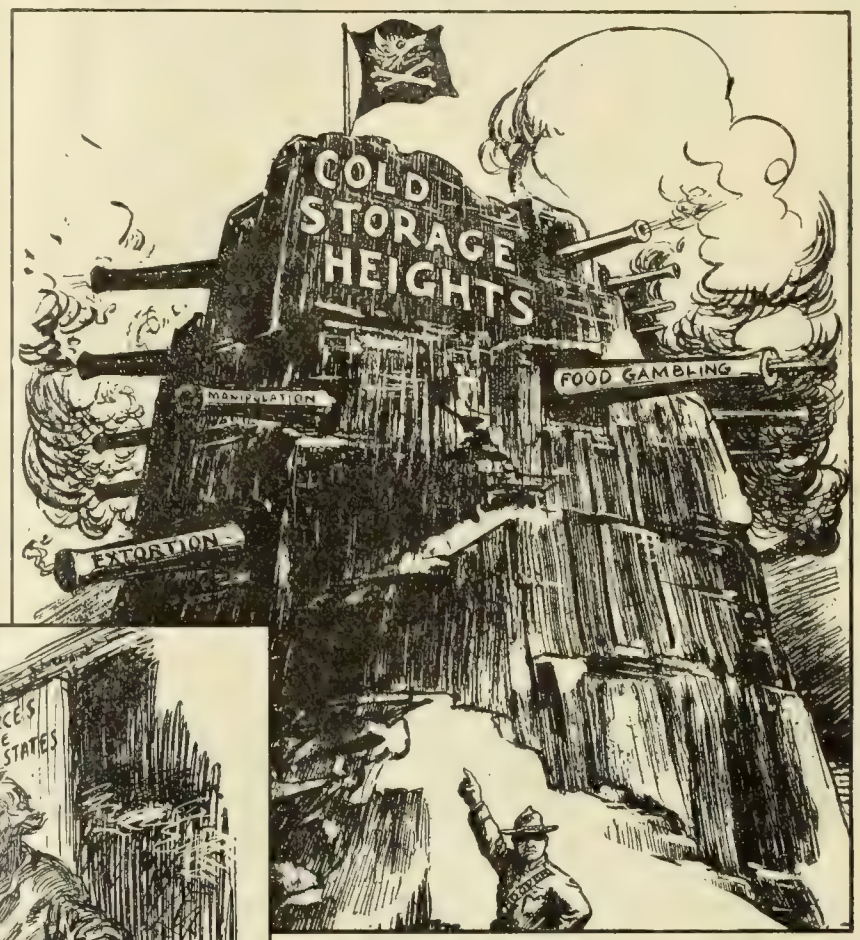
But the voters of New York must not be deceived. However plausible the appearance of "respectability" that clothes the candidate that opposes Mr. Mitchel, Tammany is still Tammany, and any administration that Tammany elects will be a Tammany administration, with all of wickedness and viciousness and bad government that that implies.

WAR RESULTS THAT WILL STAY

NOT all of the governmental, industrial and other by-products of the war, which are piling up rapidly in the United States as they have piled up in Great Britain and in France, will last very long after peace returns. There are, however, numerous highly important ones that men of good judgment tell us will probably be permanent. It is worth while, therefore, to look at these now, and ask ourselves how we like them. If they are to endure, and if we don't like them, we may as well begin changing our minds.

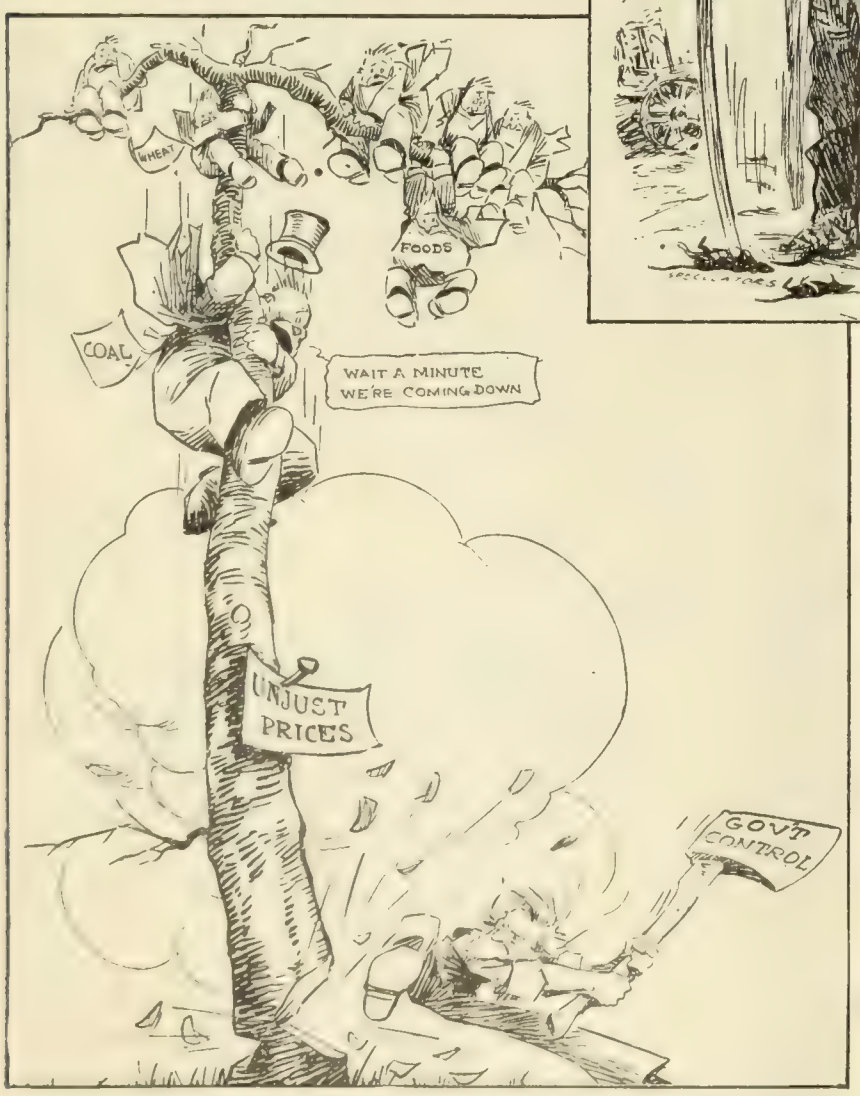
It is highly probable that we shall never again return to the notion that an immensely prosperous nation of more than a hundred million heads can get on without a military establishment that would be adequate to a real emergency. We have at last worked out a plan for a national army. It is based on the idea that all able-bodied men are under equal moral and patriotic obligation to serve their country in a military capacity if necessary. There is every reason to believe that we shall stick to this idea and build our permanent military establishment upon it. Also, we shall be well rid of the fallacious notion that military preparedness is militarism. There is no more identity of these two things than there is of the policeman and the thug if both happen to carry pistols.

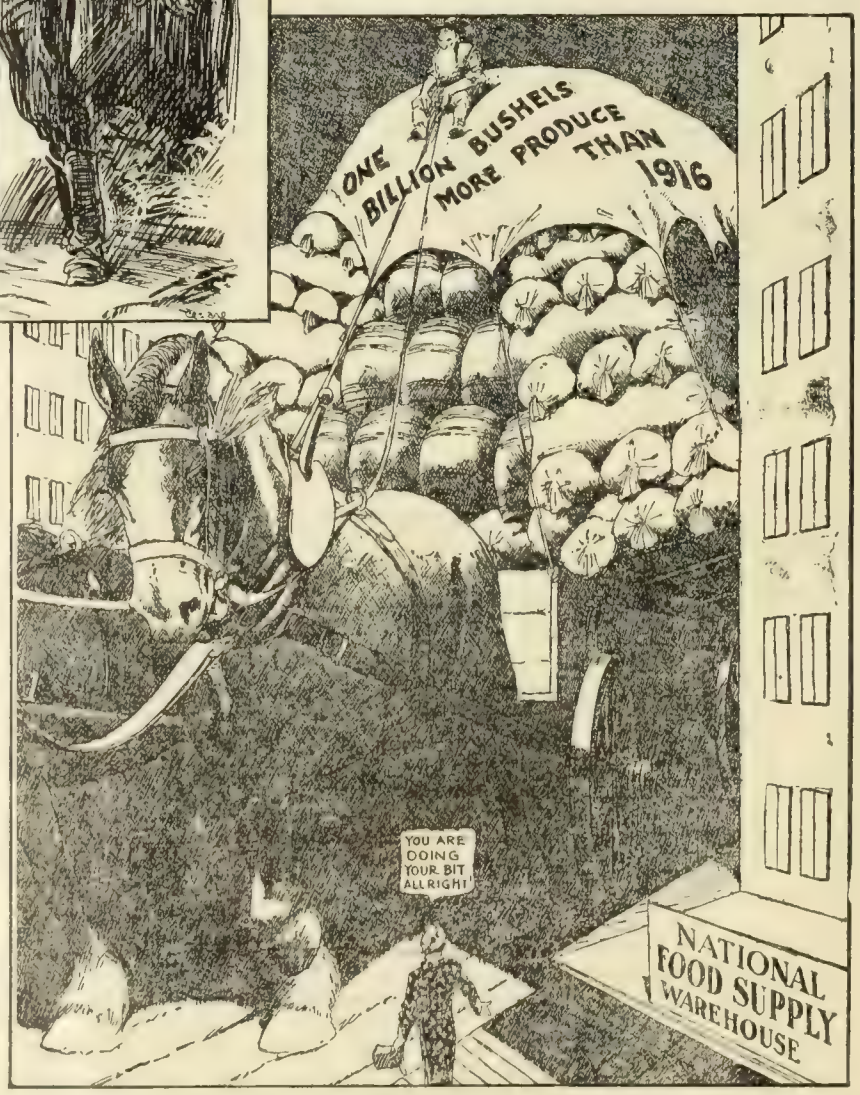
We are demonstrating that the government of a republic, awkward and uncertain as it necessarily is, may, nevertheless, learn how to control industry, commerce, even agricultural operations, and other business enterprises for a general end, and with great gain in national efficiency. That this control need not be so rigorous in days of peace as in days of war it is not necessary to argue, but having worked out its possibilities by the crude trial and error method we shall not again permit either big or little business to run amuck, exploit the public, and often destroy itself on the plea that government is by its nature unfit and incompetent to interfere in business matters. The functions of government will henceforth be enormous, responsible and dignified, and we may reasonably expect that the career of the national legislator and of the administrative officer will offer attractions to men of high character



CARTOON COMMENT

THREE SQUARE MEALS A DAY?





The spirit of '17 has been a favorite theme for war cartoonists lately—however Nelson Harding, of the Brooklyn "Daily Eagle," seems to have found a vigorous and a brand new way to use it here

"Get control of this Heligoland—or lose the war!" says Rogers of the New York "Herald" in a cartoon of Food Commissioner Hoover standing ready to storm "Cold Storage Heights" and capture them

The two sides of our food problem: at the left, Unjust Prices scurrying down at the threat of Government Control—"Strange they couldn't do it until now!" says Ding in the New York "Tribune"; and at the right, the task of the producer—Winsor McCay of the New York "American" shows Uncle Sam saying "Well Done!" to the farmer, bringing in this year's harvest. "The Open Door—but one to be watched," is Cesare's comment in the New York "Evening Post" on Uncle Sam's storehouse of national resources

and great ability more nearly proportionate to the attractions offered by big business and the opportunities of the corporation lawyer.

The war is doing more than fifty years of discussion of the ideas of Mr. Eliot and Mr. Flexner would have done to change our educational ideas and practises. When the alumni of our universities and colleges were asked to sign cards stating what they could do in a practical way to serve their country in a time of peril, a majority of them, it is safe to say, experienced a sense of humiliation. For the first time in their lives they realized that their educational equipment had not fitted them to do much of anything of emergency value. It is probable that the entire nation is today converted to the notion that every boy and girl should be taught to do something of emergency value and to do it thoroly well. We shall not make the mistake of assuming that this is the whole of education, but it is an essential part of the education that is maintained by taxation.

With much confidence we may assume that the general moral attitude of the people will be more sincere, more temperate, more practical and more just by reason of our war experience. Slowly but unmistakably the American mind is arriving at a clear apprehension of the objects of the war, and at a conviction that these objects are essentially moral rather than merely political or merely economic. That fact alone may prove to be in days to come a full compensation for the sacrifice and the suffering that the war will have cost. Extravagant living and freak behavior will not again have their former vogue. The people will learn that life can be enriched and made interesting in other ways which better comport with right feeling toward fellow-men and a sane way of bringing up children. We have had in this country a vast amount of personal and domestic tragedy directly attributable to fast living and neglect to train children and youth to habits of industry, prudence and considerateness. We shall not get rid of all of this unnecessary misery, but in all probability we shall greatly diminish it. Among the abiding results of the war we shall be able to count a net gain in wisdom and practical good sense.

THE QUESTION OF INDEMNITY

PLUNGED as we are into the midst of a war that originated in issues with which, as the President said, America had no concern, it becomes our duty to inform ourselves about them, for now we must have a voice in their settlement. Accordingly we have been taking up these questions in turn for the purpose of getting a clear understanding of what they involve and putting into concrete terms what diplomats prefer to veil in generalities. The latest of these articles is that of July 14 on "The Question of Alsace-Lorraine," and now we turn to the question of indemnities, which has been brought to the front since the Russian Government and the Socialists of belligerent countries on both sides have declared for peace without punitive indemnities.

President Wilson seems to take a similar position, for in his reply to Russia last June he said: "No indemnities must be insisted on except those that constitute payment for manifest wrongs done." This could be stretched to include all the "wrongs done" to the world by the war for which we hold Germany primarily responsible, but apparently it intended to restrict the indemnities to actual and direct damages and to exclude compensation for military expenditures as well as pecuniary penalties for breaking the peace. This was the line drawn in the "Alabama" case when the United States claimed compensation not only for the destruction of its shipping by the Confederate cruisers built in England but also for indirect losses such as diversion of commerce, enhanced insurance rates and consequent naval expenses. The arbitrators representing England, United States, Italy, Switzerland and Brazil decided unanimously that "the indirect claims did not constitute upon the principles of international law applicable to such cases a good foundation for an award or computation of damages between nations."

In the case of the Boxer outrages the United States claimed compensation only for property destroyed and tried hard to get the other powers to agree to this, but Germany, backed by Great Britain, insisted upon exemplary damages. So Germany got $67,500,000 and an expiatory monument, while the United States, with greater damage, took only $22,625,000 and remitted half of that when it was found that the losses of the missionaries and other Americans in China had been overestimated. It was, then, in spite of the protests of our Government, that China was loaded with "the enormous debt of $333,000,000," which it was not expected that she would ever be able to repay.

The term "indemnity" covers, as we see when we come to analyze it, a number of claims which might be arranged according to priority as follows:

INDEMNITIES IN PROBABLE ORDER OF PREFERENCE

1. Claims for actual destruction of buildings, bridges, roads, crops, granaries, mines, machinery, trees, etc., in the war zone, or interior towns bombed by airships.
2. Restitution of merchantile shipping destroyed, "ton for ton."
3. Repayment of all fines, contributions and assessments levied upon the inhabitants of occupied territory.
4. Compensation for all food and other supplies confiscated, for forced labor, for quartering of troops, etc.
5. Compensation for all civilian lives lost thru sinking of vessels, bombardment of towns and aerial raids.
6. Payment of the military and naval expenses of the victorious enemy.
7. Compensation for lives of soldiers and sailors.
8. Purely punitive fines, designed to impress the defeated party with the heinousness of his offense and to render him helpless for a term of years.

Whether this be the proper order or not we may assume that, however the war may turn out, the final indemnity will be fixed somewhere between the first and the last of these items. It is unthinkable that innocent people in the devastated war zone should receive no compensation for their injuries, and it is equally unthinkable that the defeated party could pay the whole bill for the direct and indirect losses of the whole world. It is, then, with the first items of the list that we are primarily interested. *The Fortnightly Review* for June contains a careful estimate of "The World's War Bill" and reaches the following conclusion:

COST OF THE WAR FOR THREE YEARS

Material damage	$2,500,000,000
Military and naval outlay	90,000,000,000
Interest liability	2,500,000,000
Economic value of lives	25,600,000,000
Dislocation of trade	750,000,000
	$121,350,000,000

This agrees closely with German and French estimates. It does not include the Japanese expenditures or the American, which are already approaching the ten billion mark. The number of soldiers killed or permanently crippled is put at 6,500,000 and their future earning capacity is estimated at the low figure of five dollars a week for fifteen years, or an average potential value to society of about $3900.

Another calculation of the value of the public and private property destroyed in the war was made for the Fourth National Foreign Trade Council at its Pittsburgh meeting last January and gave the following figures:

DESTRUCTION OF PROPERTY

In Belgium	$2,055,000,000
In France	1,680,000,000
In Eastern Europe	2,250,000,000
	$5,985,000,000

The American estimate of material damage is more than twice as large as the British but the agreement is as close

as could be expected without official investigation. The interesting thing about it is that it is relatively so small, only two or five per cent of the total cost of the war. Since the belligerent nations are now spending more than $100,000,000 a day on their military operations, not counting their commercial losses, this means that the extension of the war for a month or two would more than cover the material losses. Either side could better afford to make peace now and pay for all the damage its property has suffered rather than to continue the war even tho by continuing two or three months longer it were certain of a victory so complete as to secure a full indemnity for material losses. To carry the war thru another year will cost more than $36,500,000,000 and many times that in destruction of life and property. The question of indemnities has sunk into insignificance in view of the enormous cost of the war. It cannot matter much now which side pays the bills, for there will be very little difference between victor and vanquished in losses of men and money. The United States has already spent more money on the war than would suffice to rebuild every ruined city, restore every demolished villa and cottage, restock every farm and reopen every factory in Belgium, France, Serbia, Rumania, Galicia and Poland.

There are four ways in which the indemnity question may be settled:

1. Let each side stand its own losses, the richer countries recompensing their poorer allies. This solution of course ignores the justice in the claims for damages.

2. Let each nation pay for the damage its armies and navies have caused. This would have the advantage of putting a penalty on "frightfulness" and of recompensing the invaded countries.

3. The Russian Socialists, regarding the war as a world calamity in which all are sufferers, propose pooling all claims for damages and apportioning the bill among all the belligerents according to their national wealth, their population or the size of their armies.

4. Making the defeated party pay the whole bill. This assumes that the defeated party is the guilty party, and further that the defeated party is sufficiently crushed to submit to such a penalty yet not sufficiently crushed to be bankrupt. If, as we believe, Germany is the guilty party and if, as we hope, Germany will be the defeated party, there is little prospect of carrying out this plan, for it seems likely that Germany will hold out until financially ruined. If the Allies persist in their present demands of taking away from Germany eighty-five per cent of the territory of the German empire her ability to pay a big damage bill will be materially reduced, tho of course she could in any case afford to pay for the destruction caused by her armies and submarines. From a financial point of view—and that is all we are here considering—it is merely a question whether it will cost more to collect the bill for damages than it is worth.

THE RUSSIAN VIRTUE

EVERY nation has some characteristic merit which is worthy our study and admiration and far more worth dwelling on than the corresponding national vices, since it is our business to see that none of our world competitors, whether friendly or unfriendly, can outdo the United States by the possession of any secret moral patent. The Russian specialty is candor. The terrible disasters which are now confronting the young republic are half redeemed by the frankness with which they are acknowledged. It has been customary for the student of the war to piece out the truth from the dispatches by striking an average between the reports of the contending belligerents. But we have noticed that the official Russian reports for the last few weeks have constantly admitted "heavy losses" when speaking of Russian advances and promptly chronicled every Russian retreat. Often the Russian reports acknowledged the abandonment of a position before the Austrians or Germans announced its capture. That this is a genuine expression of national character and not the temporary policy of the War Office is proved by the fact that Russian literature has always been noted for the same frankness, the same admission of terrible or discreditable evils in Russian life. In all ages the Russian patriot has been the exposer and denouncer, not the flattering courtier or false prophet of smooth things.

A DANGER SIGNAL

THE man who openly says "I don't believe in patriotism and I don't admit any allegiance to the United States" is usually harmless. But look out for the man who says "Yes, I'm loyal to America and all that sort of thing. But—"

OUR HEADLESS CONGRESS

NO American institution stands so badly in need of organization and leadership as Congress. At each session Congress goes to work without a plan or a program and is soon swamped by a flood of local bills and small appropriations and would never accomplish anything of bigger scope but for the constant intervention of the President at every stage of legislation. Not only must the President at the opening of each new session map out a legislative program, exactly as if he were a schoolmaster assigning the next day's lesson to his class, but he must shove the work forward whenever it gets "stuck" on its way to enactment. Almost every important piece of legislation in recent years, with the possible exception of the recent Immigration Bill, owes its existence wholly to the initiative of the Administration and can thank Congress for nothing but ratification. Often, in fact, Congress cannot even perform the poor duty of a rubber stamp, but confines itself to obstruction and denunciation of the "usurpations of the executive," as if the hard working man in the White House, whose only interest is to get necessary work accomplished, were a sort of Mexican dictator.

We think that the reason for this absence of initiative in Congress is due less to the weakness of the individual congressman (tho there are not more than a score of men in Congress whom any one but themselves would dream of considering for President) than to the imperfect organization of the House and Senate. There is no man and no committee in Congress to furnish the leadership indispensable to every legislative body. The Speaker of the House of Representatives and the Republican and Democratic floor leaders are almost invariably men who combine exceptional skill in parliamentary sparring with an absence of constructive statesmanship that no one could believe without the evidence of *The Congressional Record.* The chairmanship of important committees is determined by seniority or favor rather than by the personal merit or the political views of the individual selected. In the Senate all leadership is frowned upon as contrary to the unwritten code of "Senatorial courtesy," to which, until a few months ago, was added the right of unlimited debate.

Under these circumstances the President inevitably becomes the Chief of State, the Prime Minister and the party leader of the majority: combining three important offices in one and furnishing the element of leadership which otherwise would be wholly lacking. An exactly parallel tendency may be seen in most of our states and municipalities. Everywhere citizens look to strong Governors to save their states from the rapacity or folly of the legislators, and the Mayor tends to become so important as completely to eclipse the Board of Aldermen. Leadership there must be, and if a legislative body cannot furnish it then its power and prestige must pass to the executive. Congress recognizes this condition and complains of it. But what will it *do?*

THE STORY OF THE WEEK

Russian Readjustments

Premier Kerensky, following the usual custom of parliamentary governments in continental Europe, provoked a cabinet crisis by his resignation on August 3 in order to obtain a free hand to reconstruct the ministry. Foreign Minister Terestchenko and Minister of Agriculture Tchernoff had their resignations accepted, but the other members of the ministry withdrew their resignations. M. Terestchenko was one of the few non-Socialist members of the ministry; M. Tchernoff is a radical Socialist who was accused of pro-German tendencies, altho he vigorously denied the charge. The provisional government summoned a conference of party leaders in the Duma and of the Councils of Workmen's, Soldiers' and Peasants' Delegates to consider the state of the nation, and on August 5 Premier Kerensky received a vote of confidence not only from all the five parties represented, but from the executives of the Workmen's and Soldiers' and Peasants' councils, the Maximalists alone dissenting. Vice-Premier Nekrasoff declared the government must be strengthened, because a counter-revolution exists already and was steadily growing.

The Premier, who returns to the government stronger than ever, and is hailed as the only possible deliverer of Russia, has issued a manifesto in which he promises to form a strong revolutionary Cabinet. He is now virtually dictator of all the Russias.

The crisis in Finland has been temporarily postponed. The Finnish Senate agreed to adjourn the Landtag and arrange for a general election in October. The Senate and Landtag in joint session resolved that the future constitution of Finland could only be determined by a joint agreement of representatives of both democracies. In many other parts of Russia anarchy and disorder continue.

THE GREAT WAR

July 30—Rumanians make fresh gains. Heavy artillery duel in Belgium. Twenty-one British ships sunk during past week.

July 31—British drive in Belgium begun. Russian retreat continues.

August 1—Germans make counter-attacks in Belgium. Kaiser disavows war for conquest.

August 2—Kaiser summons war council. General Korniloff assumes command of Russian armies.

August 3—Shake up in Russian cabinet. Austrians occupy Czernowitz.

August 4—Premier Lloyd George proclaims faith in Allied victory. Root mission brings encouraging reports from Russia.

August 5—Canadians advance on Lens. Kerensky returns to office.

The War in the East

The outstanding fact of the military situation in eastern Europe is that the Russian army is still in full retreat before the advancing German and Austro-Hungarian forces. But the retreat is no longer a mere rout; according to the dispatches from both sides the Russian army appears to have recovered a little of its discipline and morale. On several occasions the Russians turned on their pursuers and fought them stubbornly, even compelling them to give ground for the time being. It is a part of Russian military tradition, of which Napoleon's campaign is the classic example, to retreat in such a manner as to inflict the utmost possible damage upon the enemy and then turn upon him when he has advanced too rashly or too far. But to retreat in this fashion, giving up territory to the enemy while still holding intact the army organization, is a great test of the loyalty of an army, and is impossible if the soldiers are disaffected and ready to desert. The military problem of Russia is therefore but one aspect of the political problem.

The climax of Austro-Hungarian victory thus far in the war against Russia is the reconquest of Bukowina, the province to the east of Galicia, and the occupation of Czernowitz, its chief city. This place, a city of some seventy thousand inhabitants, has changed hands ten times during the war. Its occupation means the practical evacuation of all Austrian territory by the Russians. General Brusiloff has resigned his command of the Russian army in Galicia because he despaired of being able to restore military discipline. His place has been taken by General Korniloff, who is considered the most dashing and brilliant commander in the army. The combined Russian and Rumanian forces continue to win small local victories in Rumania.

Germany Seeks Swiss Loan

A very good illustration of the predicament of the small neutral nations which find themselves dependent upon the trade and the good will of their warring neighbors is that of Switzerland. President Schulthess has just announced that Germany will shut off the Swiss coal supply unless Switzerland advances a loan to Germany. Switzerland is a country of growing manufactures but it has little coal to support its industries, except the "white coal" or power from the waterfalis. Of Switzerland's neighbors

UP FROM SLAVERY! BUT HOW?

Thousands of negroes in New York paraded up Fifth Avenue last week to present their protest against the East St. Louis riots and similar recent occurrences and to ask for equal labor rights with white men. The migration of colored workingmen to the North in the last two years is requiring a readjustment of economic conditions in the big cities; agitators now find the cry of "nigger-scab" too sure a way of starting trouble

Germany is richest in coal. Great Britain and the United States can hardly spare the tonnage to keep all the neutrals as well as the Allies supplied with their coal, and in any case the price of coal carried for such a distance would be much higher than that of the German. The two governments are reported to have reached an agreement whereby Switzerland advances Germany $8,000,000 a month for nine months at five per cent interest and Germany permits the export to Switzerland of 200,000 tons a month.

Similar arrangements are being made between the Entente Allies and the neutrals of northern Europe. Norway has presented a request to the Allied governments to permit the importation of all the foodstuffs, principally sugar, fats and grain, needed by the Norwegian people, and permission to sell fish to Germany without being punished by an embargo on imports from the Allies. In return, Norway is willing to promise not to permit the reëxportation of imported foodstuffs to Germany and to allow the Entente nations the use of a certain number of Norwegian ships for their trade.

The government of the Netherlands has offered a part of the large Dutch merchant marine if the United States and the other Entente Allies would assure the nation that sufficient foodstuffs would be permitted to enter the Netherlands for the needs of the people and their live stock. Sweden has placed a ban on the exportation of machinery, certain manufactured goods, provisions, and base metals other than iron (principally copper, nickel, lead and brass). These restrictions will chiefly affect Germany as there is at present a large export trade on the Baltic from Sweden to Germany in these commodities.

Kaiser's Letter Published

Former American Ambassador James W. Gerard has made public, with President Wilson's permission, a personal letter written to the President by Kaiser Wilhelm. The date of the letter is August 10, 1914, about a week after England's entrance into the Great War. In it the Kaiser alleged that late in July King George V had given personal assurances that England would remain neutral in a war involving Germany, France, Austria and Russia. On the following day, July 30, Foreign Secretary Sir Edward Grey warned the German ambassador that if Germany entered the war between Austria and Russia England "would take quick decisions and grave measures." This would seem to indicate one of three things: that Great Britain had not yet made up its mind whether to enter the war or not until after the invasion of Belgium, that the British Government was deceiving Germany as to its intentions, or that King George was carrying on diplomatic negotiations independently of his Foreign Secretary and contrary to his policy. The Kaiser also asserted that if England would guarantee French neutrality Germany would remain on the defensive against France. But this offer came too late as England had already made a *casus belli* out of the violation of Belgian neutrality. The Kaiser said further that Belgian neutrality "had to be violated by Germany on strategic grounds, news having been received that France was already preparing to enter Belgium." He laid the blame for the war on Russia for mobilizing while England, Germany and Austria were about to reach an agreement on the Serbian situation.

United States Acquires Private Shipping

Rear Admiral Capps, Manager of the Emergency Fleet Corporation which is now building a merchant marine for the nation, has requisitioned "all power-driven cargo carrying and passenger vessels above 2500 tons capacity under construction." These ships will be hurried to completion as rapidly as possible by double and triple shifts of workmen in order to clear the yards for the building of the new designs approved by the Government. The records of the Shipping Board place the number now being built at some 700 vessels of 2,000,000 aggregate tonnage. Much of this construction is for the Norwegians and the British. The British Government is willing to relinquish to this Government all the construction orders placed with American shipbuilders. As for the American ships requisitioned, they will be operated for the nation by the Shipping Board. Contracts for ships not yet under construction have also been taken over by the Government which is free to cancel them or carry them out as may seem best. Private owners will be compensated by the Government for all losses due to requisitions. It is not known whether the Emergency Fleet Corporation will supplement the work of the private shipyards by establishing new Government yards or not.

War Tax Bill Again Taken Up

The war tax bill is at last before the Senate, emerging from committee in a wholly altered state from that in which it left the House of Representatives in May. The long delay in the Senate committee was due to the fact that the Senate wished to pass the food administration bill before considering any other legislation. The violent opposition of Senator Reed and some of his associates to the idea of a "food dictatorship" and the long dispute over prohibition meant delay to the whole legislative program of the administration. It may take another month for the Senate to pass the bill and reach an agreement with the House of Representatives on its provisions. The situation is complicated by the recent announcement of Secretary McAdoo of the Treasury that the United States would require during the first year of its participation in the Great War an additional appropriation of about $5,000,000,000 in addition to the sums already voted. Most of this will, of course, be met by new bond issues, but there will undoubtedly be a stubborn attempt made in the Senate to cover as much as possible of the sum by taxation.

As it now stands the war tax bill will provide for raising $2,006,970,000. Individual and corporate income taxes will account for $777,000,000 and the excess profits tax on industries profiting from the war for $562,000,000 more. These are the major items of revenue, but there are also important increases in taxation on alcoholic drinks, tobacco, sugar, coffee, tea and cocoa. Postal rates are increased, but a new provision stipulates that letters may be sent free of charge to soldiers and sailors assigned to duty in a foreign country during the present war.

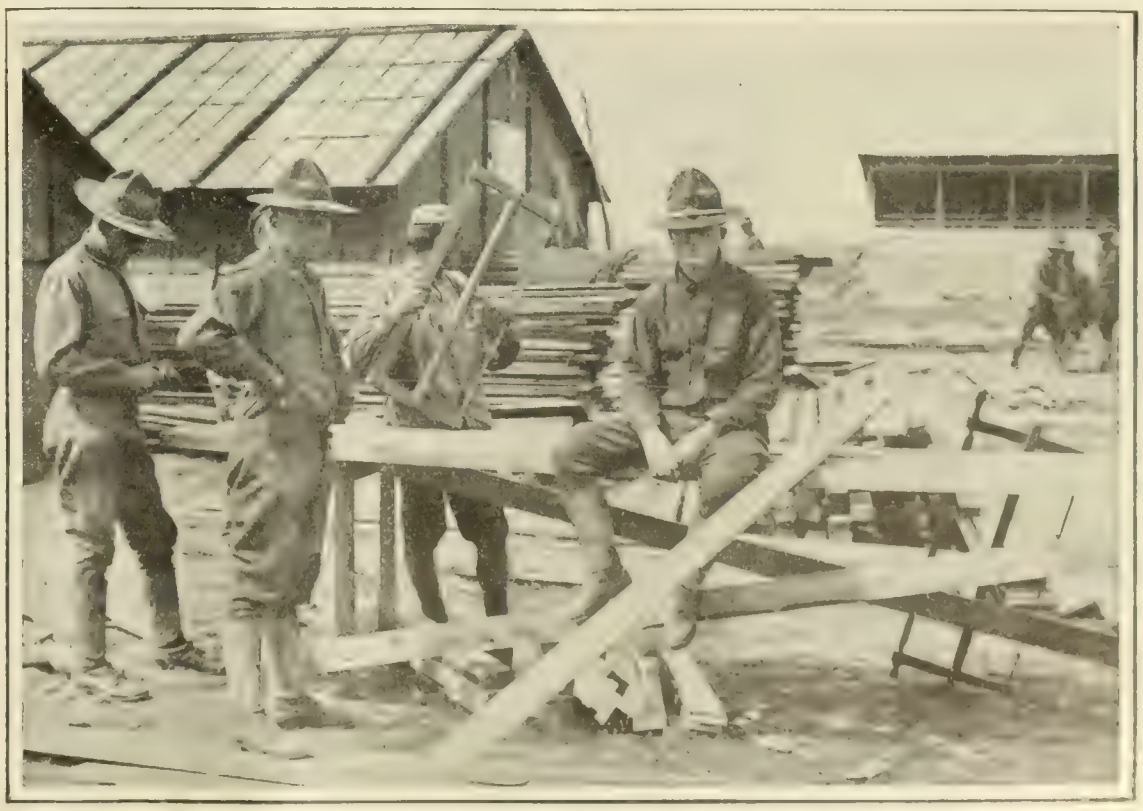
Chairman Kitchin, of the Ways and Means Committee of the House of Representatives, announces that the House cannot be expected to agree to many of the Senate amendments. He insisted that placing the excess profits tax on a basis of increase over the period immediately before the war would favor many wealthy corporations which enjoyed great prosperity during the years 1911 to 1913 inclusive, the years chosen as the basis for estimating profits. He prefers to consider as excess profits all those over a fixed percentage. Mr. Kitchin also objected to the elimination of numerous minor taxes on luxuries which were a feature of the House bill.

President Wins Food Control Victory

The food control bill has secured the approval of both the House of Representatives and the Senate, but so many amendments were accepted by the Senate that the bill must be repassed after the new amendments have been considered in conference. The conference has agreed to strike out the provisions of the bill most objectionable to President Wilson. One of these is the Senate amendment providing for a board of three members to administer the act in place of a single food administrator, an amendment adopted to save the country from the much dreaded "one man power." Finally, after much pressure from the Administration, the Senate representatives in the conference agreed to drop this provision. This decision, if confirmed by the vote of the Senate, will enable the President to give Mr. Hoover a free hand in conserving the food supply of the nation for us and our allies. Another Senate amendment which has been eliminated from the bill is that creating a congressional war expenditures committee to oversee the disposition of the immense appropriations voted by Congress for the prosecution of the war. This does not necessarily mean that no such committee will be established but that it cannot come into existence as a rider on the food control bill. The President has so strongly opposed the creation of the war expenditures committee that Congress feared that the food control bill might fail to receive his signature if it contained such a provision. The Senate amendment fixing a minimum price for wheat has been approved in conference. There will apparently be a compromise on prohibition, making the manufacture of distilled liquors unlawful but not affecting light wines and beers.

Hoover Compliments American Housewives

Exasperating as it must have been to have Congress so slow to pass the food administration bill and give real power to the Federal Government, Mr. Hoover has been able to find a silver lining to the cloud of disappointment in the fact that his advice on food conservation has made an effective appeal to the people of the nation. "Germany accomplished less in this direction in twelve months," said he, "than our people have in four. The only need of legislation and authority is to curb those who would profit by this voluntary movement." More than two million women have enrolled as volunteers in the food administration service and are practising economy with the aid of advices from Washington. Millions of new vegetable gardens have been planted this spring and summer. Mr. Hoover estimates that there will be an increased production of cereals this year amounting to 850,000,000 bushels. American canners this year will put up some 1,700,000,000 cans of fruit and vegetables; sufficient to supply the needs of this country and the Allies. Returns from a number of large cities show a reduction of garbage of nearly a third from June 1916 to June of this year, a sure indication of more careful housekeeping. Mr. Hoover spoke also of the volunteer organizations which have sprung up in every part of the country in the absence of positive legislation for better distribution and conservation of food. This, he said, was the proof that our democracy is as capable of mobilizing its great resources as any autocracy could be.



The Senate Versus Demon Rum

On the first of August the Senate resolved to submit to the states of the Union a constitutional amendment for nation-wide prohibition. The vote of 65 to 20 was eight more than the necessary two-thirds, and if the House of Representatives will also accord a two-thirds vote in favor of the amendment it will soon start on its travels from one legislature to the next until three-fourths of the states have signified their approval. The proposed amendment, introduced by resolution of Senator Sheppard of Texas, prohibits the "manufacture, sale, or transportation of intoxicating liquors within, the importation thereof into, or the exportation thereof from the United States and all territories subject to the jurisdiction thereof, for beverage purposes." Twelve Democrats, Senators Broussard, Culberson, Gerry, Hardwick, Hitchcock, Husting, James, Lewis, Phelan, Pomerene, Reed and Underwood, and eight Republicans, Senators Brandegee, Calder, France, Lodge, Penrose, Wadsworth, Warren and Weeks, voted in the negative. A score of states gave both votes in favor of the resolution and only two, New York and Massachusetts, gave both votes against it.

Section two of the resolution passed by the Senate fixes a time limit of six years for the ratification of the amendment by the several states. This clause was inserted into the resolution by a vote of 56 to 23 on the suggestion of Senator Harding of Ohio in order to meet the objection raised by many conservatives who felt it unjust to permit ratification without time limit, as this would not show whether three-fourths of the states were at the same time in favor of prohibition but only that they had once been in favor of it. But the compromise on the method of amendment, however reasonable in itself, may be regarded by the courts as a departure from the terms of the constitution. Senator Borah raised this objection, but a majority of the Senate was willing to take the risk of unconstitutionality.

Drafting the Alien

One of the problems which have been created by our entrance into the Great War is that of the alien who is citizen or subject of one of the Allied nations but who is resident in the United States. Such men cannot be forced to serve in the armies of their native countries because on American soil they are not subject to the legal procedure of any nation but this, and at present they are exempt from the selective draft in this country because they are not American citizens. To meet this condition Senator McCumber introduced a resolution requesting the President to seek from the foreign offices of the Entente Allies permission to make the selective draft law apply to their nationals in the United States. This resolution the Senate passed without debate. Senator Chamberlain has introduced a more drastic resolution which would make the resident alien immediately subject to conscription unless the government to which he is subject has a treaty with the United States providing for exemption from military service. By the Chamberlain measure the alternative to military service is deportation within ninety days. The Administration supports the McCumber resolution in preference to that of Senator Chamberlain on the ground that it would be expedient to take the matter up with the Allies thru diplomatic channels. It is not believed that any of the governments

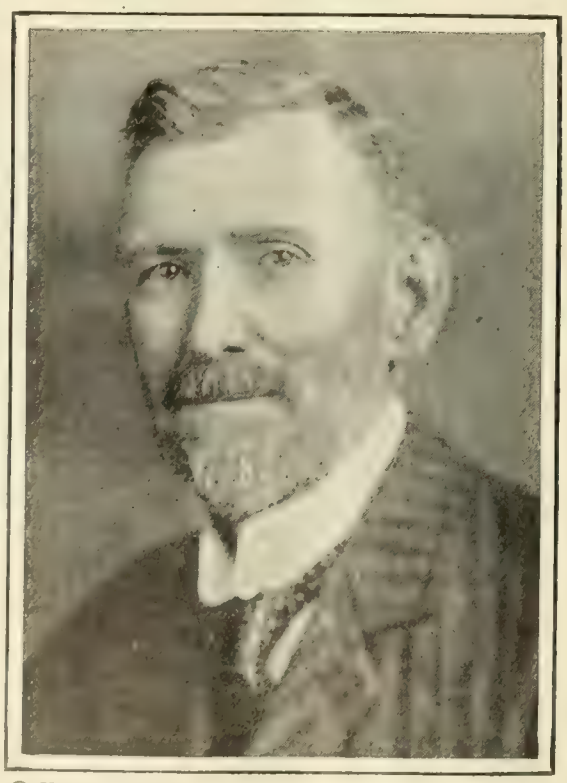
THE AMERICAN CAMP IN FRANCE

German prisoners (not particularly eager to be photographed) are shown here building their camp somewhere behind the Allied lines

concerned would make objection. The French Chamber of Deputies has approved similar legislation permitting aliens resident in France to enter other branches of the French Army besides the famous "foreign legion" and compelling resident subjects of other Allied nations, liable to military duty in their own countries, to enter the French service. Americans resident in Great Britain are not as yet required to perform military duty by the British Government.



Texas Governor Indicted Impeachment charges have been filed against Governor James E. Ferguson of Texas for alleged misappropriation of public funds. Speaker Fuller of the state House of Representatives submitted the charges and issued a call for a special session of the legislature to consider them. The legislature had been summoned in the first place for the purpose of repassing the appropriation bill for the support and maintenance of the University of Texas which Governor Ferguson had vetoed a few weeks earlier. One of the counts of the indictment is that the Governor sought to defeat the constitutional requirement for the state support of a university and only resubmitted the appropriation bill which made the existence of the university possible after impeachment proceedings had been instituted. Other charges are that he failed to pay money into the state treasury as required by law but kept it in his own possession and spent it at his pleasure, that he placed public funds in his own bank without interest, and that he sought to bribe and coerce members of the state Board of Regents and the Speaker of the House of Representatives in order to influence their political actions. Governor Ferguson denied all of the charges brought against him and pointed out that many of the acts for which he was criticized had been done as a matter of course by previous executives whose conduct was never questioned.

Lynching in Montana Frank Little, an organizer and agitator associated with the Industrial Workers of the World, was lynched on August 1 at Butte, Montana. Mr. Little had come to Montana for the purpose of organizing a strike in the metal mines of the state. In Arizona he had taken a leading part in the strikes in the copper mine districts where the I. W. W. terrorized the community until, as in Montana, the mob rose against the trouble makers. In Butte he distinguished himself by denouncing the army and the Federal Government, declaring, it is charged, that "if the mines are taken under Federal control we will make it so hot for the Government that it will not be able to send any troops to France." The authorities were considering prosecuting him for treasonable utterances, but the mob struck first. Seven men went at night to Little's lodgings and carried him in an automobile to a railroad trestle on which they hanged him. Pinned to his clothes was a warning for others to take notice of his fate. Signed to this note were the figures 3-7-77, the old sign of the Montana Vigilantes, irregular tribunals who made and executed the law in pioneer days before the establishment of regular law courts. The city officials, considering the lynching a disgrace to the name of Butte, promised the arrest and conviction for murder of the lynchers as soon as they could be detected. A thousand dollar reward was voted for the arrest and conviction of any of the mob, and the I. W. W., which had just been defying the Montana authorities, promised funds to aid them in bringing the lynchers to justice.

ON THE ITALIAN FRONT

Between battles with the Austrians the Italian army in the Alps has found time to act for the movies. This spectacular photograph of a perpendicular advance is taken from "The Warrior," a remarkable film made by the producers of "Cabiria" and endorsed by the Italian Government

A UNANIMOUS VOTE FROM THE IRISH

The convention of ninety-five Irish delegates, meeting in Dublin to draw up a program of Home Rule to please all parties, agreed in one —perhaps in only one—respect, their choice of a chairman, Sir Horace Plunkett, founder of the Irish Agricultural Organization Society

In many other parts of the country there have recently been conflicts between the sowers of sedition and infuriated mobs of loyalists. In the Michigan iron district several I. W. W. leaders were arrested for fomenting disorder, and the Arizona copper mining industry is still demoralized by their activity. In fact, a quarter of the copper production of the United States has been stopped by strikes. Sporadic cases of crop burning have been reported in California. In Davenport and Lowden, Iowa, a number of anti-war agitators have been arrested and held for investigation and partly to secure their safety from the anger of loyal but hot headed Iowans who have in several instances shown a tendency to forcible resentment against the propagandists.

A Lady Mayor in Florida Moorehaven, Florida, has the distinction of being the first town in the old South to have a woman mayor. Such elections are not uncommon in the woman suffrage states of the West, but in the non-suffrage states are rare enough for each incident to be something of a landmark of the march of public opinion. Mayor Marion N. Horwitz at first refused to think of public office, but was persuaded to accept by a petition of a majority of the town's voters; a clear case of the office seeking the man, or, in this instance, the woman. Her program, as announced to the new town council, includes a nonpartizan administration, a referendum on municipal legislation, and various improvements in public sanitation, schools, policing and local finance.

The War on the Water During the week ending July 30 the British lost twenty-one merchant vessels, eighteen of them being of more than 1600 tons each. The report is an encouraging one as it shows a tendency toward a decrease in losses. During the same period the French lost three merchant vessels and the Italians four. The comparatively small toll of destruction credited to the submarine during the past four weeks does not, however, seem attributable to any decrease in the number of submarines. American estimates place the total number of German U-boats now active in the blockaded area at not more than two hundred. But this number seems to be increasing, for it is doubtful if more than one submarine is put out of action for each week and Germany is known to be able to launch new ones at three or four times that rate. The destroyer, a type of ship originally designed for use against torpedo boats, is doing most of the work of destruction in the anti-submarine campaign and the Navy Department will probably use a considerable part of the appropriations at hand to build warships of this type.

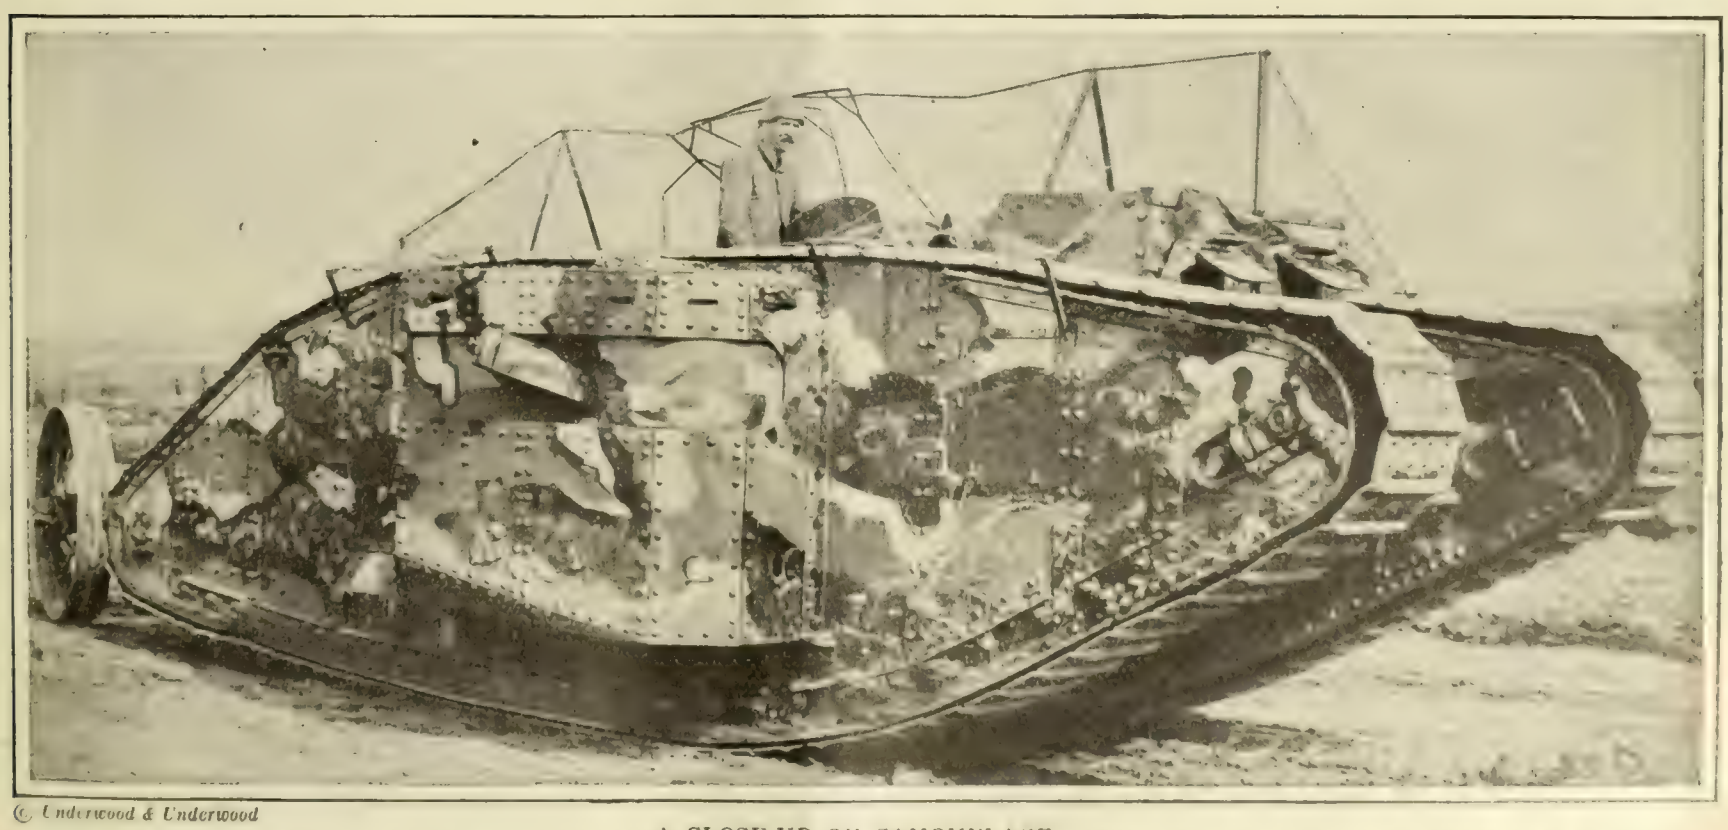
Lord Robert Cecil, Minister of Block-

ade, places the present shipping of British registry at more than 15,000,000 tons, including prizes captured from the enemy and new ships built since the opening of the Great War. In 1914 the ocean going merchant craft of the British Empire had an aggregate tonnage of seventeen or eighteen millions. This does not appear, at a superficial glance, to be a very serious blow to British trade, but Lord Cecil pointed out that some 6,500,000 tons have been diverted from their normal trade routes to the use of the army and navy, the British colonies and the other Entente Allies, not including a further million tons taken from the export trade. Imports into Great Britain have decreased during the war from 58,000,000 tons yearly to less than 43,000,000. The British export trade has fallen off about one quarter and would show a much greater reduction if the shipment of war supplies to the other Entente Allies were excluded from the total as not a part of normal trade. Many distant trade routes, once followed with profit by British vessels, have been abandoned to neutral shipping lines. Premier Lloyd George announces a building program for next year of four million tons or double the average rate of British ship construction.

Among the losses of the week was an American schooner, the "John Hays Hammond," sunk by the gunfire of a German submarine. An old British cruiser, the "Ariadne," of 11,000 tons, was torpedoed and sunk with a loss of thirty-eight members of the crew.

The Big Blow in Belgium

The greatest battle of the war, unless some future conflict wrests away the title, is now being waged in Belgium. The preparations for the drive were of unexampled thoroness, and its early stages caused comparatively small loss to the attacking forces. The British artillery kept up a bombardment of the opposing trenches so heavy and continuous that it literally swept away the German defenses. Even in London, over a hundred miles away, people insisted that they could hear the thunder of the guns. With such a degree of artillery preparation it was impossible for the Allies to keep their intentions a secret from the Germans, and the only surprize possible was the uncertainty as to just what day the attack would be delivered. On the morning of the last day of July the long expected attack came at last.



British and French troops coöperated in the drive, as a considerable portion of the French army had been moved to Flanders north of the British positions. This change in the distribution of the armies on the western front had not been made generally known to the public before the present battle. The first attack was on a line of twenty miles from the town of Dixmude to Warneton, a town south of Ypres. Except Verdun and the Somme Valley, no sector of the western trench line has seen so much hard fighting as this, for it was at Ypres that the Germans made their chief attempts to break the British line and reach the ports on the English Channel. The advance of the Allied troops was protected by "barrage" fire, which kept a curtain of shot and shell immediately in front of them as they charged. In taking one underground fortification known as the Menin tunnel the British were so eager that they charged thru their own barrage fire to reach the foe. The first day's offensive resulted in the occupation of all the towns and villages within some two miles of the old trench line and the capture of about five thousand prisoners.

On the following day the Germans made a strong counter-attack, regaining a little ground near Warneton and the town of St. Julien opposite Ypres. At the same time the Allied armies consolidated the gains they had already made and even extended them at some points. No very decisive action on either side marked the first of August, since the heavy rains had made the ground almost impassable. The trenches and shell craters were flooded with the rainwater and the plains became one great sea of mud. In such weather the lowlands of Flanders are a greater obstacle to the advance of an army than mountainous country would be. On the second of August the British regained the positions they had lost in the German counter-attack and both sides announced further captures of prisoners.

It is surmised that the main purpose of the Allied drive was to force the Germans to a general retirement in Belgium which would cut them off from their hold on the Flemish seacoast. This would greatly restrict the facilities for submarines by limiting their bases to the narrow German coast and might mean a decrease in the intensity of U-boat warfare which would be decisive in the war.

Peace Talk from the Central Powers

At the beginning of the fourth year of the war the weariness of the people of Germany and Austria-Hungary is unmistakable. The German press expresses unanimous confidence in the military situation and still treats American intervention as a wholly negligible factor, but there is less talk of victory and conquest and more emphasis on merely "holding out" than at any previous time during the Great War. Count Czernin, the Austro-Hungarian Foreign Minister, has voiced this sentiment more clearly than any other spokesman of the Central Powers who is in a position of authority. He did not, it is true, specify the desired peace terms more exactly than to say that Germany and Austria-Hungary repudiated the idea of forced conquests and insisted only upon an "honorable" peace. But he declared further that common sense and morality were revolted at the thought of a further

A CLOSE-UP OF CAMOUFLAGE

When it stops to have its picture taken this looks like a tank, but moving along toward the enemy trenches it makes itself a part of the landscape, for the entire surface has been painted in map-like patches of green and brown and yellow that render it practically invisible from any distance

continuation of the war, that the Entente nations could never hope to crush the Central Powers and "in our position of defense we have no intention of crushing the enemy" and that the war would come to an end by a peace based on a common understanding. After the war he hoped that all the powers would enter into an agreement to prevent the recurrence of such wars in the future. He said that the German and Austro-Hungarian Governments were willing to make the constitutions of their respective countries more democratic, but that they would refuse to listen to any demand from their enemies concerning the internal affairs of the Central Powers. Count Czernin's speech may be summarized in the phrase "peace without victory" invented by President Wilson.

Germany, which has perhaps more to gain by a decisive victory and less to lose by a decisive defeat than her ally, is not showing quite such eagerness for an immediate peace as was revealed by the Austro-Hungarian Foreign Minister. But the peace overtures of the Reichstag showed the strength of the growing demand for a compromise settlement and the tone of the Kaiser's proclamation reveals a more conciliatory attitude on the part of the government toward the popular demand. In his address to the German people the Kaiser says that they "may rest assured that German blood and German zeal are not being gambled with for an empty shadow of ambition or schemes of conquest and subjugation, but in defense of a strong, free empire in which our children may live in security." His nearest approach to a discussion of definite questions of peace is in the sentence "The enemy is stretching out his hands toward German territory, but he shall never have it." Thruout his annual address to the people and also in a second proclamation to the army in the field he stresses the note of defense, of being content with the avoidance of defeat. The German Government is known to be in consultation with Austria-Hungary on the general question of the possibility of peace, tho what the upshot of these diplomatic deliberations may be it is yet impossible to say. The one thing that appears certain is that while the Central Powers might now accept a peace based on the map as it existed in 1914, they will not consider making any territorial concessions of importance until they have further tried the fortune of arms.

Raemaekers, Cartoon in Philadelphia Public Ledger

KAISER (TO PRESIDENT WILSON): "YOUR PICTURES MAKE YOU LOOK SMALLER THAN YOU ARE!"

Entente Socialists and the Peace Question

The Socialist parties of Great Britain, France and Germany seem to incline to the now familiar formula of "peace without annexations and indemnities" and to favor an international Socialist conference at Stockholm on that basis. The conference will probably convene on the third of September and will be attended by such representatives of Socialism as are permitted to attend by their home governments. The British Labor Party seems to wish to be represented at the conference, but Andrew Bonar Law, Chancellor of the Exchequer, threatened to withhold passports from any one desiring to attend it. What makes the question a difficult one for the British Government is that the Labor Party is officially supporting the present administration, and Arthur Henderson, a leader of the party, is also a member of the supreme War Council of the Empire. To break altogether with the Labor Party would make it necessary to reconstruct the ministry and even the War Council, which is at present a kind of cabinet within the cabinet, replacing Labor men by Conservatives or Liberals. This no one wishes to do, as it would create a certain breach between British labor and the so-called "ruling classes" which would imperil the unity of the nation. On the other hand, to permit British representation at the Stockholm conference might seem to commit the British Government to some measure of approval of the meeting and its results. Mr. Henderson has already been criticized for continuing, while a member of the Government, his political association with violently anti-war Labor men such as J. Ramsay MacDonald.

Premier Ribot, on behalf of the French Government, scored his compatriots of the Socialist Party for thinking that anything could be gained from a conference with German socialists of the Scheidemann group who were only the tools of the Kaiser. He secured the reindorsement of a previous resolution of the Chamber of Deputies demanding as the conditions of peace the evacuation of French territories, the payment of just reparation for damages done by the invaders and the return of Alsace-Lorraine.

In the United States also the question of representation at the Stockholm conference is a live one. President Samuel Gompers of the American Federation of Labor has sent a telegram to the secretary of the conference asking for information.

German Chancellor Denounces French Imperialism

In a statement to a number of journalists Chancellor Michaelis of the German Empire related what he believed to be the plans of France for conquest of German soil, as revealed in negotiations with the Russian Government and in secret debates in the Chamber of Deputies. According to the scheme as it was outlined by the Chancellor, France was to get the whole of Alsace-Lorraine, Saarbrücken, and "vast territorial modifications on the left bank of the Rhine."

Responsible statesmen of France, Russia and Great Britain promptly gave the lie to the German allegations. Premier Ribot denied that France sought any European territory beyond Alsace-Lorraine, but he admitted that there had been some discussion with the old Russian Government of the possibility of making an autonomous state of German lands to the west of the Rhine as a buffer to protect France and Belgium from another invasion. Foreign Minister Terestchenko of Russia denied that his Government had protested against the French war aims and added that the whole subject of the Entente peace terms will shortly be determined by a conference of the nations concerned. Foreign Secretary Balfour said Great Britain should support a French demand for Alsace-Lorraine, but he did not allude to plans for further conquest. Many newspapers have rebuked Sir Edward Carson for his careless phrase about compelling Germany to retire beyond the Rhine. As practically all of Germany west of the Rhine, with the exception of Alsace-Lorraine, is purely German in language and sympathy the evident intention of Chancellor Michaelis was to convict the Entente Allies of insincerity in their claim to stand for the rights of nationality. But the prompt denial of the French Government robbed the German accusation of its political effect.

Pele-Mele, France

WILHELM: "IF I COULD ONLY GET UP HIGH ENOUGH TO PUT OUT THAT LIGHT!"

YOUR BOY IN CAMP

An Answer to the Mothers at Home

BY HILTON HOWELL RAILEY

Mr. Railey's Work

IF you have a boy in camp, your sharpest anxiety will be not for his food or his comfort or the ordinary details of life, but for his safety from those insidious dangers which infest our cities and towns and, terribly reinforced by the circumstances of military life, are waiting to taint body and soul. Because the moral atmosphere of the encampments where a million young men will soon be preparing themselves for war is the most critical element in a situation already full enough of anxiety and unhappiness for those who are left at home, The Independent has arranged with a competent investigator to study the whole problem and report to Independent mothers and fathers. Hilton Howell Railey, a careful student of social conditions, has traveled thru much of North and Central America; has served the Government in the Canal Zone; has fought vice in New Orleans as assistant managing editor of the New Orleans *American;* has been associated with the Philadelphia *Evening Ledger;* is now writing for the New York *Evening Post* a series of articles on the subject; and is highly endorsed by the American Social Hygiene Association and the General Medical Board of the Council of National Defense. The following letter from the chairman of that Board provides valuable endorsement for The Independent's plan to meet the anxieties and fear of mothers and fathers about their boys in training camps.

"Washington, July 22, 1917."

"I am in receipt of your letter of July 21st announcing that you have selected Mr. Hilton H. Railey to write for an early issue of The Independent a comprehensive article on the plans contemplated by the Government in connection with training camp activities for the moral protection of young men entering the Army.

"Mr. Railey has had experience in writing in this field and has used good judgment in his methods of presenting the subject. There is great need at this time of national crisis for informing the public in accordance with the plan which will be followed out by Mr. Railey under your supervision. There is probably no more effective way of formulating public opinion than the right kind of publicity thru responsible publications which reach the homes of representative citizens thruout the United States. Conversely, there is nothing more harmful than the wrong kind of publicity, and your entrance into this field will do much to combat this evil.

"Mr. Fosdick, chairman of the Commissions on Training Camp Activities of the War and Navy Departments, is absent from Washington, but I have talked over your plan with him and it meets with his hearty approval. Rightly conducted, your 'Question Box for Mothers' should prove of great service. The Council of National Defense, the Training Camp Commissions and other governmental agencies are daily in receipt of just such inquiries as you will doubtless cover in your replies. It is the consensus of opinion of federal and state authorities and representative citizens thruout the United States that there is opportunity now to develop policies and administrative measures of far-reaching influence in the protection of our military forces and civil population from commercialized vice and venereal diseases."

(Signed) WILLIAM F. SNOW, M. D.

ONE OF THE TEN MILLION

AMERICA'S finest men are wearing the uniforms of the army and navy in answer to the order for mobilization. Some of them are already on the far-flung battle lines of France, Belgium and England. But the great national army is just being called into the sixteen cantonments provided for it. Selected primarily from the youth of the nation, the young men who will bear arms are leaving their normal environments, the protection of sheltered homes and home influence to enter an unaccustomed state. Thus mobilization becomes the word of the hour.

To young men it is a command; to older men and children, an inspiration; to mothers and sweethearts, a sacrifice; to the nation *against* which it is issued, a challenge; to the nation in *defense* of which it is issued, a call for the performance of a stern duty. Under every form of civilization from prehistoric tribes to the highest democracy of the present day, all men of all races have heard—and answered it!

The training received by those mobilized will result in presenting to the world a composite, human standard of our national ideals. Therefore it is of the highest importance that we afford every facility which will aid in the development of personal efficiency and the awakening of those qualities of manhood which necessarily lie dormant in civil life.

THE NATION'S CHARGE

THE responsibility of the nation to its citizen soldiery has been fully established. In Secretary Baker's letter to the governors of all the states it was clearly set forth that "our responsibility in this matter is not an open question. We cannot allow these young men, most of whom will have been drafted to service, to be surrounded by a vicious and demoralizing environment, nor can we leave undone anything which will protect them from unhealthy influences and crude forms of temptations." It may be realized, then, that the young manhood of the country is to be guarded zealously, not alone when on military duty, but also when in intimate contact with the civil population. Secretaries Baker and Daniels have provided a way by which they can keep in touch with the life of the men in order that their environmental conditions may be made thoroly normal and wholesome.

A mother told me not long ago that she felt more concern for the moral welfare of the boy she had "surrendered in the cause of democracy" than for the physical dangers he may some day encounter in France. She was particularly anxious to know what the Government proposed to do to guard him against the venereal peril—the immediate danger both to his health and

morals. There are a great many mothers like her, mothers of the ten million young men eligible for service in the draft army, who are asking similar questions. Their appeal echoes from shore to shore, across mountain peaks and lowlands, in every city and hamlet in this great, broad land—and it must be answered!

So let us put all else aside and take up immediately the broader aspects of the situation. Presently we shall draw conclusions.

The draft, or national army, will be sheltered in sixteen cantonments, located in the following places—I shall name them in the order of divisions: Ayer, Massachusetts; Yaphank, New York; Wrightstown, New Jersey; Annapolis Junction, Maryland; Petersburg, Virginia; Columbia, South Carolina; Atlanta, Georgia; Chillicothe, Ohio; Louisville, Kentucky; Battle Creek, Michigan; Rockford, Illinois; Little Rock, Arkansas; Des Moines, Iowa; Fort Riley, Kansas; Fort Sam Houston, Texas; American Lake, Washington.

National Guard units will be stationed at Greenville, South Carolina; Spartanburg, South Carolina; Augusta, Georgia; Montgomery, Alabama; Anniston, Alabama; Waco, Texas; Deming, New Mexico; Houston, Texas; Fayetteville, North Carolina; Palo Alto, California; Alexandria, Louisiana; and Hattiesburg, Mississippi.

Training establishments for reserves and national naval volunteers will be located at Portsmouth, New Hampshire; Bumkin Island, Boston Harbor; Newport, Rhode Island; Bensonhurst, Long Island; Pelham Bay Park, New York; U. S. S. "Iowa," "Indiana," "Massachusetts," Delaware River; Cape May, New Jersey; S. S. "Bulgaria," Norfolk Navy Yard; Key West, near Navy Station; New Orleans Navy Yard; Municipal Dock, Los Angeles (San Pedro Harbor); State University Grounds, Seattle, Washington; S. S. "Commodore," and Grant Park Camp, Chicago.

WHEN war was declared on April 5, 1917, the Government realized that aside from definite military preparations it was absolutely necessary to take effective steps toward the repression of prostitution and alcohol, and the prevention of venereal infections. There were stern facts to face, and theories were out of place. The Government was determined that vice should not imperil the efficiency of the millions of young men who may eventually be called to the colors. Accordingly, Secretary Baker and later Secretary Daniels decided upon the creation of Commissions on Training Camp Activities, under the chairmanship of Raymond B. Fosdick. These bodies have two distinct functions which may be briefly summarized here; we shall discuss the details further on. First, they are charged with the responsibility of keeping the Secretaries of War and Navy informed as to conditions in training camps and the zones surrounding them. Second, it is their function to operate as clearing houses to eliminate the waste and competition of overlapping organizations, at the same time stimulating rational recreational facilities. The machinery of both has been put in order and both are now fully under way. It may be well to point out here that tho the functions of the two commissions are the same, there is a sharp line of demarkation between them.

MR. RAILEY'S QUESTION BOX FOR THE MOTHERS

Mr. Railey will devote his time, probably for the duration of the war, to a thoro study of training camp activities and the moral conditions which will surround American youths as they prepare to become a part of the new army. He will be glad to put the results of this first-hand investigation at the service of mothers or fathers of boys in camp. A letter addrest confidentially to The Independent Question Box for Soldiers' Mothers will be answered in the fullest possible detail in accordance with his intimate knowledge of the situation.

WHAT HAS BEEN DONE

THUS far, without attempting even a summary of the agencies which have participated in bringing about the result, there are ten outstanding facts indicative of great progress. These were summed up and outlined to me by Dr. William F. Snow, secretary of the General Medical Board of the Council of National Defense, as follows:

1. The President of the United States, by direct authority of Congress, will endeavor to protect the military forces from the evils resulting from alcohol.

2. Congress has empowered and directed the Secretary of War to establish and regulate such zones about military places as may be necessary to protect soldiers from prostitution.

3. The Secretary of War has created a Commission on Training Camp Activities for the purpose of suppressing vice in military camps and zones surrounding them and of counteracting harmful influences by a constructive program of entertainment, education, recreation, physical tests, athletic contests, and social activities participated in by both military and civil populations under auspices approved by the commission.

4. The Secretary of the Navy, thru a similar commission, has taken steps to safeguard the officers and men of the naval establishment.

5. The Council of National Defense has considered social hygiene questions to be of the first rank among problems of nation-wide preparedness for this war, and has adopted resolutions which clearly define its policy to be favorable to the carrying out of a comprehensive social hygiene program.

6. The surgeons-general of the Army, Navy and Public Health Service have endorsed the program outlined and have planned administrative measures in accordance with it.

7. The General Medical Board of the Council is devoting every effort to the study and solution of unsettled questions bearing on the details of this program.

8. The American Red Cross, thru its director-general of Military Relief and the personnel of its hospital unit, is planning coöperation, particularly in the foreign field.

9. The International Committee of the Young Men's Christian Association, thru its own far-reaching activities, including sex education, and its leadership of other correlated national agencies working under the supervision of the Commission on Training Camp Activities inside the camp and designated zones, is exerting a powerful influence in maintaining the moral tone of camp life and standards of conduct of the individual soldiers.

10. The American Social Hygiene Association, thru its coöperation with the departments of Government on the one hand and the civil authorities on the other, is serving as a clearing house for social hygiene societies and allied agencies, particularly in the medical and hygienic phases of the work and in organizing public opinion in support of the complete program.

By an analysis of the activities of both the Army and Navy Commissions, with a slight interpolation of thought beforehand, we may derive for the mothers an exact knowledge of what is to be done by these important bodies.

THE nine members of the Army Commission on Training Camp Activities and the members of the Naval Commission are men who have had wide experience in the control of vice and who have studied the problems which arise when large, heterogeneous bodies of troops are assembled under conditions of enforced intimacy. They know that it is necessary to occupy lonely hours with virile activities, that active recreational agents must be provided—even in the face of great difficulties. They know, too, that many organizations are volunteering to assume the solution of this problem, that it is necessary to coordinate and supplement the tasks of these bodies in order to avoid overlapping and to eliminate waste and competition.

I shall present a few concrete examples of work already accomplished by such agencies. The Play Ground Association of America has placed thirty-seven experienced directors in thirty-one centers. These men will form an administrative board to coördinate the operations of local organizations and committees in cities within camp zones. The Young Men's Christian Association has appropriated $3,000,000 for the construction of recreational huts in the different cantonments and it has commissioned five secretaries to supervise this work in the training camps of the National Army and among the National Guard units in Federal service.

It has been estimated that thirty-five per cent of the men in military service are of Catholic faith. To care for these the Supreme Council of the Knights of Columbus has raised more than $1,000,000 for the provision of similar facilities.

When young girls and women come

to the camps to visit relatives or friends there are often no reception tents where they may be comfortably and properly housed during their stay. So the Young Women's Christian Association plans to provide huts for this purpose, altho its exact intention in this regard has not yet been made known. Regardless of relationship of women visitors to the men in camps it is not likely that they will be permitted to visit the tents.

The American Library Association is to coöperate with the commissions by furnishing in each camp a building to be used as a library. These are to be built by the Government.

Sex education is held in high regard on the training program. This vital work will be under the direction of two well known authorities, Dr. M. J. Exner of the Young Men's Christian Association and Dr. William F. Snow of the Council of National Defense. The American Social Hygiene Association has ten experienced field secretaries working under its direction, and other affiliated organizations have collectively as many more on duty.

The General Medical Board of the Council of National Defense is now in conference with the Government authorities concerning plans for appealing to each drafted man before he leaves his home. It is planned to write asking him to protect himself from vice and disease while en route to his military post. Similarly, plans are being developed for safeguarding the men while on furloughs, no matter to what part of the country they may go.

THE moral safeguards of the men—with which so many mothers and wives are concerned—are assured. With the coöperation of the men themseves the tremendous immoral influences which have corrupted army life in times gone by can be effectively wiped out. Secretaries Baker and Daniels spread a vast corps of investigators thruout the country. These men are personal representatives of the commissions. Wherever complaints of vice arise the conditions reported will be investigated.

Vice will not be tolerated in zones surrounding the cantonments. The sooner this fact dawns on those who promote it, the better it will be for all concerned, for the Government is going to deal them a mighty blow without official warning other than *this*!

Both the Army and Naval Commissions are not only to eliminate the sources of evil, but are to take up and act on definite policies of recreation that will permanently supplant the cruder attractions of civil life.

Everything possible will be done to inspire the officers and privates in the National Army to maintain a standard of intelligence commensurable with the ideals of the American public. They will be supplied with daily papers and other periodicals which will aid them to keep abreast of the times, in pace with the trend of modern thought. They will have access to substantial libraries, attend lectures and be kept in constant touch with men who will lead them first of all to understand themselves and master their minds and impulses. They will be taught that their national duty lies primarily in the development of personal efficiency.

This shall be part payment of the nation's debt to its soldiery. When they return after the war is over they will be better citizens for having served their country in the period of national peril.

IN FRANCE

GREATEST of all the inescapable responsibilities of the Government is the sending of our men into concentration camps in France, where for many weeks they will be isolated from all but their own society and social responsibilities. It is there that the suspense of waiting for their baptism of fire will prove the supreme test of character. The fact that for a long time only one-fourth of the men so stationed will see action at the front but adds to its gravity. So far as possible, the Government proposes to follow its soldiers abroad to aid them in this time of special trial.

There was an enormous amount of waste and loss of time, money and energy when France, England and Russia attempted to deal with this problem. However, the United States, benefiting by the experience of its allies is prepared to cope with the situation.

In each concentration camp moving pictures will be shown and theatrical performances staged, and the activities of the many smaller organizations which furnish amusement to the men will be enlarged and encouraged.

As a part of this program athletic contests will aid the men to resist the lure and bright lights of Parisian cafés and similar attractions in other French cities. The highest type of athletic leaders, men like Walter Camp, Coach Stagg and Tad Jones, will be on hand to direct this work. A course of intensive athletic training is being carried to completion in the Officers' Training Camps here in order that the future commanders may themselves be able to act as directors of such activities.

Educational measures, in addition to those on the military program, will be fostered by the Young Men's Christian Association and the Knights of Columbus. These organizations will provide facilities for and supervise the studying of French and various other subjects of value to the soldiers. This will increase the efficiency of our men for foreign service. It will keep their minds refreshed and active.

IT will be seen that it is the intention of the Government not to adopt a single definite plan for the various communities, but rather to assist each locality to develop for itself individual sources of activities. In some cases the responsibility placed upon the smaller communities will prove great indeed, but from present indications there is no fear that the issue will not be met squarely and disposed of efficiently.

Now I have presented to the mothers a broad outline of the Government's plans for the general welfare of their sons. All in all, the outlook is most reassuring. The causes which have placed an unavoidable stigma on life in our armies of the past have been or will be removed before the danger becomes imminent. This should encourage the mothers of the nation to give their sons with a strong sense of security, at least for their moral welfare.

The cornerstone of the American home is laid by love and harmony. It has heretofore been the lot of our mothers, in times of national crisis, to remain within that home, to bear the brunt of the subsequent confusions and discord and misunderstanding; to give their all and suffer, heroically resigned, amid the silent ruins of their hearts. But no more of this. The American mothers of today are not only to give their sons to a just cause, but they will march with them to aid the Government to the utmost in making the grim business of war as free from pain and sorrow and disease and regret as is possible thru human effort.

New York City

DISCIPLINE AND THE CHILD

ONE MOTHER'S EXPERIENCES WITH THEORIES AND WITH FACTS

WHEN theory and practise in the discipline of a child agree, the results are disastrous.

That child fares best who falls between the two, or rather, who springs up independently between his parents' theories, intellectual and reasoned, and their instinctive human understanding of him.

I never knew but one man who was able to line his practise up with his theory, and then line his children up under both. His theory was based upon a cosmic philosophy. Among other practises by which he hoped to instil into their minds the dignity of human life was the ringing of a bell every quarter-hour to remind them of the swift passing of time.

I knew these children when they were grown. They were remarkably well educated. They knew all the languages, dead and living, philosophy and science. They had remarkable manners; might have belonged to some long-forgotten aristocracy. But they were three absolutely different temperaments, quite as different when grown as when they were born. And it seemed to me that their characters had matured, not by reason of their father's theories or of his practises, but solely by virtue of the discipline which life had given them.

And *character* is the one aim of discipline; of the training in the home; and of the unconscious training outside the home. Life has a way of escaping parental bounds and being larger than the four walls of the house.

I have a child, not yet three years old. I have not yet discovered a theory on the basis of which I could train him. And this, in spite of the fact that at college I not only studied pedagogy, but was one of the teachers in John Dewey's experimental school. In my class I had perfect discipline. But on the occasion of a visit by Ella Flagg Young, that teacher of teachers, I discovered that I obtained this perfect discipline by what she called "hypnotic influence."

WE were allowed no rules and regulations by which to keep the children in our classes quiet. We were supposed to study each child, and help it to work out its own salvation. In some unconscious way I had found a cross-cut. My children sat rigidly upon their little chairs, with their eyes fixed upon mine, eagerly drinking in my words of wisdom.

I was overcome with shame when I found what I had been doing—shackling their little free souls, as it were; imposing the weight of my grown-up personality upon the tender, budding growth of their ten or twelve separate individualities. But, before I could work out another method, I stopped teaching school. I am not sure but that it was the many occult pitfalls which frightened me away.

Those children are avenged. I might gaze sternly for an hour upon my one child, not yet three years old. The only effect would be to amuse him more and more. I defy any person, parent of either sex, to gaze sternly upon a grinning child and not be baffled, utterly and completely, by the mystery of human development.

Before he could reason, I had recourse to chastisement. A spanking had at least a momentary effect. Paddy-whacking the little blossom-like hand did sometimes keep it from upsetting the ink-well. But I was brought to book. The editor of a great daily newspaper explained to me that the reason the Japanese child knew no fear was because no one ever lifted a hand against it.

It was months before I got the answer to that. In this individual instance, the answer is that my child knows no fear—in spite of having been spanked. The second answer is that it might be well for the nations if the Japanese in their childhood could be taught a little fear.

HOWEVER, we have now reached the age of reason in our house, and my son has evolved his own method of punishment. Quite without seriousness I said to him one day, upon some slight misdemeanor:

"You had better go into that little room and shut yourself up."

To my surprize, he did. As soon as he had closed the door upon himself he began to howl. Anger melted into remorse. His sobs quieted. He said plaintively that he would be a good boy if I would let him come out. I gave him permission. He opened the door and emerged, much chastened.

That was several months ago, and it has worked like a charm ever since. It was only yesterday that I saw a cloud come over his face when I had asked him to do something.

"I don't like to be good," he said. "I'll go shut me up."

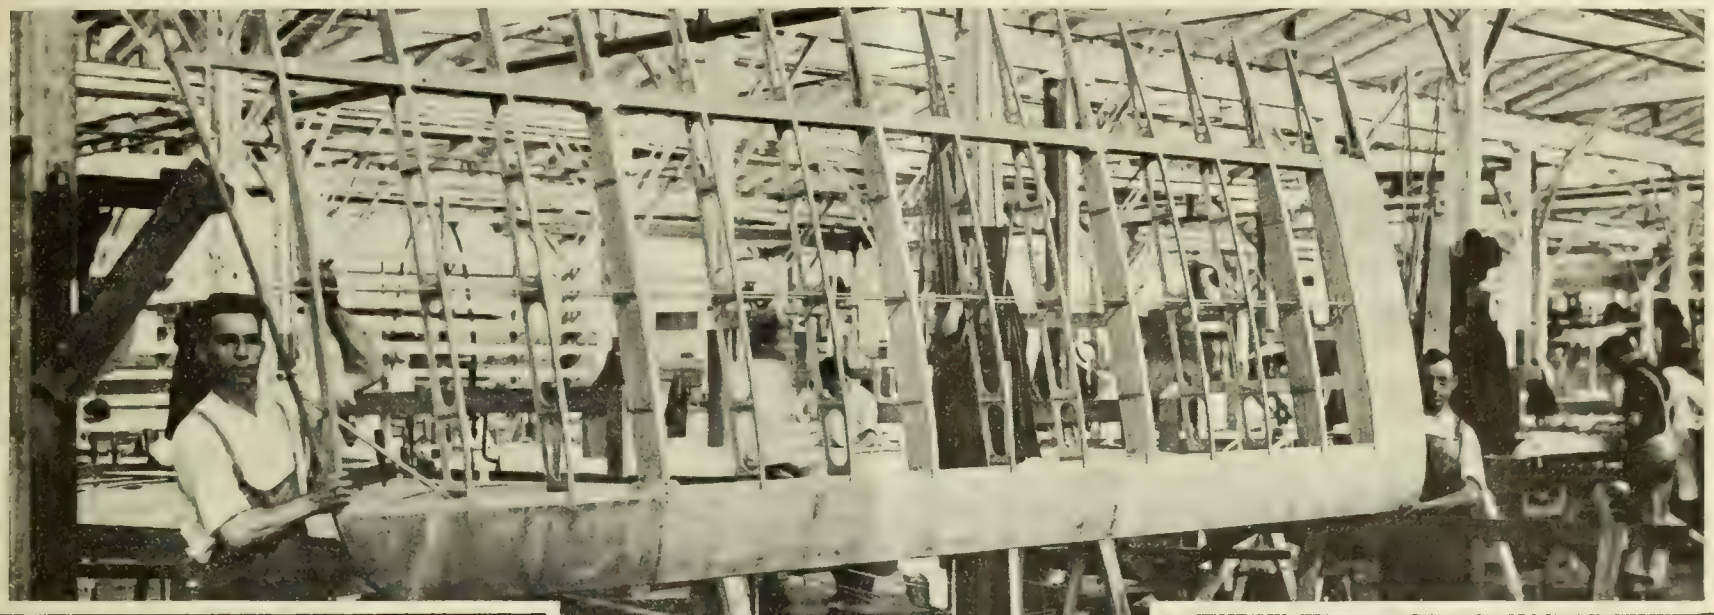
And without word from me, he disappeared.

At once the mournful howling behind the door began, and then the announcement that he felt like being good, could he come out? He knows that that door is not locked; that my hand never touches it. But that in no way affects his sense of being ostracized, and helpless, once he is within, until he shall have reconciled himself with the forces of good.

Jessie Tarbox Beals

IS THIS THE AGE OF REASON?

I do not advocate this method, whose success depends not at all upon any theory of mine, but merely upon the temperament of my son. But it does suggest the possibility of a child falling upon its own best sort of discipline, if the parents are sensible enough and humble enough to watch it solve its own problem.



Since life is to be the teacher, and since, as soon as the child leaves the nursery, each day holds its own discipline, I do believe that the mystery of life should in some way be brought home to it. Bertrand Russell says that today our human relationships are very trivial. And I believe it is because we ignore the mystery of mere existence. Prayer, however simple, is an admission that the visible, tangible world about us is not the great fact. But the rolling over the horizon each morning at dawn of a day's hidden possibilities is to me a wonder which will never cease.

Can I communicate this wonder? I do not believe it possible to do so unless in some way I can pass on to my child my own heritage of belief in God. And since we deal in symbols whenever we speak, I am not afraid to pass on, as well, the idea, the symbol of God, as a personal, a loving and a just Father.

RESPECT for mystery, for that which is powerful and unseen, will never hamper the freedom of any human being. My respect for my child is for that which is mysterious and unfathomable in his being. If I can make him respect the same sort of mystery in me, so that he takes my word that there are still greater mysteries, whose grandeur lies not in our ability to solve them, to analyze them, to make them tangible and measurable, but lies in the very fact that they are beyond human conceptions, I shall have given him a staff upon which he can lean, as he goes up and as he goes down the path that is before him.

How can one force such a desire into a theory of discipline?

That we must win this war with wings is rapidly coming to be accepted as an axiom, but the construction of the wings is a costly and complex business. Every part must be carefully examined and tested. The picture below shows a machine being rolled out to have its engine tried. The men above are constructing a frame. The boy on the left is stitching the linen which is to be stretched over wings and frame. On the right is the finishing touch, painting on the emblem of the United States

No wonder that it has ever been one of young America's highest hopes to run away and join the Navy! Even the routine work on board a battleship looks like fun—here's evidence to prove it!—and it is always seasoned by the zest of outdoor living and no lack of new adventures. Wouldn't you like to be one of the sailors, for instance, "hooking a ride" on Jack Tar's favorite elevator, the net of ship's supplies being swung on board by a big derrick? It's not so different from the days when you were dared to hang on to a bale of hay being hoisted into Father's barn! Perhaps grown-up "boys" aren't entirely past the pleasures of kite-flying, either, tho in this

case they are putting up the kite for business reasons; it will furnish a target for fractise shooting from the ship's anti-aircraft guns, a phase of fighting in which the Navy under Uncle Sam has proved particularly proficient. The group of men on the bridge are in a strategic position to "see the world!" At the end of the bridge are electrically manipulated semaphore arms, fitted with red and white bulbs and used at night to send messages in the Morse mode. There are a couple of man-power semaphore arms at that end of the bridge, too. Most seamen are taught both wig-wag and semaphore (wig-wag is signaling with one flag and semaphore is with two). Don't try too hard to make out what letter this man is sending—it's probably just the upstroke of an "Attention" call. The sailors photographed on deck seem to be packing up their troubles—if they have any—along with all their other luggage, to pass inspection before going on shore. Don't you envy their emancipation from all the tedious details of traveling with a trunk?

The Great War was forced down to second place in last week's headlines; "Terrific heat wave takes huge toll" was the chief news item all over the United States. In New York—so any New Yorker will tell you—the hardships of heat and humidity reached their climax! When the mercury found 98 degrees and stuck there, thousands of city dwellers left home to sleep in parks and on beaches till the hot spell broke. Coney Island resembled a subway jam—the photograph above shows just a sample of the record-breaking crowd—during "the hottest day in forty-three years," the first of August, more than one hundred thousand people took to the ocean at Coney, and a fair percentage of them stayed there till a thunderstorm shattered the heat and made houses and city clothes endurable again. The photograph at the left shows the happy inspiration of some city youngsters who called out the Fire Department to cool them off. Their plan worked so well that the firemen took turns playing the hose on the crowd that gathered all day long

ROLLING-PINS, FRUIT TREES AND SHOES

THE FIRST COLLEGE WOMEN'S UNIT TO WORK IN FRANCE

BY HANNAH HASTINGS WHITE

WHEN I went back to 'Hamp for reunion last June I leaned halfway out of the car—it's the thing for an alum to do—listening to catch the first strains of "Fair Smith." But the music that dominated campus wasn't "Fair Smith" at all. I heard instead college girls singing the "Star Spangled Banner!"

Not ten minutes later I was explaining to an earnest classmate that my present earnings didn't exactly warrant my pledging a whole motor truck, but that whatever I could do to help I'd do.

Kadel & Herbert

"Il fleurit quand-même!" This apple tree was cut down by the retreating German troops last spring, but its flowers kept on blooming bravely all the same—a heartening symbol of the spirit that is rebuilding France

And then I began to find out all about the Smith College Relief Unit for France.

The Unit was started—that is, it was first mentioned—in April 1917, when Mrs. Harriet Boyd Hawes, Smith '92, speaking at a luncheon of Smith alumnae in Boston, told of the work she had been doing in Serbia, distributing Red Cross relief, establishing a diet kitchen, getting barracks built for troops on the island of Corfu and caring for refugees. She emphasized chiefly the need of beginning the work of reconstruction. "There's a big chance for college women now in France," she said. And before the luncheon was over the plan of a Smith College Relief Unit was well under way.

From April till June the idea spread naturally. Smith alumnae began to apply for permission to join it. Contributions began to come in. The American Relief for French Wounded, consulted as to needs and methods, offered its cooperation and suggested definite lines of work.

SO when Smith alumnae gathered at 'Hamp in June everything was ready to put the idea thru. Mrs. Hawes was formally appointed director of the Unit; eighteen Smith women were chosen as members from the many who applied; and about $22,000 was contributed. A committee of organization under Mrs. Lucius Thayer, a director of the Intercollegiate Community Service Association, took up the general work of providing equipment, arranging for passports and so forth.

It is a very real tribute to the Smith Unit that it is the only unit of this sort officially recognized by the French Government as unaffiliated with any big organization, such as the Red Cross or the American Fund for the French Wounded. In its work the Smith Unit will coöperate with both those organizations, of course; but its passports have been issued directly under the name of the Smith College Relief Unit.

Early in July the Organization Committee had purchased and shipped about $6000 worth of supplies: three motor trucks, six portable houses, hand-sewing machines, industrial tools, farm implements, food, clothing, bedding, kitchen utensils, furniture, fruit trees. The wilful devastation of France during the Hun retreat has left nothing whatever there to help rebuild civilization. What the Unit hopes to do is to help the refugees who are coming back remake their homes, to set in motion again the machinery of normal living, to teach the children and to encourage the old people—there are neither men nor women between the ages of fifteen and forty left anywhere in France now to carry on the duties of civilian life.

Underwood & Underwood

The youngest member of the Unit, Miss Margaret Ashley, '14. When she was at college Miss Ashley was president of the Student Council. Her place in the Smith Unit is that of chauffeur and mechanician

In a sense it seems like a problem of making bricks without straw. Six thousand dollars' worth of supplies is almost negligible in comparison with the need. But somehow one doesn't for a minute doubt the ability of the Unit's determination and resourcefulness to magnetize straw. Perhaps after all making bricks without straw may be one of those never-defined assets of a college education! I remember an occasion in my junior year when a couple of us were given three hours to construct realistic scenery for "The Great Divide" in a room about twelve by twenty feet, and told to leave plenty of room for the cast and spectators, too! That's the spirit that the Smith women who are going to work in France have translated in terms of real life.

MEMBERSHIP in the Smith Unit requires, first of all, ability to pass a rigid physical examination and to speak French, a minimum age of twenty-five, practical experience in some phase of organized social service, readiness for plenty of hard work, and a pledge to stick to it for at least six months. At the end of that time Smith hopes to be sending over a second unit. And unless all signs fail Vassar and Wellesley and perhaps several other woman's colleges will each be sending them, too.

"The tremendous potentialities of a unit such as this can hardly be realized," says Mr. Henry P. Davison, head of the American Red Cross. "It has taken a big step in the right direction for women's war work."

Dean Comstock of Smith paid a similar tribute when she said that she thought of the Unit as "Pilgrim Fathers, faring forth across perilous seas to make homes in a wilderness." (Wherefore the Unit is probably doomed to be known in undergraduate conversation

hereafter as "The Pils.") A luncheon given in New York to the Smith College Relief Unit was the occasion of these compliments. Several hundred of us Smithites pretended that we wanted a chance to sing to the Unit, when what we really wanted was a chance to see what they looked like in their new service uniforms: soft gray felt hats and dark gray, many-pocketed suits that prove the compatibility of good looks and utility. We stood each member up on the platform for approval while Mrs. Thayer, the chairman of the Organization Committee, told us—time permitting—the reasons for taking her on.

The director of the Unit, Mrs. Hawes, is of course exceptionally well equipt for the work she is to do. She was in charge of relief work during the Cuban War and in the Balkan Wars. She established a hospital and directed Red Cross work in Serbia in 1916.

The head physician and assistant director of the Unit is Dr. Alice Weld Tallant, who has been for some time connected with the Women's Collegiate Hospital in Philadelphia. Her assistant, Dr. Maude Kelly, is really part of the Unit, too, tho there's no getting round the fact that she was at school in England when she should have been at Smith. The Unit has one skilled wireless operator, Miss Lucy Mather. She has also had executive experience in Red Cross and in relief work for children. Another member, Miss Marie Wolfs, is a Belgian girl who was living in Liege when the Germans bombarded it in the first weeks of the war. After Liege was taken Miss Wolfs escaped to this country.

© *Underwood & Underwood*

What home-coming means to the people in northern France

The girl who taught the people of a shiftless North Carolina town to cobble their old shoes—thereby interesting the boys and girls in a trade and the grown-ups in an economy—Miss Elizabeth Dana, is taking her cobbling kit and a generous supply of extra tools and old shoes along with her to France. There is a carpenter in the Unit, too, Miss Alice Leavens; and a farmer, Miss Frances Valentine.

The four chief chauffeurs are Miss Marjorie Carr, Miss Florence Hague, Miss Ruth Joslin and Miss Margaret Ashley. Miss Margaret Wood is a kindergartner and an expert at planning camp cooking—there's no doubt of her versatility, she used to play Macbeth in Senior Dramatics at college! Miss Marion Bennett is a teacher of domestic science; Miss Ruth Gaines has had several years' newspaper experience. The members whose training in social work is preëminent are Miss Anne Chapin, Miss Millicent Lewis, Miss Elizabeth Bliss and Miss Catharine Hooper.

© *Underwood & Underwood*

Here they all are—the Smith College Relief Unit—looking as pleasant as they could in gray woolen service uniforms on one of New York's hottest summer days. Left to right, in the front row, are Miss Lucy Mather, ex-'88, wireless operator; Mrs. Harriet [illegible] Hawes, '92, director; Dr. Alice Weld Tallant, '97, head physician; Dr. Maude Kelly, assistant physician; in the second row: [illegible] Rooke, a member of the Italian faculty at Smith, who is to be with the Unit two or three months; Miss Ruth Joslin, '1[illegible], [illegible] Miss Margaret Ashley, '1[illegible], chauffeur; Miss Florence Hague, '09, chauffeur and social worker; Miss Marjorie Carr, '09, [illegible] Miss Catharine Hooper, '11, social worker; Miss Millicent Lewis, '07, trained executive in work with girls; Miss Marie [illegible] registrar (she escaped from Belgium to this country after the capture of Liege); Miss Elizabeth Dana, '04, cobbler; in the [illegible] row: Miss Marion Bennett, '06, teacher of domestic science; Miss Anne Chapin, '04, social worker; Miss Elizabeth Bliss, [illegible] tive in Consumers' League; Miss Alice Leavens, '03, carpenter; Miss Margaret Wood, '12, kindergartner; Miss Ruth [illegible] [illegible]

Answering the Nation's Call

IN this "supreme test" of the nation, private interests must be subordinated to the Government's need. This is as true of the telephone as of all other instrumentalities of service.

The draft for war service which has been made upon the Bell System is summarized in a recent Government report.

Government messages are given precedence over commercial messages by means of 12,000 specially drilled long distance operators all over the country.

The long distance telephone facilities out of Washington have been more than doubled.

Special connections have been established between all military headquarters, army posts, naval stations and mobilization camps throughout the United States.

More than 10,000 miles of special systems of communication have been installed for the exclusive use of Government departments.

Active assistance has been given the Government by the Bell System in providing telephone communications at approximately one hundred lighthouses and two hundred coast guard stations.

Communication has been provided for the National Guard at railroad points, bridges and water supply systems.

A comprehensive system of war communication will be ready at the call of the Chief Signal Officer, and extensive plans for co-operation with the Navy have been put into effect with brilliant success.

As the war continues, the demands of the Government will increase. And the public can help us to meet the extraordinary conditions by putting restraint on all unnecessary and extravagant use of the telephone.

Reading in the Grades

FIFTY years ago reading in the elementary school meant the intensive study of one reader of well-chosen literary selections for a year, or perhaps two in the upper grades. Everything, technique, oral expression, literary appreciation, and sometimes spelling, was taught from this one volume. Of course, many of the pieces were memorized by constant repetition, and became a vital part of the pupil's after life—a benefit not possible in the changing work of the present. Today the term reading has broadened to include many books on many subjects. In the lower grades, where technical training predominates, the reader used in the basal work generally follows the old type. It presents the best literature for that grade, and still keeps the name of reader. In the upper grades this literary reader holds the foremost place in expression training. Of this type only one book, *The Natural Method, Fourth Reader*, appears this year. By its well-chosen selections, fully adapted to the broadening view of the pupil, this book maintains the high standard of the series.

The first special subject to be added to these literary readers was history. Educators learned that biography appealed to the child of the primary and intermediate grades more than the dry histories of the earlier days. The first attempts at teaching history by biographies were poor enough from an historical point of view, but the interest aroused in the child proved the expediency of the method. Today the confusion and choppiness of the older books have disappeared and the primary histories are largely biographical and of this class. *Forman's First Lesson in History*, part textbook and part reader, is one of the best. It combines the historical accuracy of the higher book with the simplicity and vividness necessary for primary work.

From teaching primary history by biography to supplementary readers giving the main incidents in the life of the great heroes of our own and other lands was a short step. Of this group, two books of the Little Folks Series, *Little Folks on Thrones*, stories of French and English sovereigns of the fourteenth century or later, and *Little Heroines*, five fascinating stories of English, Dutch, Russian and American girls, furnish charming readers for the fourth and fifth grades. *Old Settler Stories* of Everychild's Series provides interesting pioneer and Indian tales of the Middle West for fourth grade.

Pioneer Days, a good library book for sixth grade, gives the adventures of many unknown heroes of the Eastern Rockies. Except for a boy's love for Indian adventure, the similarity of the stories would be monotonous. A similar book, *Heroes of the American Revolution*, for seventh and eighth grades, is a good reference book where others of the same period are not found. Its list of patriots is better chosen than in many books. McBrien's patriotic reader, *America First*, offers splendid opportunities for training the boys and girls of the eighth grade in love and honor for their country. The dramatization of the First Continental Congress would arouse

deeply the patriotism of the lads, while in the short selection of poems are found some of the best for reading and memorizing.

Next in the development of supplementary readers come the geographical and few are the children who have not some knowledge of the children and people of foreign countries. For the first and second grades, *Nursery Tales from Many Lands* is a jolly little book. The skilful teacher could arouse in the children much interest in the fourteen lands from which the tales come. Such a book, correlated with the simple geographical readers of these grades, would make both more interesting. In *Swiss Stories and Legends* of Everychild's Series, much charming material in a new field is furnished the fourth grade. If in this connection Spyri's "Chel" and, a little later, "Heidi" could be read, the sturdy qualities of the Swiss would find admiration and imitation among the children. Too little has been known of this patriotic, loyal people. Fitted to the more serious study of geography in the fifth and sixth grades is *The Building of Cities* of the same series, an allegorical tale in which the Past, Present and Future discuss the causes of city location, their growth and improvement. In the same grades and the seventh belongs *New England* truly a book of human interests as the author describes it. It tells admirably the history, industries and noted places of each state, while thru all the descriptions runs a personal touch that appeals to children. The pictures are most helpful.

Only within the past ten years have the nature, science and industrial readers been prominent in the elementary course. One of the most fascinating of the nature readers is the *Boyhood of a Naturalist*. Surely John Muir's thoro enjoyment of the wild life in the Wisconsin woods would open the eyes of other boys to the beauties around them. Equally interesting is *Happy, the Life of a Bee*, as fascinating as a fairy tale, and scientifically true to the facts. Its value to the children is as great as is Maeterlinck's book to the elders. *Keep Well Stories for Little Folks* solves the troublesome questions of how to teach third grade children hygiene. Not only are such stories attractive but they firmly fix the facts in the pupil's mind. Miss Tappan needs no introduction to either pupil or teacher. Both value her work highly. In her four industrial readers, *The Farmer and His Friends*, *Diggers in the Earth*, *Makers of Many Things*, and *Travelers and Traveling*, she presents a series of articles on some common features of everyday life which most children take as a matter of course.

The last group of supplementary readers, now in the process of development, are the moral and religious books. The rush of our American life, the large foreign element with radically different ethical standards, and the lack of religious home training even among Americans have compelled the school to take up, reluctantly in many instances, the question of ethical training. The difficulty of such teaching has been enhanced by the necessity of avoiding all sectarian points and teaching purely ethical principles. Prominent among these books has been the King's Highway Series, two more of which are published this year, *The Way of the Gate*, for children of six, and *The Way of Green Pastures*, for those of seven. Both furnish excellent stories, from the Bible and other sources, for moral training either in the home or school.

In some schools, tho probably not in all public schools, *St. Paul the Hero* could wisely be added to the group of Washington, Lincoln and Stanley. Certainly as many

Rejected!

One in Four Was Sick And Didn't Know It.

They were the pick of the nation who applied for admission to the Officers' Camp at Plattsburg.

They came confidently forward—each sure that his health was perfect—and out of every four one had something vitally wrong with him, of which he did not know.

He was perhaps facing failure—disaster—death—in the serene confidence that he was perfectly well.

That is your great danger—the insidious illness that creeps on you and saps your vitality day by day, and leaves you a wreck—too late for help! Be on your guard while you can.

Take advantage of the great movement started to help you.

It is because they realized that old age was reaching its hand into the ranks of the young, that men were dying at forty and forty-five who had no right to die, that the people of this country were missing a full—complete—joyous life—that a distinguished group of men joined to form the

Life Extension Institute

Ex-President Taft is the Chairman of the Institute—Professor Irving Fisher of Yale is the Chairman of the Hygiene Board, to which technical matters are referred and on it are such men as General Gorgas, Dr. William J. Mayo, Dr. Harvey Wiley, the famous food expert, and nearly a hundred others of national reputation.

To get to the hundreds of thousands who could better their condition, the benefit of the judgment of these eminent men through personal contact would be impossible. A new department of the Institute, the Health Study Chapter, does this work through the mails.

SOME OFFICERS AND DIRECTORS of THE LIFE EXTENSION INSTITUTE

Irving Fisher,
Chairman Hygiene Reference Board
Prof. Political Economy Yale Univ.
Hon. W. H. Taft,
Chairman Board of Directors
Ex-President of the United States
Gen. W. C. Gorgas,
Surgeon General, U. S. Army
Harold A. Ley, *President*
E. L. Fisk, M.D., *Director of Hygiene*
Charles H. Sabin, *Director*

There are about 100 Hygiene Advisory Board Members in this country, Europe and Japan

Hundreds of prominent men and leading physicians are giving time to the work of the Institute without charge. Among the thousands who are consulting it—are not only individuals, but such organizations as Guaranty Trust Company of N. Y., Metropolitan Life Insurance Co., Postal Life Insurance Co., Germania Insurance Co.

You are here Invited to Join this Chapter

The instructions as to your health, your life, your work, your play, on which these hundred eminent authorities agree, have been incorporated in fifteen simple, direct, stimulating lessons. They are to be studied and cheerfully practiced at home, and students will be inspired and checked up, through examinations, by a competent central staff. Each student of this full course is examined weekly by mail as to his progress, and receives answers to any reasonable questions on personal hygiene.

You are not asked to exercise wearily and monotonously,—or subsist on faddish foods—or give up everything you like.

You simply learn how to live, how to readjust yourself to a joyous good health in so far as modern science can aid you. Do not think you can dispense with living rightly because you are not absolutely ill. You ought to feel "fine" as a regular thing. It is your first duty and highest attainable pleasure to do so. You ought to get up in the morning feeling ready to do two men's work, and come through the day feeling fit. A majority of people do not have to have bad digestions or bad circulation or tired nerves. They can avoid them by learning HOW TO LIVE. They can learn how to live from this course of instruction.

In the past generation of swift, tangled modern life, the death rate from heart and arterial troubles, kidney and digestive maladies and nervous disorders has greatly increased—in some cases OVER 40 PER CENT.

Every day fifteen hundred Americans die who might have lived longer if they had learned and acted. Every day a thousand times as many are living and working inadequately, with too little joy and progress, who could certainly improve their lot by learning how to live. This course will enable you to do better than these.

How to Join the Chapter

Send the coupon below with $1.00 membership fee.

Upon receipt of it a long blank will be sent to you with questions regarding your physical condition.

You fill this in and mail it, and it will be analyzed and returned to you with comments and hygienic suggestions. At the same time, you will be made a member of the Health Study Chapter and receive Free—our 48-page book, "What to Eat," and complete information as regards the home study Course in Health and Culture of Body and Mind.

Find out some of the facts about yourself. Learn what they mean to your future health and happiness. Learn how to live as Nature intends.

Send this coupon now—while you have it at hand.

THE INDEPENDENT EFFICIENCY SERVICE

119 West 40th St. New York

boys as possible should have the stimulating influence of this stirring tale of the pioneer missionary, here well adapted to the understanding of the twentieth century lad. In the grammar grades and the first years of high school, the problem of ethical teaching is more difficult. Tho written for the pupil, *Talks to Young People on Ethics* would give better results when presented thru the medium of a skilful teacher. The arrangement is attractive and suggestive.

The Natural Method, Fourth Reader, by McManus and Haaren. Charles Scribner's Sons. 50 cents. *First Lessons in American History*, by S. E. Forman. The Macmillan Company. *Talks to Young Folks on Ethics*, by C. H. Wilson. Charles Scribner's Sons. 75 cents.

High School and College Reading

TWO attractive textbooks of English literature are out this season. That by Professors Rankin and Akin is arranged rather with view to showing the spirit of the different literary periods and writers and the characteristics of the different types of literature than as a handbook. It has, however, chronological tables, many reading lists and a full index. A larger work is *Outlines of English and American Literature*, by William J. Long. This follows the usual type, but it is written with much vivacity and charm. Its first chapter, An Essay on Literature, starts the student with the idea of literature as one of the pleasures, not one of the tasks, of life. A paragraph on the history of the times introduces each literary period, and the writers are treated as living men. The latter third of the book is given to an uncommonly well balanced review of American letters, altho, of course, it is the right of a contemporary to cavil at some of the criticism after 1876 and to wonder why Henry James is wholly ignored.

A comprehensive, well printed and well arranged anthology is that of *English Poetry and Prose of the Romantic Movement*, edited by G. B. Woods. "The Romantic Movement" is inclusive, taking in practically all essayists and poets writing between 1798 and 1832 with selections from many writers of the eighteenth century who directly influenced the new school. A literary map of England, a glossary, a large index and bibliographic notes with charts of contemporary historic events and French and German writers complete an excellent reference work. A small but well chosen collection of *English Popular Ballads* has been arranged by Walter Morris Hart, of the University of California. This is prefaced by an essay of the ballad in its social significance and its development as a literary form. A collection drawn from a wider field is Guido H. Stempel's *Book of Ballads Old and New*. The short introduction is mainly historical. Descriptive comment and glossary are in an appendix. There are

fewer of the old ballads. altho much the same ones as those chosen by Professor Hart. But a number of American cowboy songs are borrowed from the Lomax collection, and a delightful group of ballads of the literary type are taken from nineteenth century writers and from Noyes, Masefield, Service and Newbolt. Among the many series of school reprints the Lake Classics are convenient and pleasant little books, and well edited. The introductory essays are interesting and the notes at the foot of the pages are carefully chosen to explain what surely needs to be made clear without loading the text with instruction. Four recent issues are the *Aeneid of Virgil;* and Reade's *Cloister and the Hearth; Mill on the Floss* with introduction and notes by C. H. Ward, of the Taft School; and Southey's *Life of Nelson*, edited by Professor Westcott, of the Naval Academy. Another edition of *Southey's Nelson* is edited by Frederick Houk Law, his notes being mainly historical and literary, while those by Professor Westcott are delightfully nautical in character. A. Marion Merrill's edition of *Ivanhoe* is very thoroly arranged for class work altho happily the novel is entire and printed without numbered paragraphs. A sketch of Scott's life, list of his works and map of the Ivanhoe country introduce the story. The long notes in the appendix excellently succeed in being informing without being dull. Thin paper and clear print make this a satisfactory reprint.

German students in high school read with pleasure *Minna von Barnhelm*. Heller's admirable translation, in idiomatic English yet true to the spirit of the original, now offers all pupils a chance to enjoy this popular comedy. Despite the persistent reading of the Greek and Roman myths in the grades, few pupils absorb enough knowledge of them to appreciate the classical allusions in their later reading. To aid these pupils Miss Tatlock's charming book, *Greek and Roman Mythology*, presents in clear and attractive language a short course for high school students on ancient gods and heroes.

The Macmillan Pocket Classics, little square brown volumes now numbering about a hundred and fifty, are excellent examples of inexpensive bookmaking. Of this year's issues *Richard III* is the twelfth Shakespeare play to be had in this handy form. The short introduction and notes are by Dr. Brubacher. Dr. Hoffsten has edited a group of *Lowell's Earlier Essays*, delightful, discursive, quaintly humorous papers mainly from the "Fireside Travel." Possibly a stupid collection of letters could be made but fortunately letters are easily destroyed and few but those of real value long survive their recipients. *Letters from Many Pens*, gathered by Margaret Coult, is a charming collection, chosen with the simple letter writing of the pupil in mind. Nearly all deal with everyday topics and all save the last dozen are by English or American writers of the nineteenth century.

Two of these little Macmillan Classics put together bring back from undeserved oblivion the beloved old "Sixth Readers" of a past day. These are Margaret Sprague Carhart's *Selections from American Poetry*, which includes the old favorites of our nineteenth century writers, and *Short Stories and Selections*, a prose collection arranged by Emilie Kip Baker. *Representative Short Stories*, a collection by Nina Hart and E. M. Perry takes in both classics and recent magazine tales. It is well varied, and attractive for class work and besides is just the tiny book needed for the traveling bag. *The Short Story*, a volume of the Academy Classics prepared by W. P. Atkinson, is the fruit

The Women's College of Delaware

In addition to 4-year general academic course, provides 2-year and 4-year courses in household economics, and in normal training for teachers; also 4-year course in scientific farming. Write for catalog.

DR. WINIFRED J. ROBINSON, Dean. NEWARK, DEL.

of experience with high school classes and considers the modern short story as of American origin and development. The introduction is a somewhat technical analysis of the story form. An interesting local anthology is Maurice Garland Fulton's *Southern Life in Southern Literature*. Here are selections from "Swallow Barn" and "Horseshoe Robinson," from Simms and Timrod, Preston, Irwin Russell, Tabb, besides gleanings of popular verse beloved in Southern households two generations ago.

It is pleasant to find editors so enthusiastic in their topics as the two who have set out to interest their pupils in Boswell and Macaulay, the last two volumes on our list. A small book in Barnes's English texts holds Stella S. Center's abridgement of *Boswell's Johnson*, an abridgement that has managed to keep an entertaining paragraph at least to every page. *Selections from the Prose of Macaulay* is an excellent volume with an uncommonly interesting introductory essay, this by Professor Holt, of West Point. Several of the papers chosen are printed in full and the book is an attractive volume to any reader, being happily unincumbered by notes.

English Literature, by Rankin and Akin. The Macmillan Company. $1.30. *English and American Literature*, by W. J. Long. Ginn & Co., Boston. $1.40. *Poetry and Prose of the Romantic Movement*. G. B. Woods, ed. $3.25. *English Popular Ballads*. W. M. Hart, ed. 40 cents. Scott, Foresman & Co., Chicago. *Book of Ballads Old and New*. G. H. Stempel, ed. Henry Holt & Co. 60 cents. *Æneid of Virgil*. J. Conington, tr. 40 cents. *Cloister and the Hearth*. A. B. de Mille, ed. 50 cents. *Mill on the Floss*. C. H. Ward, ed. 45 cents. *Southey's Nelson*. A. T. Westcott, ed. 40 cents. Scott, Foresman & Co., Chicago. *Southey's Nelson*. F. H. Law, ed. The Macmillan Company. 25 cents. *Ivanhoe*. A. M. Merrill, ed. Allyn & Bacon, Boston. 65 cents. *Minna von Barnhelm*, O. Heller, tr. Henry Holt & Co. $1.25. *Greek and Roman Mythology*, by J. M. Tatlock. The Century Company. $1.50. *Richard III*. A. R. Brubacher, ed. *Lowell's Earlier Essays*. E. G. Hoffsten, ed. *Letters from Many Pens*. Margaret Coult, ed. *Selections from American Poetry*. M. S. Carhart, ed. *Short Stories and Selections*. E. K. Baker, ed. *Representative Short Stories*. Hart and Perry, eds. The Macmillan Company. 25 cents each. *The Short Story*. W. P. Atkinson, ed. Allyn & Bacon, Boston. 60 cents. *Southern Life in Southern Literature*. M. G. Fulton, ed. Ginn & Co., Boston. 80 cents. *Boswell's Johnson*. S. S. Center, ed. A. S. Barnes Company. 25 cents. *Selections from the Prose of Macaulay*. L. H. Holt, ed. Ginn & Co., Boston. $1.25

Languages

THE German books of this year are largely reprints of popular books of previous years with the addition of some supplementary work to aid in the direct method of teaching. For beginners, Heath publishes *Progressive Lessons in German*, an excellent beginner's grammar with the technical work in German; *Märchen und Erzählung*, a good, simple reader for the grades; *Immensee*, a delightful reminiscent story of boyhood days as seen by an old man; *Höher als die Kirche*, a simple rather sentimental story, but illustrative of the effort toward individual thinking; *Germelhausen*, an attractive story of a sunken village, so often found in German myths; for intermediate work *Die Journalisten*, a comedy next to "Minna von Barnhelm" in popularity; and for the advanced students, *Die Burgkinder*, a novel studying modern German thought. Ginn also has an excellent reprint of *Höher als die Kirche* with the usual addition of German questions for conversational work.

Of the three new books, *Gender and Declension of German Nouns* is an attempt to teach by the grouping together of nouns of the same gender, and the drawing or pasting of pictures opposite the lists the difficult subject of gender. As a book for young children, it might furnish a profitable exercize. The *Handy German Gram-*

SCHOOLS AND COLLEGES

WISCONSIN

NORTHWESTERN MILITARY AND NAVAL ACADEMY

ON the shores of beautiful Lake Geneva. **Designated by the President as a Reserve Officers Training Corps.** Within two hours of Chicago, the school is of easy access from both East and West. Even She Had Corns

Until a Little While Ago She Thought Them Unavoidable

If you have corns don't blame yourself too much. Many an old person has had them fifty years.

Yet they have done what you do—pared them and used old-time, useless treatments.

But what folly it is when nowadays about half the world keeps free.

Just try one corn.

Apply a Blue-jay plaster in a jiffy. Then forget it. It will never pain again.

In two days take the plaster off. The corn will disappear. Only one corn in ten needs another application.

The cost is five cents per corn. The trouble is a moment. The results are sure.

You will laugh at the old ways when you try Blue-jay. You will wonder why people ever let corns hurt. Please start tonight. You have suffered long enough.

T. T. ANDERSON, Treasurer.

PACIFIC GAS AND ELECTRIC CO.

FIRST PREFERRED DIVIDEND NO. 12.

ORIGINAL PREFERRED DIVIDEND NO. 46.

The regular quarterly dividend of $1.50 per share upon the full paid First Preferred and Original Preferred Capital Stock of the Company, for the period commencing May 1, 1917, and ending July 31, 1917, will be paid by checks mailed August 15, 1917, to stockholders of record at 3:30 o'clock P. M. July 31, 1917.

A. F. HOCKENBEAMER,
Vice-President and Treasurer.

San Francisco, California, July 31, 1917.

mar is exactly what it claims to be, a concise handbook of essential facts of German idioms. By selections, prose and poetry, chosen from Heine's writings, *Die Harzreise* forms a biographical story of the author. It abounds in copious notes and the usual grammar exercizes.

A single Latin book is *Cicero* in the Rolfe and Roberts series. It is an excellent edition, planned to give the necessary help in one volume. It contains a full grammatical outline covering the points of Cicero, a set of sentences for translation, and an interesting and well-outlined life full of vivid touches which will make the times much clearer to the student.

Among the few French textbooks of the year is an attractive reader for beginners, *La Belle France*, a journey to France told in short stories by Adolphe de Montvert and well illustrated. *Colomba* has two new editions, one illustrated by Boardman Robinson and edited by W. S. Barney. This is a pleasant little book with an appendix containing notes, vocabulary and exercizes for translation. That prepared for class use by W. W. Lamb is a thoro textbook. It has a grammatical appendix, syntax drill, full notes, exercizes for translation, questions, and the lessons are printed opposite the text to which they refer.

The Knowles-Favard system of learning to speak French is the basis of an originally arranged *Grammaire de la Conversation*. The book is planned for class work wholly oral and in French, with written work at home and "self-corrected." *Soldiers' Spoken French* is a compilation of words and phrases that are likely to be urgently needed by every soldier going to France. These were chosen by Helen Cross from experience in lessons to the New Zealand contingent. It fits the uniform pocket.

A textbook which deals with the Spanish language as spoken in Hispania is the *Spanish-American Reader*, by Ernesto Nelson. It is a valuable addition to an already large collection, treating as it does of the difference between the idioms of Spain and South America. *First Spanish Course*, by Hills and Ford, issued by the same publishers, is a grammar for beginners, with exercizes. One of the most interesting books for him who already has acquired his first grammatical steps is *Lecturas Faciles*, by Wilkins and Luria, which gives short stories and articles based on customs, history and literature, instead of taking the student at once into the classics as is usually done. *Classroom Spanish*, by M. A. Solano, is a vest pocket edition of the phrases most necessary to a beginner.

The Spanish Reader of South American History is hardly the condensed history that its author, Supplé, modestly claims, but rather a thoro going-over of the principal historical events in such a related manner that practically all South American history is laid before one. A reminder of the grave fact that South Americans know more of us than we do of them is found in the *Spanish-American Composition Book*, by J. Warshaw. Every chapter contains names and allusions which are practically Greek to the average American student. Perhaps the elusive charm of Spanish is best caught and held in a series of articles on *Spanish-American Life*, by E. D. C. Morse. This author has succeeded in lively descriptions of every day occurrences, gathered from every possible source. It is in a fashion a trip thru South America, guided by sane and lively curiosity.

As it is the commercial side that attracts nine-tenths of Spanish students, perhaps it is fitting to end with *Spanish Commercial Correspondence*, by Whitten and Andrade. In this complete volume the man in business finds all sorts of contingencies disposed of. When we realize that it is commerce that opens the way for arts and sciences it is not amiss, surely, to give this little volume an important place.

Progressive Lessons in German, Part I, by Huebsch and Smith. D. C. Heath & Co. 75 cents. *Märchen und Erzählung*, by Guerber and Meyers. 65 cents. Storm's *Immensee*, Bernhardt, ed. *Hillern's Höher als die Kirche*, Clary, ed. Gerstacker's *Germelhausen*, Lewis, ed. Each 35 cents. Freytag's *Die Journalisten*, Toy, ed. 45 cents. Herzog's *Die Burgkinder*. Boetzkes, ed. 65 cents. All D. C. Heath & Co. Hillern's *Höher als die Kirche*, Eastman, ed. Ginn & Co., Boston. 30 cents. *Gender and Declension of German Nouns*, by C. T. Stewart. D. C. Heath & Co. 30 cents. *Handy German Grammar*, by C. N. Gould. Scott, Foresman & Co., Chicago. 50 cents. Heine's *Die Harzreise*, R. P. Keep, ed. Allyn & Bacon, Boston, 75 cents. *Cicero*, Roberts and Rolfe, eds. Charles Scribner's Sons. $1.50. *Colomba*, W. S. Barney, ed. Allyn & Bacon, Boston. 50 cents. *Colomba*, W. W. Lamb, ed. Scott, Foresman & Co. Chicago. 96 cents. *Grammaire de la Conversation*, by Knowles and Favard. D. C. Heath & Co. $1.15. *Soldiers' Spoken French*, by Helen Cross. E. P. Dutton & Co. 60 cents. *La Belle France*, by A. de Monvert. Allyn & Bacon, Boston. 80 cents. *Spanish-American Reader*, by E. Nelson, *First Spanish Course*, by Hills and Ford. D. C. Heath & Co. $1.25 each. *Lecturas Faciles*, by Wilkins and Luria. Silver, Burdett & Co. $1. *Spanish Reader of South American History*, by E. W. Supplé. The Macmillan Company. $1. *Spanish American Composition Book*, by J. Warshaw. Henry Holt & Co. 90 cents. *Spanish-American Life*, by E. L. C. Morse. Scott, Foresman & Co., Chicago. $1. *Classroom Spanish*, by M. A. Solano. 10 cents. *Spanish Commercial Correspondence* by Whitten and Andrade. $1.25. D. C. Heath & Co., Boston.

English Spoken and Written

IN nearly all secondary schools today great emphasis is rightly placed on oral and written composition. *High School English, Book One*, out in revised edition, offers material for the first two years of the course. The study outline is simple, with abundance of theme work within the experience of the pupil. An unusually large portion of the book is devoted to grammar to be used either for reference or for thoro study as the class requires. *Practical English Composition*, a four book series, one for each year of high school, follows an excellent plan. Tho the four divisions of composition are treated in each book, the emphasis in the first is on description and letter-writing, in the second on narration and journalism, in the third on exposition and literary feeling, and in the fourth on argument and public speaking. Perhaps the most helpful parts of the books are the many models for the pupil's imitation, the large number of topics for practise, and the suggested time schedule.

Oral and Written English provides a satisfactory course in composition and grammar for the grades. Book One is attractive in its presentation of pictures, topics and outlines. To obtain a better allotment of time, Book Two groups the work of each chapter into three parts, composition, grammar and drills on good usage.

Not all high schools have special classes in oral reading and speaking, but for such as do Bassett's *Handbook of Oral Reading* provides good selections, a clear statement of principles, and a full outline for teachers. For high school pupils or business men who have missed high school training, the *Dictionary of Grammar* is a complete reference book of grammatical terms, well illustrated and alphabetically arranged. *Good Usage* is also a reference book for high school pupils or for teachers. Unlike similar books, it aims to give authorities on both sides, leaving the choice to the reader. It is a protest against the rigid rules of the purists in grammatical form. Still one strongly questions calling a poor form correct because it is found in the works of an excellent author. It is certainly better to teach young people to adhere to certain definite rules.

A study of technique and style in de-

scriptive writing, reporting, argument and criticism is to be had in *The Method and Practise of Exposition*, by Professor Rankin. It is a work for the college student, but is not technical. While thoroly clear and interesting in method, and drawing examples from the daily paper as well as the classics, it is a book for the thoro student not for the learn-to-write-a-best-seller class.

Professors Greenough and Hersey have prepared a most interesting textbook on *English Composition*. What they term "mechanics," that is troublesome points of grammar, punctuation, spelling are touched in short final chapters. The main chapters are on exposition, argument, description, narration, structure, with clear and suggestive discussion of the topics, and fine examples. The first chapter on gathering and weighing of material is especially to be noted, for it gives the pupil all sorts of practical, helpful hints that students must usually work out for themselves slowly at great waste of time or never work out at all.

High School English, by Brubacher and Snyder. Chas. E. Merrill Company. $1.20. *Practical English Composition*, by E. L. Miller. I, II, III, 35 cents each, IV, 45 cents. Houghton, Mifflin Company. *Oral and Written English*, I, II, by Potter, Jeschke and Gillet. Ginn & Co., Boston. 52 and 64 cents. *Handbook of Oral Reading*, by L. E. Bassett. $1.60. Houghton Mifflin Company. *Dictionary of Grammar*, by J. A. Hennesy. Funk & Wagnalls Company. 35 and 65 cents. *English Usages*, by J. L. Hall. Scott, Foresman & Co., Chicago. $1.50. *Practice of Exposition*, by F. E. Rankin. *English Composition*, by Greenough and Hersey. $1.40 each. The Macmillan Company.

Civic and Economic Studies

ONE of the most interesting recent experiments in textbook writing is *Elementary Social Science*, by Prof. Frank M. Leavitt and Edith Brown, which aims to give children who have never studied high school civics or economics a general picture of the institutions and problems of our modern civilization. The attempt is a promising one and little fault can be found with the way in which it is carried out, except that the authors sometimes intrude their own opinions, on the tariff, for instance, in what should be a purely impartial study. A fuller, more judicial and equally attractive work is *American Government*, by Dr. Frank A. Magruder, which, altho primarily a text-book in civics, is unusually broad in its scope and devotes as much attention to the social reforms achieved by recent legislation and the conditions which these reforms were designed to remedy as to the structure and functions of the organs of government. Another happy blend of civics and sociology for high school students is *The New Civics*, by Roscoe Lewis Ashley, which lays special emphasis on the historical forces which have been making and molding our institutions. If books like these could be placed in every school it is no rash prediction that the electorate of the next generation would view political issues more sanely and thoughtfully than this. The teacher of civics will be interested in the discussion of his own problems in *The Teaching of Government*, by Charles Grove Haines and six associated writers, the report to the American Political Science Association by the Committee on Instruction, and will find a convenient handbook for reviewing elementary courses in economics in Prof. Harry G. Hayes's *Problems and Exercizes in Economics*.

Elementary Social Science, by Frank M. Leavitt and Edith Brown. The Macmillan Company. 80 cents. *American Government*, by Frank Abbott Magruder. Allyn & Bacon, Boston. $1.25. *The New Civics*, by Roscoe Lewis Ashley. The Macmillan Company. $1.20. *The Teaching of Government*, by Charles Grove Haines and others. The Macmillan Company. $1.10. *Problems and Exercises in Economics*, by Harry Gordon Hayes. Henry Holt & Co. 35 cents.

American Banking Service with France

IN recognition of the increasing importance of American commercial and financial relations with France and of the opportunity afforded for serving American business interests, the Guaranty Trust Company of New York has opened an office in Paris.

It is a fully equipped banking institution, similar to our London office. It enables us to give direct service and to handle more expeditiously a large volume of business with France.

Propositions regarding foreign business may be made at our office in Paris or at our main office in New York, and definite terms can thus be arranged more quickly than by cable or mail.

American business concerns and individuals having interests abroad will find it to their convenience and advantage to bank with our Paris office. It will be our effort to be useful in every possible way to American citizens traveling abroad and to those with the armies in France.

A few of the many services we owe to France, together with an abstract covering some of her achievements in industry, commerce, and finance, are set forth in a booklet, "France and America", just issued by this company, which will be sent on request.

WAR WITHOUT TAX

on Food, Labor or Industry

Will you think or pay? The Nation creates all land values—justice demands their use for National Defense—not for private gain. Tax on land values alone with no other taxes whatever will provide entire annual national budget—even five billion dollars. Will force idle land into use. Increase crops. Stimulate industry. Reduce taxes for 95% of the people. Will not raise prices or reduce production.

THE WISDOM OF ACTING EARLY

BY W. E. UNDERWOOD

DIRECTOR OF THE INDEPENDENT INSURANCE SERVICE

IN 1882 an intimate friend and close associate of mine, who was then twenty-two years old, secured a whole life policy for $1000 at an annual premium of $18.35. By a "whole life," which is one of its designations, I mean a policy the premiums on which must be paid once a year until death, or if so fortunate, or unfortunate, as the case may be, until age ninety-six, at which age the reserve or cash value of every whole or ordinary life policy equals its face and may be withdrawn.

This man has never seen the time during the past thirty-five years when he has not actually needed the protection of life insurance. He has taken and dropt many policies during that period, but he kept the $1000 first mentioned and has it now. His fortunes have varied, ranging from moderate affluence to approximate poverty. Many children came—all girls. Theirs is an ideal home, a diminutive republic, in which love is the chief magistrate, under whose rule punishment is unknown. Mother is idolized, and there is no man in all the earth as wise and kind as father. And I agree with them; for as a friend, known to me during a whole generation, he has worn well—outworn all others.

At the time he took the $1000 policy at a premium of $18.35 a year it would have been just as easy to have made it $5000 at $91.75, and no hardship if it had been $10,000 at $183.50, for he was unmarried at the time and in receipt of a salary of $1000 a year. But he was twenty-two. Altho a youngster of unusual good judgment and hard common sense, he was not superior to the general mass in his attitude toward life insurance. As a matter of fact, in his money affairs he was under-average as to judgment and tho never a spender, a generous, and too often an imprudent, provider. There seemed to be no "rainy days" in his calendar; no years to come in which the vim and vigor of manhood and the capacity to struggle valiantly would be worn down by the continuance of days and the weight of the harness which every good man must carry.

This is not criticism, for I am able to point out my friend's mistakes only because the years have revealed them to me. And in what did his error as to life insurance consist?

Three years ago he came to me for advice on the subject. Things had gone wrong with him. He was not as resourceful in meeting and overcoming adverse conditions as formerly. Age was beginning to dull his energy and abridge his productive powers. He looked weary. I knew he was worried. He confest to me that he had been taking desperate chances for several years and that a part of his present trouble was due to the thought, which never abandoned him, of what would happen to "the girls," as he calls the family, if he should die. I asked him how much life insurance he then had, and was not astonished to learn that the entire line consisted of that old policy of $1000.

"Don't you waste another day," said I. "Get at least $10,000 more; and then you won't have half enough."

But how? Business was bad and had been steadily growing worse; living expenses had been mounting just as steadily. What would $10,000 cost? Here it was my friend was to learn, too late, one valuable lesson. There is no business in the world which gives so much point to the maxim: "Time is money." In its way it will tell you how much money time is worth. Here is what the rate book of the company which had issued its $1000 policy to him in 1882 told us:

"Your age is fifty-four. A whole life policy at that age costs $54.33 per $1000; therefore $10,000 will cost you $543.30 a year. Since you last needed our services thirty-two years have been taken from your stock, and the cost has risen 300 per cent. There is no power can alter the conditions. What you cannot give us in time, you will have to give in money."

"Just think," said my friend, "of what folly I have been guilty. Do you know, I have kept that $1000 policy out of sentiment. It was my first. I have taken dozens—well, at least a dozen—since, carried them a while, borrowed on them as I needed and rather than be inconvenienced let them lapse. Never even took any paid-up insurance. Had my cash surrender values every time. But I kept that little first policy intact."

"Yes," I replied, "and that little first policy is going to save you now if you can pass a satisfactory physical examination. And we are going to that same company for a $10,000 policy."

"Fine!" he exclaimed, "but how is that runt of a policy going to save me?"

"Can you put up a hundred dollars or so?" I inquired.

"Y-e-s," he answered, "but where's the $400 'or so' coming from for the premium on the $10,000?"

"Sometimes sentiment pays a substantial reward in hard money; and sometimes the small things in life, things like a little 'runt of a policy,' bulk large in emergencies. Do you know," I continued, "I am astonished that you haven't been ass enough to pull down the cash surrender value on that little policy long ago!"

"So am I," he confest, "I simply never associated that particular policy with a cash surrender; piece of sentimentality, I've told you. The truth is I never think of that policy except when the notice comes once a year asking for $18.53, less the dividend, and I have never been so hard-up I couldn't send that amount, $14 or $15, promptly. That done, I just as promptly forget it."

I found we could borrow about $400 on the thirty-two years' old $1000 policy, and we did it; and we secured an additional $10,000 in the same company; and paid the premium on it for a year; and the splendid fellow who had "fumbled" on life insurance matters, when he got that new policy, seemed to grow ten years younger, for he was thinking about "the girls" thruout the whole business. The specter born of fear had vanished from his soul.

While planning the loan on the small policy I requested that he make me a promise he would regard it as an accommodation loan and not as a permanent lien against the security. Here was an example of the beneficent nature of a policy loan, an instance in which it performed a legitimate office, a substantial service to an entire family; and I did not want the benefaction violated. This happens too often. When men borrow money on their life insurance they may be in fact borrowing from their widows and orphans—are doing it, indeed, if they die while the loans remain unpaid.

Circumstances continued narrow with my friend for more than a year, but by cutting an expense here and practising a reasonable system of self-denial there, all the household coöperating, at least $50 were laid away each month, some months a little more, as a sinking fund against the second premium on the big policy and a small amount in reduction of the loan on the other. When that day arrived, the premium was paid and the loan reduced by $100. Within six months following, due to the war, the line of business in which he was engaged experienced a revival, orders continued to multiply, profits increased tremendously and the end is not yet in sight. Faithful to the promise made, no time was lost in paying off the balance of the loan when a larger volume of money came to him.

Regarded as a piece of fiction, this narrative could be pronounced uninteresting, if not dull. If it finds salvation, it will be because in all its essentials it is true.

PERHAPS it is always useless to meditate over what might have been; it surely is if we can find no lesson in it, no warrant against future mistakes. Observation of life seems to indicate that men prefer to get experience at first hand—to buy their own, rather than profit by that of others. Young men look forward; old men, backward. The former, confidently, on the victories they will win; the latter, sadly, on the mistakes and defeats to their account. The modern world, particularly that portion of it of middle age and under, dislikes moralizing. Bacon's Essays are not popular. But a serious student and practitioner of life insurance—a tribe not over-numerous—sees so much of avoidable human misery as to make moralizing a sort of pre-occupation. To him it is as if men were drowning in waters that are strewn with life rafts; dying of a plague while holding the remedy for it in their hands.

Why should a man at twenty-two exercize less common sense in the consideration of a simple fact than he will thirty years later. To put the question naturally resulting from the story I have recited: Why should a man pay $54 for the thing—mark you, the same thing—he could have had for $18? Remember, the price of the thing itself has not advanced; the difference is due to the time at which it is bought.

True, not many young men can afford to take all the life insurance most of them will need later; but fewer of them take all they can afford. If one at age fifty-five needs life insurance for some years beyond that time, and the rate is $54, and he bought it at $18 when he was twenty-two, he has had a discount of 66⅔ per cent.

The value of these observations is not alone for young men. It means that every man should maintain now as much life insurance as his income will permit. Fathers should impress it on their sons; more, they should inculcate in them the indispensability of life insurance, impress on them the wisdom of buying it in the morning of life, and of increasing the line they carry as often as they can afford to do it. There is no money so wisely devoted to any object as that which is put into scientific life insurance.

This department will furnish on the request of readers any information respecting the business of insurance and the companies transacting it which we have or can procure. Address all communications to the Director of The Independent Insurance Service.

Resinol Soap

the fairy touch that brings the bloom of roses.

Resinol Soap makes the skin so clean that it can hardly *help* being lovely!

Wash your face with warm water and plenty of Resinol Soap, working the generous, creamy lather gently into the pores for a few moments. Then rinse off, finishing with a stimulating dash of clear, cold water.

Often from the first treatment you can feel—and even *see*—the difference in your skin. It quickly takes on a rosier look, redness and oiliness disappear, and in a short time ou become really *proud* of your complexion.

Those who have once formed this habit of being beautiful will rarely consent to be without Resinol Soap for their toilet.

The same extreme purity and delicate soothing medication which make Resinol Soap so good for the complexion also make it most beneficial for the hair, and for a baby's tender, easily irritated skin.

Resinol Soap is sold by all druggists and dealers in toilet goods, throughout the United States and Canada.

THE NURSE'S CALLING

EDITORS are only human—tho sometimes if one were to believe the writers, they are merely inhuman—and from time to time they let creep into the publication under their charge things that ought not to be there. When such statements of mistaken verity or wisdom appear in articles signed by contributors, the editors can make a very plausible and reasonable disclaimer of responsibility.

In the case of a statement which has been called to our attention by the head of the Red Cross Nursing Service we are not willing to make any such disclaimer. If we had been more alive to the situation we should not have permitted a statement like this to appear even in a contributed article in The Independent.

The letter which has come to us in protest against the statement in question makes the following points:

In Mr. Heber Blankenhorn's article, "First Aid to the Allies," published in The Independent of June 23, a statement occurs that no member of the nursing profession can let pass unchallenged. He says, "Nurse work is not romantic, just disgusting. Unless some are killed, as were two on the way to the front by a freakish shell aboard the 'Mongolia,' the nation thinks little about the Red Cross nurses' achievements." The statement gives an entirely wrong impression of the attitude of the professional nurse toward her work. To the outsider, disease and suffering humanity bring no such reaction as they produce for her. She has been trained to apply the finest aids that modern science knows to combat disease and suffering. From the humanitarian point of view, she should know only patient pity. She is animated by the highest feeling for the art and science of her profession. It really does not matter whether outsiders see the reward, or notice her work: the work itself is a reward. To the lay observer nursing may be unromantic but no profession that deals so intimately with the critical moments of human life is ever dull or unattended by a constant sense of high usefulness. At this time in the nation's history, when it is important for us to build up the whole nursing profession and to recruit in its service the finest candidates from our high schools and colleges, it is important that no such slander on the nursing profession, as Mr. Blankenhorn's careless statement makes, should be accepted broadcast. No one knows how important it may be for the United States to have an undepleted supply of Red Cross nurses thru the next three or four years. It might be one of the critical factors in the future of our country. We need to be prepared to meet the emergencies of war, and to safeguard the national health at home in the interests of a vital and healthy peace. Young women must not be given false impressions. They must today be made aware of the spiritual returns and great satisfaction that the nurses of America feel in their profession, if that profession in the future is to have the numbers to meet the demands that will surely be put upon it.

We are glad to add our hearty endorsement of what is said here. To any trained nurse who is worth her salt, nurse work is very far indeed from being "just disgusting." We wish Mr. Blankenhorn had thought a second time before he made that unfortunate statement. We believe that when the matter is now brought to his attention he will wish so too. We are sure that he does not really believe what he inadvertently says there.—THE EDITOR.

THE FOOD FIGHT

Under this head, every week, The Independent will print some vital part of the information which is being circulated by the Department of Agriculture to aid American housekeepers in their patriotic and intensely necessary work of conserving food.

THERE is a very up to date version of "My Old Kentucky Home" which runs:

> "Wheat no more, my lady,
> Oh, wheat no more this year."

It wasn't written by the Department of Agriculture but it expresses its sentiments exactly. The Department of Agriculture, however, never stops with sentiments and theories; it follows them up with concrete, detailed suggestions for putting them into practise.

The first and most obvious substitute for wheat is corn bread. A newer and more interesting one is potato bread. England has for some time been mixing potato flour with her wheat flour and finding the results peculiarly delicious. Potato flour is not generally available in this country so the Department has devised recipes for bread made of plain boiled potatoes mixt with wheat flour. Economically it is a success, especially when you have potatoes in your own back yard as most people have this year. Use early perishable varieties and "culls," not the later varieties which can be stored thru the winter. The bread is not merely economical; it is palatable. Many people prefer it to bread made wholly with wheat flour. It has a rich brown crust, is tender and elastic. Also it has more moisture than ordinary bread and therefore keeps longer.

There are several recipes for making potato bread and potato rolls. Write to the United States Department of Agriculture, Washington, D. C., for them. They will be glad to furnish them on request.

REMARKABLE REMARKS

BILLY SUNDAY—I work too hard.

WILLIAM WATSON—Up and prepare.

ORVILLE WRIGHT—Flying is great fun.

J. EDGAR PARK—We love you, ye nations of Europe.

CLARENCE DAY, JR.—Kipling is an insidious devil.

ED. HOWE—Critics are becoming almost as crazy as poets.

LORD NORTHCLIFFE—The end of the war is very far distant.

HALL CAINE—Motherhood is the supreme power in the state.

J. OGDEN ARMOUR—In ninety-nine per cent of cases first impressions are correct.

JOHN D. ROCKEFELLER—I am a disciple of Theodore Roosevelt.

AMY LOWELL—My grandfather had the first greenhouse in America.

THE SUPREME COURT OF MASSACHUSETTS—Women are not people.

SECRETARY REDFIELD—None of you, I think, ever heard of the tilefish.

HELEN KELLER—Before my teacher came to me I did not know that I am.

DR. BEVERLY ROBINSON—Good whiskey and brandy are the oil of old age.

SENATOR TILLMAN—There are too many people practising law in the Senate.

A. M. MACDONALD—Croquet is Dr. Sun Yat-Sen's favorite form of exercize.

PAUL MILUKOV—Russia's aims are clear, but the way to get them is not clear.

MRS. GAP JOHNSON—There are four motor cars to every bathtub in Kansas.

THEODORE ROOSEVELT—I can appeal to the natural fighting man in this country.

MRS. PANKHURST—We can never get the vote until we terrorize the politicians.

ERNEST RHYS—Tagore is one of the very few tale writers who can interpret women.

GEORGES CARPENTIER—I contend that boxing is vastly more athletic than aviation.

EX-AMBASSADOR GERARD — Woodrow Wilson will win this war for us if he is left alone.

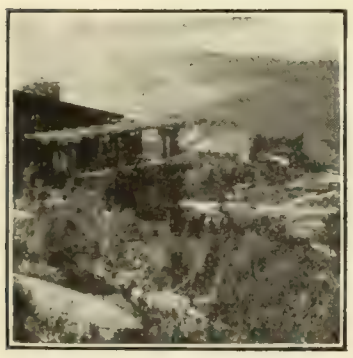
CARDINAL GIBBONS—I do not believe in the national prohibition of light wines and beer.

P. CASPAR HARVEY—Morale is the factor which troops other than our own do not have.

DR. SUN YAT-SEN—Unless something is done, and done speedily, China will succumb.

"MA" SUNDAY—There is no difference between sin in trousers and sin in petticoats.

WALTER TALLMADGE ERNDT—The boss is apt to fight political innovation to the last ditch, but his keen eyes have become accustomed to reading the handwriting on the wall.



HOW TO GET CASH

FOR YOUR

Real Estate

"Your plans sold my property when every other method failed. Found a buyer in a remarkably short time."—*John O. Brown, Pennsylvania.*

"Sold my store and real estate at Ben Lomond, California. Your method of finding cash buyers is without a peer."—*Benj. Lloyd, California.*

"Your method sold my farm in a short time, and for cash, too."—*Mrs. L. A. Childs, Minnesota.*

"Sold my property for cash within ten days. Gladly recommend your methods."—*Wm. H. Cartland, Massachusetts.*

Do you want to sell your property quickly—and for cash?

Do you want to do it at the smallest possible expense, without depending upon real estate agents or paying commissions to any one?

If you do, then get and follow the SIMPLEX PLANS FOR SELLING REAL ESTATE.

These Plans are complete in 8 pocket-size booklets, in special library holder, and they are so plain and easy to follow that any one who can read and write English can use them.

They show how—*exactly how*—to find cash buyers for houses, farms and building lots, located anywhere in the United States, provided they are priced at $15,000 *or less.*

Guaranteed Selling Plans Sent Free

Simply mail the attached coupon and we will send you these original, copyrighted Plans without a cent of expense to you.

Examine them free—at our risk. Then return them, without any obligations, if you do not wish to keep them—if you are not convinced that they are just what you need to make a quick, cash sale of your property.

With each set of Plans is a Guarantee Sale Bond that insures the sale of your property or money refunded.

5,000 Properties in the 48 States Sold by the Simplex System

Don't fail to take advantage of this free-examination offer right now. Remember these Plans have been tried, tested and proven hundreds and thousands of times. They will show you how to sell your property quickly and cheaply. One user of the Plans says:

> "The cost of advertising and selling my property by the Simplex System was *less than $15*, whereas if I had sold through an agent I would have had to pay a commission of $125."

Whether your house, your lot or your farm is in or near New York City or in the heart of Wyoming, far from any railroad, you will find the Simplex Plans of invaluable aid in turning your holdings into cash.

SEND NO MONEY

Just mail the FREE-EXAMINATION COUPON. Pay nothing in advance. We will send the Plans promptly by parcel post with convincing proof of what they have done for others and what they can do for you. When you receive them, look them over carefully. Be your own judge.

See for yourself how they will make it easy for you to market your property. Then if you wish to keep and use them send only $5 in full payment for them at our special reduced price. Otherwise, return them and you will owe us nothing—not a penny. Do not risk delay. As we reserve the right to withdraw this special, reduced-price, free-examination offer at any time, better fill in, cut out and mail the coupon at once.

Simplex Service Company, Dept. E, 1123 Broadway, New York

FREE EXAMINATION COUPON

Simplex Service Company, Dept. E, 1123 Broadway, New York

You may send me, by parcel post, prepaid, a complete set of the SIMPLEX PLANS FOR SELLING REAL ESTATE, in 8 pocket-size booklets in library holder, together with GUARANTEE SALE BOND. After receiving them I am to have three days in which to examine them, at the end of which time I will either remail them to you, or send you $5 in full payment for same. I agree not to show them to any one, except members of my own family, unless I keep them.

The Independent

WITH WHICH IS INCORPORATED

HARPER'S WEEKLY

THE ONE WAY TO PEACE

THERE is much talk of peace as the fourth year of the Great War begins. Premonitions, vague and elusive, of peace are in the air. The desire for peace has become a dull, torturing ache at the heart of the world.

Such a moment has its dangers, subtle, seductive, real. The longing for peace in the hearts of men is likely to steal away the judgment from their minds.

At this moment of the world's war weariness sundry well intentioned but muddy minded individuals and groups are demanding peace. They are demanding it not of Germany but of the Allies. They want peace, apparently, on any terms—or none. They hurl their demand for the cessation of war with a lordly gesture at the world, as who should shout at the storm wracked sky and the hurtling winds, "Be still." Then they descend to particulars and would have the United States announce in bold, clear tones upon what terms it will make peace. Or rather they insist that the United States shall lay down certain demands which it will not make on Germany, and, what is more, it will not countenance its allies' making on Germany.

Such outbursts as these must be very comforting to Germany. There is nothing Germany would like better than the adoption of sundry self-denying ordinances by its enemies, which of course would be binding on them but not on Germany—for what binds Germany save Germany's lawless will? But they only blur the issue and muddy the waters.

There is one issue in the Great War and only one. Until that issue is decided there can be no peace worth having. When that issue is decided, every lesser difference will fade away.

Shall German autocracy, German ruthlessness, the German will to power, the German blasphemy of a partnership between the Hohenzollern and Almighty God for the exaltation by force and frightfulness of the German nation, crush under the heel of German militarism the world's precious possessions of justice and humanity and democracy and righteousness?

Not the fate of the German colonies, not the possession of Italia Irredenta, not the destiny of Alsace-Lorraine, not the future of Poland or the status of Constantinople or the solution of the eternal Balkan problem, not who shall pay the piper, not even the freedom of the seas and the sacredness of a nation's word given on a "scrap of paper"—none of these is the matter at issue. These are corollaries; some of them may even prove to be irrelevancies. All of them come after.

The world must be made safe. It must be made safe against German autocracy, German aggression, German faithlessness, German frightfulness. It must be made safe for democracy. It must be made safe for humanity.

Then and then only will it be in order to consider collateral but inevitably minor questions. Then only can the world have a peace worth having.

LAZINESS: POSITIVE AND NEGATIVE

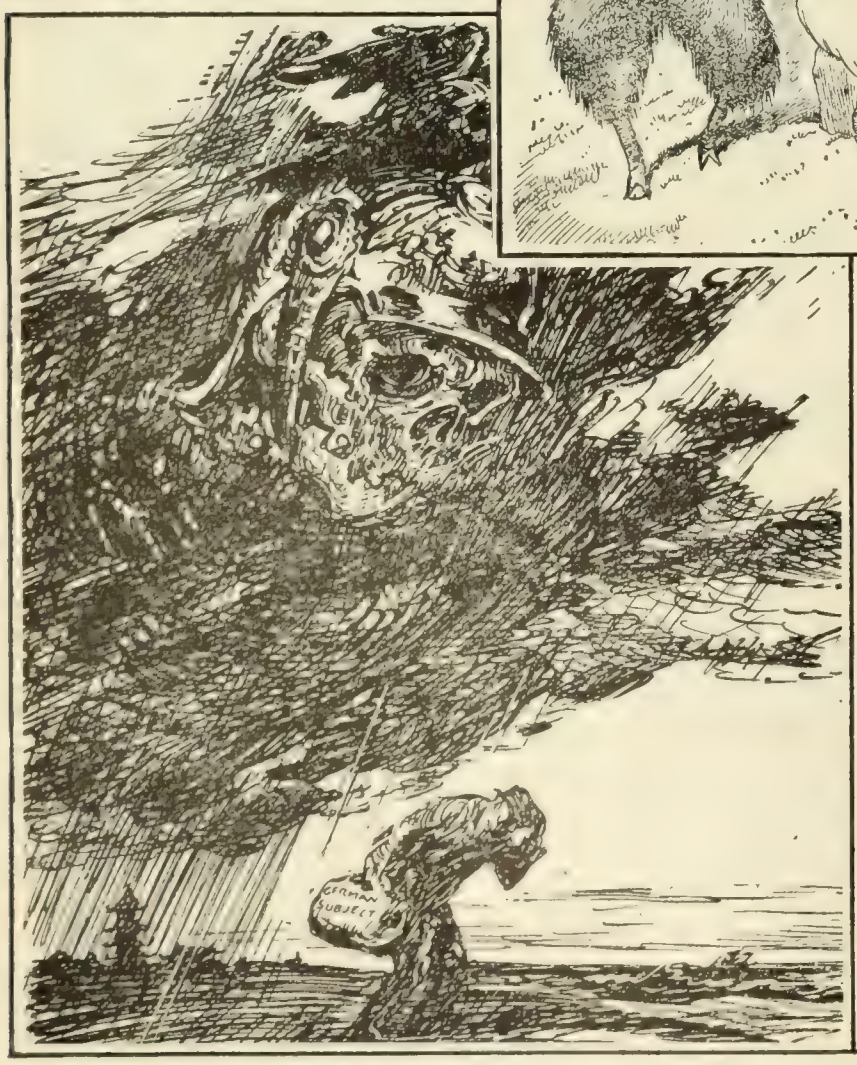
THE average man does not love work for its own sake. This is a truism, and a truism rather mildly worded. And yet we are convinced that real laziness, real disinclination to bodily or mental effort, is one of the rarest things in the world. Cases of it are unquestionably known to the medical profession and to the poorhouse authorities, but when the cause is not hookworm or anemia it is usually a too enthusiastic thermometer.

What we call laziness in a healthy human being is something very different. It has nothing to do with lack of energy or love of repose. On the contrary, the boy most inattentive to his lessons is frequently the boy whose inexhaustible energy wearies the life out of his parents and teachers. He hates the Fifth Reader but he will forget supper to finish his paper-bound copy of Dead Eye Dick the King of the Outlaws. He hates to write compositions in class but he finds it no labor to compose squibs satirizing his classmates for the school paper, tho the tax on his ingenuity is as great in the latter case as in the former. He does not like drawing lessons but he loves to draw. He grumbles about bringing in wood for supper but he will carry forests to build a bonfire. He finds gymnasium work a bore but he submits to more exacting discipline from his baseball coach than any teacher would dare to impose.

The child is father to the man. The clerk who watches the clock does not long for his day's work to end. He longs for his evening's recreation to begin. If there were nothing else for him to look forward to he would not mind clerking sixteen hours a day rather than face the awful gulf of boredom implied in the words "nothing to do." The business magnate who shuts down his desk at half past two does not love office work less but tennis more. The housewife sighs at mending stockings because she wants to sew some fine embroidery which is ten times as difficult. The farmer looks balefully at the garden patch not because he would rather sit in the hammock but because he would rather go hunting and tramp ten miles of muddy road to kill a rabbit. We ourselves, dear reader, are not so lazy as you might think. While we are sitting at our typewriter we are not thinking how unpleasant it is to write editorials. It is not unpleasant at all. We are thinking how nice it would be to play chess or go swimming or write a book of poems. But you would

CARTOON COMMENT

GERMANY AFTER THREE YEARS OF IT



Ding of the New York "Tribune" pictures the Kaiser and von Hindenburg as whistling to keep up their courage while the London "Sunday Evening Telegram" shows the Great God Pan-Germanism at a discount with the Teutonic K-Nymphs

The Italian cartoonists seem to get a lot of fun out of their job. "L'Asino" enjoys "The Situation." Kaiserism and militarism are seen clinging desperately to the rope of popular ignorance which is being rapidly cut in two by the shears of evidence

China's declaration of war inspired Cesare's conception, in the New York "Evening Post" of the Wandering German expelled from yet another land. Kirby of the New York "World," sees the Kaiser ladling out spoonful after spoonful of the soup of promises

not buy the poems and we could not make a living writing them unless you did.

Work, then, is not distinguished from play because it involves effort. Were people naturally sluggish of body the manufacturers of sporting goods would go out of business; were they sluggish of mind the editors of puzzle columns in the papers would lose their jobs. Neither is work to be defined as effort for the sake of pay. The slave is not paid nor, at a higher level of work, the man or woman who gives free service for the welfare of the nation or the sake of humanity. Mr. Hoover will lose money by giving his time to the Government but he has enough work ahead of him to frighten a regiment. Work is purely a comparative term. It may be adequately defined as "anything that one does at a time when he would rather be doing something else." That "something else" may be more difficult, more dangerous, more exhausting, but it must be called "play" since it represents the free choice of the will. Mankind hates work not because it takes strength but simply because it takes time.

Of course there is a moral to all this. It goes without saying that you should do all the work that your conscience or the state of your bank account requires, especially at a time when the future of civilization depends upon the extent to which the American people put their backs into the war. But if you do get a chance to play don't turn it into work. There is work enough without that. The world is full of people doing what they don't want to do, not from economic necessity or moral obligation but simply from social servility. They fritter away their lives in paying calls or attending social functions or giving elaborate dinners when life would become a thing of wonder and joy if they ceased trying to "keep up with the Joneses" (to quote a justly popular contemporary) and spent their leisure as they secretly wish they had the courage and independence to do. College "games" are turned into extra tasks because students slave at them after they have ceased to enjoy them. If the gods have given you a vacation this summer, in the name of common sense do not waste it doing "what everybody does." It is work to go to the seashore when you prefer the mountains; to go to the roof gardens when you prefer sitting at home and listening to the phonograph; to read summer fiction when you would rather read metaphysics (were it not for the fear of being laughed at as a highbrow); to visit the Adirondacks when you would rather visit Kansas City. Don't fool yourself by labeling it play.

TRANSPORTATION IS CIVILIZATION

EVERY civilization that man has known grew up at the crossroads. The Egyptian civilization was the creation of the Nile, that great artery of traffic which stretched from the trade routes of the Mediterranean to the jungles of Central Africa. The civilization of Mesopotamia was the one break in the desert barrier that extended from the Red Sea to the plains of China. It was the natural link between Europe and the Orient. The brilliant civilization of Greece was wholly the creation of the Greek coastline, which is perhaps the most ragged and the best adapted to coastwise trade in the world. Good harbors and a long coastline have made western Europe, and particularly England, today the center of the world's densest population and intensest industry. The development of civilization far from the coast had to wait for the railroad. Had the ocean route remained the only highroad in the world, Siberia and western North America would have been condemned forever to barbarism.

The importance of transportation has been more clearly illustrated by this war than ever before in history. The Allies possess every other advantage over Germany. They have a preponderance of soldier power, a preponderance of munitions, a preponderance of wealth and resources, but they do not have a better organization of transport and supply. Had Russia been as adequately supplied with railroads as Germany, it is probable that the war would have ended at least two years ago. France and Belgium are well supplied with railroads, but the Belgian railroads are now advantaging the Germans. England and America are well supplied with railroads, but they cannot supply their troops at the front by this means. They are forced to rely upon the old main highroad of human travel, the sea, and here the German submarine enters the situation. Could the Atlantic be replaced by a broad plain and several good trunk railroads, the United States within two years could have five or ten million trained and equipt men constantly supplied with every necessity of warfare facing the Germans on the western front.

The very word progress implies a highway. It would be far more interesting and would tell us far more about the events of the next hundred years could we see a railroad map taken from an atlas of the year 2017 than to see a map showing the boundaries of nations at that time. All this has its lesson for the American people. It matters comparatively little whether the railroads are run by the nation or run by private corporations or whether, if run by private corporations, they are allowed to make a small profit or a large one. What does matter supremely is that the equipment of the railroad must not be suffered, under whatever management, to deteriorate. For every dollar that is absorbed in transportation, provided only that it is wisely spent, industry receives an increment of many hundred more.

RULES FOR DISLOYALISTS

THE INDEPENDENT has always preached the gospel of efficiency, and we have been deeply grieved to see how many persons have started out with the noblest intentions of hampering the prosecution of the war by the American Government and yet have failed to achieve an effect in any way proportionate to the efforts which they expended. Some have spoken too boldly against the nation which protects them and have had their period of usefulness ended prematurely behind barred windows. Others have fallen into the opposite error and have been too subtle and too "highbrow" to reach more than a small circle of pacifists or Germanized university men. To prevent such misdirected efforts, The Independent has compiled, with the utmost care and regardless of expense, ten rules which summarize in a nutshell the methods and experience of the most successful practitioners of disloyalty.

I. When driven to make an unequivocal statement protest your loyalty and then change the subject.

II. Assert on every occasion that "Wall Street" made the war. Never mind explaining when, how or why.

III. Get in all the sneers you can at any professions of ideal motives. If you can find any flaw in our democracy say that "we are just as bad an autocracy as Germany." Use the word "hypocrisy" at every opportunity. Place the war in as sordid a light as possible.

IV. It is dangerous to denounce the United States directly. But rake history from end to end for mud to throw at the Allies. Especially, twist the lion's tail.

V. Profess great concern lest sending food to Europe will starve America. Support every embargo movement that applies to the Allied nations and none that does not.

VI. If the President asks for any extension of power rave about "dictatorship" and the "overthrow of the liberties for which our fathers, etc."

VII. Spread rumors that the Allies are going to betray us or take advantage of us as soon as we are deeply enough involved in the war.

VIII. Accept conscription in principle but hamper its working in every possible way. One good way is to start scares about revolution and internal disorder as a pretext for keeping a large part of the army at home.

IX. Demonstrate that the enemy is unconquerable and

victory hopeless. Play the "candid friend" and act as a depressant.

X. Be very jealous to prevent "entangling alliances" and be much concerned about the Monroe Doctrine if we "mix ourselves in European quarrels." A permanent league of nations would embarrass your Junker friends if they remain in power after the war. Germany can only hope to conquer other nations if they act selfishly and in isolation.

MIXT ON CHAPLAINS

A Church of England chaplain somewhere in France writes to *The Church-Times* complaining that whenever he appears on the streets the children leave their play and flock after him shouting *"Bon jour M. Cinema!"* or what is still more humiliating; *"Au revoir, M. Charlie Chaplin!"* Now the spectacle of a preacher playing the part of the Pied Piper is truly gratifying to those who have been fearing lest the clergy were losing their hold upon the younger generation, but unfortunately it appears to be based upon a confounding of persons which altho excusable is nevertheless deplorable. The children were eager not to enter the church but to get free tickets for the cinematograph. It is naturally annoying that the French boys and girls should not be able to distinguish the clerical gait and garb from those that have made millions on the film and that they should believe that the man who officiated in canonicals at the altar took another role on the screen in the evening.

But such confusion is inevitable when an army chaplain —and many a home clergyman—is obliged to devote a large part of his energies to recreating rather than to re-creating his flock. We have no objection to a minister being as amusing as he can be and we are glad to see the church using the motion picture in its work. But after all, a pastor is not primarily an impresario and if he enters professionally into the amusement business he is likely to find it hard to compete with the nickelodeon over the way even tho he may give his show free. He may be sure that if in his absorption in his new avocation he neglects his duty as a moral instructor his rival will take it up. When the church is showing purely secular pictures and the theater is giving morality plays and scenes from the life of Christ it is no wonder that the public hardly knows which door to enter.

THE INCONSISTENT ANARCHIST

THE tract writers say that when the unbeliever lies on the bed of sickness, or does duty in the first line of trenches, or falls overboard in rough water he usually reverts to the faith of his childhood and calls on his God for help. Whether this be true or not, it is unquestionable that nine men out of ten who spend their lives denouncing the government and defying the law fly to it for protectiton at the first excuse. This is quite right from the standpoint of the law, since its fundamental principle is the protection of every human being within its jurisdiction regardless of whether this protection is accepted or repudiated. If today you say that the police force should be abolished and are robbed tonight the police are none the less in duty bound to find and punish the robber. But we have often wondered how the anarchist reconciles an appeal to the police power with his own first principles.

Out in Montana the very men of the I. W. W. who have threatened open revolution and have involved themselves in criminal conspiracies are demanding not only legal protection but legal retribution. They require of the community which they have defied the punishment of the mob which, appealing to their own boasted method of "direct action," lynched one of their number. They are justified in this demand. But in making it they prove how wrong they were before. They have found out, and should admit their discovery, that the policeman, the sheriff, the judge and the soldier are not mere "tools of capitalism" but are necessary to *any* society, whether capitalist or Socialist, where unjust or violent aggression may occur. Emma Goldman and other anarchists, who do not merely antagonize our government but deny the legitimacy of any government which the mind of man could create, are still more inconsistent when they fight conscription on technical pleas of constitutionality or legal definition. What have *they* to do with constitutions if all government is equally incompatible with the rights of humanity?

We admit a certain attraction in the anarchist ideal. Anybody with a spark of romance in him likes to read about the gallant criminal, a Robin Hood or a Raffles. But we have only contempt for the Robin Hood who whines to the sheriff that some blackguard is stealing his venison and the Raffles who calls up the detective agency when his own safe is blown open. If we have the right (and we all have) to demand the utmost measure of protection from the community we have the duty to join forces with the rest of the community in protecting the life and property of others.

THE KNEIPP CURE IN GERMANY

IT is many years now since Dr. Kneipp of Bavaria announced to the world that men might live a hundred years if they would walk barefooted in the snow and dew. The death of the discoverer of this elixir of life long before he had completed the promised quota put a damper upon the fashion, but now it is revived in Germany under pressure of the war, not as a fad of the overfed but as a measure of economy and necessity. The shortage of leather has been felt from the start, for the Germans, perceiving that they could not keep their stock and eat it too, took the latter alternative and have since depended largely upon the cattle which were fed on American fodder in the Netherlands and then driven over the line. But now the American Government, by a somewhat extreme extension of its Civil War doctrine of "continuous voyage," has shut off the exportation of foodstuff to the neutral neighbors of Germany and so the Teutons are left without leather. They reverted to wooden shoes and they invented paper shoes, but the former clattered on the stones and the latter mushed in the rain. So they decided that it was best to go barefoot after all and the professors, always ready to supply reasons for anything the Government deems desirable, have proved that the practise is conducive to health and beauty, for it will bring the body into a normal posture and relieve the foot from the deformity of its rigid encasement. School children, as we should expect, are rejoicing in the new freedom and university students, always inclined to eccentric attire, have also taken it up, but we are surprized to learn that bank clerks and government employees are going barefoot to their offices, for they are usually the most conservative of all classes in their costume.

If this goes on Berlin will look like a college campus when the track teams and the Greek dancers are exercizing, and the character that Maeterlinck introduced into his "Blue Bird" play, "The Joy of Running Barefoot in the Dew," will be familiarly seen on *Unter den Linden.* And who can tell how much farther the denudation movement will go? Cotton and wool are short as well as leather. Before the war a *Nackt-Kultur* had been added to the other forms of *Kultur* and certain parks near Berlin and Hamburg were devoted to the art of Edenic living. Since then, it is reported, the movement has spread and the Germans seem to be reverting to the habits of their savage ancestors in their manner of apparel as they have in their mode of warfare. When the Allies do break thru the line, if they are much longer about it, they are likely to find the inhabitants of Germany much the same as Cæsar found them—minus the furs they formerly wore.

THE STORY OF THE WEEK

Kerensky Rides the Storm

By reorganizing the Russian cabinet Premier Kerensky has strengthened the Russian Government without greatly changing the character of its membership. Both Foreign Minister Terestchenko and Minister of Agriculture Tchernoff have been retained, in spite of the earlier report that they had been finally dropt. M. Tchernoff has been cleared of the charges of pro-German intrigue brought against him by his political opponents. Several members of the Constitutional Democrats (a middle-class party of reform which before the revolution was excluded from the Cabinet as too radical but is now considered the conservative wing of the provisional government) appear in the new ministry. This gives the Kerensky administration a broader basis of support in the Duma and excludes the danger of a conflict between the Socialists and the moderates. Premier Kerensky, as the head of the coalition cabinet, exercizes the powers of a dictator with the full support and approval of his colleagues. It is impossible to say who could take his place if his present ill-health should compel him to resign.

General Korniloff is doing a work of organization in the army comparable to that of Premier Kerensky in the civil service. Discipline is, in general, restored, but the effects of previous indiscipline are not yet at an end. German and Austro-Hungarian troops continue to expel the Russian forces from Bukowina and are even threatening an invasion of the northern part of Rumania, which is still unoccupied by the armies of the Central Powers. The Rumanians are considering the removal of their capital, which is at present at Jassy in Moldavia, to some town in southern Russia. General Mackensen's army has captured considerable numbers of Russian and Rumanian troops. On the other hand, both Russians and Rumanians have been able to carry out vigorous counter-attacks and in some places have repulsed heavy German offensives. The military authorities have discovered that the Russian army which broke and fled before the Germans in Galicia was honeycombed with German spies who had systematically demoralized the soldiers with false news, bribery and strong drink.

THE GREAT WAR

August 6—Twenty-three British ships sunk during past week. New German cabinet ministers take office.

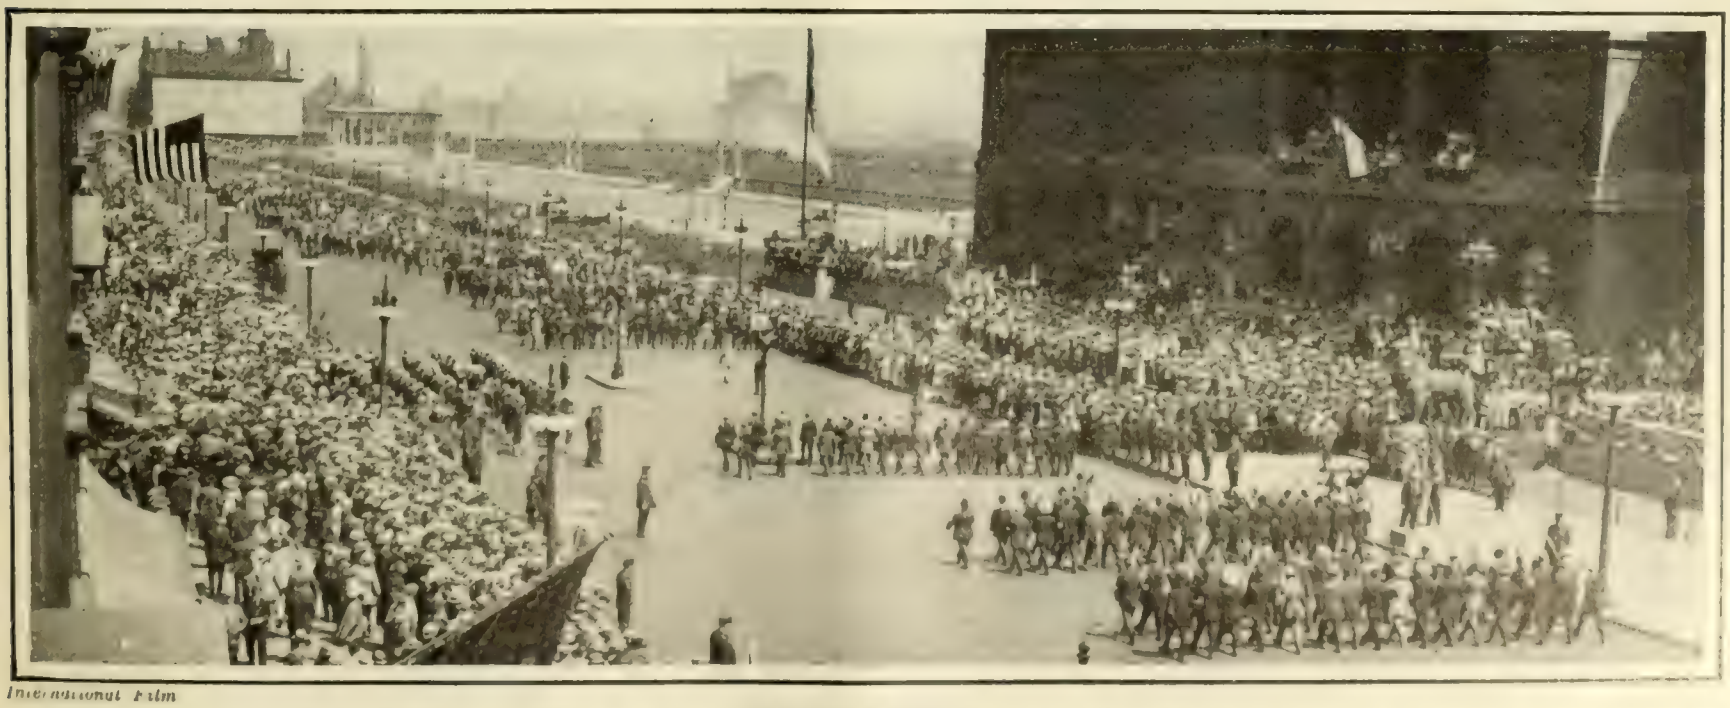
August 7—Mackensen attacks Rumanians. Canadians approach Lens. Liberia declares war.

August 8—Canadian Senate approves conscription. American food bill finally enacted.

August 9—Artillery duel renewed in Flanders. Canada announces food restriction program.

August 10—British Labor Party votes to send delegates to Stockholm. British take Westhoek Ridge.

August 11—Henderson leaves British cabinet. Germans make six counter-attacks near Ypres.



August 12—German aircraft raid English coast. Mackensen gains in Rumania.

Root Explains Russia

The Root commission which was sent to Russia has returned to Washington and reported on the conditions existing in that country at the time when the Americans were there. The commission is unanimous in the opinion that Russian freedom has come to stay, that the long years of revolutionary struggle and of local self-government thru the mir and the zemstvo (provincial council) had fitted the nation for stable government, and that the worst dangers from anarchy and German propaganda are already past. The greatest problem is the organization of transport and supply, and here American aid is most effective. Major General Scott, the military expert of the commission, asserted that the Russian army was still a factor in the war and would continue to be so in spite of every rumor to the contrary. Mr. Root admitted, however, the possibility of a German advance very far into the heart of Russia before it could be halted. Charles Edward Russell advocated sending American soldiers to the eastern front for their moral effect, but the other members of the commission seem to think that more effective aid can be furnished in other ways. The commission agreed that one of the most mischievous elements in the whole situation was the return of disaffected radicals, or paid German agents acting the part, from the United States to Russia. These men misrepresented the war policy of the United States and insisted that Russia take an independent line and refuse to become the tool of American capitalism.

British Labor Votes for Conference

By a vote of 1,046,000 to 550,000 the British Labor Party resolved to send delegates to the Stockholm Peace Conference. When the vote was announced at the conference of leaders held in Westminster one delegate declared that the Firemen's and Seamen's Union would refuse to transport the labor representatives, as they did on a previous occasion. Arthur Henderson, the Labor member of the British War Council, addrest the conference in favor of sending delegates to Stockholm. He said that at first he was opposed to

International Film

CHICAGO'S QUOTA

They haven't any uniforms and they haven't any guns, but wouldn't you know they were soldiers? Pretty nearly all of Chicago turned out to cheer them as they marched along Michigan Avenue—the men of the first draft, the front ranks of the National Army

the idea, but that during his recent trip to Russia he discovered that the Russians were so insistent upon a conference that they would be alienated by a refusal of British laborites to take part in it. "I concluded," he said, "that it would be inadvisable, perhaps dangerous, for the Russians to meet enemy and neutral representatives alone."

Arthur Henderson resigned from the War Council on the day after the Westminster labor conference. Lloyd George, in accepting his resignation, rebuked him severely for his conduct. He pointed out that Mr. Henderson had allowed his colleagues in the ministry to believe that he was opposed to the Stockholm conference, that he had behaved improperly in acting independently of the War Council of which he was a member, that Premier Kerensky had sent a letter to the British Government in which he denied that Russia's participation in the conference had his indorsement, and that Mr. Henderson had omitted all mention of this vital point when he spoke before the Westminster conference. Mr. Henderson did not deny these charges but intimated that he might later answer them in the House of Commons.

The resignation of Mr. Henderson is a serious embarrassment to the British War Council, since it now contains no representative of the Labor or Irish Nationalist parties and only one Liberal, Premier Lloyd George himself. Unless the idea of a balance of parties is wholly to be abandoned and the war waged by a frankly Conservative ministry, some Liberal or Labor member of Parliament must be put in Mr. Henderson's place. There are many Labor men who oppose the Stockholm conference, but if the party as a whole favors it, no such man would be considered as truly representative of the party on the War Council.

German Ministry Reorganized

Chancellor Michaelis has selected his new cabinet after accepting the resignations of four Imperial secretaries of state and five members of the ministry of the Kingdom of Prussia. Like all German Chancellors, Herr Michaelis is at once leader of the administration of the whole German Empire and also of Prussia, the dominant state of the Empire. In both capacities he is responsible only to the German Emperor and not to the Imperial Reichstag or to the Prussian Diet. By the character of the appointments which he has made Chancellor Michaelis shows his determination not to permit the introduction of Parliamentary government either in the Empire or in the Kingdom. Most of the new ministers are bureaucrats without known political affiliations. Dr. Peter Spahn, however, the leader of the Catholic Center Party in the Reichstag, gets a post in the Prussian cabinet.

By far the most widely discussed appointment both in Germany and in foreign countries was that of Richard von Kühlmann as Secretary for Foreign Affairs in place of Dr. Alfred Zimmermann. The new Secretary has had much diplomatic experience. He was

Paul Thompson

GERMANY'S NEW FOREIGN MINISTER

The appointment of Dr. Richard von Kühlmann, Ambassador to Turkey, to succeed Dr. Zimmermann is the most important of the recent changes in Germany's ministers. He has been a vigorous opponent of the ruthless submarine warfare and has advocated the policy of avoiding so far as possible the further alienation of Great Britain

born in Turkey and has served there as German Ambassador during the present war so he may be regarded as thoroly familiar with the situation in the Near East. He has also been Minister to Holland, and in both posts he devoted himself to the dissemination of very effective pro-German propaganda. Some German liberals are disposed to welcome the appointment of Dr. von Kühlmann on the ground that he did not favor the policy of unrestricted submarine warfare. Herr von Waldow, high bailiff of Pomerania, replaces Adolph von Batocki as head of the Food Regulation Board. No party in Germany, to judge by the comments of the press, seems very enthusiastic over the cabinet changes, but only the Socialists seem disposed to withdraw their support from the Michaelis administration on acount of them.

Germany's greatest internal embarrassment at present is in the occupied region of Russian Poland. Since the Russian revolution the Poles have shown more friendliness to the cause of the Entente Allies and fight less willingly in the German army. Several Polish officials have been sentenced to imprisonment by German courts martial for trying to incite the populace to disturbance. The greatest cause of difficulty is, however, not political but economic. There are reports of a famine in Warsaw which is causing an exceptionally high rate of infant mortality among both Poles and Jews. Hunger forces the people to riotous demonstrations which can only be suppressed at the cost of alienating the Poles from their German overlords.

The German Government is also in some financial difficulty. In order to buy from the neutrals Germany has usually been compelled to pay gold, and, in order to preserve the gold supply from exhaustion, has been forced to seek a loan from Switzerland. The allies of Germany, likewise, are placing heavy burdens on the nation. According to a Swiss report Germany has notified Turkey and Bulgaria that she will finance all expenses incurred by those countries in the 1917-18 campaign.

The Belgian Battle

The week was one of uninterrupted success for the French and British on the Belgian front, altho no territorial gains of great importance were made. The present war plan of the western Allies is to be content with small gains secured by first obtaining a local advantage in aircraft, thus "blinding" the enemy as to the tactical maneuvers of the army; then by sweeping away the enemy's earthworks and barbed wire defenses with a lavish expenditure of shell fire; then attacking and occupying a small but conveniently placed area of trenches and shell crater positions. This type of warfare is costly in time and ammunition but very economical of lives. Whether the present policy is wise or unwise depends upon whether "Time is one of the Allies," as military writers have generally assumed, or is really on the side of the Germans.

The Canadians again distinguished themselves by their attack on the German trenches near Lens. They gained only a few hundred yards, but they suffered very few casualties. In Belgium, after the usual artillery preparation, the French made a short advance north of Bixschoote, where the French and British lines are said to join. On August 10 the British captured the village of Westhoek and all the German positions on the Westhoek Ridge. The entrenchments taken were favorably placed and of some military importance. On the following night the Germans attacked the new British lines six times, but wholly without success. One reason for the absence of more extended offensives on either side is the state of the weather. Flanders has become a sea of mud, and the clouds are so heavy and continuous that aeroplanes are unable to direct the fire of the artillery since they cannot make observations except by flying dangerously close to the ground.

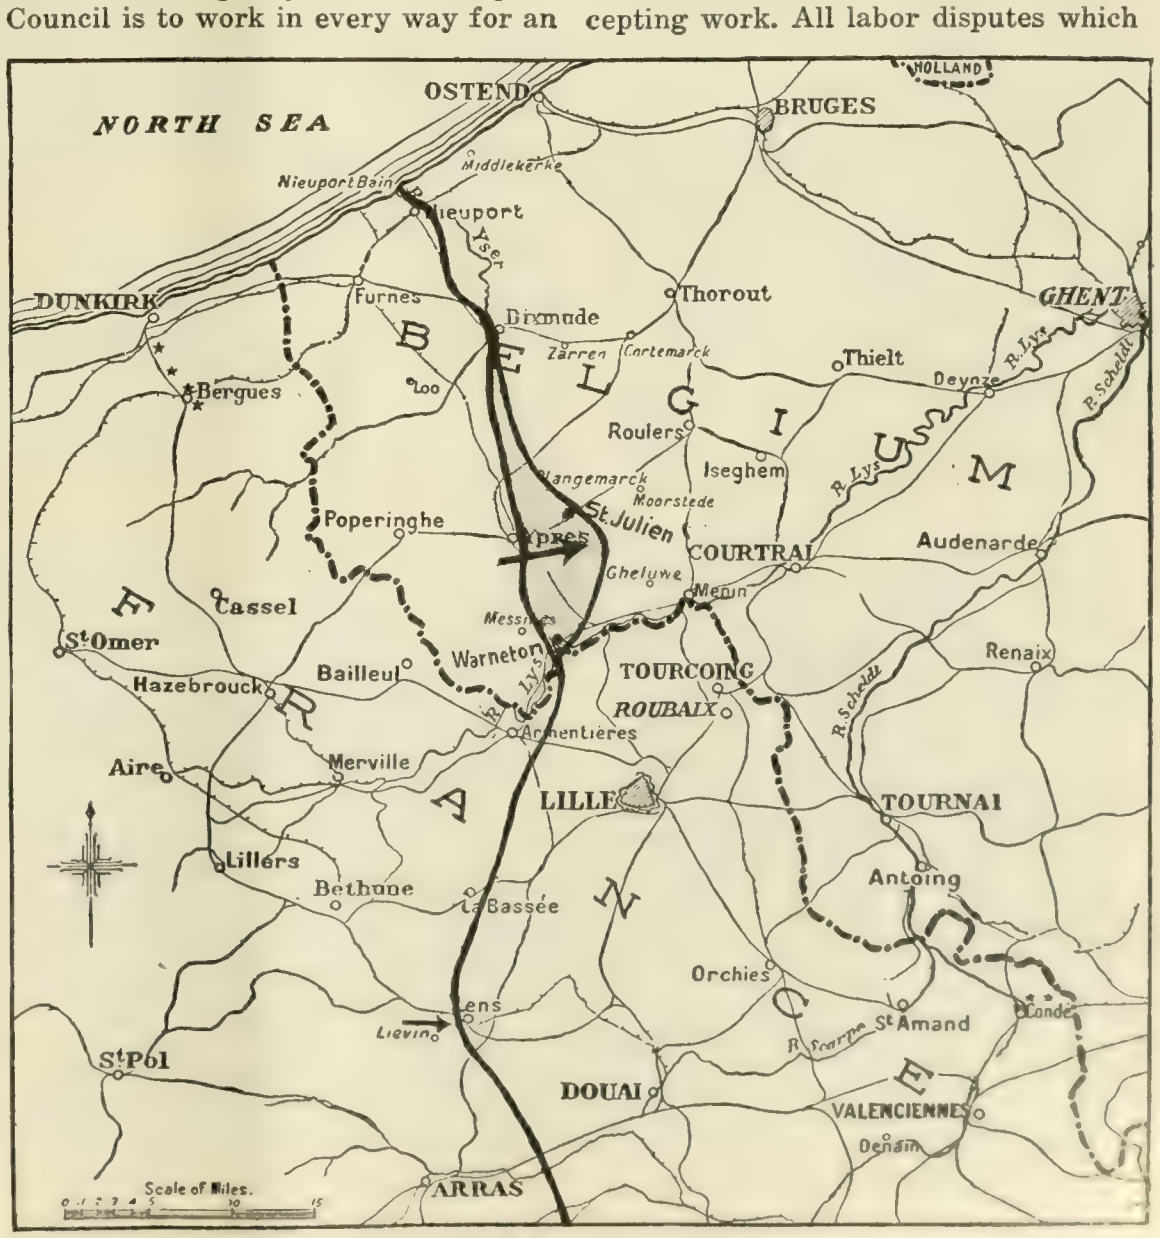
In France there has been comparatively little activity except in the neighborhood of Lens. The Germans have continued to hammer the French lines, but their only success was the capture of some yards of trenches north of St. Quentin and 150 prisoners.

Serbian King Avenged at Last

Tardy justice has overtaken several of the military conspirators who in 1903 assassinated the King of Serbia, Alexander Obrenovitch, his wife Queen Draga, and the leading adherents of the dynasty. Several high officers have been condemned to death and others, including General Popovitch, to imprisonment. These men owed their long immunity to the political complications in which the crime was involved. King Alexander's death closed the chapter of the Obrenovitch dynasty and put a rival line, the Karageorgevitch, upon the throne. The new ruler, King Peter, had, so far as is known, no part in the crime which gave him the crown, but he dared not attempt to punish the authors of it since they were not only the chief supports of his royal house but powerful and unscrupulous military leaders who would not hesitate at a *coup d'etat* against King Peter if they were molested. The conspirators therefore remained in positions of honor to the scandal of Europe and several nations refused for some years to send diplomatic representatives to the Serbian capital. But grown overbold from long security they plotted last year against Crown Prince Alexander and this gave the Serbian government both excuse and opportunity to act. Some forty high officers were arrested after the disclosure of the new plot and tried by court martial. In the list of persons tried are most of the men who had taken part in the murders of fourteen years ago.

China's Troubles

Acting President Feng Kwo-Chang has approved the unanimous decision of the Cabinet to declare war on Germany and Austria-Hungary. The Government is in touch with the ministries of the Entente Allies and may soon be expected to announce the details of its participation in the war, whether it is to be purely formal or active. China's entry into the war, taken in connection with the recent declaration by Siam, means that the whole continent of Asia is now in the war, not including the Dutch islands as belonging to the continent. Afghanistan and a few small native states in the mountains of central Asia are nominally neutral, but they are really British protectorates, and Persia is only neutral in theory, as the British, Russians and Turks have made it their battleground. With the entrance of the negro republic of Liberia into the war, Africa also becomes practically a belligerent continent. Only Abyssinia and the small Spanish colonies on the west coast are unaffected by the war. Liberia's declaration of war is the natural sequence of the break with Germany, which occurred some weeks ago.



The new Chinese Government may have to carry on a civil war at the same time as its war with the Central Powers. Republicans of southern China are organizing to elect a new president and refuse to recognize the authority of Vice-President Feng Kwo-Chang, the head of the administration since the resignation of the Chinese President, and of Premier Tuan Chi-Jui. A portion of the Chinese navy, including fourteen cruisers, has espoused the cause of the rebels and Chen Pih-Kuan, Minister of the Navy, has issued a manifesto declaring the existing Government illegal. One cause for the outbreak may be dislike of participation in the war on the part of some of the republicans of the south. The adherents of the Manchu dynasty seem to be making no effort to recover power in spite of the division of the republican forces.

Labor and the War

The activities of the I. W. W. have called forth a response from the representatives of the more orthodox labor unions which is very far from sympathetic. A conference of leaders of the American Federation of Labor, with Samuel Gompers at its head, has organized an American Alliance for Labor and Democracy to aid in the prosecution of the war and to combat disloyalists who might appear within the ranks of organized labor. The Workmen's Council, which is the labor wing of the People's Council, considering itself aggrieved by the remarks of Mr. Gompers who criticized unpatriotic workingmen, issued a statement showing that many organizations affiliated with the American Federation of Labor were also adherents of the Workmen's Council. The policy of the People's Council is to work in every way for an immediate peace "without annexations or indemnities."

The biennial convention of the United Mine Workers of America, District One, denounced the Industrial Workers of the World for attempting to start strikes in the anthracite coal districts of Pennsylvania, and pledged themselves to do their best to keep up the coal supply of the country during the war. On the Pacific Coast organized labor is equally emphatic in its attitude. The Seattle Central Labor Council has made public the resolutions which it adopted several weeks ago condemning the I. W. W. for establishing rival unions against the interests of the American Federation of Labor and urging local unions to bar their members from joining the I. W. W.

In spite of the loyalty of the American Federation of Labor strikes continually recur in every part of the country and particularly in those industries which relate most closely to national preparedness. All carpenters engaged on Government building operations for the army, navy and aviation section in New York, which includes work on the new army cantonments, were ordered out by the delegates of the Building Trades board in order to establish the principle of the closed shop. In order to meet the situation the Council of National Defence has prepared an agreement which will hereafter bind all employers taking Government contracts and all men accepting work. All labor disputes which

THE BIG PUSH IN BELGIUM

The shaded area shows the gains of the French and British in their recent drive in front of Ypres. The arrows show the direction of the present offensives near Ypres and near Lens

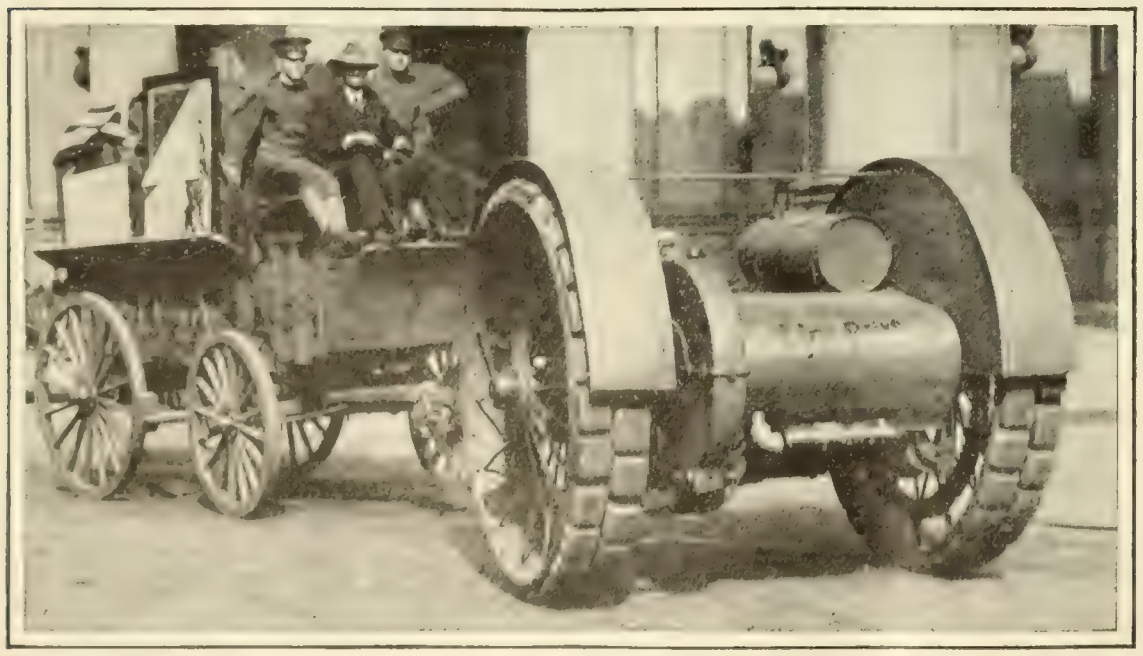
cannot be adjusted by negotiation must be submitted for final decision to a labor adjustment committee representing the nation, the workmen and the employers.

The I. W. W. strikes in the metal mines of the Rocky Mountain states continue to hamper the Government in its effort to secure an adequate production of war munitions. Miss Rankin of Montana, the only woman member of Congress, has introduced a resolution demanding legislation to enable the President to take over the copper mines of Montana and Arizona. In the course of her speech supporting this resolution she named the "Copper Trust" as the party to blame for the strikes by forcing the miners to work under intolerably oppressive conditions.

Submarines to Specialize The report is current that the German U-boats will hereafter confine their activities to the Atlantic, the North Sea and the waters around Great Britain, leaving the policing of the Mediterranean to the Austrian submarines. Austria-Hungary now has submarines in sufficient number to harass Italian commerce without risking German ships on the long and perilous trip by way of Gibraltar. Apparently the Germans have found that they were scattering their submarines too widely for the maximum effect.

Prospects for a speedy conquest of the U-boat are not very good. During the week ending August 5 twenty-one ships of more than 1600 tons and two smaller vessels were sunk. This is practically the normal degree of submarine activity for the past three months. Neither belligerent is satisfied, for the Germans are unable to increase their total of destruction and the British unable greatly to reduce it. German dissatisfaction is shown in the reported decision to concentrate submarine warfare in British waters. British dissatisfaction is revealed in recent changes in the British Admiralty. Vice Admiral Wemyss succeeds Admiral Sir Cecil Burney as Second Sea Lord, and Alan Anderson, who has been a member of the Wheat Commission, takes the Controllership of Naval Construction, the post formerly held by Sir Eric Geddes, the new First Lord of the Admiralty. English official estimates show an increased grain and vegetable acreage of about six per cent or 347,000 acres. This figure does not include small market garden plots recently planted. This is England's answer to the threat of starvation by submarine.

Other belligerents and neutrals are suffering from the German war on the world's commerce. Four large French vessels and two of less than 1600 tons were destroyed during the week and three ships of Italian registry. During July Norway lost thirty-three vessels, aggregating 58,000 tons, and eighteen lives. The death of four Americans on the British ship "Belgian Prince" is reported. The crew of this ship were first made prisoners and then deliberately drowned. The Government of Peru has renewed its demand for indemnities for the sinking of the Peruvian ship "Lorton."



The Law and the Slacker Evasion of the draft law is coming to be classed as an extra-hazardous occupation. By the first of August some twenty thousand persons had been arrested for refusing to register on June 5. The majority of these were convicted and sentenced to various short terms of imprisonment. Of course many unregistered individuals escape the knowledge of the Federal authorities, but a surprizingly large number have been reported by private letters sent by their neighbors and acquaintances to the Department of Justice.

In nearly every part of the country the exemption boards are at work examining drafted men. It is too early to state what the percentage of rejections for physical causes and what the proportion of granted exemptions may be, but both are thus far larger than had been estimated before the numbers were drawn at Washington. The Government has issued instructions that no wife shall be considered "dependent" if she can live comfortably without her husband's labor, and the exemption boards have shown a tendency toward a stricter interpretation of the law. It has been pointed out that where a woman has married for the purpose of enabling a man to escape conscription both are liable to imprisonment for conspiring to evade the law. In few such cases, however, can intention be proved. Aliens of countries associated with the United States in the war against Germany are permitted, according to Provost Marshal General Crowder, to serve in the new National Army raised by the draft, altho not as yet compelled to do so. Congress is considering legislation which will place the friendly alien in the same position as the American citizen. There is some discussion at present whether the mere fact of being drafted places the conscript under army discipline and subjects him to martial law. If this is the case the man who persists in refusing to serve might be treated as a deserter and be liable to the death penalty. Of course such an extreme sentence, whether theoretically allowable or not, would hardly be inflicted upon any peaceable "conscientious objector."

Draft Riots in Oklahoma A local case of resistance to the draft, of little real importance but possessing certain features of interest, recently occurred in Oklahoma. A gang of very motley membership, having little in common but dislike of conscription, left their homes to join in a common resistance. The larger part of the confederated outlaws were poor tenant farmers whose resentment against their poverty extended to resentment against the Government which permitted it. These men were organized into several radical associations known by such names as the Oklahoma Working Class Union and the "Jones family." With them were associated a few negroes and Indians of lawless and adventurous type and some criminals. The center of disturbance was in and near Seminole County.

The citizens of Oklahoma organized posses of several hundred armed men to round up the outlaws and bring them to justice. Altho the draft resisters were armed they usually surrendered quietly to the larger forces brought against them. In a few cases only was there a conflict. Near Holdenville the posse raided a country schoolhouse occupied by draft resisters and killed one man and wounded two others, two men also being wounded of the citizens' posse. Within a few days two hundred anti-conscriptionists surrendered singly or in groups. Altho some Indians had taken part in the insurrection, a larger number of Indians took the side of the Government and assisted greatly in trailing the outlaws. The United States District Attorney announced that he would bring a charge of treason against the prisoners since they had levied war on the Government with armed force.

Apache Indians, near Globe, Arizona, are reported to have taken to the warpath. Forest rangers and sheriff's deputies have undertaken to quell the out-

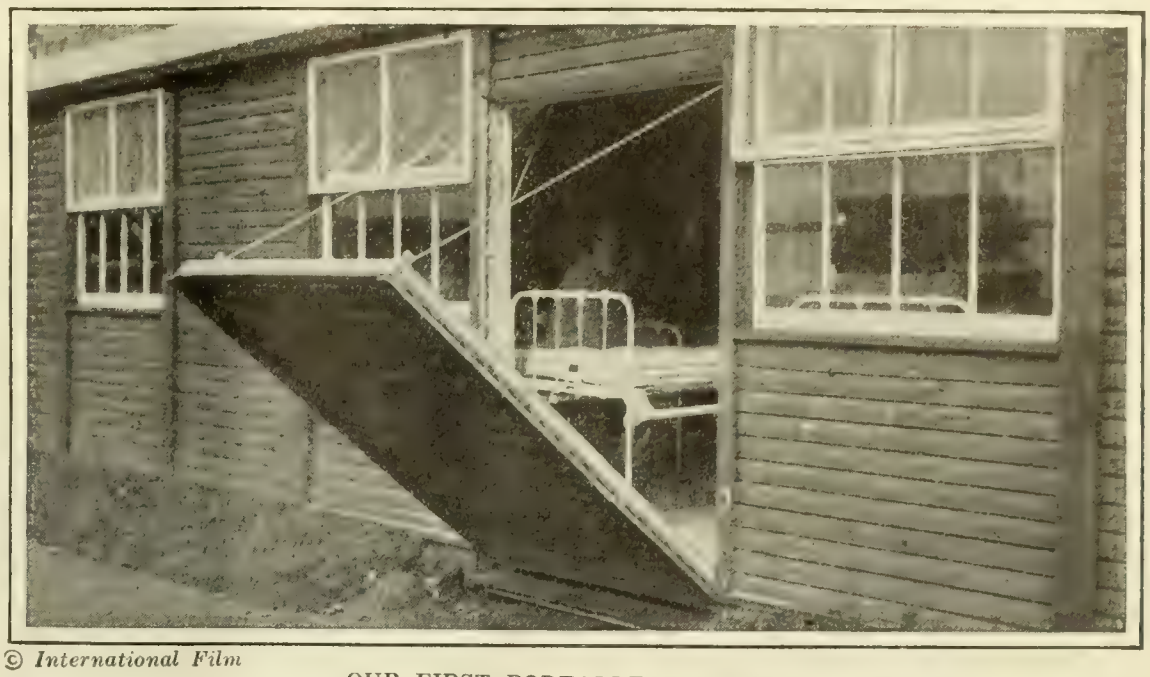
THE ARMY HORSE

Here is an automobile that you drive with reins. Its official title is line-drive tractor. Its speed is ten to twelve miles an hour and it will carry fifteen tons of field artillery and supplies up the steepest grade. It can be used for farming, too, and for recruiting. That is what this particular tractor is being driven thru New York for

break. According to the account of a forest ranger I. W. W. agitators have been attempting to stir up insurrection among the Mexicans and Indians employed in the asbestos mines of the district.

Food Bill Law at Last



On August 8 the food control bill again passed in the Senate after having been approved by the joint conference of House and Senate and repassed by the House of Representatives. The conference report was adopted by a vote of 66 to 7. The only senators voting in the negative were Hardwick of Georgia, Hollis of New Hampshire, and Reed of Missouri, Democrats, and Gronna of North Dakota, La Follette of Wisconsin, France of Maryland and Penrose of Pennsylvania, Republicans. Senators Gore of Oklahoma and Sherman of Illinois announced their opposition but did not vote. Most of the absent senators would have voted favorably. Altho the final vote was so decisive no piece of war legislation has encountered so much opposition or been debated at such length.

In the House of Representatives the food control bill was received with much approval and very little opposition. Altho several representatives spoke against the measure as it emerged from conference no one ventured to vote against it. The most striking speech made during the course of the debate was Representative Heflin's attack on filibustering congressmen who impeded the progress of necessary legislation; a speech that called forth many protests. He said in part:

> The other day one member in another body, by his objections, held up for ten days the aeroplane bill, a very important measure. Would Germany have asked anything more? Another one praised the slackers and the traitors of Canada for resisting the selective draft. Would the Kaiser have asked more? Another has tried to discredit Mr. Hoover before the country. . . . And in this House a member from Illinois introduced a bill, which is now pending, asking that the selective draft law be repealed, and the German spy system is urging that petitions be sent to members to vote to repeal the law.

After the food control bill had been finally enacted the Senate took up the long delayed food survey bill which has been held up since June by the debate over the companion measure. This measure provides for an investigation, conducted by the President thru agencies designated by him, of the supply, consumption, cost, prices and distribution of food products, fuels and agricultural implements, and authorizes the President to purchase foods, fertilizer and agricultural machinery and sell them again to stimulate production should such a course become necessary.

The food control bill as adopted gives the Government power to administer the production and distribution of foods, feeds, fuel, fertilizer, farm equipment and every other agricultural necessity. It prohibits restriction of supply by hoarding or destruction of food and establishes a system of conditional licenses for those engaged in the business of food storage. In extreme cases, hoarded food may be condemned and seized by the Government. Power to regulate speculation in the commodities conservation of which is the object of the bill is granted to the executive. Power to fix prices is also granted, and a minimum of two dollars a bushel established for wheat. The manufacture or importation of distilled liquors for beverage purposes is prohibited during the war and the President is directed to commandeer such distilled liquor now in bond as may be needed for the manufacture of alcohol for military purposes. The compensation for liquor so commandeered is left indefinite. The production and sale of beer and wine is not absolutely prohibited but is made subject to regulations issued by the President. Federal purchase and sale of fertilizers is authorized. No food administrator is named in the bill, but the President is left free to give the position to Mr. Hoover without dividing the power among the members of a board, as the Senate had at first proposed.

OUR FIRST PORTABLE HOSPITAL

At the Rockefeller Institute in New York City is a complete base hospital where Dr. Alexis Carrel is teaching surgeons the Carrel-Dakin method of treating wounds. This is one of the bomb exits. At every few yards a section of the wall swings outward on a pulley, forming a door of escape for patients and nurses in case the hospital is bombarded by German 'planes

The French Contribution

M. André Tardieu, French High Commissioner to the United States, has sent to Secretary Baker of the War Department a very important statement of what France has thus far contributed to the general cause of the Entente Allies. He states that France now has nearly three million men in the active army and sufficient reserves to maintain that strength for many months to come. He presented statistics to show that French losses have steadily decreased for each successive six months' period during the war owing to better understanding of the methods of training and tactics suited to the present war. The whole western front, according to his estimate, is 739 kilometers in length. Of this line the French occupy 574 kilometers (360 miles), the British 138 (85 miles), the Belgians 27 (17 miles). The Germans have about 42 army divisions opposite the English and 81, or almost twice as many, opposite the French. In less than three years the French increased the number of their heavy cannon from 300 to 6000 and their munitions output from 13,000 to 350,000 shells a day. In addition to supplying their own needs the French re-armed and re-equipt the Belgian, Serbian and Greek armies. Up to the first of January the French had borrowed six billion francs ($1,200,000,000) from foreign nations and loaned four billions ($800,000,000). During three years of war the French Government expended 82,647,000,000 francs, or more than $16,500,000,000.

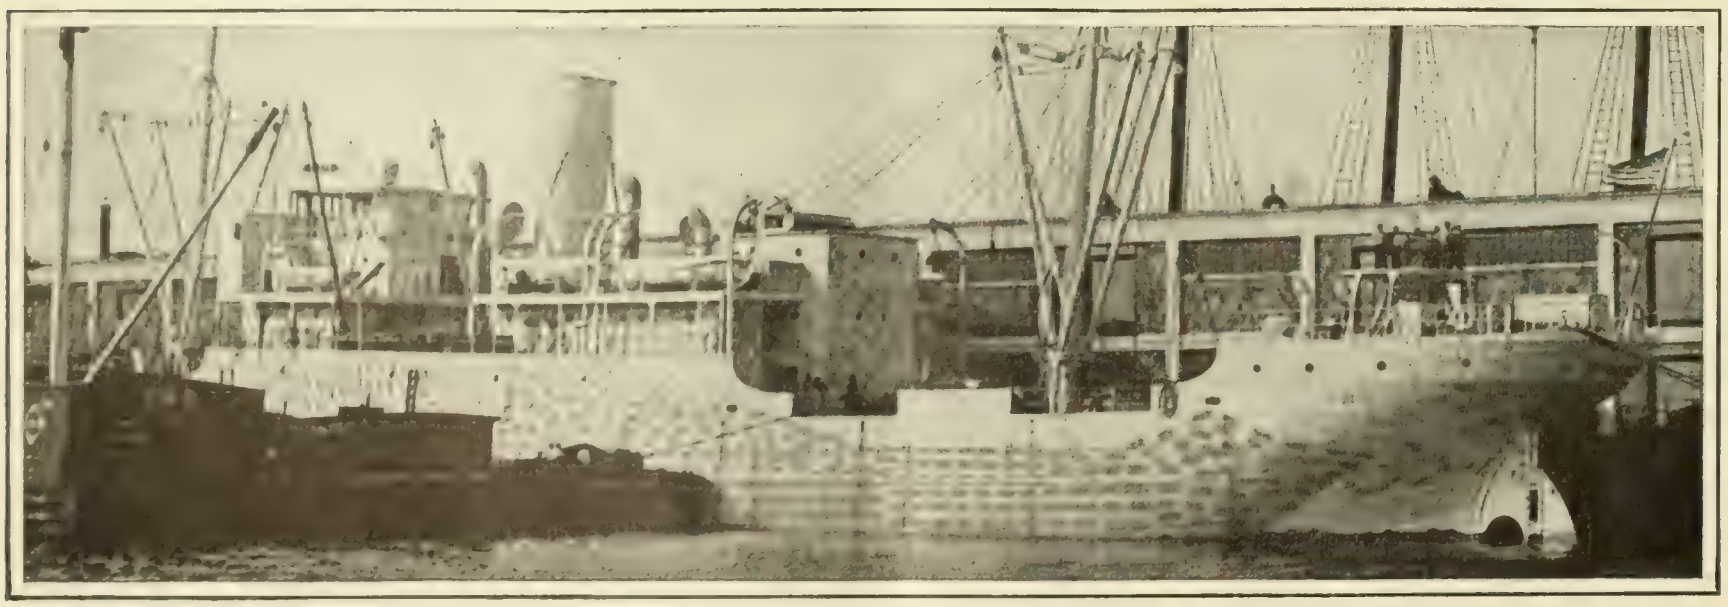
Conscription Wins in Canada

The Canadian Senate has approved the bill for compulsory military service which had passed the House of Commons in July and now goes into effect. On August 4 the Canadian Senate advanced the conscription act to second reading. A motion to postpone the operation of the measure until after a general election was defeated by 44 votes to 34, only three supporters of the Borden administration voting in favor. Four days later the bill passed the third and final reading. By its terms the first class to be called, single men between the ages of twenty and thirty-two years, will be summoned for examination as soon as tribunals have been established to pass upon applications for exemption. The authorities hope to have a hundred thousand drafted men in training this autumn. Archbishop Bégin of Quebec has sounded the trumpet of opposition to the law. He exprest his fear that the Roman Catholic clergy and divinity students might be held to military service. A large part of the French speaking population of the Province of Quebec is ready to go to any lengths to prevent the compulsory service law from going into operation and will be greatly encouraged by this championship of their cause by their religious leaders.

The Market for Stocks

In the market for securities, on the New York Stock Exchange, the upward movement of the preceding week was not checked on Monday, the 6th. Net gains for a majority of the stocks were small, but there was an addition

of nearly 2 points to the price of Steel shares. Their strength was due partly to the recent report showing net earnings of $144,498,000 for the June quarter, altho the company in its statement estimated that $87,783,000 must be allowed for the new excess profits taxes in the first six months of the year. Gains far exceeding the average were made by shares of sugar and tobacco companies. On the 7th, however, the market's course was reversed, owing to the effect of news from Washington about the Government's plans for fixing or controlling prices, and to indications that manufacturers in the metal industries might be required to sell to all buyers at the reduced prices named for the Government and the Allies. Bethlehem Steel shares were exceptionally weak on reports that the company would borrow a large sum on account of the new taxes, and that it had declined an order from the Government because the offered price was too low. Sugar shares continued to advance, but motor stocks were not favorably affected by the Studebaker Company's reduction of its dividend rate from 10 to 4 per cent. There were slight gains for nearly all the railroad securities.



A sharp decline on the 8th, when the market broadened and 628,000 shares were sold, was caused by additional reports concerning the Government's price-fixing policy. The August crop report, highly favorable except with respect to wheat, seemed to be ignored. Net losses for industrials were large. From the price of Bethlehem Steel 9½ points were taken. The report that a Government order had been rejected by the company was denied. While the new War Industries Board did not say that prices for all buyers would be made as low as those paid by the Government and the Allies, it quoted these words of the President: "We must make the prices to the public the same as the prices to the Government." Investors and traders foresaw a great reduction of the profits which have raised the prices of many industrial stocks. Nearly one-fifth of the day's business was in Steel Corporation shares. For these the net loss was 4⅛ points. Almost half of this was recovered on the 9th, when prices turned again, altho the average advance was slight. Motor shares were weak. This recalled the recent depression, ascribed to the appeal of Mr. Bedford and the Council of National Defense to the owners of cars, urging them to economize in the use of gasoline because consumption of oil was exceeding output. Prices of sugar and tobacco stocks continued to move upward. For a majority of the railroad shares there were fractional gains. Some accounted for the persistent firmness of these shares by pointing to a recent report of the Interstate Commerce Commission, showing large increases of net earnings in June and the first half of the year.

Grain and Cotton

The quoted price of wheat at Chicago last week for September delivery was in the neighborhood of $2.25 with December corn selling at $1.17, but these reported prices are misleading, for 40 or 50 cents more must be paid if the wheat is to be delivered at once, and the cash price of corn has been about $2.40. The market was but slightly affected by the Government's August crop report, which reduced the expected crop of wheat to 653,000,000 bushels, or only 13,000,000 more than were harvested last year, while it increased the preceding month's estimate of the great yield of corn. Canada's Food Controller says the Allies hope to get 460,000,000 bushels of wheat from Canada and the United States. As our surplus under normal conditions would not be more than 35,000,000, it will be very difficult if not impossible to supply what is needed abroad, even if we sharply reduce the quantity consumed at home. Germany's crop is small, and unfavorable weather has cut down the yield in the Scandinavian countries, where stocks are nearly exhausted. In our Atlantic ports are scores of Dutch ships with grain on board, for the exportation of which licenses are withheld by our Government. Restrictions imposed by our new Exports Council and by Canada have reduced the weekly exports of wheat from the two countries from a recent average of more than 8,000,000 bushels to 1,678,000 in the third week of July and 2,782,000 in the fourth. The shipment of wheat and fodder grain to the northern European neutral countries has been prevented since July 15. The price of cotton, which advanced a few weeks ago to 27 cents a pound at New York, on account of drought, fell to 24¼ and then rose to 27½, on the 9th. A Government report indicates a new crop of 11,949,000 bales and shows that the planted area was reduced by 1,488,000 acres. Last year's crop was 11,511,000 bales.

The Metal Industries

Metal markets and the operations of many manufacturers have been affected by the Government's plans for fixing prices at the close of the inquiry now being made by the Federal Trade Commission; also by the restriction of exports since July 15 and the embargo on ship plates which will be in force after August 15. If low prices for the Government are to be duplicated for the Allies, it may be necessary to revise contracts involving large sums, and if the entire buying public is to have the advantage of the same low prices, great changes may take place in the metal industries. Thus far the high prices in the steel industry have been as a rule maintained, altho two or three reductions are announced. Restraint imposed by the Exports Council in the last three weeks has caused accumulation of iron at the ports; in the South 40,000 tons are waiting for licenses. The coming embargo on ship plates will not be satisfactory to Japan. That country for several months past has taken 50 per cent of our output, now has large orders on manufacturers' books, and is offering four times the old price for 30,000 boxes of tin plate, the shipment of which probably will not be permitted. In the copper and lead industries there is uncertainty on account of the price problem. There, as in the steel industry, private consumers are out of the market because they expect low prices fixed by official authority. These would give them an advantage over competitors who have paid the current rates for large stocks. Until the price inquiry is finished and decisions based upon it are made, many plans for construction will be delayed and the condition of the metal trades will be unsatisfactory.

CAMOUFLAGE AT SEA

Camouflage is as useful on the water as it is on land. When a ship is checkered, like this, in marine blue and gray it fades out of sight entirely at a distance of a mile or so, and even nearby it shimmers and glitters in the sun so that it is a very bad target for a submarine

FUSION'S FINEST MAKE GOOD

THE REGENERATION OF THE NEW YORK POLICE

BY FOSTER WARE

NEW YORK'S police force has had its share of ups and downs —perhaps a larger share than any other body of men of its size—but it has remained for the Police Department of 1917 to upset tradition not only by frankly accepting responsibility for failure in a particular case but by voluntarily setting about to rid itself of whatever defect that particular failure may have been the result of. Therein lies one of the oustanding differences between the New York police of 1917 and the force as it existed in the dear dead days of Tammany rule. To underestimate the importance of the Cruger case would be as dangerous as to overestimate it. The tendency perhaps has been in the latter direction. Nevertheless there have been no excuses, no apologies and—what is more to the point—no attempts on the part of Commissioner Woods and his deputies to shield any one upon whom suspicion may rest. That in itself is something decidedly new and reassuring to a city that has had nearly three and one-half years in which to forget the many shortcomings of former police administrations.

For over against one admittedly bad piece of detective work there is a record of actual performance which has gone far to impress both residents and visitors with the fact that New York has at last qualified as a well-policed city. Not that its police force is yet perfect. It isn't, and not one of its admirers pretend that it is. But that it stands heads and shoulders above the police organizations that preceded it, few whose memories are in good working order will deny.

Take the individual policeman—the patrolman you meet on almost any corner of crowded Manhattan. Observe his general appearance, the way he carries himself, how he "sets up," and what manner of man he is, mentally and physically. Run your eye along his front and side elevations and compare the result with the mental image you have of the "cop" who used to be outrun by all the small boys of the block and who could almost always be found on duty at the sign of the nearest dealer in Ales, Wines, Liquors and Cigars. Gradually, and scarcely realizing what was taking place, New York has said farewell to the old-time patrolman. What might have proved a fitting occasion to pay its respects to a dying race was lost when Commissioner Woods abandoned a plan to select the thirty fattest policemen, send them to the Police Training School, and put them thru a rigid course of gymnastics, "for the good of the service" as much as for their own good. The plan fell thru, not because of the sheer weight of the undertaking, but out of regard for the feelings of the thirty relics of a day when the dimensions of a Devery were distinctly *de rigueur* on the force. What it was intended to accomplish, however, has been brought about in a more effective, if less spectacular, way.

Police Commissioner Arthur Woods

Machine gun practise on a police boat

There are on the New York police force about 11,000 men, and the recruits number not more than 300 or 400 a year. Thus the personnel of the force today is much the same as it was when Mr. Woods took charge, save for about 1000 men. The change that has come about cannot, therefore, be explained by any wholesale rooting out of old-timers. But it can be explained in two words—gymnasiums and handball courts. Either a gymnasium or a handball court is now a regular part of the equipment of more than half the ninety-odd police stations in New York. They are provided in all the new stations and as many of the old ones as could be made over for the purpose. The station house is no longer designed for pinochle and loafing for men off duty. It is a training quarters. The physical fitness of the New York policeman may be traced to the fact that the city has provided him with a place where, by spending a few minutes each day, he may keep in trim—and he uses it. He is turned out of the Training School an athlete, and there is no longer any reason why he should break training and cultivate a waistline. Handball is now his salvation. If the battle of Waterloo was won on the cricket creases of England, it is equally true that the struggle of the New York policeman to conquer old General Adipose Tissue was carried to a successful conclusion in the station house handball court.

Another arch enemy of police efficiency—Field Marshal Politics—was defeated in a different way. This was a job that did call for rooting out, top and bottom. It was begun by Mayor Mitchel when he appointed Mr. Woods and gave him a free hand as Commissioner. It used to be said that the surest way to be out of a job within a year was to become Police Commissioner of New York. There was unfortunately a good deal of truth in that. New York mayors with Tammany connections could seldom get along without a "police policy" and for some reason their commissioners were seldom able to get along with it. If Mayor Mitchel has a police policy it is not working true to form. It was as if he said to Mr. Woods: "Here is the Police Department. Take it and do the best you can with it. It's up to you."

The policeman can turn being lost from a tragedy into an adventure with a happy ending

"You men don't want to get into trouble any more than we do. Use your eyes, drive carefully and help us make the streets safe. Make it easy for the police to handle the traffic and we'll make it hard for the man who tries to steal your truck or your goods and in doing so causes you the loss of a good job. You want that job? Meet us half way and we'll see your truck isn't stolen"

The plain intimation was that the Commissioner was to be the boss, and every policeman knows that it is the principle on which the department has been run for over three years. One of the first things Mr. Woods did was to issue an order notifying the force that any policeman desiring to "see the Commissioner" could do so by writing and asking for an interview. There was more than met the eye in that order. There never had been any rule against such a procedure, but no patrolman ever dreamed of going about it in just that way. If he wanted to get the ear of the Commissioner, he did so thru a friend-of-a-friend-of-a-friend of the Commissioner. He might have a just grievance against a superior, he might be in trouble or in debt and need help, he might—as was very often the case—be seeking promotion or a transfer to a different precinct, but he knew there was little hope of telling his story to the Commissioner so long as there were those who "stood in" with the powers at Headquarters and could "fix it up" for him. He knew, too, that it was important for him to stand in with those who stood in with the powers, and he took particular pains to do so. Commissioner Woods's order changed all that. The "cop" on the corner now knows that he can go down to Headquarters and see the Commissioner any time he pleases, and he doesn't have to do favors for any party of the third part in order to arrange it. When he issued that order, Commissioner Woods really drew up the New York policeman's Declaration of Independence—independence of the ward politician who had the power to make or break him and often used it.

The order has had a double effect. The very fact that the policeman *could* tell his troubles to the Commissioner automatically removed many of the causes of those troubles. The politician kept his hands off. On the other hand, many members of the force with real troubles, financial or otherwise, have gone to the Commissioner and received needed aid and advice. Mr. Woods gets about 1000 such visits in a year. The men appreciate the opportunity.

"What do the men think of it?" the Commissioner asked one of his veteran officers shortly after the order had gone out.

"Well," replied the other, "those who are *in right* don't like it—but all the rest do."

On the occasion of introducing another reform, however, the Commissioner did not get quite the same encouragement. That was when he decided to establish a Bureau of Statistics as a means of keeping tab on the number and also on the nature of both accidents and crimes as they occur from day to day and week to week and month to month in New York. Strangely enough, there had been no attempt to keep such a police record before, and some old-timers shook their heads.

"Look here, Commissioner," said one of the older officers when the Bureau of Statistics came into being, "this won't do. I'm for you and want to see you make good. But New York will never stand for this. Why, if you let the people know everything wrong that goes on in this town there'll be a howl and you and the rest of us will lose our jobs. Take it from me."

But the Bureau of Statistics was allowed to continue and performs a useful service; and no one has lost his job because of it.

Which is not saying that Commissioner Woods is unmoved by what the men on the force tell him. One of his earliest acts was to call for suggestions for improving the service. First there were suggestion contests, the man submitting the best suggestion receiving a commendation which counted in his favor when he took his examination for promotion. Later, policemen were permitted to submit suggestions at any time, and a number of these have been accepted and put into operation. One such suggestion from a policeman has proved of particular value. It was that, in certain classes of minor offenses, a policeman might issue a warning to the offender instead of serving him with a summons. This is being done in many instances where a warning is really all that is necessary and where a summons merely kept the police and the magistrates' courts overloaded with trivial offenses.

One inheritance of a previous administration was the "fixed post," over which there had been a deal of grumbling and dissatisfaction on the part of the uniformed men. Now from the point of view of the public, there was a good deal to be said in favor of the fixed post. If a citizen wanted to call a policeman he knew where he could find him. So far good. But unless some one did want a policeman the man on fixed post was as good as out of commission for practical police work. His job required him to take up a position at a given street corner and stay there six hours at a stretch. He was forbidden to budge from the spot unless called upon to do so. The citizen knew he was there and could be found if needed, but the drawback was that the man on fixed post had to *wait for trouble to come his way* instead of being constantly on the alert to detect mischief and, so to speak, nip it in the bud. A large part of his time was wasted.

Commissioner Woods introduced a system whereby the good features of the fixed post were retained and the bad ones eliminated. Where the fixed-post man had formerly taken his stand, he attached a green flashlight signal box to the lamp-post and set the patrolman free to patrol the neighboring streets. To call a policeman then became as easy as sending in an alarm of fire. The citizen merely ran to the nearest signal box and put in a call. The green light flashed out; the patrolman saw it and came to the citizen's assistance. It also enabled the station house or Headquarters to call a particular policeman to the telephone whenever

The Department's study of street accidents led to the establishment of play streets

he was needed. For each signal box is a direct telephone connection with the station or Headquarters and an alarm telephoned to either of these places can now be quickly relayed to the man covering the nearest post. This system has been introduced in the more thickly populated sections of the city and has been found to work well. In the outlying sections of the Bronx and Queens, where a much larger territory must be covered by each policeman, police booths with flashlight and telephone connections have been established at strategic points, and at each a patrolman with a motorcycle is in constant attendance. These booths are connected also with the public telephone lines so that a resident may call up the booth nearest him and get police assistance with far less delay than was the rule under the old fixed-post method. The present system, in other words, is an amplification of the old one, and it has been found to operate more efficiently.

Along with the fixed-post "cop" there disappeared another Tammany institution—the plain-clothes man, one of the most convenient mediums of police graft ever devised. The old plain-clothes man was, as his name indicated, merely a policeman in citizen's clothes. He was not a detective. Theoretically, he was partly an investigator of vice and partly a spy upon the uniformed men of the precinct. Actually, the plain-clothes man served as the "collector" for the precinct captain. Every precinct commander had his squad of plain-clothes men whom he could employ largely as he wished. It was an ideal arrangement to enable captains to levy taxes upon keepers of saloons and other resorts in return for lax enforcement of the laws. Needless to say, Commissioner Woods lost no time in abolishing the plain-clothes man. There are a few plain-clothes men today, but they are attached to the inspector's staff and are used largely to keep the inspector informed of vice conditions in his district. Police extortion and the "protection" which it was supposed to buy was pretty generally put out of business when the captain and his plain-clothes men parted company.

A reorganization of the Detective Bureau was part of this same reform. In place of the old Central Office, with its staff operating from Headquarters and trying to cover the entire city, there were established Branch Detective Bureaus, each with its own captain and working force and each with a separate district to cover. There are four of these bureaus in Manhattan. The branch bureau is really a step toward the absolute separation of the police and detective forces and as such is admittedly a good thing. The average New York detective is a policeman who has shown special aptitude for detective work. The difference is in degree rather than in kind. Yet the qualities that make a good policeman are not necessarily those that make a good detective, and there are those who believe that eventually New York will develop a Scotland Yard of its own and not be obliged to draft its detectives from the ranks of the uniformed force.

Until then there will always be the danger that a difficult detective job will suffer thru being entrusted to men who are not primarily detectives. The worst that has been said of the detectives who bungled the Cruger case is that they failed to show that degree of intelligence which a city like New York ought properly to expect of professional detectives. A young woman was murdered and her body hid in a cellar. No police force on earth could have prevented the murder; but it was their duty to find the body and capture the murderer. In both respects the police detectives failed. They searched the cellar but could find no hiding place. Detectives from at least two private agencies also searched the cellar and also failed to find the body. Men from the District Attorney's office and a delegation of newspaper reporters took up the hunt and they, too, found nothing amiss in the cellar. And so, for four months, the crime went undiscovered. Truly a bad piece of detective work—but what of the others who had searched and failed! The handful of police detectives who are blamed for the failure have this consolation, that there were plenty of others in the same boat with them.

But to conclude that this was a typical case is to shut one's eyes to the record. The police figures show that in the first six months of the present year 853 women and girls were reported missing and that of this number all but fifty-four have already been located—an average of ninety-three per cent.

When it is considered that months of the hardest kind of work were spent to prepare the police to meet a war situation—with all that that implied in the way of possible disorder in a city like New York—it is surprizing that the remaking of the police force has advanced at all beyond the initial stages. Yet time has been found to carry out reforms which even under normal conditions would have been considered notable. A study of traffic problems and street accidents led to the establishment of play streets and the opening of backyard playgrounds for children in the more crowded sections. A Bureau of Missing Property has been opened and is operating the most successful method yet devised to trace stolen property—more particularly automobiles and stolen jewelry in the hands of pawnbrokers—and restore that property to its owners. A strong-arm squad has tackled the gangster and the gunman and greatly curtailed their field of operations. Efforts have been made not only to suppress but to prevent crime. Policemen have been sent into prisons and institutions of correction to talk to the inmates and urge them to "go straight" when they come out and to drive home the fact that in going straight they will find that the policeman is not [Continued on page 1

"The policeman is your big brother—not a bugaboo. Do your duty by the city and the policeman will do his duty by you. He's put there on the corner to help you, not to chase you and scare you. Don't let them frighten you by saying 'The cop will get you.' Get that idea out of your head. If you're in trouble, you'll always find him your best friend." Just see how they listen!

These men are receiving instruction in effective methods of dealing with tough customers

"THIS RED-HOT MINUTE" AT NIAGARA

BY HERBERT REED

WHEN Colonel Miller wants anything done at Fort Niagara he wants it done "this red-hot minute." These training camp minutes were as fresh from the furnace as far as he was concerned in the early, shivery days of the encampment as they are in these final stages when the thermometer mounts to something like 96° or better in the shade and to unknown hights under the blazing sun on the range where is held the absorbingly interesting combat firing which the Pennsylvanians have been crowding into the last ten days or so. The pace, far from letting down, has been pushed up a few pegs in the last days of training, save that the officers, considerate of their pupils, have been able to insert a few extra rests now and then into the day's program. The men have suffered from the heat, beyond a doubt, but they are remarkably philosophical about it, and for that matter the mental training gives them little time to think of discomforts. The same old worry that troubled the Plattsburgers has been in the saddle here recently—the worry over the commissions, for recently there have been sizable squads dropt from the training.

The obstacle race in the afternoon is the peak of the day's load

Here I think lies the real strain. I have thought so from the start. Worry, coupled with considerable digging in "book soldiery," takes it out of the men. The actual physical effort is not to be compared with that put forth by a squad training for an eight-oared crew. It is to be remembered, too, that crew squads have examinations to worry over, and this has troubled oarsmen just as it troubles the student-officers of today. The actual physical effort is really not excessive and has increased not a great deal since I held the stop watch on it in the second week of training at Plattsburg. It is a fairly full physical day, as days go, but it is an exceedingly crowded mental day. In any study of the physical work it is hardly possible to register the constant state of alertness which is the mark of the true soldier, and this no doubt will continue to be a strain until it becomes a habit, which, of course, it will become in time. Just as at Plattsburg I have found the athletes here less troubled by worry and the strain of study than those who have not learned coördination of mind and body.

The main point is that the men are thinking, everlastingly thinking about their work. The body can be made to lie down, relaxed to the full, but apparently not the mind. So the term "intensive training" seems to be a happy one. The reaction at the close of the camp, when the furloughs, no matter how brief, are in order, ought to take the tenseness out of the men.

Recently, in addition to the regular work, the rather stiff obstacle course of about two hundred yards has been added, and this I should consider the peak of the day's load, for it comes late in the afternoon, when the men are pretty tired. There is no particular strain about the conferences, it seems to me, and in many cases they offer a chance to snatch a nap. There are occasional casualties over the obstacles, for unless a man has had some experience in that work he is apt to be a little awkward, and to some extent unable to take the best care of himself in tackling, with rifle and pack, a six foot fence about a foot thick.

In any consideration of the work on the range considerable allowance must be made for the recoil of the rifle. If the rifle is properly held the shock will be well distributed over the frame, and should not prove excessively severe. There has been a great deal of discussion of the actual kick of the Springfield rifle. Purely as a guess, I should say that a day's field work with a large-bore shotgun would result in considerably more pounding than the work on the range with the Springfield. Of course, there is a margin for the penalization of carelessness, such penalization generally being a puffed lip or badly banged up nose. Such cases, however, are infrequent. The foot-pound energy of the Springfield bullet figures out to 3145, while the foot-pound energy of the recoil comes to 12.1. This recoil, 14 pounds, is the shock to be taken up by the human shock absorber.

With the active cooperation of Mr. Floyd A. Rowe, a representative at Fort Niagara of the War Department's Commission on Training Camp Activities, the accompanying table was worked out. The figures merely support my contention made at an early stage of the training that there was no actual physical "strain," but that there was a perfectly natural and in the main unavoidable mental stress.

Fort Niagara, N. Y.

HOT WEATHER HUSTLING AT FORT NIAGARA

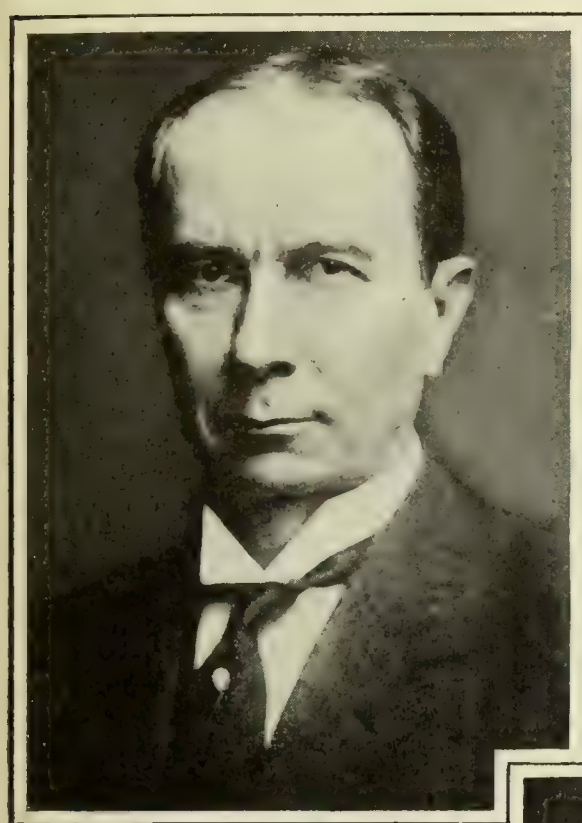
The following condensed table gives the day's average physical work done while under actual command. The position of attention is included, together with roll call, as well as any other physical response to command. The averages are made up from several days of close observation, and with the aid of the stop watch, as accurately as possible under the conditions. In further explanation it should be said that the men were really occupied mentally at all times save in the course of very short "breathing spells."

	Hrs.	*Mins.*	*Secs.*
Reveille (roll call by squads)		4	3 3/5
Route step to mess		2	33 2/5
Company and battalion drill, bayonet drill, battalion battle drill, combat firing, trench digging, etc.	1	55	1
Route step to lectures and conferences		13	9 3/5
Marching to, standing at attention, and actual physical movement under count at physical drill		11	32 3/5
Marching to, charging over obstacles, and marching back to barracks *		10	25 1/5
Total	2	36	45 2/5

(*Each company does not necessarily charge over the obstacles each day. The company observed, however, did so on all days while under observation, and this item is therefore included.)

Added to the above time the following table of time on parade:

	Hrs.	*Mins.*	*Secs.*
Standing at attention		9	7
Standing at parade rest		5	31 3/5
Marching		5	4 1/5
Total		19	42 4/5
Average daily time on parade *		7	10
Average daily work (not including parade)	2	36	45 2/5
Total average daily physical exertion under command	2	43	55 2/5



(*Each company parades on the average of twice weekly. Therefore, the average daily parade time is found by multiplying the parade time by two, and dividing by five and one-half days. The result is added as above.)

	Hrs.	*Mins.*	*Secs.*
Maximum day	3	23	32 4/5
Minimum day	2	17	59 3/5

(Difference simply the matter of parade or no parade.)

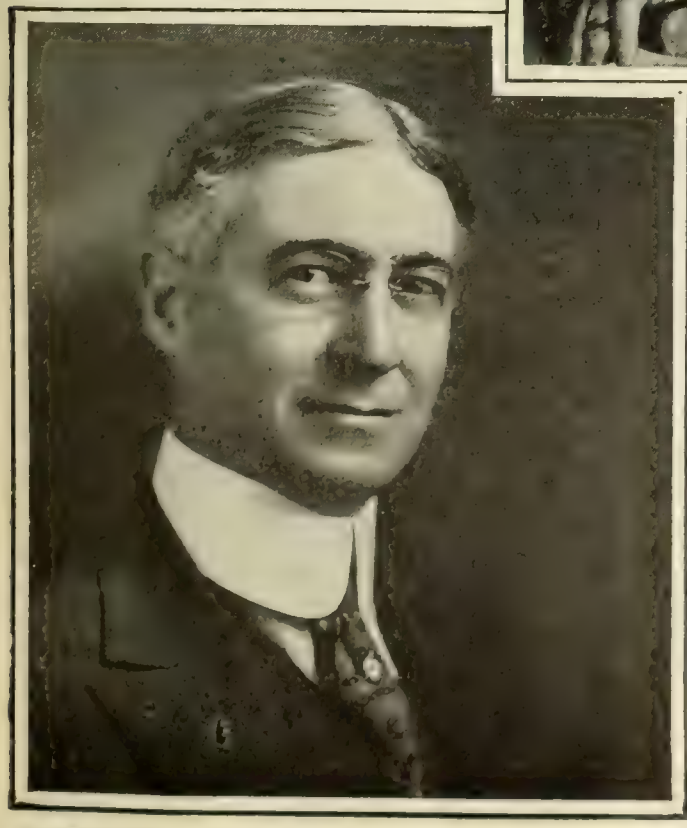
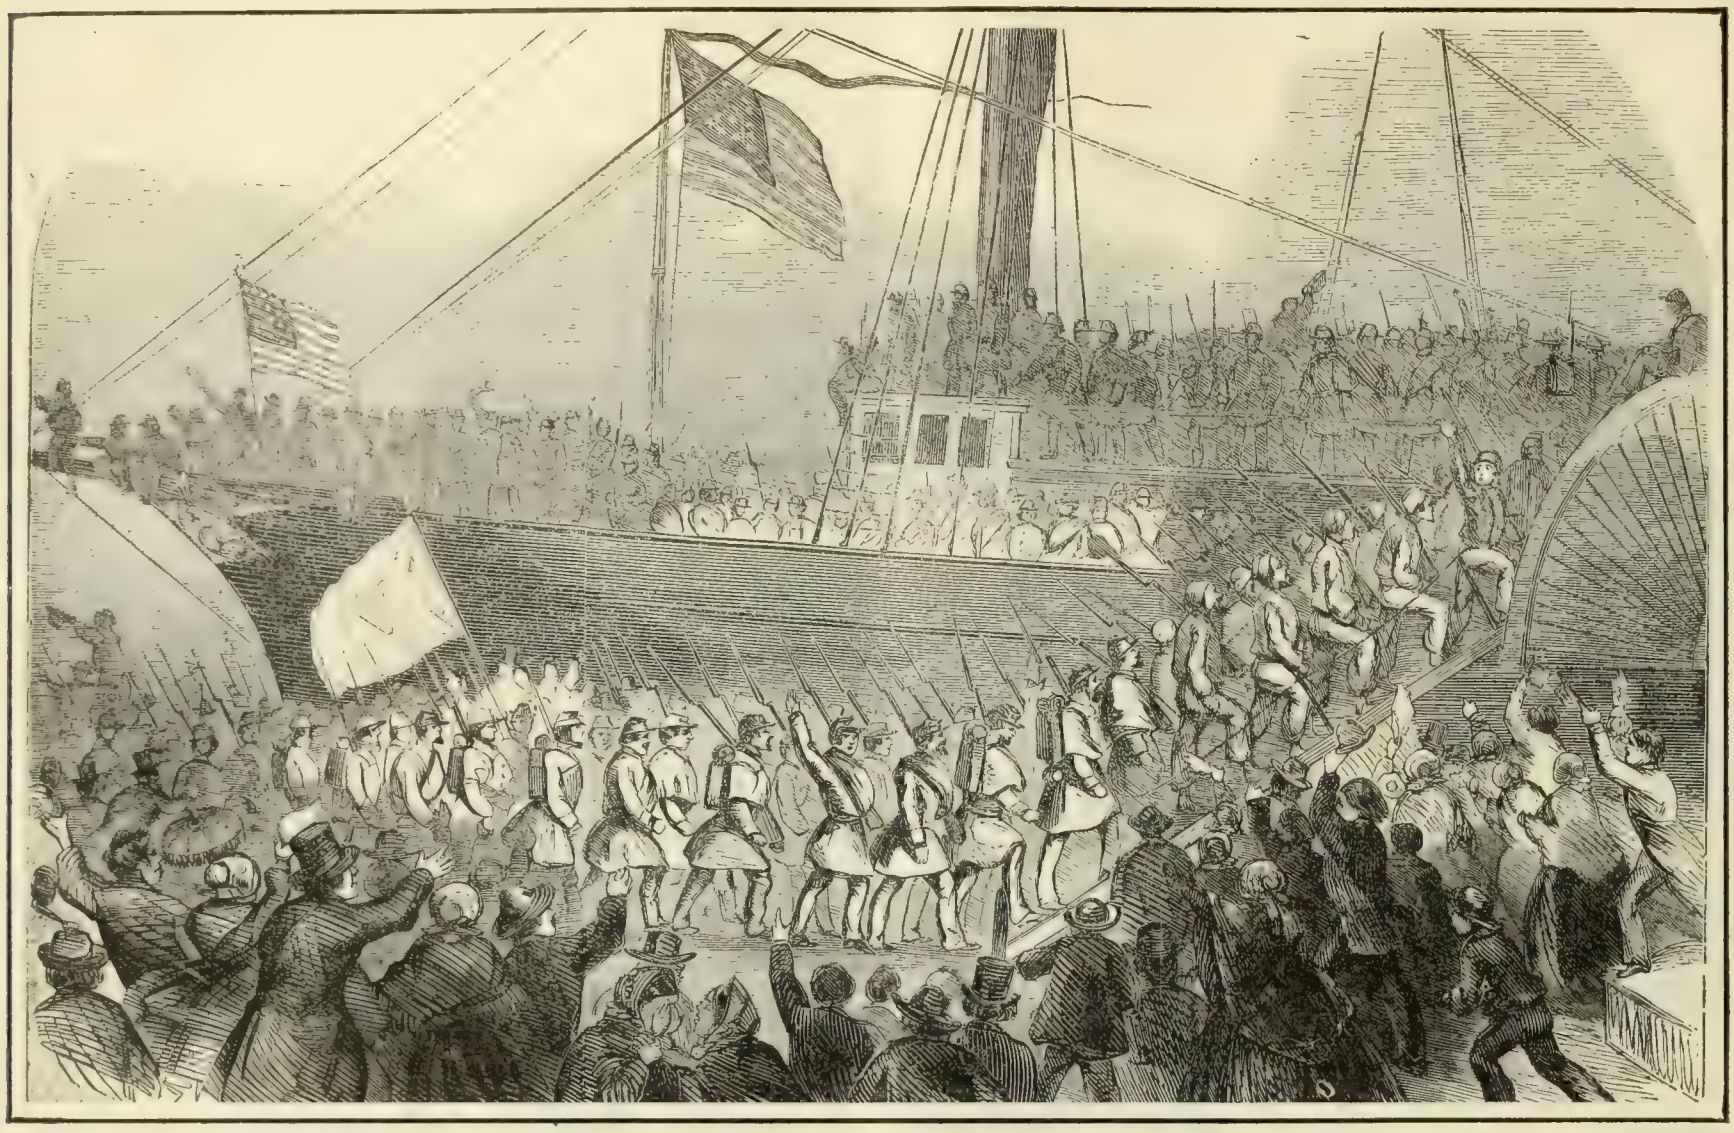
NEWS-PICTORIAL

Bain

The War Industries Board is to be of even more importance than was supposed when its formation was first approved by President Wilson. It is directly under the control of the Council of National Defense but it will take over a large number of the responsibilities and duties vested in the subsidiary committees of the Council's advisory commission. The seven members are to supervise the nation's buying of food, munitions and supplies of every character for the army and navy. In the best interests of efficiency it has been arranged to have food purchases made in consultation with Mr. Hoover

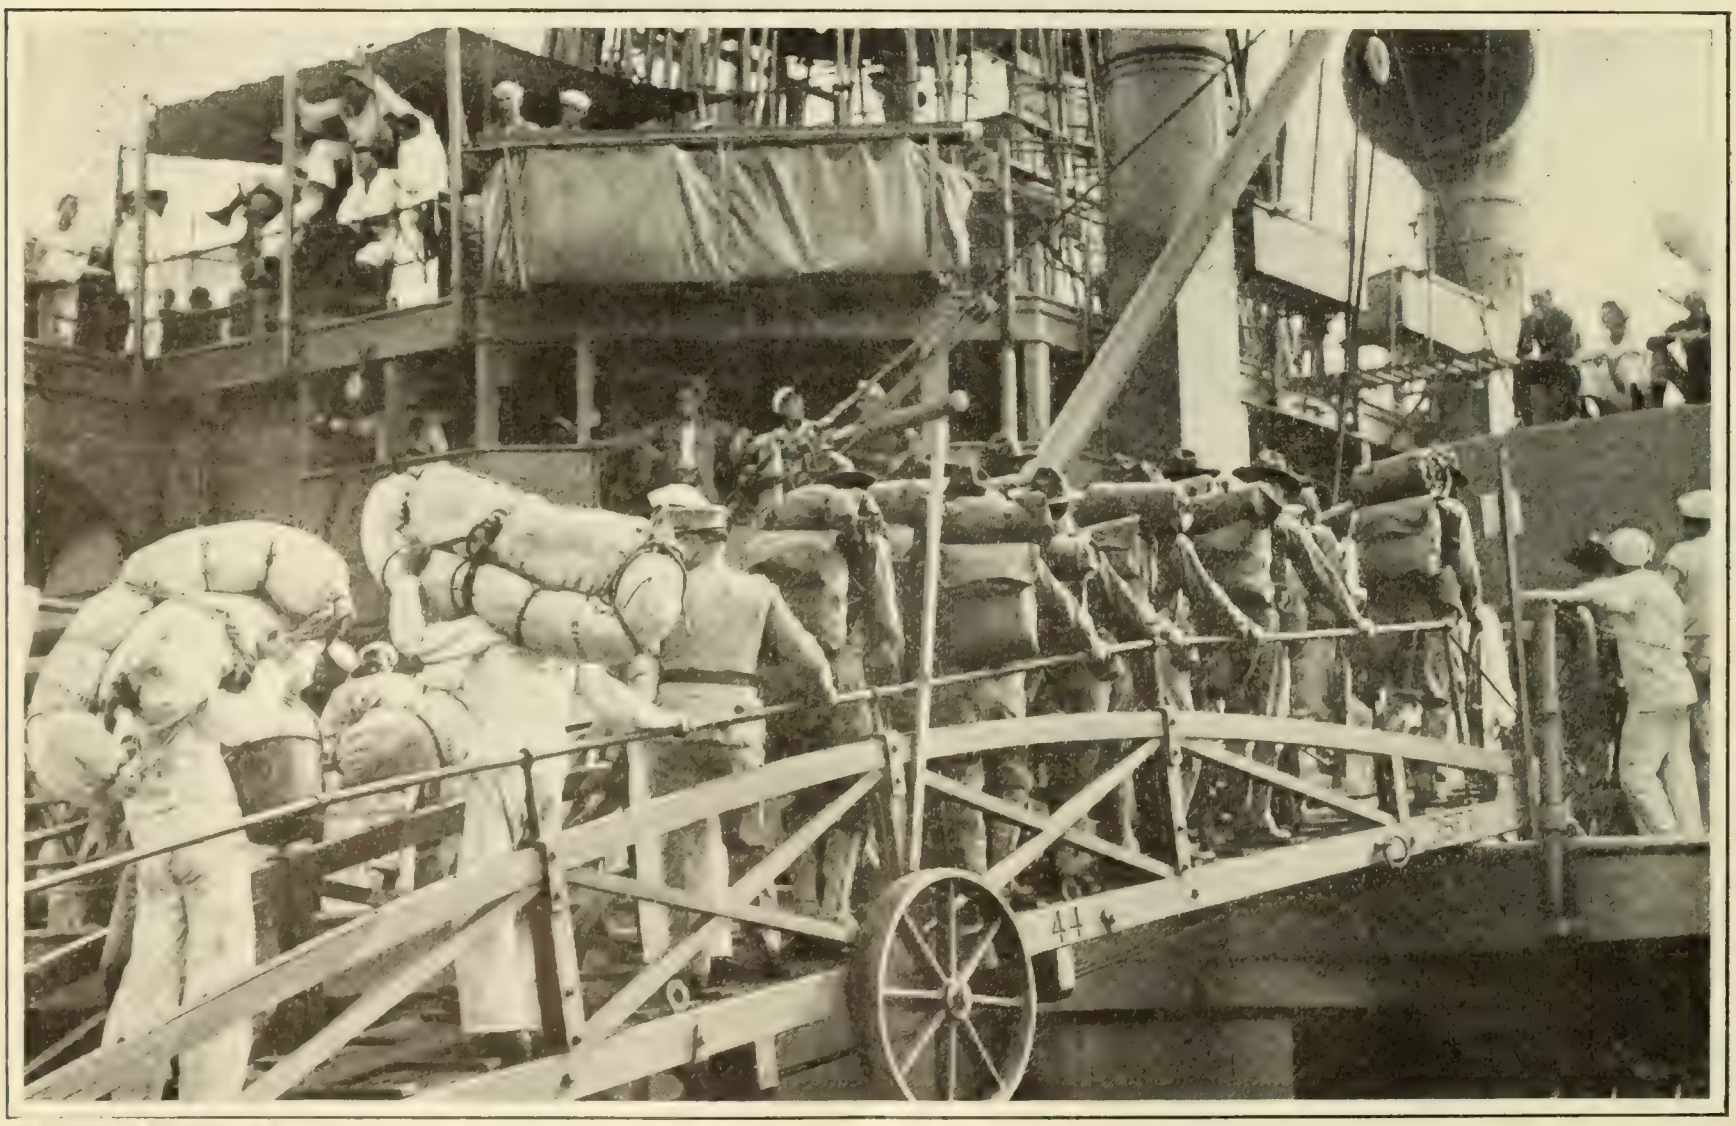


Underwood & Underwood



The chairman of the board is Frank A. Scott (center) who, before his appointment, was chairman of the general munitions board. The other members are (left to right above) Robert S. Lovett of the Union Pacific. Hugh Frayne of the American Federation of Labor, Robert S. Brookings, Bernard M. Baruch (below to the left), Admiral Frank F. Fletcher (below to the right)—who represents the navy. The seventh member is the army's representative, Lieutenant Colonel Palmer E. Pierce. Mr. Baruch, Mr. Brookings and Mr. Lovett are to have particular charge of the purchase of food supplies

Central News



The importance of the War Industries Board is likely to increase as time goes on. The centralization of administration is one of the necessities of the successful prosecution of war on a large scale and the creation of this board is another and very significant advance in that direction. It controls some of the most important factors in the nation's whole campaign and its members are men of high and proved capacity and wide experience in their particular fields. They are part of that movement toward the socialization of business which the war is causing

We hear nearly every day how much the spirit of '17 is like the spirit of '76. It's like the spirit of '61, too, as the pictures on these pages show. Two of them were taken this year; the others are from two numbers of Harper's Weekly published during the Civil War

© Underwood & Underwood

Back in '61 the censorship wasn't quite so strict. The picture at the top of the page is labeled "Sixty-ninth (Irish) Regiment Embarking in the 'James Adger' for the War." The one below is just some American troops embarking on something for somewhere

Press Illustrating

This is what Harper's Weekly of 1862 calls "Woman's Influence," which starts a rather fascinating train of thought. Can a sock influence the course of battles? Could a dropt stitch have as far-reaching and fatal consequences as the missing horse-shoe nail?

Even a generation ago Sister Susie sewed shirts for soldiers as the box in the lower right hand corner proves. Apparently she also made comfort bags. She seems slightly more pensive than her 1917 counterpart, but perhaps that is because her skirts are so long

BUYING—WHAT, WHERE, WHEN, HOW

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

"ALL this talk about the high cost of living makes me smile. It is a bugaboo, like a ghost-story in the dark. Take it to the light and there isn't much left."

Hearing these strange words, I listened. Who could be denying so immovable and implacable a fact as the doubled price of things? But the speaker was a famous man, who had set unequaled records in the business world, and possest the confidence of the public. Wherefore, I listened.

"The high cost of living," he went on, "is in reality the cost of high living, large wasting, low financing, and little thinking. The purchasing power of a dollar is what *you* can buy for the dollar. The market price of certain commodities affects only indirectly the value of your dollar. I know a woman who can buy four good meals for a dollar. I know a man who is not satisfied unless he has paid more than a dollar for a single meal. Her cost of living, on this item, is about twenty per cent of his. He pays for his ignorance of the right methods of purchasing.

"The daily expenses of the average individual can be reduced a third to a half by the proper system of buying. We proved this last year in our own family. We spent about $60 for every $100 paid out the year before—and we enjoyed life more last year. It is astonishing how many thousands of good business men fail to apply to their domestic and personal expenditures the same rational, scientific, penny-saving cost-plan that they are proud of in their business dealings.

"Every American citizen should be taught what, when, where and how to buy everything he wears, eats, and uses. Here is the first step to the elimination of extravagance and waste. A good shopper is a real patriot—haven't we saved enough to buy a collection of Liberty Loan Bonds with the money we threw away last year? And our young folks are as proud of their new bank books as they used to be of their social extravagances.

"We made the experiment partly as a home game, partly as a war duty. The physical, mental and moral results have been as great as the financial. It is harder for people with a good income to learn how to buy than it is for poor people. If we could save forty per cent a year, any family can. If I had time I would elect myself a national home missionary of marketing, and preach it as widely as Pinchot does conservation or Bryan temperance."

Here I stopped listening and started investigating. The suggestions offered below are combined from the experience of the man just quoted, from the methods of buyers in large concerns, from the advice of economists, and from personal observation of examples of thrift. By adapting to your special conditions and requirements the general principles here outlined, you should save at least thirty cents out of every dollar in your expense account, while creating better standards of living. There are five main questions—Why, What, Where, When, How.

WHY BUY AT ALL?

Every science is based on rules, and every rule on a reason. The first rule in the science of finance is to have a reason. *Always think before you buy.* If you do, you will buy fewer things, and better things. At least forty per cent of the expenditures of the average person are made from habit, or impulse, or a superficial motive—no real thought is present. The way to make money go further is to mix thought with it. Crowds are brainless; buy with the crowd and be sorry. Note the following examples of brainless buying—remarks lately overheard in popular stores, where customers talked instead of thinking about their purchase.

In a grocery. "You recommend this rare fruit, imported from the South? Let me try some—it will tempt our jaded appetites."

In a butcher shop. "We really can't

MR. PURINTON'S CHART OF BETTER BUYING

TO REDUCE EXPENSES 15 TO 40 PER CENT BY MODERN METHODS OF PURCHASING

DIRECTIONS.....First read Mr. Purinton's article, "Efficient Buying." Then take a standard element or staple product frequently bought, and apply to it the following analysis. Where answer to question is Yes, write plus mark (+) in space opposite. Where answer is No, write zero mark (0) in space. Where answer is uncertain, leave space blank. When chart is completed, go over all zero and blank spaces, beginning with item you consider most important, and figure how to make every answer a plus mark. Any article bought, whether food, clothing, business materials, household supplies or personal incidentals, may thus be approximately standardized in a single operation.

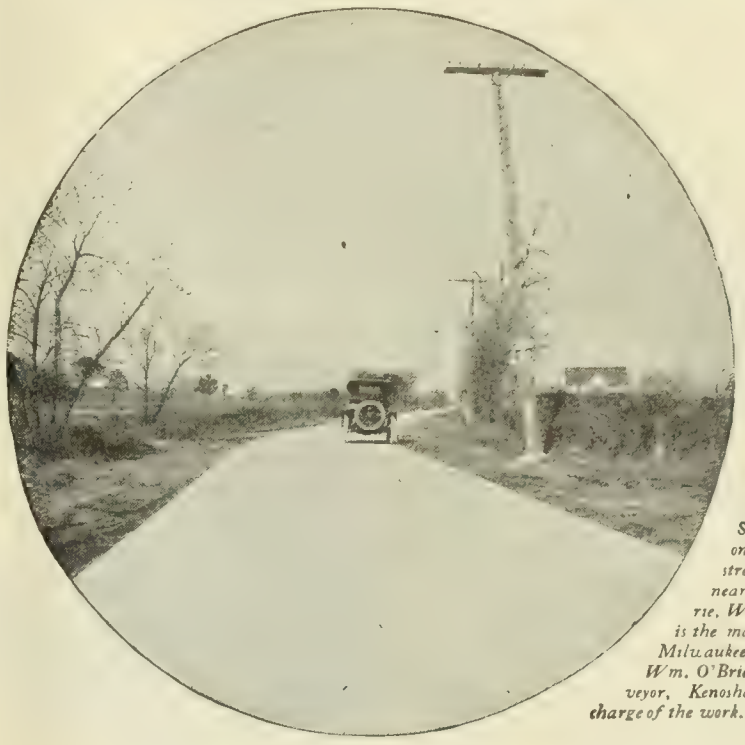
afford such high prices, but my husband will have the choicest cuts of meats, and you know men must be humored."

In a millinery store. "Oh, what a darling of a hat! And you say the model is exclusive? Twenty-five dollars? That is more than I meant to pay, but—oh well, one must keep up appearances, and the hat is so becoming!"

In a haberdashery. "Guess I'll take this $1.50 cravat. You're soaking me a lot, but the tie sure is a swell-looker, and I've got to make a showing when we promenade the Avenue on Sunday."

In a drug store. "Give me a bottle of that stomach dope you advertise. Just read a testimonial from a feller I used to know. If the stuff cured him, guess it'll cure me."

The foregoing remarks indicate how many shoppers have no reason, or a bad reason, for buying. We mention a few bad reasons: Because a thing is new, or "cheap," or fashionable, or exclusive; because you have always bought this kind; because your acquaintances will note the costliness of the brand; because you buy a luxury without asking yourself whether it *is* a luxury; because you have loose change in your purse, and a nickel or dime is too small to count; because you imagine you need something when you don't; because your companions would vote you a "piker" if you don't spend; because the clerk would look down on you if he thought you couldn't afford to be extravagant; because tho your home is already too full of *things* you will go on getting more in a vain expectation that you will be happier; because you haven't learned that real equivalents may be bought for less money and larger satisfaction; because you haven't found the best place to shop and you won't look around; because you consider a knowledge of marketing beneath you; because you are of a generous nature and economy comes hard to you; because you have no big aim in life that impels you to save money for its accomplishment. A financial loss is generally the outcome of a moral lapse. And a wrong reason for buying what we buy raises prices automatically, that the moral balance may be restored to us thru deprivation.



Efficient buying does not mean solemnness, pettiness or penuriousness. A little money—perhaps one per cent of our income—should be spent "foolishly." But we should be prodigal only when we start out to, not while making the ninety-nine per cent of our purchases that ought to be economical to the penny. Most of our unwise marketing would be prevented by the simple habit of asking ourselves these questions before making a purchase: Is it absolutely needed? Is it the best for the price? Will it all be used up? Would a cheaper equivalent serve as well? Could I put the price in a savings account, with nobody really worse off? Should I be glad to have my reason for buying published in the paper or announced from the pulpit? Would a financier make this purchase, as a good investment for a shrewd man?

WHAT TO BUY

A list of standard qualifications on every article bought should be in every household. This should be consulted prior to purchase, and gradually made a part of the subconscious judgment of the individual most concerned. Take, for instance, a man's collar. This should be four or five ply to guarantee wear; low enough for comfort yet high enough for appearance; factory-shrunk to retain exact size; made with ample tie-space to pervent destruction of cravat; measured by quarter sizes for a neat fit; rendered durable by patent-stitched buttonholes and in sets; cataloged as a permanent style for repeat orders.

CONCRETE ROADS

Are Becoming as Widely Used as Concrete Sidewalks

Sheridan Road, on which this stretch of concrete near Pleasant Prairie, Wis., is located, is the main road from Milwaukee to Chicago. Wm. O'Brien, County Surveyor, Kenosha, Wis., had charge of the work.

Concrete Roads are inevitable. Today when any one mentions sidewalks to you, at once you think of concrete. Concrete roads are becoming so general that soon you will first think of concrete when any one mentions improved roads. The hard, clean, rigid surface of concrete, unaffected by heat, frost or rain, is even more important for horse and motor traffic than it is for pedestrians. Greater loads must be supported. Swifter traffic must be borne. Heavier wear and tear must be resisted.

There is no known limit to the life of a concrete road. It not only lasts indefinitely under the hardest wear, but it lasts in perfect condition.

Concrete Presents an Unbroken Surface

to traffic year after year. The road itself does not wear out; it wears down. But that process is very slow indeed—almost imperceptible. In eight years, during which seven million vehicles have passed over them, the concrete roads in Wayne County, Michigan, have worn less than a quarter of an inch in the most traveled parts.

CONCRETE ROADS:
THEIR ADVANTAGES

No Mud—No Dust
No Ruts—No Holes
No Slipping
No Skidding
Easy Hauling
Smooth Riding
Long Life—Safety
Always Ready for Use
Low Maintenance
Moderate Cost

Communities are building permanent highways, and of all permanent construction, concrete is the least expensive. Let us give you some interesting facts about the cost of construction and upkeep of concrete roads—actual figures for various localities.

Write for Bulletin No. 136, and after reading it pass it on to your road authorities.

Installing Kor-Ker Puncture Cure

with KOR-KER PUNCTURE-CURE

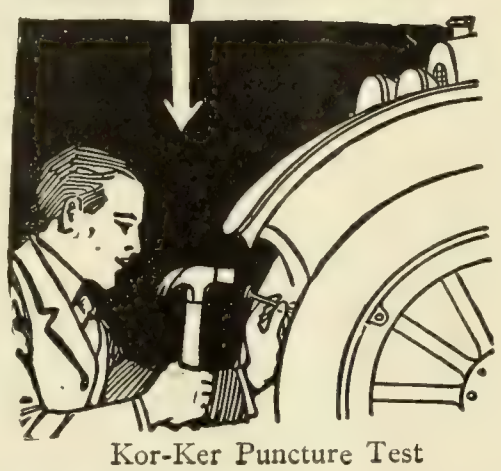
(America's Standard Tire Treatment)

You can test our claims very quickly. You'll know *absolutely* that you can start on a long ride *free from puncture worry.*

Further Korker is a *preservative of rubber* and will give your tubes *threefold* life. We have analytical chemist's reports to this effect and our own seven years' tests besides. Inner tubes installed with Korker four years ago are still in use.

There will be no slow leaks and scant chance of blowouts.

If you want to assure yourself that Korker seals Punctures—



You can do this

Drive a nail into your tire. Pull it out and with one revolution of your wheel *the puncture will be permanently sealed.*

Your tires will always be at proper inflation—*no half soft tires that crack or break down quickly.*

No matter how skeptical you can't doubt after such a test, can you?

Kor-Ker Puncture Test

We Want Able Men

as Local Distributors for Kor-Ker Puncture Cure

Can make $150 and more a week. *We need the big man who can close the leads developed by our national advertising.* Car owners preferred. Must finance small initial order in return for exclusive selling rights. We are advertising in 25 magazines.

We invite most thorough investigation

NEW YORK CITY

Every article from a store should be, in like manner, subject to a brief catalog of standard specifications. Don't burden your mind forever with such details; but look for a product that meets your reuirements, locate it, memorize it, ask for it by name.

Remember that a nameless product is generally a worthless product. Buy goods that are nationally known, perpetually advertised. Their quality is higher, their cost lower.

A recent tabulation by experts indicates that the average price of automobiles has been reduced, in ten years, from about $2000 to about $600. How? By the increased output and sharpened competition of national advertising methods. The same principle operates in all manufacturing lines. The customer pays for the mediocrity of the manufacturer who will not advertise.

Demand articles fully guaranteed, by the seller or the maker. The rule in all sales should be: Satisfaction—or money refunded or goods exchanged. College degrees, lawyers' pleas, and doctors' prescriptions ought to be sold on this basis. A man who will not guarantee what he sells is either a fool or a thief. Better buy elsewhere.

Learn to ask for a scientific, neutral guarantee by an impartial, authoritative source. This applies chiefly to all foods, drinks, drugs, medicines, household and toilet preparations. There are poisons on the shelves of nearly every grocer, baker, butcher, confectioner and druggist. Nothing protects you but the statement of a national authority that your purchase will be clean, pure, wholesome. You should have a list of guaranteed products, for comparison when shopping. (Names of authorities or lists of sanitary products given on request.)

Avoid substitutes—and the store that harbors them. Patronize the merchant who, when he hasn't what you want, promises to get it or tells you where you can get it. He is your friend.

Weigh the ultimate uses of things, buy to conserve. Choose the cuts of meat that may be good for a second meal, the colors and fabrics of clothing that will respond to a cleaning-up and making-over process, the kind of furniture that will befit common rooms when too shabby for the parlor. Buy with a purpose to waste nothing, but utilize the article to the last.

WHERE TO BUY

Other factors being considered, the store nearest you is best. Patronize home dealers first. But do not be limited to them, nor prejudiced by them. Demand that your favorite store be modernized and standardized. Every customer has a personal duty and civic responsibility; namely, to require of his dealer a combination system of hygiene, sanitation, quality, courtesy, fairness, promptness, reliability and economy. Do you know the twenty or more points of merit that characterize a good store? Do you make sure, particularly, that all the dealers who sell you foods and food-materials are up to the standard? (Further information on request.)

I have been astonished to find how limited is the marketing range of the average person. It seems that half the people who shop for themselves or their families never even heard of some of the best sources of supply. Among these are: the national mail-order houses; department and specialty stores in large cities; five and ten cent stores; chains of stores under one management; coöperative concerns; parcel agents; market lists and directories; trade publications and organizations. Permit a few suggestions.

Obtain catalogs of three or four large mail-order establishments, put in small trial

orders, note and compare results, find how much you can save by purchasing regularly lists of selected articles from one or more of these concerns.

Locate the leading five and ten cent store in your town, or a nearby city. Compare varieties, qualities and prices with goods in your neighborhood shops. Prepare a catalog of items you could purchase to advantage from the low-price store, and make a pilgrimage there to stock up as often as required.

Find the nearest branch of a big store system having a dozen or more branches. Grocers, tailors, druggists, butchers, dairymen, confectioners, others now have chains of stores in almost every city; they can sell cheaper because they buy in large lots; their goods are fresher on account of quick turn over.

See if a cash store operates in your neighborhood. A "basket" grocery should be first aid to economy. The average family pays about $40 a year for the doubtful privilege of having its groceries delivered. Take your basket once a week and go to market in a cash store minus costs of telephone, delivery wagons, high rent on a main street. The 25-cent tin of the beverage I drank this morning cost 18 cents, from a cash grocery.

Make a study of the *local* reasons for high prices; favor the dealer who is not forced to rob you by his own stupidity.

WHEN TO BUY

The expert buyer consults both the calendar and the clock before spending money. Real bargains usually rest on the time factor. The time of day, time of week, time of season, time of year should all be considered. I judge that seventy per cent of one's business appliances, wearing apparel, household utensils and equipment are cheaper when bought with regard to time values.

Housefurnishing and department stores and shops for men's and women's wear hold regular bargain sales at least twice a year when goods a trifle out of fashion or a bit shelfworn may be had with 10 to 40 per cent of the price knocked off. Learn when these sales are held, take an inventory of your personal needs and stock up for the year on all articles thus reduced.

Buy everything in season, and at the close rather than the opening of the season. Foods, particularly, are most healthful as well as most economical when most plentiful. Green bananas cost 30 cents—ripe ones 15 to 20 cents. The ripe ones have their skins a little blackened, so their prettiness is gone; but they taste better and are *better*. Squabs cost more than hens, but are worth less. Strawberries at 50 cents in January do not begin to equal strawberries at 15 cents in June. Baker's bread a day old is more digestible—and the price is down. All foods are cheaper at the flush of the season; every family should own a marketing chart, for the household and for individual members, to show precisely when the true buying season occurs for each article bought.

Make it a rule to shop in the early morning when possible. Clerks are fresher then, stocks larger, mistakes fewer; and you have time to select goods and be served properly.

HOW TO BUY

Pay cash. Credit costs too much for any but the rich—and they don't need it. When you buy on the instalment plan, you raise the price 10 to 20 per cent. You may not know it, but the merchant does; he has to meet the extra costs of bookkeeping, collections, investigations, bad accounts; he must increase prices to come out even. You pay the difference. Whenever you say

"A luminous story." *"Absorbingly interesting."*

CHRISTINE

By

Alice Cholmondeley

The second edition is now ready.
The third edition will be ready next week.

"Alice Cholmondeley deserves our congratulations and hearty thanks. She has written a book which is absorbingly interesting, with much in it of beauty and even more of truth." —*N. Y. Times.*

CHRISTINE

"A book which is true in essentials—so real that one is tempted to doubt whether it is fiction at all—doubly welcome and doubly important. . . . It would be difficult indeed to find a book in which the state of mind of the German people is pictured so clearly, with so much understanding and convincing detail. . . . Intelligent, generous, sweet-natured, broadminded, quick to see and to appreciate all that is beautiful either in nature or in art, rejoicing humbly over her own great gift, endowed with a keen sense of humor, Christine's is a thoroughly wholesome and lovable character. But charming as Christine's personality and her literary style both are, the main value of the book lies in its admirable and lucid analysis of the German mind." —*N. Y. Times.*

CHRISTINE

"is absolutely different from preceding books of the war. Its very freedom and girlishness of expression, its very simplicity and openheartedness, prove the truth of its pictures." —*N. Y. World.*

CHRISTINE

"A luminous story of a sensitive and generous nature, the spontaneous expression of one spirited, affectionate, ardently ambitious, and blessed with a sense of humor." —*Boston Herald.*

SAN FRANCISCO - 875 Monadnock Bldg.

"Charge it," you run the risk of losing both money and morals.

Buy on a competitive basis. Try out a number of stores on the same article, as to quantity, quality and price. A dealer who specializes in certain grades or brands of goods can usually sell these on less margin.

Weigh or measure all purchases of staple merchandise from a given store, until you have thoroly proved the accuracy and honesty of the dealer. Apply to your federal bureau of weights and measures for methods of determining reliable scales and receptacles in local shops; then make certain that your dealer employs these.

Know what you spend. Procure a modern personal or family account book, and keep a set of business records of income and outgo. Financial experts agree that this is the first move in detecting and eliminating waste.

Follow the apportionment plan. Don't touch your weekly or monthly salary or allowance before you divide it up and parcel it out among your various groups of expenditure. Almost everybody makes the fundamental mistake of robbing a necessity to gratify a luxury. Put your income on a strict budget basis, keep your various accounts distinct, and you will find the expense problem greatly simplified. There is no more excuse for mixing up your food money and your clothes money than there would be for throwing the rent appropriation and the advertising appropriation of a business altogether in a hat, then paying a bill by letting the office boy shut his eyes and grab a fistful of money out of the hat.

Get your budget system approved by an expert. There are now available certain books, home study courses, and personal consultations by efficiency engineers, looking to the scientific and satisfactory conduct of personal and family expense accounts. Two or three modern books on the use of money should be in every home library. A person is not educated until he knows how to spend money wisely.

Put special thought on the science of equivalents. Why purchase meat every day when you can derive as much energy from six cents' worth of cheese or three cents' worth of peanuts as from fifteen cents' worth of the "best" cut of beef? Certain varieties of canned fish may be had for twelve cents a pound; have you ever tried bowfin, or sablefish, or atkafish, or grayfish? All are cheap and good.

Be friends with your dealer. Many little ways occur in which the dealer who likes and respects you can reduce the strain on your pocketbook (altho we do not consider this a good reason for being friends with anybody). Lately our grocer telephoned us that certain canned goods would shortly be twenty per cent higher, but he had a few cans left in stock and would sell them at the old price. Again, he frequently warns us not to buy goods from him that are shopworn, or otherwise below the grade we expect from him. Study the art of being a good customer; when you master it, you will find almost every dealer a good dealer.

Profit by the Government bulletins and other federal aids to efficient buying, utilizing and conserving of home products. Many of these publications are free, some are sold at cost. Every citizen may learn economy from the Government; and should do so, now that economy has been raised by the war to the pinnacle of patriotism.

Keep the *moral* aspect of thrift uppermost. Better buying leads to better living. The real object in adding to your savings is to add to your self-respect. Lowered costs mean lifted characters. And the final way to make your dreams come true is to make your dollars do as you bid them.

Is Your Life's Blood Trickling Away?

When you see red blood escaping you know that your vitality is escaping with it, and you promptly stop the flow.

Millions of people live on, indifferent to the loss of vital power even more serious than the loss of blood—the LOSS of NERVE FORCE.

The nervous system is the CENTRAL POWER of the human body, and when the nerves become deranged and depleted, every organ, every muscle, and every cell of the body becomes sluggish, weak and depressed, causing "that tired feeling," super-sensitiveness, nervous indigestion and scores of other troubles.

Wonderful Book on the NERVES

Paul von Boeckmann, the noted nerve culturist, has written a remarkable book which teaches you how to save your nerve force and care for your nervous system. It explains how to soothe, nourish and calm the nerves. It is his MASTER WORK as a health treatise, and is the result of over 20 years' experience with nervous people, whom he understands from the ground up.

What Readers Say

Send us 100 copies to give to our employees. It is the only real efficiency book.

I gained 12 pounds since reading your book, and I feel so energetic.

My nervous headaches disappeared as if by magic. I never knew I had nerves.

SLEEP is now my middle name, thanks to the advice given in your book. It is wonderful.

Your book did more for me for indigestion than two courses in dieting.

Stopping the leak of nerve force has cleared my brain. Before I was half dizzy all the time.

My Solar Plexus has been driving me mad until your book taught me how to calm it. My stomach feels so easy and relieved now.

Price of book is

25 cents

(coin or stamps)

FUSION'S FINEST MAKE GOOD

(*Continued from page 253*)

their enemy but their best friend. Police lecturers have gone into the schools and talked to the children and into the settlement and talked to the mothers, preaching a gospel unknown in the past—that the bluecoat on the corner is not a thing to be dreaded but a servant and guardian of the community that put him there. Whatever "hounding" was done by the police in the past, it is no longer true that the ex-convict is forced to return to a life of crime by reason of the police attitude toward him. He is promised a fair chance and a helping hand so long as he keeps his part of the bargain and goes straight. How well this promise has been fulfilled will be realized when it is said that under the Woods administration more than 800 ex-convicts have been aided, thru the Police Department, to find employment and start life afresh.

How the New York police prepared for war—when it was evident that war was coming—and how, even before that, they prepared to meet all emergencies likely to occur under a state of strained neutrality; how every possible trouble spot and strategic point in the city was inventoried; how, thru the training camp at Fort Wadsworth in the summer of 1916, upward of 3000 policemen were taught what to do in case the city were suddenly called upon to feed and shelter and care for a large number of refugees or other homeless persons; how inventories were taken of every available site for a refugees' camp, of hospitals and homes where refugees might be taken, of doctors, nurses, automobiles, ambulances, trucks and countless other necessities in time of trouble; how all these were listed as auxiliary police facilities; how the food situation was studied and plans worked out for the provisioning of a refugee host; and how plans were prepared for the movement of large bodies of men quickly from one part of the city to another—all this is a familiar story to those who know their New York. Probably never before has such a thorogoing mobilization of the police resources of a great city been undertaken. Every conceivable situation was thought out and provided for.

These preliminaries, complete tho they were, would have been of little practical value had not Commissioner Woods established a Home Defense League to serve as a reserve police force. The League, which was the model for thousands of similar organizations in other cities, now numbers 26,000 men, of whom 16,000 have been equipt with uniforms. Each police precinct has its quota of Home Defense men who have been drilled under police and army officers and fitted for the task of patrolling the streets, handling crowds, regulating traffic and other more or less routine police work which would necessarily be neglected if the regular force were called upon to mobilize for emergency duty. Already the League has rendered good service by way of supplementing the regular police in connection with parades, mass meetings, and extraordinary duties such as the house-to-house checking up of the Federal draft registration.

But it will not be by the work of the Home Defense League nor the Detective Bureau nor any other single branch of the Department that the administration of Arthur Woods will be remembered, but rather by the sum total of the work of all branches of the force. And that constitutes a police record of which New York has good reason to be proud.

New York City

The Secret of Prolonging Life

Important Discovery: How to rejuvenate your body and mind, increase your brain power and rebuild and repair your nerve and vital forces.

SOME folks are accustomed to being ill. They think it's natural to have aches, pains and physical ailments. And it's hard for them to believe that they can get absolute relief, without medicine, merely by taking the right sort of food and drink.

As Professor R. von Walden, a scientist of national repute, says:

"Most of our physical ills come out of the kitchen. People eat sickness. For diseases are caused by the various waste products retained in the body, and can only be cured by proper combinations and quantities of foods, which dissolve and expel these impurities. Correct and adjust the diet and all disorders, with strikingly few exceptions, will speedily leave and health improve. Give to the run-down brain worker more of the brain-feeding and nerve-repairing vital foods—flesh, fish and fowl—and he will again be fit for brain work; and to the physical worker more cereal or muscle foods, and in each case the efficiency will be increased."

All of which is more plausible than it sounds.

Large consumers of vital foods rule the earth, whether among men or beasts. They are more active, progressive, and always more enterprising, than those living chiefly on a vegetarian diet, starches, cereals, etc., which produces stagnation, as in India and China.

Meat eaters are longer lived, the animal gelatine in meats keeping the body elastic and youthful.

Moses lived to be 120 years old, "and his eye was not dim, nor his natural force abated." He and his people were meat eaters, and therefore longer lived than the present generation. The laws of Moses for the preparation of meat are still in use today.

Old age can be directly traced to an excess of starchy foods, which harden the body and stiffen the joints, as they stiffen collars and cuffs, because of the hardening limes they contain; these limes encrust and block up the arteries, like water pipes, causing Arterio-sclerosis.

People who live principally on white bread, pastry, butter, tea or coffee, have neither brains nor energy. These stupefying foods lack in brain-building material. They cause brain starvation, while vital foods produce brain power, vitality and longevity.

If you are subject to brain fag and nervous exhaustion, you can easily prove there are certain foods that nourish your brain and nervous system. For a week use very little or no starchy foods. Take a preponderance of vital foods, fresh lean meats, game, poultry, fish, oysters, curdled custard, with fresh green vegetables, tomatoes, lemon juice, and a small amount of fruit in correct proportions and combinations, according to the New Vital Diet System. Your brain power will soon be restored to full vigor.

By taking correct quantities of digestible vital foods, lean meats, etc., you can increase your brain power for any special stress of brain work.

Drugs may relieve temporarily. But to get permanent relief, you must remove the cause—wrong foods and combinations—which ferment, cause gases, poison and kill, or produce gastritis, appendicitis, paralysis, etc.

It is well known that an excess of fatty and starchy foods will make you sluggish and bilious. Such diet will give you dull, splitting headaches, and cause lack of memory, inability to concentrate, drowsiness and inertia. Change to a digestible vital diet. Note your improvement.

Catarrh, Hay Fever and bronchial-asthma sufferers have been relieved by abstaining from foods that form mucus or phlegm, and cause expectoration, which are cream, butter, cheese, fats, oils, yolk of eggs, salt, etc.

Here are a few curative principles of the Vital Diet System: Suitable meats generate vitality and nourish your brain and nerves. Starchy foods feed your muscles, furnish staying power and increase your weight. Tomatoes and lemons are solvents of retained impurities, foreign elements and waste matter—the cause of disease. Green vegetables purify your blood, dislodge and carry off your waste products, provided all other foods are properly selected and combined.

Many statements on file from business men testify that they have been permanently relieved through The von Walden Rejuvenating Vital Diet System of serious ailments which had forced them to retire from business and that, without using drugs and medicines, they were again made fit to return to work.

The identical instructions, which restored these sufferers, and for which cash fees of $500 and over have been paid to Prof. von Walden in his private practice, are contained in The von Walden Course of Scientific Brain and Body Building, which consists of 25 lessons in manuscript form.

Without the slightest expense to you, you may have The von Walden Course of Scientific Brain and Body Building—the whole twenty-five lessons—to study for one week. They will gladly be sent on approval, transportation prepaid. Simply write and say you wish to try the instructions, using attached coupon, and that if not completely satisfied you will either return them within one week after you receive the lessons or send $10 for them.

The Secret of Prolonging Life will be disclosed to all earnest students of these lessons, and not only will their reward be permanent good health and a prepossessing personal appearance, but also mental efficiency.

JNO. WILLIAMS, Inc., Bronze Foundry, 550 W. 27th St., N. Y. Write for illustrated booklet. Free.

Metropolitan Hospital Training School for Nurses
BLACKWELL'S ISLAND, NEW YORK CITY

offers a three years course of training. The school is registered by the University of the State of New York, and connected with a hospital of nearly two thousand beds, which gives ample opportunity for a broad, general training.

The Nurses' Residence, removed from the hospital, is homelike and ideally located.

Requirements: At least one year of high school or equivalent. Age limit—18 to 35 years.

Remuneration—$10.00, $12.00 and $15.00 per month; the increase made yearly.

For information address Superintendent, MISS AGNES S. WARD

New Text Books

The Sciences

IT is interesting to consider the change in the intellectual life of our country that is likely to come within another half century simply by the growing attention to science in our schools. At present we are in a transition stage. The fathers and mothers of the young men and women of the present had practically nothing in the way of scientific training. Today, while the place of science in the school curriculum is still unsatisfactory, nevertheless, youngsters of twelve and fourteen years are being taught to think in terms of cause and effect, to cultivate the open mind and intellectual independence and hardihood. It is not too much to assume that the liberalizing effect of this training will produce a flowering of intellectual life during the latter half of the twentieth century that would surprize even those who have seen the marvelous changes that have taken place in our ideas and institutions during the past twenty-five years.

Among the new science textbooks is an excellent *First Course in General Science*, by Barber, Fuller, Pricer and Adams. The authors are in line with the latest trend in the teaching of this subject and are on solid ground when they contend that "the primary function of first year general science is to give a rational, scientific understanding of the pupil's environment to the end that he may to some extent correctly interpret it. It must be justified by its intrinsic value as a training for life's work." In their choice of subject matter the authors have consistently followed their theory, and the result is a valuable addition to the literature of the subject. It should give pause to the science teacher who has been following the usual line.

Lyman C. Newell, professor of chemistry, Boston University, is the author of an excellent new *Laboratory Manual of Inorganic Chemistry for Colleges*. The experiments chosen have been selected from a large number performed in the author's classes during the last fifteen years. A thoroly revised edition of the author's well known text on *Inorganic Chemistry for Colleges* is also off the press. The portions dealing with the theory of chemistry have to a great extent been rewritten and many new problems and exercizes have been added. *The Laws of Physical Science*, by Edwin F. Northrup, is a full list of the general propositions of science, "prepared to fill an obvious gap in the literature of physical science." It includes an alphabetically arranged bibliography of all books and journals referred to and should prove a very useful reference book to science students. *Physics with Applications*, by Carhart and Chute, is an excellent text for a first year course in physics, very attractively illustrated. A special feature is the emphasis given to the practical aspects of physics and to many picturesque phases of the subject. Professor Venable, of the University of North Carolina, is the author of *A Brief Account of Radio-activity*, in which students of chemistry will find a fuller statement of the marvelous facts and deductions from their study than is given in the present textbooks. A revised edition

of E. H. S. Bailey's *Sanitary and Applied Chemistry* is off the press. It is not only an excellent textbook, but is written in such a clear style that it should prove valuable to housewives wishing a work of general information and reference on their everyday problems. *The Magic of Science*, by A. Frederick Collins, is a book of scientific amusements which can be performed with simple apparatus. We are sorry for the boy who cannot own a copy of this fascinating book.

Elementary Agriculture, by James S. Grim, is a first rate textbook for children in country schools. It aims to make farm life attractive by pointing out the social and economic values and possibilities of country life. The illustrations are very attractive. *Productive Agriculture* outlines a stiff course in farming as carried on in the Middle West. As far as possible in the grammar grades, its training in grain and stock raising is thoro and complete. The book would fit admirably with the "Rural Arithmetic" reviewed under Mathematics.

There is a wealth of good textbooks on physiology and hygiene. One of the newest is by C. E. A. Winslow, professor of public health of the Yale Medical School. This book, called *Healthy Living*, is adapted for use in the intermediate grades. Grade teachers will also welcome the two companion textbooks, *Clothing and Health* for grades six and seven and *Food and Health* for grade eight, which furnish simple training in domestic science and hygiene. The former gives a history of cotton, flax, and wool, a study in the different kinds of cloth, and simple patterns and stitches. The latter, dealing with cooking utensils, simple recipes, and food values, is a practical book for a small school.

Practical Biology, by Smallwood, Reveley and Bailey, is an unusually simple treatment of the subject and will be of especial interest to teachers in New York State for the reason that it exactly covers the work indicated in the Regents' Syllabus. It contains both the descriptive text and laboratory directions. *Direct Method of Physical Development*, by Claus Seltz, contains practical suggestions on hygiene by a layman who writes rather vaguely about a mysterious life force which one can learn to control by adopting his system of exercizes. His ideas of hygiene, however, are good and his exercizes are to be performed without apparatus.

First Course in General Science, by Barber, Fuller, Pricer and Adams. Henry Holt & Co. $1.25. *Inorganic Chemistry for Colleges, Laboratory Manual of Inorganic Chemistry for Colleges*, by L. C. Newell. D. C. Heath & Co. $2, 64 cents. *Laws of Physical Science*, by E. F. Northrup. J. B. Lippincott Company, Philadelphia. $2. *Physics with Applications*, by Carhart and Chute. Allyn & Bacon, Boston. $1.25. *Brief Account of Radio-activity*, by F. P. Venable. D. C. Heath & Co. 50 cents. *Sanitary and Applied Chemistry*, by E. H. S. Bailey. The Macmillan Company. $1.50. *The Magic of Science*, by A. F. Collins. F. H. Revell & Co. $1.25. *Elementary Agriculture*, by J. S. Grim. Allyn & Bacon, Boston. $1.25. *Productive Agriculture*, by J. H. Gehrs. The Macmillan Company. $1. *Healthy Living*, by C. E. A. Winslow. C. E. Merrill Company. 75 cents. *Clothing and Health, Food and Health*, by Kinne and Cooley. The Macmillan Company. 65 cents and $1.10. *Practical Biology*, by Smallwood, Reveley and Bailey. Allyn & Bacon, Boston. $1.25. *Direct Method of Physical Development*, by Claus Seltz. R. F. Fenno & Co. $1.

Histories for the School

NOW that the Great War has made us all students of history it is impossible to draw a sharp distinction between history for the general reader and history for the student in school or college. Many books, especially those which carry their story down to the present time, might be placed in either class. Such a special study as Leon Dominian's *Frontiers of Language*

Are You Ready to Direct Others?

We are just entering upon the titanic task of turning this nation into a vast fighting unit. With proper organization and coördination the individual strokes of our millions of mechanics, farmers, and other producers—just as well as of our soldiers—can be concentrated in trip-hammer blows on the common enemy. Without proper organization the most strenuous of individual efforts will have no appreciable result.

The Nation-wide Call For Trained Leaders

Throughout America business transformation—readjustment, reorganization, expansion—is the order of the day. This unparalleled commercial and industrial activity, to meet the imperative necessity for increased output, demands more and better Executives. Men who can direct others and get things done are needed as never before. Trained executive ability is at a premium. It is the day of opportunity for the man who knows the fundamental principles of organization, management, and finance that underlie modern business.

Get In Line Now For Leadership

The Pace Standardized Courses in Accountancy and Business Administration are available to you at home by mail. These well-known courses have been officially adopted by many of the largest corporations of America to meet their need for competent men. The history of business discloses no such real opportunity for young men as the present. It is all a question of What are you prepared to do?

Take stock of your present ability in business. "Your Market Value," an unusual 36-page booklet, will aid you in determining the line for which you are best adapted—we will mail a copy free to all who request it. No need to delay. If you are called for military duty, the Pace Organization will gladly suspend your instruction and tuition payments. Ask for details of month's trial instruction.

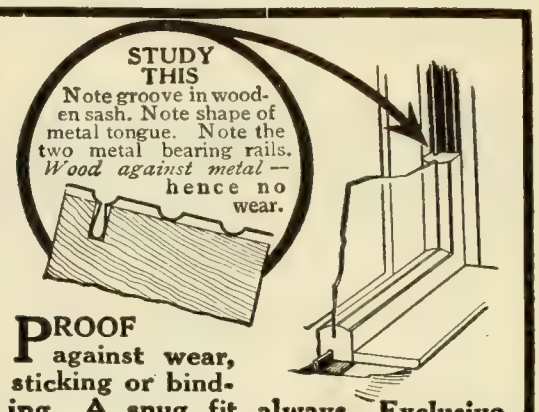
The New Thing in War

The rule of the modern censor, and the unwritten happenings are among William G. Shepherd's **"Confessions of a War Correspondent."** A new kind of a visit to the war zone is provided in the humor and thrill of this book. Get it today at your booksellers, or it will be sent postpaid for $1.10 by

Harper & Brothers, Franklin Sq., Dept. I., N. Y. City

and Nationality in Europe, would, ten years ago, have found a very narrow circle of readers in spite of its illuminating maps and attractive illustrations. Today no one can understand his daily paper without some knowledge of the problems discust in this work. The author, as a graduate of Robert College, Constantinople, is decidedly at his best in treating of the racial situation in Turkey. A book which might have been valuable to the student if the passing emotions and prejudices of the war had not so strongly colored it is Prof. Ramsay Muir's *Expansion of Europe*, which tells the story of colonial rivalry from the discovery of America to the present. There is great need for textbooks that have a world-wide outlook, and it is a satisfactory sign of the times that an unpretentious history for high school pupils, *Essentials in Modern European History*, by D. C. Knowlton and Samuel B. Howe, devotes an excellent chapter to "The Expansion of Europe in Asia and Africa." One of the best recent school histories is Prof. Charles D. Hazen's *Modern European History*, based largely on "Europe Since 1815," by the same author, but brought up to date and related to the issues of the Great War.

Prof. Hutton Webster's *Early European History*, which begins with prehistoric man, covers the rise of European civilization down to the period of the Protestant Reformation with which most histories of modern Europe begin, and it may, therefore, be used conveniently in conjunction with any standard modern history.



Among the recent school histories of the United States are *A History of the United States*, by Prof. Andrew C. McLaughlin and Prof. Claude H. Van Tyne, in two volumes, and Prof. Emerson D. Fite's *History of the United States*. Both works are ably written and interestingly illustrated with many maps and pictures and, altho elementary in character, discuss current economic and political problems.

Frontiers of Language and Nationality in Europe, by Leon Dominian. Henry Holt & Co. $3. *Expansion of Europe*, by Ramsay Muir. Houghton, Mifflin Company. $2. *Essentials in Modern European History*, by D. C. Knowlton and S. B. Howe. Longmans, Green & Co. $1.50. *Modern European History*, by C. D. Hazen. Henry Holt & Co. $1.75. *Early European History*, by Hutton Webster. D. C. Heath & Co., Boston. $1.60. *History of the United States for Schools*, by A. C. McLaughlin and C. H. Van Tyne. 2 vols. D. Appleton & Co. $1.50 each. *History of the United States*, by E. D. Fite. Henry Holt & Co. $1.60.

Mathematics

TEACH only what is of practical value to the pupil and omit all cultural subjects, particularly in mathematics, says the modern radical. Certainly many of the set types of questions based on former conditions ought to be replaced by problems of modern industries. But it seems hardly fair to omit all work in interest or insurance, because the business world claims that the greatest failure of the public school graduates is in addition and fractions.

A Rural Arithmetic from Illinois, a state which has been very successful in correlating school studies with its agricultural interests, is of the distinctly modern type. It is an excellent book on agriculture, on business forms and accounts, mensuration and averages; but its work in percentages and allied topics would not meet the requirements of the Eastern schools. Even more radical in its methods, for the purpose of meeting the adverse criticism of algebra as a required subject, is *First Year Mathematics*, tested for several years in certain Boston schools. In theory it would seem an improvement to combine for the first year, advanced arithmetic with funda-

PROOF against wear, sticking or binding. A snug fit always. Exclusive Features of

CHAMBERLIN METAL WEATHER STRIPS

"THE STANDARD FOR 25 YEARS"

Installed ONLY by expert mechanics from our factory branches and therefore GUARANTEED 10 YEARS—but outlasts the building. More Chamberlin in use than all others put together.

We equip windows, doors, casements or transoms—wood or metal—in new or old buildings, with Chamberlin Strip.

WRITE for illustrated, descriptive book and list of users in your vicinity.

Headquarters: 119 Dinan Building, Detroit

LIGGETT & MYERS TOBACCO COMPANY

NOTICE.

The Board of Directors of Liggett & Myers Tobacco Company has resolved to issue Seven Million Three Hundred and Seventy-Six Thousand and Forty Dollars ($7,376,040) additional seven per cent. (7%) cumulative preferred stock heretofore authorized by the stockholders.

This new stock will be issued as of October 1, 1917, and will be offered to all stockholders of record at the close of business September 10th, 1917, for subscription at par in the proportion of one share of new preferred stock for each five shares of stock, whether preferred or common, held by them, to be paid for in cash on October 1st, 1917.

Warrants for rights of subscription will be sent to stockholders of the company by the General Trust Company, 54 Wall Street, New York, N. Y., as soon after September 10th, 1917, as practicable.

T. T. ANDERSON, Treasurer.

DIVIDENDS

The Board of Directors of the American Cotton Oil Company, on August 7th, 1917, declared a quarterly dividend of one per cent. upon the Common Stock of the Company, payable September 1, 1917, at the Banking House of Winslow, Lanier & Co., 59 Cedar Street, New York City, to holders of record of such stock at the close of business on August 15, 1917.

The Stock Transfer Books of the Company will not be closed.

WILLIAM O. THOMPSON, Secretary.

UNITED STATES STEAMSHIP COMPANY

August 9, 1917.

A regular dividend of one per cent. and an extra dividend of one-half of one per cent. has been declared on the capital stock of this Company, payable September 1st, 1917, to Stockholders of record on the books of this Company at the close of business on August 16, 1917.

N. H. CAMPBELL, Treasurer.

GENERAL DEVELOPMENT COMPANY

61 Broadway, New York.

August 2, 1917.

At a meeting of the Board of Directors of the General Development Company held this day, a dividend of Two Dollars ($2.00) per share on the capital stock of the Company was declared payable September 1st, 1917, to stockholders of record at the close of business on August 15th, 1917. Books will not close.

SAM A. LEWISOHN, Treasurer.

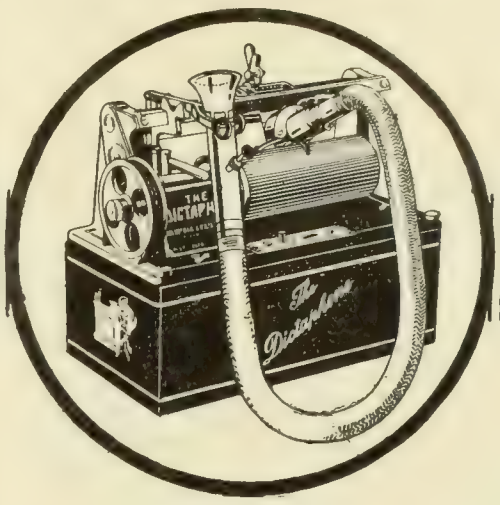
THE INDEPENDENT EFFICIENCY SERVICE

119 West 40th Street New York

mentals in algebra and geometry. But unless practise proves that this can be done without devoting additional time to mathematics later, the gain would be small.

Myers and Atwood's *Elementary Algebra* is a good book, among scores of its type, well arranged, with clear explanations and much drill in problem solving. In Merrill and Smith's *First Course in Higher Algebra*, tho little review work is given, the topics of the book are well presented, and the unusually large amount of preliminary work on calculus is clear and concrete.

Two books on geometry, plane and solid, both show an effort to condense and simplify the work. Betz and Webb's is a compromise between conservatism and radicalism in geometric training. By the omission of non-essentials it meets the needs of a shorter course, but, with its good original problems, gives enough work for college requirements. Durell and Arnold's, in two volumes, is as fully condensed, its correlation work is better done; its plans for theorem study excellent, and the large number of simple original problems well presented. *Recreations in Mathematics*, a book for true mathematicians, is a curiosity shop of odd methods and circumlocutions used when mathematical knowledge was meager in all subjects from arithmetic to calculus and astronomy.



Until recently bookkeeping has been consigned to the high or commercial schools. *Everyday Bookkeeping*, altho listed in Macmillan's Commercial Series, fits admirably the work in household and cash accounts now required in many states for the grammar grades. The simple training given in profit and loss accounting would enable any pupil to test the soundness of his business transactions. Closely associated with *Everyday Bookkeeping* in its aim to teach every child the value of money is *Money—What It Is and How to Use It*. It is difficult to know how to classify the book or where to place it in the high school curriculum. It is not a scientific work, tho the history of money in its various forms is given, but a readable account of the general principles of business transactions, thoroly adapted to young people.

A Rural Arithmetic, by Madden and Turner. Houghton Mifflin Company. 65 cents. *First Year Mathematics*, by Evans and Marsh. C. E. Merrill Company. 90 cents. *Elementary Algebra*, by Myers and Atwood. Scott, Foresman & Co., Chicago. $1. *First Course in Higher Algebra*, by Merrill and Smith. The Macmillan Company. $1.50. *Plane and Solid Geometry*, by Betz and Webb. Ginn & Co., Boston. $1.36. *Plane Geometry, Solid Geometry*, by Durell and Arnold. C. E. Merrill Company, 88 and 80 cents. *Recreations in Mathematics*, by H. E. Licks. D. Van Nostrand Company. $1.25. *Everyday Bookkeeping*, by A. M. Bogle. The Macmillan Company. 65 cents. *Money—What It Is and How to Use It*, by W. R. Hayward. Houghton Mifflin Company. 80 cents.

It is difficult to judge of the value of a penmanship system by one book of the series and no teacher's manual, but Lister's *Muscular Movement Writing, Primary Book*, certainly gives good training in a form which has been thoroly tested and approved. The letters are more artistic while fully as clear as those of other muscular systems. (The Macmillan Company, 44 cents.)

A simple little handbook on *Essentials in Mechanical Drawing* is by L. J. Smith. The explanations and directions are detailed and there is an outline for a short course in drawing, with designs. (The Macmillan Company, 50 cents.)

Jane Fales, of Teachers' College, is the author of a textbook on *Dressmaking*. It has a well illustrated chapter on the history of costume, and much on the manufacture and qualities of the different fabrics. The rest of the book is given to matters of tools, design, cutting, finishing, and with its clear diagrams will be valuable to home dressmakers as well as to class students. (Charles Scribner's Sons, $1.50.)

If there is a time to "do it now"—it is *now*

Conscription is *here*. You are losing a part of your office staff. You face a disrupted organization. Probably some of your people are already in National service.

1917 POPULAR SONG BOOK With Recitations, Toasts, Parlor Pastimes, Etc., Etc. 10c

It's a Long Way to Tipperary	Chinatown, My Chinatown	Choo Choo Leaves for Alabam'	California and You	Cubanola Glide
When Maple Leaves Are Falling	In Dreams of Yesterday	Wonder Who's Kissing Her Now	When I Lost You	Memories
Among the Sheltering Palms	I Love the Name of Dixie	Call Me Some Rainy Afternoon	Sweetheart Days	I'm the Guy
When the Roses Bloom Again	Mother — A Word That	Alexander's Ragtime Band	On Moonlight Bay	Grizzly Bear
Till Sands of Desert Grow Cold	Means the World To Me	When We Were Two Little Boys	Ragtime Violin	Rainbow
Rebecca of Sunnybrook Farm	There's a Girl in the Heart	When I Get You Alone Tonight	My Hula Hula Love	Red Wing
Where the River Shannon Flows	of Maryland; Twilight	Waiting for the Robert E. Lee	On Mobile Bay	Hiawatha
When I Dream of Old Erin	Are You From Dixie?	Trail of the Lonesome Pine	Stop, Stop, Stop	Oh You Kid
I'm On My Way to Dublin Bay	When I Was a Dreamer,	Let Me Call You Sweetheart	Just Next Door	My Pony Boy
Sailing Down Chesapeake Bay	Tulip Time in Holland	Will the Angels Let Me Play?	Oh Mr. Dream Man	School Days
Dawn of a Perfect Day	When You Wore a Tulip	Roses Bring Dreams of You	Mysterious Rag	Oceana Roll
When the Angelus Is Ringing	When You're a Long Way	Great Big Blue Eyed Baby	Oh You Little Bear	Red Rose Rag
I Love the Whole United States	From Home; Silver Bell	Silver Threads Among the Gold	Old Maid's Ball	Rose, Rose Rose

There's a Little Spark of Love Still Burning; I Didn't Raise My Boy to Be a Soldier; If You Don't Like Your Uncle Sammy, etc.

ONLY 10 CENTS gets nearly all above songs with others, also a large collection of jokes, toasts, dialogues, recitations, etc. All in one book. 8 books 20c. 100 Photoplayers Free to all persons ordering this great collection. The photoplayers include such great stars as Francis X. Bushman, Mary Pickford, Charlie Chaplin, etc. 1 Outfit 10c, 3 for 25c. KLONDIKE CO., 102 N. 5th Ave., CHICAGO

THE STRAIGHT ROAD TO VICTORY

MONTHLY ARTICLE OF THE EFFICIENCY SOCIETY

SUPPOSE that there are three milk wagon companies collecting from a dairy farming district and selling to the urban community of Pigsknuckle Crossing. Suppose that every wagon and every driver was kept busy attempting to satisfy the demands of this metropolis, that horses sold at so high a figure that the delivery companies could barely afford to replace those which died and that new milk cans could not be obtained for love or money. Now suppose further that a stranger comes to town, likes the situation, and opens a big toothbrush factory. Two thousand workingmen, most of them with large and increasing families, come to Pigsknuckle Crossing to make toothbrushes. They require milk for their babies, their coffee and their breakfast cereals, but how are they going to be supplied? The farmers can raise all the milch cows that the needs of the town require, but who shall take the milk to the ultimate consumer? Must the townsfolk go hungry or the factory close?

Without exaggeration, this was the position in which the railroads found themselves when we entered the Great War. In one sense of the word they had never been more prosperous, at least they had never had more to do. There was our big export trade with Europe and likewise a high pressure of business between different parts of the country. Most of the big companies were able to run at top capacity and some were even perplexed as to how to cope with the increasing demand for transportation. Then came war.

NEEDLESS to say, the burden placed upon a railroad system in time of war is much greater than any which private business can impose. The civil population must receive its food as usual. Failure to secure adequate transportation from rural Russia to the people of Moscow and Petrograd last March caused first famine, then bread riots, then armed insurrection, and finally revolution and the republic. The factories must receive their supplies as usual unless the nation is to be shaken by panic and economic collapse. But the railroads must undertake new tasks in addition to doing "business as usual." There are troops to transport from every part of the country; first to the training camps and later to the ports of embarkation. Remember all the difficulties which we experienced in mobilizing the National Guard on the Mexican border when we went in pursuit of Villa and the heavily burdened American tortoise failed to overtake the light footed Mexican hare. Then there is the equipment for the army: wireless outfits, entrenching tools, hospital supplies, aeroplanes, shoes, gas masks, helmets, and a thousand and one other indispensables which cannot be provided once for all but must be continually renewed as the old supply is exhausted. Then there are the two great items of food and shells, not for ourselves alone but for a dozen other nations who are looking to us for help. It is not enough to get the supplies and munitions required by the army transported somehow, they must arrive constantly, regularly and without delay.

The obvious answer to these problems is increased equipment. But the peculiar circumstances of the present put that solution out of the question. The able workmen who might be making rails and cars are in even greater demand for building ships or making munitions of war and many of them also have gone and will go into the army. Such new railroad equipment as can be manufactured is needed by our European allies whose transportation difficulties are far more acute than ours. Even if the railroads enjoyed every facility for extending their mileage and putting more trains into operation the necessary construction would be a matter of months and in the meantime preparedness would be sidetracked. From May, 1916, to May of this year there has been an increase of only one locomotive in two hundred and less than one freight car in fifty; not enough to keep pace with the ordinary needs of a growing population.

YET during the same year when there was so little construction the railroad companies increased the volume of the freight they carried by 16.1 per cent and they have met without demur every task which the war has given them. Actual returns have been received from railroads operating 173,105 miles of line, enough to make a seven track railroad all the way around the earth. During May they handled traffic equivalent to carrying 29,522,870,109 tons of freight for one mile and thus established a world's record for tonnage transported. In what way was this miracle worked?

Let us take another look at the milk routes of Pigsknuckle Crossing. Finding themselves unable to secure new wagons, horses, cans and drivers the three concerns held a conference and decided to coöperate. Smith and Brown both collected milk from the farmers of the Pleasant Valley district. They decided that instead of each covering the entire region Smith would take from all the farmers north of Willow Creek and Brown from all those to the south. This saved time by shortening the collecting route and enabled both milk companies to get to town earlier and return sooner. Brown and Jones distributed to customers in all parts of town. Brown was assigned to cover the east end of town and Jones the west while Smith devoted himself to the factory district. When Jones found that he had some spare milk cans on hand he loaned them to Smith, who didn't have enough, and, in reciprocity for this accommodation, Smith let Jones use his horses when Jones's horse was laid up by an accident. In a hundred such ways Smith, Brown and Jones pooled their resources and distributed their duties and the result was that all the two thousand families who were supported by the new toothbrush factory received their milk with unfailing regularity and nobody realized how near the town had come to a milk famine.

IN just this way the railroads of America handled the new burdens of the war with their old equipment. In April a Railroads' War Board was established with Fairfax Harrison, President of the Southern Railway, as its chairman. This board acted as a directing body for the railroads of the country under the supervision of the Council for National Defense. It was agreed that for the period of the war the various lines should be operated as a single transcontinental system, eliminating all individual and competitive activities. Instead of being rivals trying to capture each other's business the companies were comrades in arms, sharing each other's burdens. If one railroad found itself with empty freight cars these were promptly sent to another road where they would be more needed. Time schedules were revised so that transfers might be facilitated and common policies were approved and adopted.

The shippers also were required to do their bit. Special accommodation was given to the requirements of the Federal Government. When there was any conflict the private shipper had to wait his turn and the Railroads' War Board issued strict orders forbidding any one to make use of any Government ordered cars for any purpose except loading specified in an official order. It is estimated that during the next few months more than 100,000 cars will be required for Federal use.

The railroads have also been able to get increased mileage from their cars and locomotives by careful adjustment of long and short haul schedules and to reduce the number of empty cars. During the year the average locomotive mileage in a single day increased from 65.5 to 71.3.

These are the proofs that American railroad men are awake to the significance of the Great War and are both ready and able to do their part in it. Those pessimists who think of efficiency as a plant that can grow only on the other side of the Rhine should ponder them well. But may we not reasonably ask that American railroads retain when peace is restored the benefits of organization which were revealed to them by war? Shall we return to the old days of "unscrambling" the railroad mergers or insist that they combine, as at present, not for the exploitation of the shippers and the consumer, but in order that no equipment may stand idle because one railroad is unwilling to accommodate a rival? Such are the questions which the war has raised and they will not cease to be asked until they have been rightly answered.

A Just and Durable Peace?..... 300

REMARKABLE REMARKS

BISHOP C. D. WILLIAMS—American prosperity is in a great measure lop-sided.

BILLY SUNDAY—I tell you if automobiles could talk there would be something doing.

EX-ATTORNEY GENERAL WICKERSHAM—Damn the Kaiser!

ORVILLE WRIGHT—The army with the most eyes will win.

J. EDGAR PARK—There is nothing perfect except a perfect fool.

H. G. WELLS—American citizenship lacks a mental "hinterland."

AMY LOWELL—My correspondence is enormous, simply enormous.

PROF. IRVING FISHER—Eugenics is hygiene raised to its highest power.

LLOYD GEORGE—I believe in the nation which can sing about its defeats.

J. OGDEN ARMOUR—Cultivate personality and make a good first impression.

DR. BEVERLY ROBINSON—Not very many operations for appendicitis are necessary.

SENATOR REED—Forever and forever the lash is laid across the legislative back.

GOVERNOR FERGUSON OF TEXAS—Some people are hog wild about higher education.

LORD LOREBORN—If this conflict goes on indefinitely, revolution and anarchy will follow.

JOHN D. ROCKEFELLER—The trouble with me is that I enjoy myself wherever I am.

SECRETARY HOUSTON—The high cost of living is due to a combination of circumstances.

BRAND WHITLOCK—The breweries are the one institution the Germans have respected.

ED HOWE—I suppose I am the only sincere admirer of John D. Rockefeller in the world.

CARDINAL GIBBONS—I am opposed to any state wide or nation wide prohibition measure.

MAXIM GORKY—Nearly all the evils of Russia's daily life spring from the absence of science.

GENERAL GALLIENI—Say what you want done, but don't say more than a man can remember.

GRANTLAND RICE—An aeroplane moves at top speed almost twice as fast as a golf ball does.

LADY DUFF-GORDON—A woman bursts into the fullest bloom of her beauty in an evening gown.

MARY PICKFORD—Have you tried pure olive oil? It is said to promote the growth of eyelashes.

PRESTOWA MANN MARTIN—Feminism will reduce the lord of creation to the status of a Tom cat.

REV. L. C. LEWIS—We should speak not of the kingdom of God, but of the republic of God.

ROGER W. BABSON—Our banks are operated by the capitalist class and for the capitalists alone.

ELIHU ROOT—There is not as much disturbance in all of Russia as there is in the United States.

SAMUEL GOMPERS—A racial problem rarely becomes acute except thru economic or social friction.

EMPEROR WILLIAM—New nations continue to enter the war against us, but this does not frighten us.

KOREAN MISSIONARY ROSE—Next to finger nail growing the popular relaxation in Korea is swinging.

GLENN FRANK—There is a distinct function for the lecturer, but at present he is not fulfilling it.

LUKE MCLUKE—There is a lot of merry sunshine in the world, but you seldom see any of it at the breakfast table.

MARY ALDEN HOPKINS—Accustom your children gradually to the sight of blood and for yourself learn to kill a little every day.

THEODORE ROOSEVELT—I am a retired commander-in-chief of the United States army and eligible to any position of command over American troops.

WILLIAM B. HAYWOOD—We are going to ride in automobiles or nobody else is going to ride in them.

ROMAIN ROLLAND—The two moral weaknesses which this contagious war has most completely revealed are the weakness of Christianity and of Socialism.

MAX NORDAU—It is enough to make one quit the human family in disgust to think that for a whole century two worlds have regarded the German as an immutable individual.

HELEN ROWLAND—In these days when an ordinary human man asks an ordinary human girl to be his wife, she ought to go humbly down on her knees and thank heaven.

FERNAND EMGERAND—The peace which will conclude this unparalleled war will be the greatest event in history and the treaty which will ratify it must be a masterpiece.

DUDLEY GLASS—If the weather continues warm and our motorists continue to use this new 200 skunk power gasoline we'll all have to wear gas masks when we go out airing.

WOODROW WILSON—If you live in a place where you can sit around a stove in a country store and spit tobacco juice in a sawdust box you are more likely to have opinions than if you live in New York.

SECRETARY OF STATE LANSING—I do not know in the annals of history an instance where a people, with truly democratic institutions, have permitted their government to wage a war of aggression, a war of conquest.

SENATOR STONE—I would strip every ruler and noble of his toggery, his pretensions, his ill-gotten privileges and send him out about his business to make an honest living by his own hand and brain like other men.

RICHARD PIERSON HOBSON—When the war closes, we should announce to the world that we intend to retain control over the elements until a proper international organization is developed. Then we will promptly transfer their control to that organization to be used in the interest of peace and humanity.

THE FOOD FIGHT

Under this head, every week, The Independent will print some vital part of the information which is being circulated by the Department of Agriculture to aid American housekeepers in their patriotic and intensely necessary work of conserving food.

CANNING this year is being done almost entirely without cans. They are hard to get and glass jars are just as good, in fact rather better, for home use. Glass jars are expensive, tho, so it will be good news to the housewife who keeps things "because they may come in handy some day" to learn that her foresight has been at last rewarded and that the experts of the Department of Agriculture are urging the use of old bottles, provided they are properly sealed, for the conservation of a good many different kinds of food. Glass or crockery jars with sealing devices must be used for canning vegetables and fruits, but preserves, marmalades and jellies can be put up in large-necked bottles and fruit juices in small-necked bottles sealed with paraffin. Cap jars and large-necked bottles with paper and paraffin or, in the case of jellies and stiff marmalades, with paraffin alone. Seal small-necked bottles this way: Make a cotton stopper, press it into the neck of the bottle and leave it during the sterilization or boiling period. To sterilize, set the bottle in boiling-hot water up to the neck and let it remain for forty minutes at a temperature of 165° F. Then remove the bottle, press the cork, which has been baked in the oven for one hour, in the top over the cotton, immediately, and dip the top into melted wax or paraffin.

THE SWIMMER

BY JOHN CROWE

IN dog-days plowmen quit their toil,
And frog-ponds in the meadow boil,
And grasses on the upland broil,
And all the coiling things uncoil,
And eggs and meats and Christians spoil.

A mile away the valley breaks
(So all good valleys do) and makes
A cool green water for hot heads' sakes,
And sundry sullen dog-days' aches.

The swimmer's body is white and clean,
It is washed by a water of deepest green
The color of leaves in a starlight scene,
And it is as white as the stars between.

But the swimmer's soul is a thing possest,
His soul is naked as his breast,
Remembers not its east and west,
And ponders this way, I have guessed:

I have no home in the cruel heat
On alien soil that blisters feet.
This water is my native seat
And more than ever cool and sweet,
So long by forfeiture escheat,

O my forgiving element!
I gash you to my heart's content
And never need to be penitent,
So light you float me when breath is spent
And close again where my rude way went.

And now you close above my head
And I lie low in a soft green bed
That dog-days never have visited.
"In the sweat of thy face shalt thou eat bread:"
The garden's curse is at last unsaid.

What do I need of senses five?
Why eat, or drink, or sweat, or wive?
What do we strive for when we strive?
What do we live for when alive?

And what if I do not rise again?
Never to goad a heated brain
To hotter excesses of joy and pain!
Why should it be against the grain
To lie so cold, and still, and sane?

Water-bugs play at Shimmer, Shimmer,
Naked body's just a glimmer,
Watch ticks every second grimmer:
Come to the top, O wicked swimmer!

HARPER'S WEEKLY

THE POPE'S PROPOSALS FOR PEACE

THE proposals which Pope Benedict XV has submitted to all the belligerent powers as a basis for the mutual discussion of terms of peace deserve the most careful scrutiny and the most serious consideration. This not only because of the respect due him as the head of a great branch of the Christian Church, but because no serious suggestion from a responsible source for putting an end to the horrors and devastation wrought by the Great War can be dismissed lightly or cavalierly. We do not believe that the United States or any one of its allies—government or people—desires so to dismiss it. Neither Great Britain nor France nor Russia nor Belgium nor Serbia nor Italy—to say nothing of the lesser and the more remote belligerents of the Allied group—wanted this war, or "willed" it, to use the Kaiser's word. The United States least of all. What the real reaction of Germany—ruling class and governed people—to an actual attempt, like that of the Pope, to bring an end to the conflict at its present stage, will be we do not dare to hazard a guess. The psychology of the German mind has become increasingly difficult for us to enter into as the war has progressively revealed it. But one certainty has been stripped of veil after veil of charitable doubt as the months since August of 1914 have passed. Germany—ruling caste and, we must believe against every inclination of our heart, united people—wanted this war and willed it.

What should be the response of the Allies to the message of Benedict? What shall be the response of the United States?

One and the same, is the first answer. We fight shoulder to shoulder with them for one ultimate end, one fundamental purpose. We must not separate ourselves from them in the consideration of the terms on which we shall all consent to cease to fight. United we face the Teutonic menace to civilization and humanity. United we must face it down.

But what shall that one answer be? Let us first consider what the Pope's proposals are. The complete text of his message to the belligerents is to be found printed on another page. Stripped to the bare bones, if we interpret them aright, the terms he proposes as a basis are these:

1—Mutual diminution of armament;

2—Substitution for armament of arbitration, with the imposition of penalties upon the state which should refuse either to submit a dispute to arbitration or to accept the decision;

3—Guarantee of the freedom of the seas;

4—No imposition of indemnities for the reparation of damages or the payment of war expenses;

5—Mutual restitution of all occupied territory;

6—Discussion in a spirit of conciliation of other territorial questions—such as those between Germany and France and those between Italy and Austria—taking into consideration the "aspirations of the peoples and the special interests and the general welfare of the great human society";

7—Examination, in the "same spirit of equity and justice" of other territorial and political questions, notably those of Armenia, of the Balkan states and of Poland.

To a sudden visitor from Mars these terms might perhaps seem plausible. If he merely knew that two great groups of nations had been at war for three years, at an unbelievable cost of blood and treasure, and with no decisive result yet in sight, he might well say, as the Pope has in effect said, "Stop fighting, restore the status quo ante bellum, agree that it will not happen again, and resolve to settle the differences between you in a spirit of conciliation and justice."

But such a simple solution of the problem ignores too many elements in the situation. It tosses cavalierly into the scrap heap such hard and unescapable facts as these:

That Germany deliberately and wantonly began the war in pursuit of her own reckless ambitions;

That Germany broke her plighted word for "strategical reasons" on the insolent plea that "necessity knows no law";

That Germany has waged the war in utter disregard of every mandate of international law, every principle of humanity and justice and moral decency;

That this war is a struggle not between conflicting interests but between opposing ideals—democracy and autocracy, civilization and barbarism, consideration for the weak and exaltation of the strong, humanity and ruthlessness, light and darkness, right and wrong;

That in such a conflict with such an antagonist the way to peace cannot lead thru the paths of conciliation and sweet reasonableness, but by the hard road of submission for the aggressor and the blood guilty;

That Germany must be defeated if the world is to be safe, for Germany, under her present leadership and in her present mood, has shown herself the ruthless enemy of everything that makes for peace and security, fair play and right dealing, equity and the rights of man.

What then shall be the reply? How should we answer?

In the Yankee way, with a question. What does Germany say?

For Germany must now speak first; and for two reasons. For the first, the Allies, in justice to the great cause of civilization and humanity for which they fight, cannot even enter into a discussion of peace with Germany until that forsworn nation shall have shown, at least by implication, some recognition of her guilt, some inclination to recant. For the second, the terms of the Allies have been known for half a year; Germany's have never even been intimated. It would be criminal folly for the Allies, before Germany had spoken, to declare their readiness to enter a peace con-

ference with the proposals of the Pope as the basis of negotiations.

The Pope proposes the restoration of the status quo, no indemnities, disarmament, arbitration.

The Allies have proposed restitution, reparation, guarantees for the future.

Germany has proposed—nothing.

Come, what does Germany say?

Until Germany has spoken there is no ground on which peace can even be discussed.

Germany must now speak first.

THE ORIGIN OF HATE

PAIN, says the physiologist, is a superficial thing. A mere cut or burn will often be more painful than a dangerous internal wound. The function of pain is not aimless torture to the injured body but a warning of a dangerous and abnormal situation, and that is why the nerve ends reach the skin where they are most easily hurt. If picking up the wrong end of a hot poker did not at once make things very unpleasant we might not drop it in time to prevent serious injury. This is true not only of pain but of most unpleasantnesses of life; they are danger signals of something out of the ordinary. Fear, for example, is only excited by the unusual. You cannot frighten a fish by the heaving billows of the ocean or an eagle by the terrible depths and distances of the boundless air. You can frighten a man with a ghost once; perhaps twice. But if ghosts drop in for a chat every night he will soon become reconciled to his strange company and converse with them almost at his ease. At least, so we are told; we confess we have not tried it. The soldier who dodges the first shell during a bombardment will not even turn his head at the fiftieth. What we are used to and expect rarely causes us pain, fear, uneasiness, shyness or perplexity.

The same principle, we believe, applies to the emotion of hate. It, too, is an emotion of adjustment to a new and unexpected situation. We may study this where hate is now being exhibited on its largest scale, in Germany. Nothing is more curious than the unequal way in which the German people distribute their hate among their different foes. The French have, perhaps, caused the death of more Germans than any other of the Allies if we consider the past three years as a whole. Yet the German press has almost universally taken a tone of patronizing pity toward this valiant and implacable foe, "Poor fellows, such fine artistic taste, such valor, such noble traditions! To think that they should become the dupes of those wretched English." Toward the Russians their attitude is similar, with a somewhat greater flavor of contempt. Did not Lissauer sing in his famous *Hassgesang gegen England:* "French and Russians they matter not, A blow for a blow and a shot for a shot"?

Such has, in general, been the attitude of the Germans toward their many enemies. Two marked exceptions there are: England and Belgium. Toward these peoples the German nation as a whole has shown an intensity of hate that borders on insanity. It is they who have been singled out not only for official frightfulness but for the insults of the mob around the prison camps and for the furious denunciations of the editors, preachers and professors who profess to interpret the German mind. The wave of collective hate is too general and spontaneous to be accounted for as part of the Kaiser's policy for new international alignments after the war. It must have some genuine popular feeling as its basis. If so, what is the cause?

We think that one explanation may be that the German people for more than four decades have taken for granted that some day they must be ready to repel an attempt on the part of their neighbors to the west to avenge the losses and humiliations of 1871, and that ever since the Franco-Russian alliance they had become used to the idea of a war against both nations at once. England was different. Very possibly the German diplomats knew that the British Government would never permit Germany to crush France in a wantonly aggressive war, but the mass of the people (unless they are all liars) really hoped that England would stand aside in her traditional "splendid isolation." The French and Prussians have fought against each other many times, but in past wars the English and Prussians had usually been allies and always friends. To the Germans it was a new and terrible element in the situation when this old ally, this "Teutonic" people of similar speech and blood, turned against them. In an instant their hopes of a short and easy war turned to ashes. "*Der Tag*" had dawned too soon.

The case of Belgium was similar. No German, so far as we know, expected that when the mighty Imperial army entered this little country that the people would dare do more than put up a formal show of resistance. The wholly unanticipated military enthusiasm which the Belgians brought to the conflict upset the German plans in matters of vital moment. They felt as a man about to drown a kitten would feel if it suddenly turned into a tiger. Not so does a man feel, not so does he hate, if he goes armed into the jungle and comes face to face with the tiger which he started out to hunt in the first place. The German feeling toward Belgium was further embittered by the fact that their invasion of Belgium had placed them irretrievably in the wrong. The Germans, therefore, avenged themselves on the little nation whose bold fight had advertised their crime.

What is true of German hate against the world is true of the world's hatred of the German Government. We cannot now recapture the first hot blaze of indignation with which we once heard of open towns bombarded or of the "Lusitania" sunk. It is a horrible thing to say, but the last three years have made us almost used to atrocities. New infamies are reported from time to time in the press, but we are calloused to the shock. There remains, we trust, the iron determination to root out from existence the political system which made these evils possible, but the strong emotional coloring has not lasted. We will make war in cold blood and make peace with cold reason. Two years ago, had we gone to war over the first submarine outrages, we could have done neither.

THE VATICAN TOMORROW

THE Pope's peace letter will be discussed almost exclusively from the standpoint of its bearing upon the continuance of the war and the terms of peace. It has another significance which perhaps will receive more attention later on.

Whether with conscious intent or not, it is a pro-German document. It probably was not written at Potsdam for signature at Rome, but it might as well have been. The plan proposed cannot be considered seriously by the Entente Allies so long as they are undefeated and retain their normal common-sense. Deeper than any other reason that can be alleged for pushing the war against the Central Powers until they surrender and acknowledge that they have been in the wrong, is the necessity, which France and Great Britain have alleged from the first, of insuring the world against a repetition of a king-made war of aggression. Other questions, including the question of the disposition of colonies and the question of trade reprisals after the war, may be considered at a council table, but before the council meets there must be a situation which will make another such war impossible.

Practically this means that Germany must throw up her hands. The practical substance of unconditional surrender is an imperative requirement in the issue as it now stands, and this requirement the Pope's letter ignores.

Therefore the deeper significance of the letter is that the Vatican has arrived at a certain momentous conclusion. It is that the Catholic Church can save more out of the wreck

in Austria and in Germany than it can hope to save in Belgium and in France.

At the beginning of the war pro-German writers in the United States were fond of representing the issue as a conflict between a stalwart Teutonic Protestantism and a decadent Latin Catholicism. It was a childishly superficial generalization, but it satisfied not a few American Protestant minds that wanted to keep this country out of the war. It is worth something to have a convincing proof that the real forces in the conflict are not and never have been so aligned. Belgium was largely Catholic, but Catholic Belgium, desolated and impoverished, cannot, for generations to come, give to the Vatican its old-time material support. France already before the war began had secularized her politics and her schools, and there was no reason to expect that the country would go back to its former subservience to the Church. The Roman Catholic population of the United States is thoroly religious and loyal, but it is not unthinking or subservient, and there is no reason to expect that in the near future it will be able or even intent to break down the vogue and efficiency of the public schools. In Italy secularism is politically dominant and commercially ascendant. Austria and southern Germany remain, and probably for a long time to come will continue to be, the strongholds of the Catholic power.

In view of these facts it must be acknowledged that the Vatican has hitherto followed an honorable course, standing by its Belgian and French adherents thruout their distress, and refraining from act or word that could be construed as lending aid to the German aggression. Its present attitude and its peace proposals are most reasonably and generously explained therefore by assuming that the plain interests of the Church and its deep concern for its Austrian and south German population have prevented it from seeing clearly the specific moral issues involved. Neither religion nor morals, nor business can afford to consent to such a peace as the Bishop of Rome proposes.

SHAM ART AND SHAM ADMIRATION

THE naïve visitor to an art gallery on learning that the picture at which he is gazing cost a quarter or a half a million often wonders—tho he does not often venture to express his wonder—what the connoisseur sees in it that makes it worth so much. The answer to this in many cases is that the connoisseur sees nothing in the picture that makes it worth so much. It is what he thinks about it that makes it cost so much. The value is not on the canvas; it is not even in his eye; it is merely in his mind. Occasionally a case comes up in court that enables us to measure the amount of the fictitious accretion of value due to an artist's name. Such a case occupied for a week the attention of the King's High Court of Justice presided over by Mr. Justice Darling, the most noted humorist of the British bench. An American millionaire had bought for $100,000 a painting guaranteed by the art dealer of Bond street to be a portrait by Romney of Mrs. Siddons and her sister, Miss Kemble. Suspecting its genuineness he brought suit against the dealer for damages under the guarantee. The defendant summoned curators and critics to prove that it was a real Romney. Among them was the art critic of the London *Times*, Mr. Humphry Ward, the little-known husband of the well-known wife. He had made a special study of the works of Romney for the last twenty years and he testified that the canvas was a fine specimen of Romney's work. He was even able to tell by its style almost the exact year when Romney must have painted it. The plaintiff on his part was able to produce experts to prove that it could not be by Romney and was a very poor picture anyhow. But after a week of contradictory testimony and opposing argument a man turned up who remembered having seen the original sketch of the picture in the Royal Academy Library. When the photograph of the sketch was produced in court, the art dealers unhesitatingly acknowledged their mistake and refunded the $100,000. The sketch was signed "O. H." in the monogram of Ozias Humphry, a friend of Romney's but an inferior painter, or in view of the testimony of the plaintiff's experts, let us put it more cautiously—a painter of inferior reputation. The painting was first exhibited by Humphry at the Royal Academy in 1780 as "Venus and Juno," but it seems improbable that these ladies sat for it and documentary evidence indicates that the Ladies Horatia and Maria Waldegrave were the originals.

Now what is the intrinsic value of the picture? When it was thought to be by Romney it was valued at $100,000. When discovered to be by Humphry it is valued at $2000. The difference, $98,000, is the measure of the supposititious authorship. Humphry could not sell the picture at all when he painted it, not even to the ladies it purported to represent. It was sold after his death at Christie's with his other works, which brought prices ranging from 50 cents to $15. But we of the twentieth century appreciate art—that is, old art—more than the people of the eighteenth.

It may be objected that the $98,000 represents not the difference between Romney and Humphry but between the Kemble sisters and the Waldegrave sisters. That does not apply, however, to the celebrated case of 1908 when Dr. Bode of Berlin bought at a fabulous price a little wax bust of Flora supposed to be the work of Leonardo da Vinci. On tapping the interior, however, it was found to be stuffed with two yards of English quilting material! British critics assert that the bust was made by the modern British artist Lucas, but the Prussian House of Lords voted that it was a genuine da Vinci, so this question must be added to the others over which the two nations differ.

At any rate it is evident that works of art are not valued for their art but for their rarity. They bring high prices for the same reason that a Caribbean stamp with some letter wrong side up will sell for a thousand dollars. A painting is like a bank-check; what it is worth depends on the signature—if it has one.

Now the real value of a painting is its face value. Questions of date and authorship cannot in any way affect its beauty. There are acres of Corots in this country and that many of them are imitations does not matter in the least to anybody except the owner, and not to him if he is what he professes to be, a lover of art and not a mere speculator in pictures. If they were not equally well painted they could not pass for Corots. If they are equally well painted they are equally good.

An American patron of art visiting Italy some years ago was stealthily approached by an Italian who informed him of a Raphael Madonna in the possession of a nobleman of ancient lineage but now in indigent circumstances and willing to sell it for a song—as Raphael songs go. The millionaire visited the palace and inspected the picture. He could see that it was genuine—anybody who knows anything at all about art can tell a Raphael at a glance. But how could he get the picture to America? The Italian Government realizing the value of its stock of old masters to the tourist industry prohibits their export. The wily Italian who had introduced the American to the picture suggested a strategem. He would have it painted over lightly with another scene in water colors. So the millionaire paid over a liberal check and past thru the custom house at New York what appeared a modern Italian painting of a snow-storm in the Tirol. He sent it to a cleaner with instructions to remove the outer picture. But the cleaner did his work too thoroly. He not only washed off the snow-storm but also the Madonna beneath, and when the patron of art got back his picture the canvas carried a portrait of Marconi!

Counterfeit art has a real value in that it exposes counterfeit connoisseurs.

THE STORY OF THE WEEK

A New Liberty Loan

Secretary McAdoo of the Treasury Department has suggested to Congress a new loan of $7,538,945,000 worth of bonds. These bonds will be used in part for new loans to the Allies, and in part to retire the bonds of the first Liberty Loan, which were issued at 3½ per cent. Since the new loan will draw interest at 4 per cent, it will be necessary to change the old interest rate on the first loan to correspond. The new bonds will be subject to federal taxes but not to state or local taxes; the previous issue was exempt from federal taxation as well. Even with the heavy income taxes now contemplated the Liberty Loan will be a good investment, since the tax on an allotment of $500,000 worth of bonds would reduce the value of the interest only from 4 to 3.9 per cent, which is more than the present rate on untaxable bonds. Of course, it is possible that war taxes have not yet reached their upper limit.

Senator La Follette has been working out a plan to finance the war as largely as possible by direct taxation without reliance on new bond issues. There is a group of radical senators who will uphold this principle and perhaps may succeed in having some increases inserted in the war tax bill, but there is little doubt that the war bonds will be authorized whether taxes are further increased or not. Secretary McAdoo has also proposed the issue of short-period certificates of indebtedness and war savings certificates to cover possible emergencies.

Coal Price Control

The Federal Trade Commission having just completed its study of coal production costs, President Wilson is considering appropriate methods of reducing the present abnormal prices. By the food control law the President is authorized "to fix the price of coal and coke, wherever and whenever sold . . . and to regulate the method of production, sale, shipment, distribution, apportionment or storage thereof." The Government will probably take over the bituminous coal supply and establish a maximum price based on ascertained costs of production, and so regulate its distribution that the essential wartime industries do not lack their necessary fuel. The states of the upper Mississippi Valley have suffered most from the coal shortage, according to a statement of the Railroad War Board. The shipping tonnage on the Great Lakes has been so largely taken up with ore shipments that the railroads have had to increase the amount of coal carried overland. President Markham of the Illinois Central has stated that the railroads are now handling more coal than ever before and that coal is practically preferred freight on every railroad.

THE GREAT WAR

August 13—Sixteen British ships sunk during past week. George Barnes succeeds Henderson in British War Council.

August 14—China issues formal declaration of war against Germany and Austria-Hungary. Rumanians make counter-attacks on Mackensen's forces.

August 15—Pope's peace appeal published. Another big drive at Lens. Austrian aeroplanes drop bombs on Venice.

August 16—British take Langemarck. Germans drive Russo-Rumanian forces across the Sereth.

August 17—Germans make counter-attacks at Langemarck. Struggle for Lens continues.

August 18—French aeroplanes bombard German bases in France. Austrians take trenches in Moldavia.

August 19—British make fresh gains near Ypres. Italians begin offensive on the Isonzo.

The governors of Illinois, Kansas and Missouri are planning to seize and operate the coal mines in their respective states unless the mine owners and coal dealers are willing to grant reasonable prices. This action may be forestalled by price fixing on the part of the Federal Government, but unless maximum prices are established for the whole nation some of the coal producing states will undoubtedly take independent action. One element that complicates the situation is the demand of labor for a higher scale of wages to correspond with the increased profits. The danger of strikes, both local and general, is constantly present. Secretary of Labor Wilson has induced 25,000 Alabama coal miners to remain at work until there was opportunity for a settlement between the operators and the unions.

The Pacifist Drive in the Senate

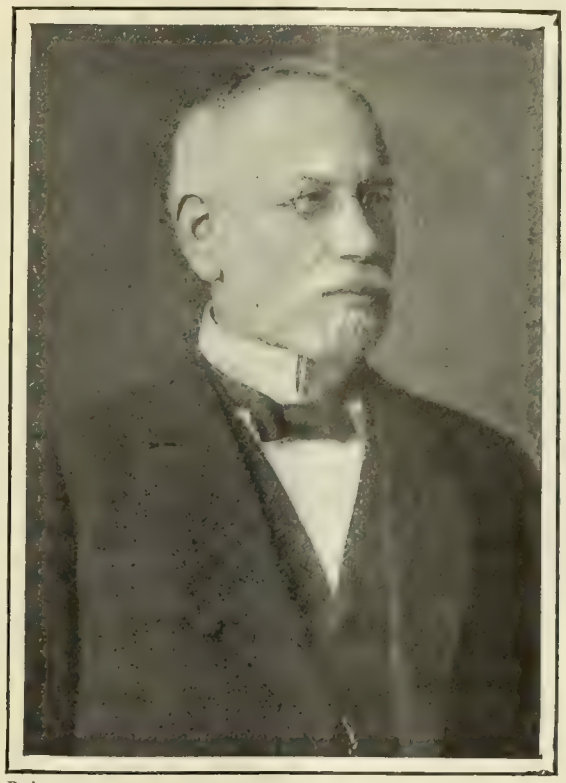
Partly in response to the Pope's strong appeal to all the belligerents to withdraw their hands from slaughter and conclude a lasting peace, and partly from their own dislike of the war or from such an attitude on the part of their constituents, several senators and representatives have attempted to introduce an infusion of peace sentiment into the halls of Congress. Senator La Follette has framed a resolution to the effect that "the Congress hereby declares that this Government will not contribute to the efforts of any belligerent for the purpose of prolonging the war to annex new territory either in Europe or outside of Europe nor to enforce the payment of indemnities to recover the expenses of the war." Senator King of Utah has introduced a rival resolution demanding victory as a prerequisite to peace. Around these resolutions, and others which may be offered, the Senate will hold its first debate on the conditions of peace. The outcome is not questioned, but it will be interesting to see how many other senators will rally around the white flag raised by the Senator from Wisconsin. Senator Gore of Oklahoma has offered an amendment to the war revenue bill, providing that no part of the money thus appropriated shall be used to send drafted men to fight overseas. Altho Senator Gore defended his amendment on grounds of military expediency, it will doubtless find its support among the anti-war forces of Congress.

A Central American Federation?

The Government of Costa Rica has approached the other Central American nations with the proposal to reconsider the peace treaties of 1907 which bound Guatemala, Salvador, Nicaragua and Costa Rica to respect the neutrality of Honduras, and to refer all matters of international dispute among the Central American countries to a court established in Costa Rica for a period of ten years. Now that the term of the agreements is about to expire there is a strong sentiment in all of the little republics to replace them by a firmer bond of union. In Honduras especially, which lies midmost of the five republics (hence the importance of its neutralization), the people are said to be earnest advocates of unification. Salvador is also favorably disposed to the idea of a federation of Central America. On several occasions during the nineteenth century there were more or less successful attempts to form such a federation, but they always broke up after a time from the jealousy of one or more of the participating nations that considered the advantages of union unequally distributed. All of the Central American countries have, in one way or another, endorsed and supported the action of the United States in entering the war against Germany, and this diplomatic solidarity may form the basis of a new and more permanent union.

The Western Offensive

The most important actions on the western war front during the week were in the neighborhood of Ypres. All the German attempts to regain their lost positions to the east of the city have been unsuccessful, but the Allies also have been content with very modest gains, aiming rather to shatter the German positions and weaken their army than to occupy territory. Early on the morning of August 16 the French and British attacked along a nine-mile front north of the road from Ypres to Menin. The French to the north took the village of Dreigrachten and the British occupied



Langemarck. The accounts of the battle are very confusing. The Germans allege that they recaptured Langemarck and repulsed the British from Poelkappelle, a village northeast of Langemarck. The British, on their part, deny that the Germans even attempted to retake Langemarck or that the Allies had any present intention of occupying so advanced a position as Poelkappelle.

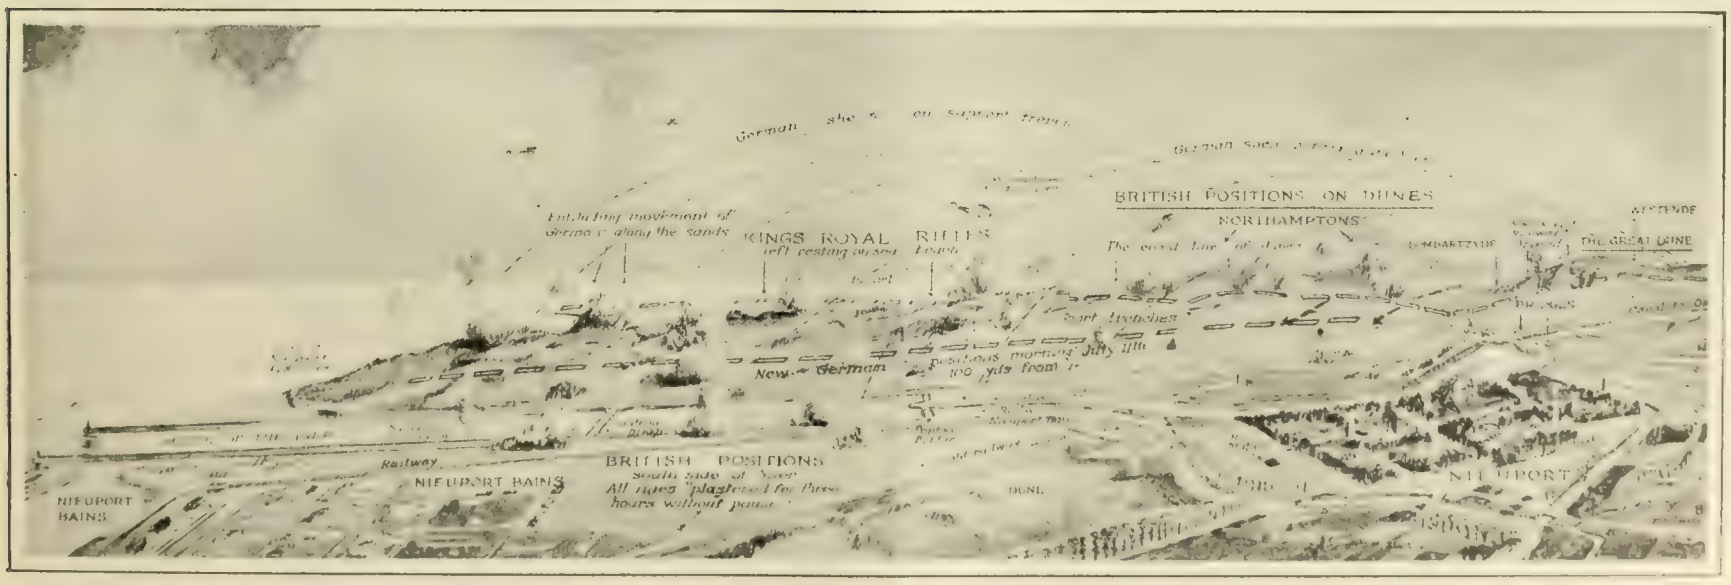
The successes of the French and the British are explained by the superiority of their artillery fire and aircraft. The infantry encountered the greatest difficulty in making any progress because of the heavy rains and the overflowing streams and canals. Sometimes a soldier would be bogged in the mire while in the act of charging and require to be pulled free by his comrades. While the German defenses above ground were easily demolished by the Allied artillery, many Germans found shelter in underground fortifications where they remained hidden until the storm of battle had swept past them. The presence of these secret entrenchments is one explanation of the fact that after every advance the Allies are busy for several days in "consolidating" their positions. The word implies not only the reconstruction of damaged trenches but the complete occupation of positions left in the rear of the new line of battle. More than 1800 prisoners and several large cannon were taken in one day.

In the coal mining region around the towns of Lens and Loos the Canadians have made gains, too small to show on an ordinary map, but the importance of which is well understood by military men. The position known as "Hill 70," which is the most prominent hight in that region, was taken on August 15 and with it a large number of prisoners. The possession of Lens has been a coveted goal for the British army for two years and at last the much delayed victory on this part of the front seems in sight.

Separatists Gain in South Africa

Ireland and Quebec are not the only parts of the British Empire where local opinion is divided between the partizans of home rule under the British flag and the advocates of complete independence. The Nationalist Party in South Africa, led by General Hertzog, has recently won six additional seats in the Provincial Council of Cape Colony and seven in the Transvaal. In the Transvaal Premier Botha's South African Party, largely consisting of Boers loyal to British rule, now has thirteen seats; the Nationalist Party eleven; the Unionist Party ten; the Labor Party eight, with one independent.

Bain



CATHOLIC LEADER OF THE REICHSTAG

Dr. Peter Spahn, the new Minister of Justice for Prussia, is the leader of the Catholic Center party in the Reichstag. He is seventy-one years old and was at one time a judge in the German Supreme Court. He is known as a conservative and an expert politician

Not all of the Nationalists are in favor of an immediate rebellion to establish their independence. The majority of them seem rather to cherish the probably delusive hope that after the war a peaceful separation of the South African Union from the rest of the British Empire may be accomplished. A republican manifesto was published urging all South Africans of whatever political party to join in a convention at Bloemfontein to discuss the possibility of independence. "So much," says this strange document, "has already been said by the leading politicians of the world with reference to a right to an independent existence of all nations of this world that we feel convinced that if we should . . . approach the representatives of the belligerent powers when they would meet in congress to discuss the peace of the world and to decide over the fate of nations, and humbly beg of them to grant us the independence of the Union of South Africa, that they would then, we feel sure, not refuse this our request." Premier Botha is laboring hard to counteract the separatist movement among the Boers, which in his opinion endangers the peace and the future prosperity of South Africa.

The War for Moldavia

Rumania stands in some peril of being as completely overwhelmed as Serbia or Montenegro. The Germans, together with their Austro-Hungarian, Bulgarian and Turkish allies, for all four nations have been represented in this theater of war, have for many months held Wallachia or southern Rumania. This region has furnished the Central Powers with an abundant supply of grain and oil, and its possession has given them also command of the Black Sea coast almost to the Russian frontier. The importance of this is that Russia is compelled to keep an army in the southwestern part of the republic in order to prevent an invasion from the Danube valley into the vast agricultural region of southern Russia. Northern Rumania, commonly known as Moldavia, is still unconquered but it is menaced from three directions. The armies of the Central Powers are pressing hard from the south toward the Sereth river near Fokchany, and also from the west over the Transylvanian Alps. At the same time the collapse of the Russian armies in Galicia and Bukowina renders possible an invasion from the north. It is impossible as yet to estimate the net result of the campaign. That the conquest of Moldavia is a real possibility must be admitted, altho the stubborn valor recently shown by the Russian and Rumanian troops has done much to redeem the military reputation of the two nations.

THE BATTLE OF THE DUNES

This drawing, reproduced by permission of the London *Sphere*, shows the battle from above the Nieuport side of the Yser river. The distance from the mouth of the river to the islet is about a mile

SETTLING THE IRISH QUESTION?

The Irish Convention by which England hopes to solve the Irish problem is meeting in the Regents House, Trinity College, Dublin. These sandwichmen circulating among the crowd in front of the college bear placards expressing confidence in the convention and their ability to obtain results

The Pope's Peace Message

Elsewhere in this issue we print the text of Pope Benedict's letter to the belligerent powers. It reached the United States thru the British Government, because the Holy See has no diplomatic representative at Washington. To Russia, Belgium, Brazil and Great Britain, the note was sent directly; to the other nations of the Entente it was forwarded indirectly thru diplomatic channels. After an eloquent appeal for an immediate world peace the Pope discusses the terms on which such a peace may be possible. Disarmament, or rather a general diminution of armaments, is given the first place in the Papal program. There should be a general restoration of territory conquered or occupied and an abandonment of claims for indemnity. The territorial claims of Italy against Austria and of France against Germany should be settled by agreement. The Pope makes a specially strong plea for the reconstitution of an independent Poland, which is one of the most strongly Roman Catholic countries in Europe, and hopes for a solution of the Armenian and Balkan problems by peaceful negotiation.

Early rumors of the nature of the Pope's note to the belligerents had indicated terms much more favorable to the Entente Allies than those actually mentioned in the note; in fact, it was even reported that the Pope had abandoned his long neutrality and would openly endorse the chief war aims of the Allies. At present many persons in England and France are inclined to suspect, unjustly perhaps, that Pope Benedict had already reached an understanding with the Central Powers before he wrote his message. The abandonment of indemnities, the restoration of the German colonies, the absence of reference to the emancipation of any of the minor nationalities in Austria-Hungary except the Poles and Italians, and the ignoring of all the opprest peoples of the Ottoman Empire except the Armenians, are points that suggest German influence. But, on the other hand, the Pope's terms do not suggest a *status quo* peace such as that recently indorsed by the German Reichstag. If Germany is really willing to negotiate about Alsace-Lorraine, Prussian Poland and disarmament, and to admit the cession of any part of Austria to Italy, peace is much nearer than any one had supposed.

Stockholm Prospects

The British Government is unalterably opposed to any participation by the Labor Party in the Stockholm Socialist conference. Mr. Bonar Law stated on behalf of the ministry that "it is not legal for any persons resident in His Majesty's dominions to engage in a conference with enemy subjects without the license of the Crown." Arthur Henderson, the member of the British War Council who lost his position for approving the sending of British Labor Party delegates to Stockholm, defended his conduct in a long speech before the House of Commons. Premier Lloyd George replied that "the four allied powers have arrived definitely at the conclusion that if terms of peace are to be discussed they must be made by the representatives of the whole nation. I am the last man to say anything derogatory of the power or influence of labor, but they are not the whole community." George Nicholl Barnes, Minister of Pensions, takes Mr. Henderson's place on the War Council.

Altho the French Government seems opposed to permitting Socialist delegates to attend the Stockholm Conference, the French Socialists are making a strong plea for participation. The resolution adopted by representatives of the party states that: "The party does not go to Stockholm in search of a peace of compromise which would leave the fate of the peoples in suspense and at the mercy of fresh wars. It goes to declare that respect for the peoples' rights, respect for treaties and an engagement henceforth to submit every possible conflict to the justice of nations, can alone constitute an acceptable peace." The French Socialists show a stronger disposition than the Socialists of any other nation to go back to the causes of the war and demand from the conference the condemnation of those governments guilty of causing it. M. Albert Thomas of the French War Council defended the Socialists of the nation and declared that their patriotic conduct had earned for them the right to full confidence. The Russian Government has refused to approve the Stockholm Conference, but it has also refused to prevent Russian Socialists from attending. In the view of Premier Kerensky the conference is purely a party affair and has no direct bearing on the national policy.

New Air Raids on England

On the afternoon of August 12 some twenty German aeroplanes attacked the Essex coast and dropt more than forty bombs. At Southend they killed eight men, nine women and six children, besides injuring about fifty other persons. Bombs were also scattered over other towns in the neighborhood but with less effect. British aeroplanes drove the German machines away and two of the latter were destroyed. It is believed that the Germans had been trying to reach London when they were turned back by the British aeroplanes and anti-aircraft guns. The French have carried out raids of reprisal on Frankfort-on-the-Main as their answer to recent German attacks on Nancy. The damage done was insignificant. On the Franco-Belgian front the Entente Allies retain their aircraft superiority and aerial battles are of daily occcurrence.

Italy as well as England has recently suffered from aerial bombardment. On the morning of August 14, the Austrians dropt four tons of heavy and light bombs on the city of Venice with the intention of injuring the Maritime Arsenal. The Austrians admit that three of their planes did not return and the Italians claim to have destroyed a number of the raiders. The Italians then carried out raids of reprisal against places near the Austrian coast.

Neptune Favors the British

During the week ending August 12, the British lost fourteen ships of 1600 tons or over and two of lesser tonnage. Not since February have the total shipping losses of the British merchant marine been so few in any one week; altho on four previous occasions only thirteen or fourteen large ships were reported lost. During the same week the French lost one large steamship and three small ones. The optimism aroused by the British and French reports is somewhat qualified by the report of the loss of six steamers and five sailing vessels of Italian registry, an apparent indication of increased submarine activity in the Mediterranean. A Copenhagen report tells us that the German submersible merchantman "Deutschland" which traded with the United States by passing under the British blockading fleet a few months previously to our entrance into the Great War has been

converted into a war submarine with a sailing radius sufficient to permit it to prey upon commerce in the Pacific. From the same source comes the news that Germany now has nearly three hundred submarines in commission and has lost only about a score since unrestricted warfare against merchant shipping was begun.

It is difficult to realize from the curt official reports how vast has been the scale of Germany's U-boat warfare and what it has cost in life as well as in tonnage. According to a Scandinavian estimate, Norway has, since the beginning of the war, lost no less than 600 vessels; Denmark 187, and Sweden 146. Five hundred seamen of the three nations were killed. For the greater part of this slaughter the submarine is responsible, altho many ships have been sunk by German and British mines. Of course the belligerents have suffered even more severely. It was announced in the House of Commons that 9748 lives have been lost on British merchant ships as a result of enemy action up to the end of June of the present year. Of these 3828 were passengers, the rest being officers or seamen.

Still less is it generally realized how great has been the loss in ships of war to the belligerent powers. There has only been one naval battle of the first magnitude, the battle off the Jutland coast, and that was indecisive. Yet it is estimated that during the Great War Germany has had sunk or taken 194 warships of all classes, Great Britain 151, France 45, Turkey 42, Austria 31, Italy 23, Russia 23, and Japan 10. Of Germany's losses 91 were due to gunfire and only 15 to submarines; whereas the figures are reversed with the British, who lost 44 ships by submarine attack and only 32 by gunfire. Of course, this estimate of losses does not include the number of submarines sunk, since no figures for these are published. It is announced that a force of Japanese destroyers has been sent to the Mediterranean to help in the fight against the submarine. A German submarine is reported to have taken captive the gun crew of the American armed oil tanker "Campana."

Price Fixing for the Allies The War Industries Board has announced the policy of the Government in respect to purchase of war commodities by the Entente Allies. The fundamental principle is that foreign governments associated with us in our war with Germany should pay no more for munitions than our own Government must pay, since, as the War Industries Board puts the matter, "guns and ammunition employed against our enemy are for our benefit as much when used by our allies as when used by our own men." There are, however, two conditions attached to this arrangement. The Entente Allies must, first, agree to the same principle in selling to us. Secondly, the agreement is limited to war materials only. "We must not allow," says the statement of the board, "raw materials sold by our producers at prices patriotically conceded to our Government and its allies for war purposes to be diverted to industry and trade abroad which may come in competition with our own manufacturers and producers." A "reasonable profit" will be allowed on all purchases whether by the United States or by any of the Allies, but the present enormous profits now extorted from the wartime necessities of the Entente nations must cease. This will make a great difference to certain industries which have grown rich on this trade since 1914. Senator Pomerene has introduced a bill into the Senate giving the Government power to fix prices for the sale of iron, steel and iron ore to the general public as well as to the armies and navies. The food control bill has already assured the Government such power as regards foodstuffs and fuel, and there is a strong sentiment in Congress that the metal industries should not escape.

THE ECHO OF OUR MESSAGE TO RUSSIA

"We took to Russia a message of faith in democracy. We return to repeat it," said Elihu Root, head of the American Mission to Russia shortly after his return. This picture shows the mission visiting the Staff Headquarters at the Russian front. In the front row, left to right, are M. Terestchenko, Minister of Foreign Affairs; General Brusiloff, Commander in Chief; Mr. Root and Major General Hugh L. Scott, U. S. A.

An Aircraft Merger The Federal Government has arranged for the organization of a Manufacturers' Aircraft Association open to any "responsible manufacturer of aircraft, or any one who intends to become a bona fide producer, any manufacturer to whom the United States Government has given a contract for the construction of ten or more airplanes, or any person, firm or corporation owning or controlling United States patents relating to airplanes." Any new member of the association who introduces new designs or patents will be paid for them at a rate to be determined by a board of arbitration. The purpose of the merger is to enable the United States to turn out all necessary aircraft without being hampered by any patent litigation. Even before the war such a step had been recommended to put an end to the disputes as to patent rights and priority between the Wright and Curtiss interests. The three trustees in whom the voting control of the new organization is vested are Judge W. Benton Crisp, who has had exceptional experience in patent litigation; Prof. Joseph S. Ames of Johns Hopkins University, a specialist in physics, and Albert H. Flint, who represents the smaller companies taking part in the merger. The royalties due to the Wright and Curtiss companies for yielding their patents are placed at two million dollars each.

Secretary Daniels announces that the navy will at once begin the construction of an aircraft factory at the Philadelphia Navy Yard. The factory is expected to begin operations within a hundred days and to produce a thousand planes a year. These will be used in connection with the navy. The army will make use of at least twenty-five times this number of aircraft; the exact number is of course not made public.

Lloyd George Congratulates England Premier Lloyd George discussed the prospects of the Great War before the House of Commons on August 16. The tone of his address was exceptionally optimistic. He said, in his inimitable way, that, while he agreed that the people should be told unpalatable truths, they must also be told the truth even tho it were palatable. He pointed out the increased grain supply on hand, the million new acres under cultivation and the increase in British merchant craft of 1,424,000 tons within six months. Of course the tonnage losses due to German submarine activity exceeded this figure, but he estimated that there would be ships enough to meet the necessities of Great Britain for the coming year and even, with American coöperation, for 1919. He stated the net losses due to submarine activity at 250,000 tons a month for the period since unrestricted submarine warfare began. The gross tonnage lost (that is, without considering replacement thru building or purchase) decreased from April's high water mark of 560,000 tons to 320,000 tons, and the figures for August would be even lower. Even with the Russian strength paralyzed, Germany, he said, could do no more than hold her own on the western front and was ceasing to be

CHIEF OF STAFF OF THE NEW DIVISION

Major Douglas MacArthur, of the Engineer Corps, has been appointed Chief of Staff of the new 42d Division. Major MacArthur used to be the press censor

able to accomplish even that. He referred to the fresh successes in Flanders as proof of the military ascendency already attained by the British and the French.

Another Sinn Fein Victory At a by-election in Kilkenny the Sinn Fein, or Irish independence party, captured another seat in the House of Commons. Their candidate, William Cosgrave, received 772 votes to 392 for Mr. McGuinness, his Nationalist Party opponent. This is a bad omen for the success of the Home Rule convention which is now in session considering the framing of a new constitution for Ireland. In spite of the popular discontent shown by the Irish elections in East Clare and Kilkenny, the convention still hopes to arrange some compromise that the majority of the Irish people will accept, even if without enthusiasm.

The British military authorities have issued an order forbidding the wearing of military uniforms by civilians and the carrying of weapons. This order is aimed at two organizations, the Ulster Volunteers, organized in north of Ireland several months before the Great War for the purpose of resisting Home Rule, and the Irish Volunteers, who organized to impose the Home Rule bill on Ulster should the Government enact it and the Ulstermen refuse to submit. Neither army was authorized by law but the British authorities felt that an attempt to suppress either might lead to an armed outbreak and therefore did not interfere with the arming and drilling of the hostile private armies.

Nationalizing the Wheat Crop Food Administrator Hoover has announced his program of wheat conservation. After reciting the reasons why the price of wheat cannot be regulated by the normal course of supply and demand under war conditions, Mr. Hoover proceeds to explain the method of regulation adopted. All grain elevators and mills of a daily capacity amounting to more than one hundred barrels daily will be required to take out a federal license. Concerns accepting licenses will be required to give all necessary information to the Government as to receipts and shipments, to charge only normal rates for warehouse service, and not to keep wheat in storage for more than thirty days without special permission to do so. Grain exchanges will suspend speculation in futures.

The food administration proposes to open agencies for the purchase of wheat at the principal terminals, and will take over the whole harvest if necessary in order to insure a fair price to the farmers. It will resell wheat to the millers for domestic consumption, and also for export, keeping a proper balance between the needs of this nation and the needs of our allies and the neutrals. Much of the wheat sent abroad will be in the form of flour, in order to protect the interests of American millers. The Chairman of the Wheat Price Fixing Commission will be President Harry A. Garfield of Williams College.

The fixing of the price of wheat for this year (Congress has already established a guaranteed minimum price of two dollars a bushel for the harvest of 1918) is but the first step in the program of price fixing. The hope of the food administration is to establish a scale of prices from the farm to the consumer which will end speculation and eliminate excess profits all along the line.

Japan's Compliments to Uncle Sam The Japanese War Mission which arrived on August 13 at "a Pacific port" found there as cordial and unstinted a welcome as any war mission which has visited the United States. Ambassador Viscount Ishii was the leader and principal spokesman of the commission. He exprest himself pleased not only by the friendly greeting but by the evidences which he saw that we were preparing a strong armament to make our contribution to the speedy ending of the war. He pointed out that if Germany had not been expelled from her naval base in China the Pacific would today be the scene of similar submarine outrages to those which have taken place in the Atlantic and the Mediterranean. "In the protection of our seagoing merchandise and men, in safeguarding the pleasures of intercourse, you may count on us as we must count on you."

More significant, perhaps, than Ambassador Ishii's remarks upon the common cause in which the western republic and the eastern empire are engaged, were his discussions of the relations between the two countries. He asked us to forget "the little mole hills that have been exaggerated into mountains to bar our good relations." He was certain that all the questions at issue between Japan and the United States would find early and friendly settlement. He condemned in the sharpest terms "that venomous gossip, hired

TO COMMAND IN FRANCE

Brigadier General William A. Mann, Chief of the Military Bureau, has been appointed Divisional Commander of the 42d Division, which has been ordered to prepare for France

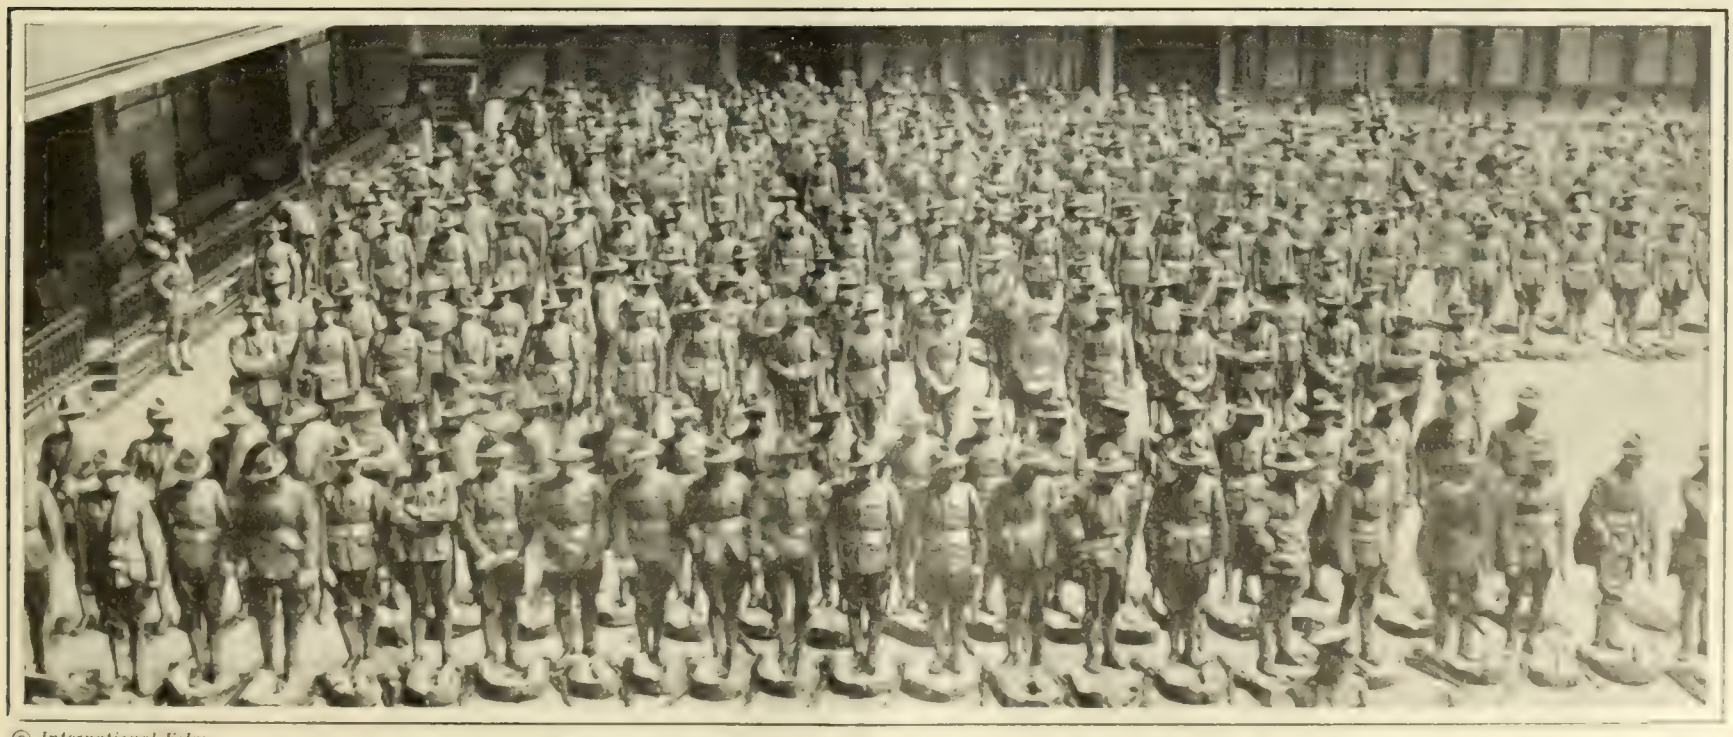
slander, sinister intrigue and influence of which we have both been the victims," but he exprest his pleasure in finding so much good will in the states on the Pacific Coast.

Shaping the New Army Altho many exemption boards in different parts of the country have not yet finished their examination of claims for exemption from military service and have not secured a sufficient number of men available to fill the local quota, the War Department is so confident that the work will be completed by September that the first call to the training encampments has been officially announced for the first of the month. The whole conscripted army will be 755,700 men, including a ten per cent margin for sickness, disabilities and discharges during the period of training. Thirty per cent of these men will be called for September first and will be mobilized between that date and the fifth, and early in October the whole army will be in cantonments. The mobilization is distributed over the month in order to prevent too great a burden upon the transportation facilities of the country. In country districts harvest hands who have been drafted will be called as late as possible in order that they may work at harvesting for a part of September.

Disquieted at the high percentage of persons excused for physical disability, the authorities have slightly relaxed the minimum weight requirements and modified the rules in a few minor particulars. Senator Pomerene has devised a plan for establishing separate training camps for recruits who are not at present up to the physical requirements of the army but may be made so by special training. This suggestion is still under consideration by the military authorities.

Congress has before it bills embodying the program of the administration for insuring soldiers, sailors and

marines against death and disability. Life insurance is offered in sums varying from one to ten thousand dollars; the Government assuming the risk and the men paying the premiums out of their pay. There are also indemnities provided for death or disability, vocational education for men discharged from the army because of partial disability, and separation allowances to dependents. Men and officers with dependent families are also required to allot a certain part of their army pay for their support. Secretary McAdoo of the Treasury Department estimates the cost of the plan for the first year at over $176,000,000; for the second year (should the war last more than a year longer) at more than $380,000,000.



The organization of the army has undergone considerable modification. Army corps are established, each containing three divisions of 19,000 men each. The traditional size of the American army division has been 28,000 men, but European experience has convinced American army officials that the smaller divisions are more convenient. In the new organization there will be three regiments of field artillery to every four regiments of infantry, instead of the present ratio of three to nine. A division of the National Guard has been summoned for early service in France with General Pershing's army. It will be commanded by Major General Mann and be made up of contingents from many parts of the country. Several Commanders of Departments have been assigned to divisions of the new National Army. Major General Leonard Wood, for example, is to command the 89th Division at Camp Funston, Fort Riley, Kansas; and Major General Bell of the Department of the East is assigned to Camp Upton at Yaphank, Long Island.

The Market for Stocks Prices advanced in the New York Stock Exchange market on Monday, the 13th, but the average net gain was only half a point. Announcement of the Government's plans for controlling the supply of wheat and flour, involving suspension of trading in futures on grain exchanges, had no depressing effect. On Tuesday, when the number of shares sold was increased to 481,000, the gains of Monday were lost. The decline was not ascribed to the Vatican's peace proposals, altho prices were reduced by peace overtures last year. Among investors and traders the prevailing opinion was that the proposals would not shorten the war. Railroad shares were almost stationary, Steel Corporation's loss was 1¼, while 4 points were taken from the price of Bethlehem Steel, owing to reports about the company's plans for increasing its working capital. It was said that there would be a new issue of stock.

On Wednesday the market broadened, and the total was 529,000 shares, altho it was generally admitted that what is called "the public" was neither buying nor selling. Prices at the close showed a fractional net average gain. The motor stocks were exceptionally weak. On Tuesday the Maxwell company passed its dividends on both the common and the second preferred shares. It was said that while profits for the year ending with July had been large, there was need of working capital for supplies of raw material and the coming excess profits taxes. A similar explanation had been given in the preceding week for the Studebaker company's reduction of its dividend rate from 10 to 4 per cent. On Thursday (482,000 shares) early dullness was followed by a decline, the chief cause of which appeared to be fear that prices fixed by the Government would greatly reduce the profits of steel companies and other industrial corporations. There were losses for all the "war order" stocks. Shares of sugar companies were affected by suspension, at Mr. Hoover's request, of trading in sugar for future delivery. American Beet's loss was 3⅜, and nearly as much was taken from the price of Cuba Cane stock. The New York Exchange has decided to withhold its daily quotations from the Pittsburgh Stock Exchange, which has not guarded, it is said, against the transmission of them to the gambling or betting places called bucket shops.

Indictments in East St. Louis The grand jury which is now investigating the race riots that took place last month in East St. Louis, Illinois, has returned sixty-eight indictments against 105 persons and warrants are out for the arrest of the accused. Among the first men to be arrested were several members of the municipal police force and two men prominent in petty politics: Thomas Benton, a white man who was once a candidate for sheriff, and Dr. Bundy, a negro dentist who was involved in election fraud charges last fall. Other "leading citizens," white and black, may be drawn into the case. Thirty-two persons are accused of murder, and others of conspiracy, arson, riot, assault, burglary and malicious mischief.

The strongly worded report of the grand jury gives an excellent account of the whole affair. The jury finds that the riots were deliberately plotted and that the police could have prevented them but for the fact that "indolent public officials heard the rumblings, but overawed by cowardly inclinations remained inactive." "Engendered with false fears," says the report, "negroes wantonly murdered policemen bent on aiding them. A rival flame of passion and unreasoning violence—all introduced into the community by intriguing ringleaders—caused white men to draw guns and clubs and shoot and beat to death some of the oldest and most respected negro citizens of East St. Louis." The jury wisely remarks that such outbreaks were the inevitable result of "contempt for law in small matters" such as the East St. Louis authorities had long tolerated. The report concludes with a recommendation for the establishment of a State constabulary in Illinois of at least a thousand members who "would not be affected by local prejudices."

Dutch ships now lie in the Hudson River instead of sailing up to the back door of the Kaiser's kitchen

THE KAISER'S BACK DOOR

HOW THE UNITED STATES PREVENTS GERMANY FROM IMPORTING CONTRABAND

BY PRESTON SLOSSON

SUPPOSE that you were Cornelius Dirk, a Dutch farmer somewhere near the German border. You do not want Germany to win the war. In the papers you read about the sinking of Dutch ships by German submarines, and you have heard the stories of Belgian refugees who sought safety in your village after the fall of Antwerp. Still you have been trading with the Germans all your life. You are officially a neutral, and what is the good of being a neutral if you aren't allowed to have any dealings with the nearest belligerent? It hardly seems a crime, does it, to turn an honest guilder by selling your own fat pig to a neighbor across the border. What business has England or America to object?

"But what did you feed the pigs, Mr. Dirk?" "Why, American corn, of course." Therefore American corn went walking into Germany on four legs, and we were feeding our enemies as truly as if we had shipped pork from Chicago to the German firing line by way of Rotterdam. And when we multiply Mr. Dirk's innocent little transaction by thousands, when whole districts turn their attention from grain growing to stock raising and import from the United States the foodstuffs that they used to raise for their own use, selling their own produce to the Germans, we can understand why the British have been virtually blockading neutrals as well as enemies and why this country has placed a partial embargo on exports except to our allies.

And yet we can sympathize with Cornelius Dirk, whose honest blue eyes are round with surprize that we propose to cut off his trade with us because of that little incident of the pig. Fats are short in Germany and he can make more money by selling the pig to Hans Wildendorf than by selling it to Hendrick Van Cortlandt on his own side of the frontier. He would be much out of pocket if he did not turn American corn into German pork by way of Dutch pigs. Of course his government might forbid the transaction, but if it shut off all trade with Germany what would Germany say of the neutrality which permitted trade with one belligerent and forbade it with another? Besides, Germany can retaliate. A German embargo on all exports to The Netherlands would be almost as damaging to the Dutch as a Dutch embargo would be to the Germans.

But what is true of food is equally true of munitions of war. Sweden, for example, does not have to pass thru the Allied blockade to reach a German port. On the contrary, the Germans dominate the Baltic as thoroly as the Allies do the North Sea. Why then, Sweden being neutral and reciprocity the soul of trade, should not Sven Petersen, ironmaster, sell the products of the Swedish iron mines to Germany? If he and his fellow-countrymen refuse to do so, Germany might reply, "All right, keep your old iron, but don't ask for any of our good coal to keep your factories going. Burn your forests to make charcoal or get coal at fancy prices from the Entente Allies, but don't come to us."

But Sven Petersen finds selling iron to the Germans so very profitable that he doesn't keep any to sell to his fellow-countrymen. Top prices in a foreign market have often stripped a nation of its own chief commodity. He sells all his iron to Germany and buys for his own needs from the United States from whence iron can be had more cheaply than at the market rates for the German trade. Therefore the United States is indirectly engaged in making 42-centimeter cannon for the enemy. So long as trade with the Central Powers is possible, the neutral nations which are adjacent to Germany, Switzerland, Holland and Denmark, and those which are separated only by a narrow strait of water, Norway and Sweden, will specialize in the goods that Germany will pay for and supply their own needs by trade with ourselves. British students of commercial conditions have estimated that enough food is being supplied to Germany by her neutral neighbors to keep an entire German army on the western front.

THE Espionage Act, passed by Congress last June, which is one of those bills that contain a little of everything, had an embargo clause empowering the President to prescribe limitations and regulations on our export trade principally with a view to preventing American products from reaching Germany by any route, however indirect. Under the provisions of this law President Wilson issued a proclamation declaring an embargo on exportation, after July 15, of certain commodities useful in wartime, such as coal, coke, fuel oil, grains and flour, fodder and feed, meat and fat, iron and steel and their products, ferromanganese, fertilizers, explosives and ammunition. Vessels carrying cargoes of these products from American ports are required to obtain special licenses from the Department of Commerce. These licenses are usually issued without question if the goods are destined for an enemy of Germany, but if they are to go to a neutral port the shipper must satisfy us on three points:

Will these goods be reëxported to Germany?

Can they be used to replace other commodities which the neutral will sell to Germany if he can import a substitute for them, but will consume for his own use if he can not?

Is the neutral now importing more of these goods than his estimated needs require?

PREVIOUSLY to the entrance of the United States into the Great War, the Entente nations prevented goods from reaching Germany by way of the neutrals, by detaining ships at Kirkwell, in the north of Scotland. This port being in British territory, the British had the right to examine there the cargo and make certain that the neutral neighbors of Germany were not importing a greater amount of foodstuffs or munitions of war than would supply their normal wants. Now the same end is reached more effectively by shutting off the products at their source. We allow ships to carry to the European neutrals enough to satisfy their usual needs in time of peace, but if they sell their grain and metals to Germany we will not make good their shortage. Nothing that is American shall go to feed the Bengal tiger of Prussianism.

If you ask the proper authorities which ships are being detained in port, what is their nationality and what the nature of their cargoes, your curiosity will not be satisfied. These matters are not questions of trade but questions of war, and are enveloped in all that necessary secrecy which war involves. But one point at least is clear. No ship leaves an American port until Uncle

Sam has been fully assured that all that it carries is so badly needed at its port of destination that there is no danger that any of its cargo, or anything equivalent, will ever reach Germany. The Kaiser's back door is locked and bolted.

The present method of "rationing" the neutrals has the added advantage that it is not only effective but unquestionably within our strictest legal rights. When neutral cargoes are held up for examination during their voyage there is usually a great outcry, whether justified or not in the particular case, that the freedom of the seas is being violated and the powers of blockade abused. High authorities may be cited both for and against any particular interpretation of international maritime law. But no one doubts our right to lay an embargo on exports of our own products from our own ports; the right is absolute and the only question is one of expediency. Nor have we pushed our power to the point of cutting off from the European neutrals what they need to import from us to supply their own people.

WHY, then, is Washington receiving protests from Holland and Scandinavia against our licensing system? Partly because conditions in these countries are no longer normal. We cannot afford to let them have more than they took from us in time of peace because that is the only way to make sure that they have nothing to sell to our enemies. But this will, in many cases, cause real hardship, since the neutrals cannot in a moment put business back on its old footing, abandon their infant industries which have fattened on the war, and supply themselves with the commodities which for the last three years they have been importing from the Entente Allies and especially from the United States. Nor can they recall goods already sold to Germany and there delivered.

A second and greater difficulty is that Germany, deprived of the grain, the meat, the iron and the copper which her little neighbors have been supplying her, can make things exceedingly unpleasant for those neighbors. Scandinavia, Holland and Switzerland must have chemicals and they must have coal. Coal we can ship them, and it is safe to say that if they submit to the difficulties of the licensing system we will take as good care that they do not freeze as that they do not starve. The question of chemicals is a more difficult one, and almost the only consolation we can give these countries, should Germany shut off their supply, is that the rest of the world is more or less in the same fix. No nation has all the chemical products that it needs, especially those nations which face the abnormal demands created by the war.

Germany has already obtained a loan from Switzerland by threatening to place an embargo on German coal. This loan throws light on another phase of Germany's difficulties. Germany is facing a shortage of many commodities, and among them is gold. For buying and selling within the Central Empires the stock of gold matters comparatively little, since the Imperial Government can conduct its purchases on a credit basis. But the Swiss and Dutch and Danes, suspicious of depreciated "scraps of paper," demand cash down for what they sell. Germany must buy from them and must pay, and promptly. She cannot, while conducting a great war, balance imports with exports. Therefore gold flows out of Germany and does not return and the nation's financiers already see the bottom of their treasure chest. The one way to make up for this steady drain was to float a foreign loan and therefore Switzerland was selected as Germany's banker.

Coal and chemicals, while the most important, are not the only needs of the European neutrals which they are accustomed to have Germany supply. Dr. Nansen, the famous Arctic explorer, tells us of one little example which may be taken as typical of many others. The Norwegians are a nation who draw their wealth as much from the sea as from the land. Fishing is one of the most important industries of the country, and a large proportion of their catch goes to Germany. Should Norway stop exporting fish to Germany, Germany will stop selling fishing tackle to the Norwegians, who will lose a center of supply for their fisheries.

© Underwood & Underwood

It's better to have freight piled up like this on our docks than sailing by devious routes to Germany

Therefore the Allies, and more particularly ourselves, have undertaken a heavy task in undertaking to feed, clothe and warm the neutrals and keep their industries alive. We must be prepared to do for them all that Germany has done and all that we have been accustomed to do before the Great War as well. We must do this in the face of increasing difficulties of transport, since the German submarines are cutting down the tonnage of the Dutch and the Norwegian mercantile marine as well as of the British and the American. In return for these services we ask that the European neutrals do not create difficulties for us unnecessarily, that they give us a true account of the needs of their own people which must be supplied by importation and do not pad the account by considering the wants of the Germans.

Cornelius Dirk must learn to keep his fat pig at home or sell it on the side of the frontier where it was raised, unless he and his neighbors can grow on Dutch soil all the food they need and all that the pig needs to. If Cornelius can do that, of course, we could not stop him from selling the pig to Hindenburg himself. But so long as Cornelius Dirk must have American corn, and Sven Petersen must have American iron, they should turn a cold shoulder to the most tempting offers from our enemies.

THE neutrals will, doubtless, view with regret the passing of three years of war prosperity and the abnormal prices which the Germans are willing to pay. But it is not they alone who suffer. American merchants and shippers, in consenting patriotically to the "rationing" system for our export trade with the European neutrals, are making a heavy sacrifice. The United States Government does not permit unusual war profits on foodstuffs and munitions sold to the American army and navy or to the Entente Allies. Trade with our enemies, of course, no longer exists. Only in one direction, then, can the American trader look to preserve a part of his vanishing war profits: the neutral market. By shutting their eyes to the fact that they are indirectly helping Germany Americans could continue to sell the commodities most in demand by the European neutrals and yet preserve a comfortable conscience. But, instead of rebelling against the new and stringent regulations which restrict this most profitable trade, they are coöperating with Washington in every possible way to make the licensing system effective.

THE BIG EXPERIMENT

BY HERBERT REED

THE results of the effort of a hitherto non-military country to produce officers for the New Army by the hot-house system are at last before the public. That they are good results I believe the man in the street will admit after he becomes accustomed to the unusual sight, and I believe further that the drafted men will realize now that they will not lack for leadership. It may be that some other country could put thru this intensive training a higher average of brains and brawn, but I doubt it. I am confident, too, that the average man will doubt it. Mistakes have been made from time to time in the course of the training, and undoubtedly there have been cases of unintentional individual injustice in handling our new officers. These mistakes, however, simply seem to emphasize the success in the mass of an experiment that even many capable army men felt doubtful of—even despaired of from time to time.

There is still much to learn, and the new flock of officers realizes that it has simply gone thru the first stage of preparation—that military knowledge will ripen only as the men themselves join the class of instructors. The hardest work, after all, lies ahead, but I believe that one great drawback to the preparation of the New Army has been eliminated. That drawback was worry. Here were men of all ages taken from civil life, with varying amounts of military experience, and some of that experience not particularly convincing, hurled into a new form of existence, jammed under an exacting discipline that in many cases ran sharply counter to the free habits of years of living. While coming thru these men worried a lot. They had set their hearts on getting the chance for leadership in the New Army, and they "took their work hard," as one of them put it to me. Now they are confident at last. They have found themselves, and I only hope the country will realize it.

Frankly, had one been so inclined, it would have been possible to run into any one of the camps in the early and creaky stages of development and muckrake it to the heart's content. There was a lack of supplies; there seemed to be a great deal of difficulty in getting an absolute policy of training down to schedule. But it must be remembered that this country has been short of a definite military policy for lo, these hundred years. And as strategy and tactics are hard to teach when there is a lack of settled military policy, the task of the instructors is hardly to be magnified. But the very work of the camps has helped mightily in giving us a military policy.

To my way of thinking the most persistent and the soundest criticism was that we were behind in learning the most up-to-date methods of the Allied armies. But it must be remembered that we were not training battalions to go

Underwood & Underwood

Secretary Baker presenting officers commissions to training camp graduates

right into the trenches on the western front, as were the Canadians, for instance, but officers who were to take and give further training; officers who had first to learn how to direct natural initiative into military channels. Much of trench warfare, of course, lies before us: much of modern warfare must of course be learned from our experienced allies; but the fact remains that we are in the last analysis building the New Army, which, with all due respect to the announced reasons why it should fight, must learn to fight for itself under any conditions, and some of those conditions will be large maneuvers in the open. It is for that very reason that it was a great pity that the new officers could not be taught to conduct an offensive in which all arms of the service could be brought to bear. But all arms are not ready, for the simple reason that we as a people have not been ready. It would be a waste of time, a matter of no use to our fighting forces and our new officers to thresh out the old complaints. It is simply better to state my belief as an observer of the new camps that we have found the right men for the right places near the base of that great pyramid of patriotism that is the New Army, and that as soon as we get into real action the elimination of the unfit "higher up" will take care of itself.

"NOTHING," said one of our most capable instructors to me, "will so quickly rid us of slavery to seniority for seniority's sake as the infusion of this new blood into our army, its support by the many capable men who will come up to us from the draft and the supreme test of battle. I'm cheerful. I ought to be. We are getting our chance to do something that will be of enduring value. We have made our mistakes, to be sure, but believe me we are getting there."

The fact developed soon after the men came back from the training camps that some of them were to be sent to France at once, so that much of the gloom due to the fear of much drudgery before there could be any chance for action was to some extent lifted. The big experiment resulted in the big chance.

There is an even more subtle benefit to be derived from the training camp, and that is the effect on the fathers and families of our new officers. I know that I was justified in writing of the camps in their early stages that the "people back home" were not awake to the seriousness of the situation. Now they have awakened with something of a jolt, for they realize at last that these are no longer the "play soldiers" of the early days of the camp movement, good as some of those "play soldiers" were. Since the commissions were awarded I have run into many of these newly proud fathers, and if there was any laxity in their point of view about the war up to the present, what has happened to son has knocked it out.

NEARLY all of us who have come into contact with the instructors, men like Major Stewart and Major Collins at Plattsburg, Major Berkeley, Lieutenant Colonel Sweezy and Captain Johnson at Fort Niagara, to mention only a few, have learned a new respect for our officers of the regular army. A husky young Pennsylvanian sat one day on a bench under the trees at Fort Niagara and offered the following: "What gets me is the way these instructors give you everything they've got. A thousand little things, the inside dope that our business man would hug to his bosom for use against his competitor, have been handed out to us daily. It is a revelation to me." Another interesting feature of the work was the feeling of the men in the various companies for their instructors. Each company was the best company and each instructor the best instructor to the student-officers. This was as it should be.

In closing this series of chronicles of what I consider one of the happiest things our country has ever done I want to bespeak for the War Department Commission on Training Camp Activities the confidence of those who have sons, husbands or brothers in the coming camps, whether those for the student-officers or for the men of the draft. I had some opportunity to learn something of the methods of the commission headed by Raymond B. Fosdick, and those methods I believe to be sound. Men like Dr. Raycroft of Princeton and Malcolm McBride, the old Yale football star, add strength to the commission, and all the representatives I have come across are the sort that make for the mental health of the camps and the camp surroundings. And there is a splendid absence of the cant that too often goes with such undertakings. The outlook is a happy one all around.

Fort Niagara, New York

The Independent-Harper's Weekly
NEWS-PICTORIAL

For some weeks we have been reading of the exploits of the Battalion of Death but these are the first pictures of the Russian regiment of women to reach this country. The regiment, which has seen active service of the most terrible kind on the eastern front, was organized by Mme. Batchkalev (on the left). She fought first in the regular Russian army, then conceived the idea of a regiment of women, received permission to form it and became its colonel. She has been wounded and is decorated with many medals. The women fight with heroism and with fury. The Germans are said to fear them far more than the Russian men. Other women's battalions are now being formed with the approval of the War Department. Any woman over sixteen who can present certificates of character, education and citizenship is eligible. If the recruits pass the rigid physical examination they are initiated into the regulations of the battalion and sworn in. They wear the regulation uniform and accept the existing military rules, and, in addition, nine others which show with what terrible earnestness they have entered upon their undertaking. "All the members of the battalions are bound to observe the following: 1. First of all, the honor, freedom and welfare of the country. 2. Iron discipline. 3. Firmness and stedfastness of spirit and purpose. 4. Bravery and recklessness. 5. Precision, accuracy, persistency and rapidity in the execution of orders. 6. Absolute honesty and a serious attitude toward the work. 7. Cheerfulness, politeness, kindness, sympathy, cleanliness and punctuality. 8. Consideration for the opinion of others, the fullest mutual confidence and nobility of purpose. 9. Quarrels and personal feuds are inadmissible as degrading. Those guilty of breaking the above rules shall be subjected to the most rigorous punishment for disgracing the name of the Russian woman." Stern rules indeed!

© *Underwood & Underwood*

The officers' training camps are over. In a few weeks the draft army will go into camp. Work on the sites is being put thru at top speed. These are typical pictures taken at the cantonment camp at Rockford, Illinois. The three men in charge of the work are seen at the right. F. L. Copeland, general superintendent of the Bates-Rogers Construction Company, E. P. Lanahan, vice-president of the company and Major D. H. Sawyer. The grader on the left is making what was once a cornfield into a street. Making a cantonment camp, you see, is about as big a proposition as building a city. There must be streets and sewerage and light and houses. Tents would not be practicable because the training will continue thru the winter, so big wooden barracks are being erected

© International Film

The Spanish War taught us a lesson in camp hygiene. Sanitation is one of the points in which the camps for the draft army are going to excel. Using a trench digger for the sewers gives a military touch, but they put the pipes in in just the same old way

© *International Film* © *Underwood*

Making soldiers is the chief business of the United States just now. Here are some of the steps in the process. At the top of the page student aviators are making maps of the enemy terrain. Camp stools are taking, temporarily, the place of aeroplanes and the big topographical map shows how the earth would look if they were in the air. The boys below, at the Princeton training camp, are learning how to make a road map—in any position. The Fort Meyer man on the left is charging a straw German with the bayonet and the one on the right is learning how to throw a hand grenade—not like a baseball

COME INTO THE COMMUNITY KITCHEN

BY MARGARET L. FARRAND

A garden is a thing not always to be depended upon. That which was confidently planted as eggplant has been known to come up as salvia. But there is one crop upon which you can count without hesitation: if you plant a community garden a community canning kitchen will spring up beside it. The section of the country makes no difference, the size of the community makes no difference, it will be there. One cannot predict the exact form and shape that it will take, but there are certain things which all those kitchens have in common, certain things which make each one typical of all the others, similarities which are due to the fact that they are all species of the genus war garden.

Paul Thompson

All these jars are filled with delicious fruits and vegetables which the New York City Canning Kitchen rescued from the "dump" and preserved

When I rang Mrs. Hawkins's doorbell the maid told me that she was "in the little canning house" in a tone of pitying surprize at my ignorance in expecting to find her anywhere else. "The little canning house" was half hidden by the trees of a rather large backyard, but it gleamed with whitewash and white mosquito netting. Within, eight women were cutting up string beans. They greeted me cheerfully, but they didn't stop cutting up beans for a minute. They had that agreeable feminine faculty of talking and working at the same time, and the chairman, a little woman in a blue apron, could do it better than any of them. It was the coolest looking place I had seen in many a hot day and they told me how it happened. "It was Mrs. Hawkins's children's playhouse that back part we use for a kitchen, and this part we built on by volunteer labor. My husband helped and Mrs. Hawkins's chauffeur and Mrs. Perkins's chauffeur and Mrs. Jones's son, and everybody, and Mrs. Hawkins's chauffeur connected all the gas pipes and the plumbing." There were a sink and a gas stove and two or three plate warmers where they put the sterilizers. These were in the back or kitchen room, which was a little warm, but not very, because most of the walls were mosquito netting. The front room had a long table with chairs and high stools and a shelf lined with rows and rows of glass jars filled with baby onions and carrots and raspberry jelly and blueberries and beans and beans and beans.

"I can beans all day and then I go home and eat beans for dinner and dream beans all night, but I like it," the woman in the green shirtwaist confided to me. I didn't wonder, they *were* good beans!

"Where did you get the money for the equipment?" I inquired of the little woman in the blue apron.

SHE adjusted the gas flame under a sterilizer. "The local food council—that's the men's organization, you know—lent us five hundred dollars, but we're going to pay every cent of it back, from the proceeds of what we sell. The agricultural committee of the National League for Women's Service—we're working with them—gives the vegetables out of the community gardens. Mrs. Tompkins gets up at half past four to pick them and then comes up here and works all day! Peaches and berries and things like that we buy. We've had orders for a good many of those already and we've sold quarts and quarts of beans." She wrapt a pile of beans in a piece of surgical gauze and put them in a kettle of boiling water. I tried to help, but everything seemed to be where it ought to be so that she could put her hand on it without assistance and I succeeded merely in gesticulating willingly and vaguely.

"We hoped to sell a good many things to the poorer people at cost," she went on, taking the beans out of the kettle and plunging them in cold water, "but we find that even at cost this sort of stuff is more expensive than most of them want, so we are going to give some to the Charities for cases of actual need and sell the rest at a fair profit. We're going to keep the jars in Mrs. Hawkins's cellar—that woman is wonderful—and sell them as people want them. Lots of people will next winter. We are going to advertise in the library and on the screen in the movies and places like that." The beans were now being transferred with sterilized spoons thru sterilized funnels into sterilized glass jars and before I knew it I was helping—because even with an ulterior motive you couldn't be the only idle person in that place—and learning how to fit on sterilized rubber rings and how much salt to put in with a glass spoon. In fact, I got so fascinated with the process and the endeavor not to scald the woman with the striped shirtwaist when I filled up her jar with boiling water that I very nearly forgot to ask any more questions. But not quite.

I found that they calculated all their expenses carefully, even to the amount of gas used in doing a jar. It conveniently amounted to almost exactly one cent per jar. They even knew which people were reckless and had to be watched lest they burn a cent and a quarter. They were all enthusiastic. Their only complaint was the lack of workers, so many people were away and so many were doing Red Cross work or canning the produce of their own gardens. Most of these women were, too, for that matter, but they weren't satisfied with that because this little community is one of the hundreds and thousands all over the country which had vowed to supply the major part of its own food needs next winter.

Now is the Time to Use

CONCRETE

War Bulletin No. 2, of the Chamber of Commerce of the United States, says:

"Iron and steel should be used only when the requirement is unavoidable. Every effort should be made to use wood and concrete in place of steel whenever this can be done, and construction and development work requiring steel should be postponed wherever possible . . . . cement may be had in quantity for concrete work."

Says Cass Gilbert, the New York architect:

"There are hundreds of buildings erected in this country every year which could be just as well erected without steel, and in hundreds of others the amount of steel could be greatly reduced. An enormous tonnage could be saved if reinforced concrete, masonry or other material were used. Practically all buildings of moderate height can be erected without the use of large quantities of structural steel. Reinforced concrete or old-fashioned masonry can take its place."

Under present conditions concrete is particularly desirable. All the materials—portland cement, sand, pebbles or crushed stone—are staple products, most of them obtainable near by. Concrete is made with ordinary labor under skilled supervision. Concrete contractors have developed rapid and efficient methods of construction. There are many engineers, architects and contractors who specialize in concrete construction. If necessary we can help you get in touch with them.

CONSIDER THE ADVANTAGES OF CONCRETE—

Fireproof	*Verminproof*	*Rigid*
Watertight	*Sanitary*	*Rapidly Built*
Durable	*Weatherproof*	*No Repairs—No Painting*

Concrete is used today more generally than ever before. The smallest job on the farm and the largest engineering works are built of concrete. Use concrete to build that factory, foundry, shop, warehouse, bridge, tank or reservoir for storing liquids, coal pocket, ore bin, grain elevator, garage—any building you are planning.

Let us send you an interesting pamphlet entitled, ***"Why Build Fireproof?"***

CONCRETE FOR PERMANENCE

Bain

The kitchen may be a perfectly equipt school house or just somebody's barn, you'll find it pervaded by the same spirit of real work but lots of fun while you're doing it

We talked about those other communities. The enterprizing women in the next state who were touring their county in a special train, lecturing and demonstrating to the farmers' wives. The splendid work of the county agent in the southern state where Mrs. Jones's sister lived. The comparative merits of the canning literature issued by the Department of Agriculture at Washington and that which comes from our own state capitol. The excellent bureau of information which the Woman's Club keeps open all day long and where any one can go for advice, spoken or printed, on food conservation.

YOU see, this community canning isn't just a fad—nobody works at a fad from eight till six thru the hottest of hot weather. It is labor performed in the spirit of patriotic service. Of course the women enjoy it, but that doesn't make it any the less work; men at Plattsburg have been known to smile. And because it is done in a patriotic spirit this canning is producing other results which, tho less tangible than beans, are none the less real. It is bringing together women in something the same way that the training camps are bringing together men in all walks of life.

"Why," the woman in the pink sweater told me, "all sorts of people have come here to work. Everybody talks and jokes together and has a beautiful time, and all the while we're canning beans and beans and beans. It's the most worth while thing I've ever done."

That is the small town's part in the food conservation campaign. The city has a part, too, of a different kind. In every port or terminal appalling quantities of perfectly good fruit and vegetables are thrown away every day because part of a lot is not up to the health standard and it doesn't pay the merchants or the railroads to sort it.

Because in this of all years it seemed to them wicked to "dump" good food, the New York Women's University Club and the Junior League and the Mayor's Committee of Women on National Defense established a city canning kitchen down near the East River. It has been running only a month, but its success more than justifies the adoption of the plan by other cities.

They were doing onions the day I went there. "But they work just as hard," the white capped director told me. "Their spirit is wonderful." They, about thirty women from all parts of the city, up and down town, were washing and peeling and packing and sterilizing and talking at top speed. "The sterilizers are really soup kettles," the director explained. "You see, this is one of the school lunch kitchens. We couldn't have had a better place. There is plenty of room and most of the equipment was here beforehand."

A red haired woman in a blue checked apron was peeling onions with peculiar dexterity. I watched her fascinated and then I asked if she worked here every day. "I do now. It's vacation time and the children are at home to mind the house. I wash them once in the morning and then I come here for the rest of the day. It's a grand work. Fifteen cents an hour they pay us, but not in money; in jars of the canned stuff next winter."

Every worker has a time card which is punched daily. She can work as much or as little as she pleases, but they say at the kitchen that they never have to ask for workers. They just come. "They told me about it at the settlement," said the red haired woman. "I read it in the paper and I'm coming down every day." It was a little spectacled woman speaking. "It takes me an hour and a half to get here, but I couldn't keep away. I've been keeping house for thirty-nine years, as you can see, but I've learned a lot here. They let you help in all the parts of the work and I keep my eyes open."

The director has several salaried, trained assistants. The woman who inspects and buys the food at the docks is also on salary. But the other workers and the Boy Scouts who sort the vegetables, under direction, in the lot across the street, are paid "in kind."

Behind the sterilizing room and the washing and peeling room is the storeroom, shelves and shelves and shelves, all the walls from floor to ceiling lined with rows of glass jars. They represent the workers' salary and also a goodly insurance against cases of need in the city next winter.

THERE is an element of excitement about canning in this way. Until the woman who is in charge at the docks telephones in the morning the kitchen doesn't know whether they are going to put in the day making watermelon pickle or canning corn. And it doesn't matter. "They work just as hard." And every single one of them, from the Boy Scouts up, smiles at you if you ask them if they like it and says emphatically, "Yes, *ma'am*."

That is the spirit you will find wherever women and cans and kettles are met together for the good of the town. It is a very contagious thing this community canning, but it is a thoroly enjoyable malady. Go to your community kitchen and see if you can't catch it too!

Paul Thompson

Miss Frick, center, director of the New York City Kitchen, which is salvaging the food that ordinarily goes to waste on the docks. The workers are paid in vegetables

This history will be complete. We promise you five volumes—but if the war lasts so long that ten volumes will be required to tell the story—you will receive ten—at no increase in price.

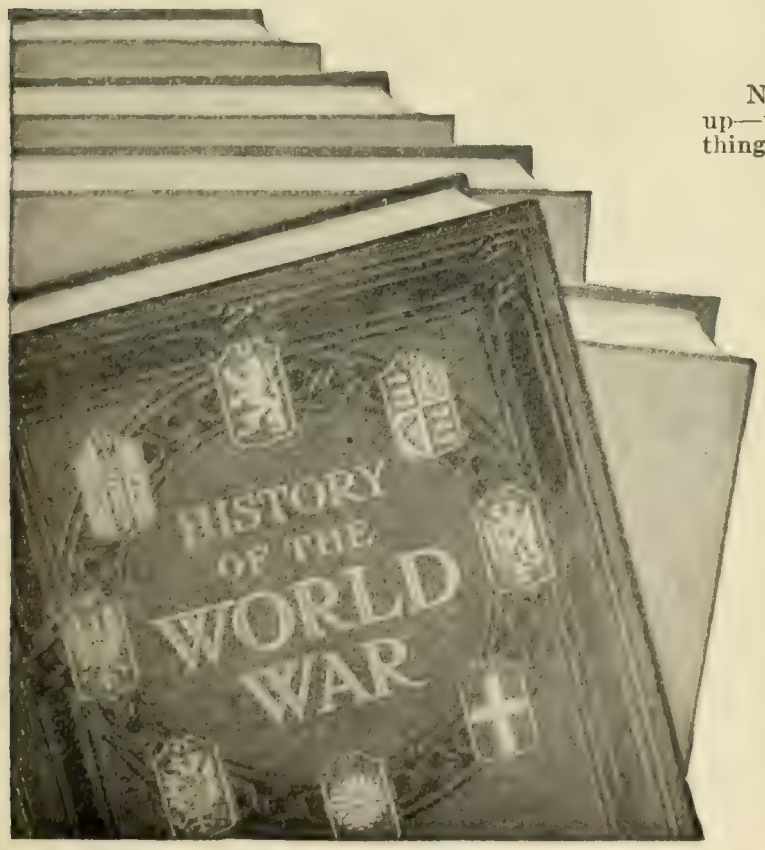
When Peace Does Come!

WHEN once quiet descends on the torn-up land of Europe—when the shricking, restless shells are still, and the dull rumble of the cannon along the road is heard no more—when silence takes the place of the thunderous noise of battle—when the weary men have laid down their arms—and those who are left are once more back at home—when conqueror and conquered once more take up the businesses of peace—will you even then understand—understand what they have been through?

To those who will listen, the war has its great message—a message of democracy fighting its last fight against autocracy—a message of world development.

All great occasions produce a man for the need, and this war has found one man and taken him from his work of every-day to write the story of the great war—

FRANK SIMONDS



HIS years of study of military strategy, his service in the Spanish-American War, his making of maps, have all borne fruit. He who spoke to America has been heard by Europe. He is read by European General Staffs, he is welcomed by President Poincaré and by Lloyd George. He has had access to places and documents—he has had opportunity to get material such as make a real tribute to his services. He is the one great historian whom this war has developed.

Once in a generation—no, not so often—there appears one man who seems to have a gift for making history vital, lucid, alive—a man like Ridpath or Macaulay—geniuses who combine a natural gift for language, a natural gift for history, a natural gift for facts, with a marvelous technical craftsmanship. All this is Simonds—he is the man of this generation—he is this generation's Macaulay.

And because Frank Simonds has become so great, the whole world is eager to help him with the writing of this story. Therefore, those who know best some individual part of the great conflict—those who have played a part in it—have written of what they know best. There are hundreds of those contributors. One-third of the whole history is written by them—the other two-thirds being written by Frank Simonds. They are the illuminating, picturesque footnotes of his history.

A few of them are:

Rudyard Kipling.
Stanley Washburn,
Russian Correspondent for the London Times.
Lord Northcliffe.
Ex-President Taft.
Viscount Bryce.
A Staff Officer of the U. S. Army.
Stephen Lauzanne,
Editor of the "Paris Matin."
Arno Dosch Fleurot,
Eye-witness of the German entry into Belgium.
Ian Hay.
Winston Spencer Churchill.
Hudson Maxim,
Inventor of High Explosives.
Lieut. Muller,
Commander of the "Emden."
James McConnell,
Killed with the American Squadron in France.
Simon Lake,
Inventor of the Submarine.
Orville Wright,
Inventor of the Flying Machine.

Why It Costs You Less Now

Nearly every newspaper you pick up tells you how the price of paper is going up—the price of ink is going up—the price of cloth—the price of labor. Everything that goes into the making of a book seems to go up every day.

One volume of this set is now complete—the second volume is in process of manufacture, and the whole set will not be finished until the war is over.

But to those who order now, we will make the price of the complete set on the basis of the cost of this first volume, although we know that the fifth volume will cost us much more to manufacture.

We do this because it is to our advantage to get some idea of how many sets will be ordered.

It is quite possible that it may cost us twice as much to manufacture the fifth volume as it does to manufacture the first. But if you order your set now—you get the five volumes on the basis of the present cost of one. The longer the war lasts the higher prices will go and the more that fifth volume will cost. Those who order their sets later will pay the price based on the cost of the fifth volume.

Send the coupon NOW and get the lower price.

THE PULLMAN COMPANY

Service. Cars of the Pullman Company are today operated over one hundred and thirty-seven railroads, aggregating 223,489 miles of track, and afford the means to reach with the maximum comfort, safety and convenience, every point of interest to the traveler.

By securing Pullman accommodations, the traveler is further assured of safety, due to the strength of the car construction, security of health, due to the scientific cleaning and sanitary methods employed, and the convenience resulting from the service of fifteen thousand efficient and experienced car employes. Accommodations may be purchased in advance, and if for any reason passengers are unable to make the trip, the amount paid for the tickets will, upon application, be immediately refunded.

Experienced representatives stationed at every principal point in the United States are prepared at all times to provide special parties with private cars, containing dining room and kitchen, accommodating from eight to eighteen persons, in charge of a competent chef, porter and waiter, or, if desired, complete trains, consisting of baggage-library, sleeping, dining and observation cars.

AN OUTDOOR SHOWER BATH

BY GEORGE H. BROWNE

I live in the summer on a Pemigewasset River farm on the old stage road from Concord to Plymouth, New Hampshire. The water supply, from a brook nearly a mile back up the hill, gurgled for over a century thru a water-box in the kitchen out into the big barnyard tub, and the steady overflow ran to waste until the present generation took the matter in hand.

We raised a new half-hogshead as high as it would go and still take the overflow. That gave a fall of only the hight of a barrel, but we laid ¾ inch pipe in a shallow trench to the garden, 320 feet away, and an open ⊣ on the end of the horizontal overflow-pipe in the supply tub still draws, by gravity, from an inch or two below the surface, a small but steady stream of pure spring water. We left a drip to drain the pipe at its lowest level (by the side of the road) and set a 45 gallon barrel over the end of the pipe as it came out of the ground. The picture shows how. We then set up on stakes a line of eight more barrels on a level at the top, and connected them with 16 foot ½ inch galvanized pipes at the bottom. The "plumbing" was easy: we just bored a hole in the first barrel, screwed the pipe into it a little farther than necessary, and then unscrewed it a few turns into a similar hole in the next barrel. There is a faucet on each barrel.

Between the eighth and the ninth barrel, the gradual slope drops sharply toward the river. The bottom of the last barrel is consequently eight or ten feet from the ground, on the edge of the woods. There is not a house in sight for over a mile, high up across the river. We therefore built a slab **V** around it open to the morning sun, and attached a shower spray to it. It beats an indoor shower all to pieces!

The New Books

London Once Upon a Time

THE seven more or less close friends of Coulson Kernahan, those who figure most frequently in these random recollections, entitled *In Good Company*—first "unloadings" from a forthcoming "cargo"—make a motley group. But whose friends do not and why not? Must they all be portrait painters or physiologists or brewers? Swinburne, Lord Roberts, Phillips, Edward Wymper, mountain climber, Watts-Dunton, S. J. Stone, the "hymn-writer," and Oscar Wilde, with such as these is an hour's—or a half day's—real pleasure. A sheaf of pages from life is spread before us.

Swinburne is the inapproachable recluse; the worshiper of bouquets; equally the worshiper of his invariable morning walk; of the verses of blind Philip Bourke Marston; of his tea; of his wit-opponent, Watts-Dunton; of his afternoon nap, "company or no company." To make this Swinburne out the lovable fay-like creature that Kernahan does make him is a literary feat.

Watts-Dunton was critic, novelist and poet, "but wished, as a literary man, to be remembered in the reverse order." He was a reviewer of the highest standards, and a seeker for exemplifications of "basic principles" in the *Athnaeum*. Swinburne called him "the ogre of the suckling bardlings" because it was his part to "keep unsullied the white shield of English literature."

The Wilde essay has some things that had better have been left unsaid, tho not such recollections as that Kernahan used to correct the "shalls and wills" before the manuscripts of Wilde's strangely beautiful fancies went to press.

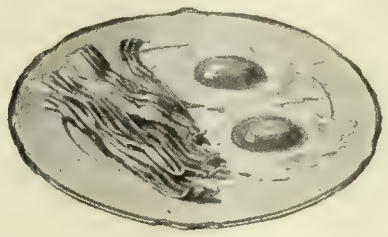
Whether worth anything as criticism or not this is served up in most delightful anecdotal fashion by "one of these," who in his chat adds, more or less familiarly, to the list of seven friends, the names of Tennyson, Morris, Arnold, Moulton, Lowell, the Rossetti's, the Browning's and Meredith.

In Good Company, by Coulson Kernahan. John Lane Company. $1.50.

Locke and the Great War

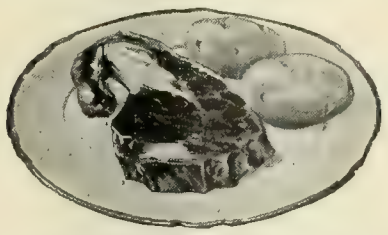
WILLIAM J. LOCKE'S new novel, *The Red Planet*, is what many novels fail to be, a thoroly interesting story crisply and entertainingly written. It is told in the first person, by an old soldier crippled in the Boer war, a plain-speaking, forthright, lovable, old patriot, whose life is very closely bound up with the lives of his friends in Wellingsford, and the clue to it is found in the stanza on the title page:

"Not only over death strewn plains
Fierce mid the cold white stars,
But over sheltered vales of home,
Rides the red planet Mars."



In a way, *The Red Planet* resembles "Mr. Britling Sees It Through." Both books are stories of the Great War, in its effects on small English communities far from the trenches, and stories that show the reactions of the better classes to the war. *The Red Planet* is less philosophical than Mr. Britling and the appeal of it is rather to our sympathies and emotions than to our intellects. The only argument propounded seems to be the argument for

Food Costs



Compared by Calories
The Unit of Food Value

Quaker Oats
Supplies 180 calories of nutrition for each one cent of cost.

Bacon and Eggs
Cost five times as much for the same amount of nourishment.

Steak and Potatoes
Cost five times as much. The average mixed diet costs four times as much.

Bread and Milk
Costs twice as much for a satisfying meal.

Nutrition, you know, is always measured by calories. Folks need on the average about 3000 calories per day.

Every woman, in these high-cost days, should judge foods on this basis.

Oats excel all other grains in calories per pound. They sometimes sell by the bushel for one-fifth the price of wheat.

In Quaker Oats—which is queen grains flaked—each cent buys 180 calories. The average mixed diet costs four times as much. Many a food costs ten times as much.

Every serving, on the average, divides your food costs by four. Yet this is Nature's supreme food, and in an extra flavory form.

Quaker Oats

The Oat-Flake Dainty

Quaker Oats is the oat dainty. It is flaked from queen grains only—just the big, plump, flavory oats. We get but ten pounds from a bushel. But these rich grains, unmixed with small grains, give this exquisite flavor.

This extra grade makes all oat foods delightful. Use it in bread and muffins, in cookies and pancakes. Use it to thicken soups. Use it to cut your table cost.

12c and 30c per package in the United States and Canada, except in Far West and South where high freights may prohibit

An Aluminum Cooker for $1.00

Made to our order, extra large and heavy, to cook Quaker Oats in the ideal way. Send us our trademarks—the picture of the Quaker cut from the fronts of five Quaker Oats packages, or an affidavit showing the purchase of five packages of Quaker Oats. Send $1.00 with the trademarks or affidavit and this ideal cooker will be sent to you by parcel post prepaid. We require the trademarks or affidavit as evidence that you are a user of Quaker Oats. The trademarks have no redemption value. This offer applies to United States and Canada. We supply only one cooker to a family.

PARAGON INSTITUTE, 501 Coliseum Pl., New Orleans, La.

staunch patriotism, unless perhaps Mr. Locke's portrayal of his one socialist-pacifist character as an arch-fiend may be said to constitute an argument against socialism and pacifism. Mr. Locke's characters at their best cling to the old anthropomorphic God and to the Christ of orthodox Christianity and do not offer us, as does Wells's hero, any modern and revised version of "The Diety." Mr. Wells's book may be said to show the effects of the war on the mind of a modern radical novelist. Mr. Locke's book may be said to show the effect of the war on the heart of a conservative. The war has made Mr. Wells think and it has made Mr. Locke feel.

The most interesting character in *The Red Planet* is Leonard Boyce, a man who forced himself to perform prodigious feats of bravery and to win a V. C. because in his heart he knew that he was a coward and had once failed, thru fear, in a crisis and believed that he was spiritually in debt to himself until he had overcome that cowardice. Similarly he is capable of what is, in a sense, a heroic renunciation, simply because he has allowed himself once to act the cad. Several sweet, fine women of whom Betty is by far the finest add interest and charm to the story.

The Red Planet, by William J. Locke. John Lane Company. $1.50.

Before the Court

NEW YORK'S Commissioner of Correction has given us in *The Offender* a study of the criminal and what is being done for him and for society that is neither reactionary nor sentimental. It sees the faults of the present court systems and what changes are needed without accusing all those who planned them or are now working under them of being knaves or fools. Probably the book is too conservative in style to please the enthusiast, but it is not conservative in recommendation, and its restraint and its broadminded discussion of the problems of justice and reform will be to many more convincing than a more emotional description of the stupidities and the wrongs of which our often antiquated court and prison systems are guilty.

The Offender, by Burdette G. Lewis. Harper & Brothers. $2.

Christianity Past and Present

WHATEVER other effects the Great War may have upon our civilization, one thing is beyond question, it has not dampened interest in the historical traditions and present problems of the Christian churches. Many classes of literature seem to have been more or less unfavorably affected by war times but this is not true of religious books. These appear in as considerable numbers as in any more peaceful year and apparently command as wide attention. In the field of church history we have *A History of the Reformation*, by Dr. Elias B. Sanford, honorary secretary to the Federal Council of the Churches of Christ in America. This account of a critical epoch in the life of Christianity is so well balanced in its judgments and so interesting that no minister or layman who invests in it should be disappointed. It is largely based on previous histories of the Reformation, such as Dr. Lindsay's, which represent a somewhat greater extent of original research. A special chapter in church history is briefly told in *A Concise History of the Presbyterian Church* in the United States, by Rev. William Henry Roberts. *Francis Asbury*, a series of collected memorial addresses, is devoted to the life and work of one of the heroes of the Methodist Church in America and its first bishop.

Christianity is tangent to many other religions. A comparative study of a number of *The Religions of the World*, by Prof. George A. Barton, of Bryn Mawr College, will be welcomed by the minister who seeks a background to Christian history. The valuable bibliographies with each chapter may serve as a guide to fuller study. The particular religions to which most thoro consideration is given are the religions of western Asia, China, Japan, India and ancient Greece and Rome. The final chapter of the book very briefly discusses Christianity.

One of the pressing present problems of Christianity is how the churches may make their existence generally known and felt in an age of the fierce competition of innumerable conflicting interests each striving to win a first mortgage on the attention of the public. *Church Advertising*, a study to which a score of clergymen have contributed chapters, is a bold plea for the arts of religious publicity, but it discusses the question in generalities rather than in detail. Most of the contributors have studied to make their own style attractive and arresting and example, after all, is better than precept. The closely allied question as to how the church may make use of the school is discussed at length in *Religious Education and Democracy*, by Benjamin S. Winchester. Systems of religious instruction in various European countries and experiments made in this field in different parts of the United States are given in great detail, and about half the book is devoted to a survey of suggested plans and programs of religious teaching.

A History of the Reformation, by E. B. Sanford. S. S. Scranton Company, Hartford. $1.25. *A Concise History of the Presbyterian Church*, by W. H. Roberts. Presbyterian Board of Education, Philadelphia. 50 cents. *Francis Asbury*. Centennial Addresses. Methodist Book Concern. 75 cents. *The Religions of the World*, by G. A. Barton. University of Chicago Press. $1.50. *Church Advertising*, W. B. Ashley, ed. J. B. Lippincott Company, Philadelphia. $1. *Religious Education and Democracy*, by B. S. Winchester. Abingdon Press. $1.50.

Two Generals

LORD KITCHENER, by Henry D. Davray, is but a sketch of the famous British commander. This little volume presents the rather austere and silent, ever faithful man. Like the majority of strong personalities, he possest warm friends and bitter enemies. His enemies doubtless discovered in him a great deal foreign to the approved pre-bellum British officer pattern. He shunned society, cared nothing for sport, and was impervious to the wiles of those in high places. On the other hand real soldiers saw in him a hard working, sincere and unaffected officer, who, in his special field of military organization, approached positive genius. In the sense of his morale, his loss is the greatest the British army has thus far suffered.

"If there had been no Smuts there could have been no Botha," may or may not hold some measure of truth. But without endeavoring to detract from the admirable career of *Jan Smuts* the "character sketch" by N. Levi seems to lack those picturesque features and that broader humanity with which we associate General Botha. This volume, over modestly termed, is in reality a well written complete biography to date of the famous Boer leader. From it one gathers the impression of a reserved, intellectual type, a brilliant public speaker, and a sagacious politician. Much of the book is taken with internal South African politics which to some readers will appear remote if not obscure. But this much shines clear, that General Smuts did his full part with General Botha in healing

the wounds of the Boer War, and bringing into lasting establishment the Union of South Africa.

Lord Kitchener, by Henry D. Davray. T. Fisher Unwin, London. *Jan Smuts*, by N. Levi. Longmans, Green & Co. $2.50.

Two Angles on Democracy

FRANK W. NOXON in *Are We Capable of Self-Government* contrasts the present belief in a mutually helpful partnership between the National Government and the business men of the country with the feeling prevailing on both sides a few years ago that they were natural enemies. The author desires that the public should always be the predominant partner, but he holds that our democracy can be called a success only to the extent to which the Government comprehends the complex mechanism of production and exchange and adjusts it with scientific caution instead of simply throwing a monkey wrench at it.

To Dr. Newell L. Sims, in *Ultimate Democracy and Its Making*, capitalism is the enemy and the road to democracy lies thru its conquest and overthrow. He is confident that "the church" is soon going to disappear and that it will be a good riddance, that our democracy will be secure without armies or navies, that as society becomes more democratic it will become more stable and that much is to be hoped from the cityward movement of population since urban population is more enlightened than rural.

Are We Capable of Self-Government? by Frank W. Noxon. Harper & Bros. $1.50. *Ultimate Democracy and Its Making*, by Newell L. Sims. A. C. McClurg & Co., Chicago. $1.50.

Books for Teachers

TEACHERS' books may be grouped in three classes: those which show her the methods of experienced teachers, those which outline classroom work for adaptation to her own classes, and those which inspire and stimulate her thought.

Of the first class, Klapper's *The Teaching of Arithmetic* is a comprehensive treatise of the whole subject, showing how to organize the recitation work without waste; the various methods in use for developing mathematical thought; how to apply each method to the topics of arithmetic, and also giving a clear discussion of the recent scientific tests in the subject.

Closely connected with these last chapters are the tests outlined in *Experiments in Educational Psychology*, a book for the training classes, where the best methods of teaching, auditory or visual, the transference of training, the value of association, and the effect of work and fatigue on memory are tested by laboratory methods, and the pupil-teachers allowed to learn by testing themselves what will be the effect on the child. Psychology has done so much to advance the better methods of teaching that such books are welcome.

Tho issued by the Bible Teachers' Training School to aid missionaries in learning the language of their field, *How to Learn a Language* has many suggestions for all modern language teachers. A method which enables the student to preach after six or nine months' training, often aided by only poor, untrained native teachers, calls for consideration, altho, of course, with the other subjects of the curriculum, no high school pupil can be expected to do such intensive work as the book outlines.

No subject offers better opportunities for good training and no subject, at the present, wastes more time than handwork. Many a child, however, responds to that method where all others fail. For that rea-

son, all teachers, especially those not definitely trained in the correlation of handwork, should welcome the two books, *Socializing the Child* and *Illustrative Handwork*. While the former limits itself to the first three years, both discuss clearly the use of sand tables, pictures, and construction work in developing a clear understanding of history, geography and literature. Both outline fully the work possible in these subjects. Both appreciate the value of a real correlation, and, while suggesting much skilful training for the fingers, still do not take time justly needed for book work in those subjects. The second book adds some excellent suggestions for grades five and six.

Of the third type of book, *The Teacher as an Artist*, by H. H. Horne, is a logical discussion of the qualities of an artist, of their application to the teacher, and also an earnest appeal to the teacher to be more of an artist, rather than an artizan, in molding the best of material, the human mind. *Reveries of a Schoolmaster* can hardly be called an educational book. Mr. Pearson has given us a series of humorous, readable essays, but in nearly all are one or more common sense suggestions on wise and tactful methods of boy training. Fully as interesting as his New England reader previously mentioned is Clifton Johnson's *Old-Time Schools and School-Books*. It is a complete history of the old-time school with many a reprint, from such old books as the "New England Primer," "Noah Webster's Speller," and the "First American Geography." Certainly this valuable contribution to school history may be not only enjoyed by teachers but used as a reference book in the American history course.

Anyone who can read *A Schoolmaster of the Great City*, by Angelo Patri, without at least glimpsing the possibilities and the needs of democratic education must be a hopeless case! It is the story of an Italian immigrant boy who becomes, on leaving college, an elementary school teacher in New York City. He works successively on the usual bases of rigid discipline, bribery by rewards and mechanizing of methods. Then came to him McMurry's interpretation of Dewey's educational vision, followed by experience in working out what a school can be and do in a modern city community.

There is very little exposition in the book—one concrete instance follows another. The author knows how to tell a story and when he has told it his point needs no further enforcing. The issues which are so sacred to the old education seem trivial in the face of the realities of present day requirements. Drill, discipline, culture, vocational pursuits, health interests, school and home become futile mechanisms when unrelated and serving merely their own ends.

What is needed is vital experience that will result in independent thinking and productive work. The rich as well as the poor need to learn that "the child is the only one who can carry the message of democracy if the message is to be carried at all." "Americanize the foreigner, nay, thru the child let us fulfil our destiny and Americanize America."

No subject has made greater strides in the last two decades than school hygiene. We advanced from dry teaching of physiology or anatomy to practical, personal hygiene. But still we are not satisfied. Our work must be carried by pre-school and post-school work into the home and the community. *Educational Hygiene*, written by experts in the various topics and edited by L. W. Rapeer, treats the subject broadly under five main topics: medical supervision, physical education, school sanita-

Why I Lunch
On Puffed Wheat

A man on a train, a few weeks ago, told a friend why he lunched on Puffed Wheat. And we think that thousands of men will endorse his view.

He said, "It saves me a dull hour or two. The brain doesn't work well when the stomach is taxed.

"Here is whole-grain food, steam exploded. Every food cell is blasted. I know Prof. Anderson, the man who invented it. And he tells me that no other process makes whole-grain so easy to digest.

"Then it makes a great dish. Note these bubble-like grains, thin and toasted. They taste like puffed nuts. And a dish makes a meal, because they are clear nutrition."

For the same reason—though he did not say it—they make an ideal night dish for a child.

The Independent Investor's Service

Luigi Criscuolo, Director

The Independent offers a Service for Investors in which personal attention is given to the desires of its subscribers for information in regard to investments of all kinds. We cannot, of course, decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves. Readers who request advice on investments will receive better service when they specify the class of securities now held, approximate amounts of each, stating if the investment is for an estate, business or professional man, woman or minor. All information given will be held in strict confidence.

tion, the teaching of hygiene, and the hygiene of instruction.

An Introduction to Educational Sociology is intended for "sociologists untrained in educational theory, educators untrained in sociology, and undergraduates with little training in either field." As the state enlarges its "sphere of influence" among institutions the school must incorporate a larger share of all the activities of youth. Under "Sociological Foundations" the primary social groups are discussed in relation to Democracy, the State and the School. "Educational Applications" cover surveys, the socialization of school administration, discipline, program of studies and methods as well as the vocational and cultural aspects of a socialized education.

A wise program for all divisions of education in England is given in *Education After the War*. It ranges from the nursery thru the university and provides for workingman and the professions, women and men, national and world service and personal development, humanities and utilities. Mr. Badley brings to his undertaking the traditions of Rugby and Cambridge, twenty years of successful experiment in coeducation and a well balanced curriculum in a private school together with a leadership in the Workers' Educational Association. America has much to learn from what he offers.

The Teaching of Arithmetic, by Paul Klapper. D. Appleton & Co. $1.25. *Experiments in Educational Psychology*, by Daniel Starch. The Macmillan Company. $1. *How to Learn a Language*, by T. F. Cummings. Bible Teachers' Training School. $1. *Socializing the Child*, by S. A. Dynes. Silver, Burdett & Co. $1. *Illustrative Handwork*, by E. V. Dobbs. The Macmillan Company. $1.10. *The Teacher as an Artist*, by H. H. Horne. Houghton Mifflin Company. 70 cents. *Reveries of a Schoolmaster*, by F. B. Pearson. Charles Scribner's Sons. $1. *Old-Time Schools and School-Books*, Clifton Johnson. $1.40. *A Schoolmaster of the Great City*, by Angelo Patri. $1.25. The Macmillan Company. *Educational Hygiene*, L. W. Rapeer, ed. Charles Scribner's Sons. $2.25. *An Introduction to Educational Sociology*, by W. R. Smith. Houghton Mifflin Company. $1.75. *Education After the War*, by J. H. Badley. Longmans, Green & Co. $1.25.

Teachers and Schools

A History of Williams College, by Leverett Wilson Spring, will be of much interest to every alumnus of the famous college. The general reader may also find not a little to attract him in the descriptions of college life a century ago and in the biographical sketch of Mark Hopkins, the most widely known of Williams' presidents. (Houghton, Mifflin Company, $3.)

A Handbook of American Private Schools, by Porter E. Sargent, is a careful and critical directory of all the important private schools and academies for boys and girls, military schools, summer camps and various special schools. It includes also valuable bibliographies on recent tendencies in education and several introductory articles on the place of the private school and the vacation camp in American education. (Porter E. Sargent, Boston, $2.)

The Book of the Opening, in three volumes sumptuously printed by the De Vinne Press, contains the inauguration proceedings of the Rice Institute of Houston, Texas, with facsimile reproductions of acceptances from learned bodies all over the world and addresses by Ostwald Ramsay, Poincaré, de Vries, Kikuchi, and other distinguished scholars, an international assemblage such as could not be got together now and probably not for many years to come.

An Old New England School, by Claude M. Fuess, is a history of Phillips Academy at Andover. The book, which deals in much detail with every stage of the school's development, gives a very complete picture of the type of school which almost wholly dominated American secondary education during the first few decades of our national existence and which survives today in its

best form in such examples as the Phillips Academies of Andover and Exeter. (Houghton, Mifflin Company, $4.)

A little book from which library and school workers may get valuable hints for ways of putting books in the path of children and thereby helping them to form the reading habit is *The Public Library and the Public Schools.* (Russell Sage Foundation, New York, 25 cents.)

Each African vacation certain picked boys of the missions hold day schools back in the tribal villages. *African Adventurers* is the story of two such boy teachers and their school told for children with all the delicacy and charm that "Black Sheep" and "An African Trail" have made us count on from Jean Kenyon MacKenzie. (Committee on Foreign Missions, West Medford, Massachusetts, 30 cents.)

In a beautifully printed and handsomely made little book entitled *Scientific Singing,* E. Standard Thomas presents a study of the human voice upon what he calls "a logical, commonsense basis," in which students of singing will find a deal to interest and stimulate them. The basis of the author's teaching is that "all art is principally the result of deep thinking." (Paul Elder & Co., San Francisco, $1.)

Two most useful book lists have recently been prepared by Corinne Bacon. These are *Children's Catalogues,* of 1000 and 2000 books each, built up with the aid of some fifty selected club and library lists. Books are entered under author, title and topic, and it is needless to say the advice is trustworthy and of immense value to librarians, teachers and book purchasers. (H. W. Wilson Company, White Plains, New York: $2 and $4.)

A plan by which examination and credit for Bible study in outside classes may be given by the public schools has been successfully worked out in many states. The wide ignorance of the Bible due to the necessary secularization of the public school is a grave matter. The varieties and the results of this simple and just method of meeting the problem are described by C. A. Wood in *School and College Credit for Outside Bible Study.* (World Book Company, Yonkers, New York, $1.50.)

Outdoors

A book for the seedsman and florist and for the owner of a large garden is *The Culture and Diseases of the Sweet Pea,* by J. J. Taubenhaus, which deals with the care of this plant in the open and in the greenhouse. (E. P. Dutton & Co., $2.)

Farm Concrete, by K. J. T. Ekblaw, is a comprehensive guide to the choice and mixing of material, the cost of construction, the building of forms and the use of concrete in walls, floors, fences and entire buildings. (The Macmillan Company, $1.60.)

Among the Rural Manuals is a new work on *Fruit Diseases.* This is by Dr. Hesler and Dr. Wetzel, plant pathologists of the Cornell College of Agriculture. It goes scientifically and with much detail into the subject, a glossary making its necessarily technical terms clear to the practical farmer. (The Macmillan Company, $2.)

A. Hyatt Verrill has tried "nearly every type known" of camp pack, and camps to match. His little *Book of Camping* is comprehensive and wise. The camper who has not had Scout or Campfire training will welcome the chapter on signaling, and even the experienced may get hints on provisions, medicine and camp fitting from a practical camper. (A. A. Knopf, $1.25.)

There is something of heroism, something of good, hard, common sense, and a leavening of the strangely soothing love of animals and fields in *Second Wind.* It is the very plain account of a plain man's experiences in beginning farming after sixty, set down by Freeman Tilden perhaps to scare folk not fitted to farming, as it well may, perhaps, to encourage discouraged farmer folk, as it should and perhaps because Hadlock was a first class human document. (B. W. Huebsch, $1.)

"Are you tired again this morning?"

UNRESTFUL SLUMBER—zest for neither breakfast nor work—nothing but a dreary vision of a tired, ambitionless day—of "I don't know what's come over me."

If he but knew, too little heed has been paid to nature's demands. The steady grind and shocks of work and worry have worn out the nerves' reserve. A complete rest would be ideal, but short of that a scientific food-tonic is the one thing urgently needed—and that means Sanatogen.

For as Sir Gilbert Parker, the statesman-novelist, writes: "Sanatogen is a true food-tonic, feeding the nerves, increasing the energy and giving fresh vigor to the overworked body and mind."

To this statement thousands of brain-workers unhesitatingly subscribe, some even going as far as Arnold Bennett, the famous writer, who exclaims, "The tonic effect of Sanatogen is simply *wonderful!*"

In the face of such unparalleled proof can *you* fail to realize that Sanatogen stands ready to give you real help?

* * *

FREE SAMPLE OFFER

On request we will send a 25-gram Sample Package of Sanatogen, also Richard Le Gallienne's booklet, "The Art of Living," telling of Sanatogen's kindly help. Address The Bauer Chemical Co., 26R Irving Place, New York.

Sold by good druggists everywhere, in 3 sizes, from $1 up.

424-434 S. Green St., Desk F-258, Chicago, Ill.

WHY BONDS?

The Nation needs money. Bonds extend long after "war profits" end. They increase all taxes, burden industry until paid and ultimately cost $2.00 for every $1.00 raised. They increase living costs and reduce wages.

THINK OR PAY

A tax on land **values** only will raise yearly $5,000,000,000, will abolish all other taxes, force idle land into use, increase crops, boom industry and perpetuate real prosperity.

TAX LAND

Independent Opinions

I might suggest the East does not know the West when it becomes alarmed over the thrilling acts of the I. W. W. The West with law if possible and by the unwritten law if necessary will easily handle any unpatriotic element arising, if it really interferes with the war measures. Please keep this in mind in your editorials. Don't lose any sleep about the West! Pioneer life make men in emergencies.

One other question. Why does not your paper have a question box suggesting remedies to meet the sub boat peril, or any other vital matter arising during the war? Such would arouse thought, somewhere to bear fruits. Some unknown Edison might thus be found. Some thought from one might lead others to its solution.

BROWN MCCRARY.

Carroll, Iowa

The Independent is not in the least worried that the West, or any other section of the country for that matter, will not be able to handle the I. W. W. There is no state where at least nineteen people out of twenty are not loyal and law abiding. This fact makes it unnecessary in our opinion to invoke any "unwritten law" such as our correspondent refers to; the written law is sufficient. But unless speedy legal action is taken there is danger of lawless conflicts between the organized anarchy of the I. W. W. and the awakened anger of the community, such as have already occurred in Montana and Arizona. We welcome our correspondent's suggestion of a question box, but our correspondence thru Mr. Purinton's war service page which appears at frequent intervals seems to cover the case.

We have received from our readers many protests against Mr. Seumas MacManus' exposition of the principles of the Sinn Fein. While we have not space for most of these letters, we are glad to give an extract from one of the most forcible pleas for the attainment of Home Rule by the path of statesmanlike prudence and moderation.

No better illustration of the political ineptitude of a portion of the Irish people need be looked for than is displayed in the spirit and sentiments of the article entitled "In the Matter of Ireland," by Seumas MacManus, in the July 14 issue of The Independent. Ireland produces great soldiers, good policemen and writers of insight and imagination, but it is notably deficient in statesmen. It is just the impractical and intransigent spirit shown in this article which is responsible for a large part of Ireland's troubles.

It is a stock statement of a certain class of Irishmen that Ireland is governed —or misgoverned—by England. In fact Ireland is governed as Scotland is governed, as England or Wales is governed, by a British Parliament in which Ireland is over rather than under represented. And yet by a species of poetic license Mr. MacManus is pleased to refer to the "English yoke" and to "English tyranny." Such accusations may have had a basis in fact once; now they represent only historical fiction. The incidents of the Dublin riots referred to by Mr. MacManus are only such as might happen anywhere, and have happened in these United States, when the authority of the law must be enforced by arms against rioters.

Freedom for Ireland is likely to be obtained as freedom for Canada and Australia were obtained, by home rule within

THIS LOW PRICED LETTER FILE

Is just as serviceable and will do its work just as well as a cabinet costing more money. Made of kiln dried, solid oak —every one of its thirty joints interlocked, glued and held with two screws. Drawers are full height —an aid in excluding dust—and operate on fibre rollers. Equipped with easily adjusted follow blocks to keep contents in vertical position. 181 N. Dearborn Street Dept. 5 CHICAGO

President Wilson Tells Why We Are At War and his authorized publishers issue in a book called **"Why We Are At War,"** the four great messages, the proclamation of April 6, and the message to the American people of April 15—a book full of inspiration for every man and woman today making a sacrifice for liberty. Get it at your book store, or it will be sent postpaid for 60 cents by

Harper & Brothers, Franklin Sq., Dept. I., N. Y. City

If your wristbands are soiled, be sure your whole blouse looks soiled. Wipe them off each day with Carbona.

It cannot explode.

15c 25c 50c $1. **At all druggists.**

Shoes made with "F. B. & C." white, bronze and fancy colored kids are cleaned with Carbona Cleaning Fluid.

AN AMERICAN PHYSICIAN of Princeton and Oxford, England, culture, recently from residence in Paris and going to San Diego, Cal., for the winter, offers his personal and professional services as specialist and expert in all scientific methods of drugless cure, to a few select patients going there, at most reasonable rates and with assurance of satisfactory results. Address Box 321, Wyoming, New York.

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of $5,000 by a man aged 67 would provide an annual income of $618.35 absolutely beyond question or doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

DIVIDENDS

FEDERAL SUGAR REFINING CO.,
August 14, 1917.

A quarterly dividend of One and Three-quarters Per Cent. (1¾%) on the Common Stock of this Company was declared this date, payable September 15th to stockholders of record at the close of business September 12, 1917.

A. H. PLATT, Secretary.

Convertible Four Per Cent. Gold Bonds

Coupons from these bonds, payable by their terms on September 1, 1917, at the office or agency of the Company in New York or in Boston, will be paid in New York by the Bankers Trust Company 16 Wall Street. G. D. MILNE, Treasurer.

AMERICAN TELEPHONE AND TELEGRAPH COMPANY

Convertible Four and One-Half Per Cent. Gold Bonds

Coupons from these bonds, payable by their terms on September 1, 1917, at the office or agency of the Company in New York or in Boston, will be paid in New York by the Bankers Trust Company 16 Wall Street. G. D. MILNE, Treasurer.

the Empire. An Irish Parliament with sole jurisdiction over Irish affairs would give Ireland freedom and self-government without compromising the framework of the British Empire, which after all is one of the greatest, if not the greatest, conservators and protectors of liberty and democracy in the world. The close of the war will probably see an Imperial Parliament, in which Ireland will have due representation, and also a local legislature for Irish affairs. These things may be obtained in an orderly and constitutional manner if there is displayed the democratic spirit of compromise and adjustment between the Irish factions themselves. But this very spirit is scornfully floated by Mr. MacManus, who even repudiates in advance the acts of the coming Irish convention.

RICHARD R. PRICE.

Minneapolis, Minnesota

Here is an interesting letter from a contributor who voices the fears of many patriotic Americans, tho not, we must add, our own. Neither Japan nor Mexico fell into the trap of the Zimmermann offer, and we do not see why they should be guilty of similar folly in the future. As for internal danger, the only real difficulty will be to rescue from the lamp-post any German sympathizer or I. W. W. agitator who makes war on the community.

America's attention is being concentrated upon sending armies abroad to defeat Germany, and thus secure our own safety. But are we to have no army, or at best a very inadequate one, left at home to secure our safety against internal enemies?

Apparently we have a trusting faith that America has not, and will not have, any internal enemies that an enlarged police force or constabulary cannot cope with. We sincerely hope so; but it is, nevertheless, very injudicious not to be prepared for graver eventualities! Whatever the common belief as to our internal security, it ought not to be left to the hazard of experiment; it is the policy of wise statesmanship to be fore-armed! Nor is our protection against internal disorder the only defense to be looked after. We know not what foreign foe might arise, if the cards should undergo a new shuffling by events still hidden in the womb of Time. We have done much, very stupidly, to alienate Japan's regard for us. We know that our next door neighbor, Mexico, is none too friendly; and we may be sure that Germany will continue her machinations, perhaps successfully, to get that country to attack us, when our armies are three thousand miles away.

And what is America doing to so protect itself? Every state in the Union is being denuded of its National Guard by draft into the Federal service; and these, together with the regulars and the now forming national army, are going to be sent overseas at the earliest possible day, to help defeat Germany.

What is America doing to protect itself? I have been trying, for some time past, to find out. Nobody has any definite answer. Nobody seems to know, or very much care! The supineness of editors on this subject has struck me with amazement! I have even written to Washington about it. The most I have been able to find out, is, that the Governors of "several of the states" have begun to form local military organizations to take the place of the old state troops of which they have lately been deprived; and that Congress, last June, voted "arms and equipment" to such local home guard organizations as may be thus formed. Perhaps half a dozen states out of our half hundred are drowsily waking up to even this much need.

But these recruits, let us remember, will be men "past military age," and will be available only for local disturbance; practically nothing more than an enlargement of the local police force, and incapable of prolonged physical strain such as younger soldiers can and must endure in real warfare.

A JUST AND DURABLE PEACE?

The Pope's Appeal to the Belligerent Nations

TO the Leaders of the Belligerent Peoples: Since the beginning of our Pontificate, when the horrors of a terrible war let loose on Europe, we had in view above everything three things to preserve: Perfect impartiality toward all belligerents as is suitable for him who is the common father and who loves all his children with equal affection; continually to attempt to do all the good possible and that without exception of person, without distinction of nationality or religion as is dictated to us by the universal law of charity which the Supreme Spiritual charge has confided to us with Christ; finally, as our pacific mission also requires, to omit nothing as long as it was in our power which might contribute to hasten the end of this calamity by trying to lead people and their leaders to more moderate resolution, to hasten a serene deliberation of a peace just and durable.

Whoever has followed our work during those three painful years which have just passed has been able easily to recognize that, if we have always remained faithful to our resolve of absolute impartiality and to our attitude of benevolence, we have not ceased to exhort the peoples and the belligerent brothers again to become brethren, altho publicity has not been given to all that we have done to attain this very noble aim.

Toward the end of the first year of the war we addrest to the nations in conflict most lively exhortations, and more, we indicated the part to be followed to arrive at a stable and honorable peace for all. Unfortunately, our appeal was not heard and the war continued desperately for another two years with all its horrors. It became even more cruel and extended over the earth, over the sea and in the air, and one saw desolation and death descend upon the cities without defense, upon peaceful villages and on their innocent population, and now no one can imagine how the sufferings of all would be increased and aggravated if other months or, worse still, other years are about to be added to this sanguinary triennium.

IS this civilized world to be nothing more than a field of death? And Europe, so glorious and so flourishing—is it going as if stricken by a universal madness to run the abyss and lend its hand to its own suicide?

In such a terrible situation and in the presence of a menace so serious we, who have no particular political aim, who do not listen to suggestions or to the interests of any of the belligerent parties, but are solely compelled by a sentiment of our supreme duty as the common father of the faithful, by the solicitation of our children who implore our intervention and our pacifying word, thru the voice, even of humanity and of reason, we once more emit the cry of peace and we renew a pressing appeal to those who hold in their hands the destinies of nations.

But in order no longer to speak in general terms, as the circumstances had counseled us in the past, we now wish to make more concrete and practical proposals and to invite the governments of the belligerent peoples to come to an agreement upon the following points, which seem to be a basis of a just and durable peace, leaving to them the task of analyzing and completing them.

FIRST of all the fundamental points must be that for the material force of arms be substituted the moral force of right, from which shall arise a fair agreement by all for the simultaneous and reciprocal diminution of armament, according to the rules and guarantees to be established, in a measure necessary and sufficient for the maintenance of public order in each state. Then in the substitution for armies of the institution of arbitration with its high pacifying function, according to the rules to be laid down and the penalties to be imposed on a state which would refuse either to submit a national question to arbitration or to accept its decision.

Once the supremacy of right has thus been established, all obstacles to the means of communication of the peoples would disappear by assuring, by rules to be fixed later, the true liberty and community of the seas, which would contribute to ending the numerous causes of conflict and would also open to all new sources of prosperity and progress.

AS to the damages to be repaired and as to the war expenses, we see no other means of solving the question than by submitting as a general principle complete and reciprocal condonation, which would be justified, moreover, by the immense benefit to be derived from disarmament, so much so that no one will understand the continuation of a similar carnage, solely for reasons of an economic order.

For certain cases there exist particular reasons. They would be deliberated upon with justice and equity, but these pacific agreements with the immense advantages to be derived from them are not possible without a reciprocal restitution of the territory at present occupied.

Consequently on the part of Germany there should be the complete evacuation of Belgium with the guarantee of her full political, military and economic independence toward it.

The evacuation of French territory. On the part of other belligerent parties similar restitution of the German colonies.

As regards the territorial questions, as for example those which have arisen between Italy and Austria and between Germany and France, there is reason to hope that in consideration of the immense advantages of a durable peace with disarmament, the parties in conflict would wish to examine them with a conciliatory disposition, taking into consideration, as we have said formerly, the aspirations of the peoples and the special interests and the general welfare of the great human society.

The same spirit of equity and justice ought to be followed in the examination of other territorial and political questions, notably those relative to Armenia and the Balkan states, and the territories making a part of the ancient kingdom of Poland, whose noble and historical traditions and sufferings, which it has endured, especially during the present war, ought to conciliate the sympathies of nations.

SUCH are the principal bases, whereon, we believe, the future reorganization of the peoples ought to be built. They are of a nature to render impossible the return of similar conflicts, and to prepare a solution of the economic question, so important for the future, and for the material well-being of all belligerent states.

Therefore, in presenting to you, who direct at this hour the destinies of the belligerent nations, we are animated to see them accepted and to see thus the conclusion at an early date of the terrible struggle, which more and more appears a useless massacre.

The whole world recognizes that the honor of the armies of both sides is safe. Incline your ears therefore to our prayer. Accept the fraternal invitation which we send you in the name of the Divine Redeemer, the Prince of Peace. Reflect on your very grave responsibility before God and before man.

On your decision depends the repose and the joy of innumerable families, the lives of thousands of young people, in a word, the happiness of a people for whom it is your absolute duty to obtain their welfare.

May the Lord inspire your decision in conformity to his very holy will. May God grant that while meriting the applause of your contemporaries you will also obtain in the future generations the splendid name of pacificators.

As for us, closely united in prayer and in penitence with all those faithful souls which sigh for peace, we implore you to light and counsel of the Divine Spirit.

(Signed) BENEDICT

Asbestos Shingles Cannot Burn—They are Fireproof

JOHNS-MANVILLE Asbestos Shingles are approved and labeled by the Underwriters' Laboratories, Inc., under the direction of the National Board of Fire Underwriters.

BECAUSE they're made of Asbestos Fibre combined with Portland cement, there's nothing in Johns-Manville Asbestos Shingles to burn, rot, curl, split or wear out. With these shingles on your roof, your house is safe from roof-communicated fires. Moderate in first cost, they pay dividends in long years of service with little, if any, upkeep expense.

You may select your roof color from a choice of Indian Red, Soft Gray or Brown Shingles, or combinations of these colors for beautiful mottled effects.

Johns-Manville Asbestos Shingles are made in a variety of sizes in both square and hexagonal shapes and in two thicknesses, with a choice of rough or smooth edges. They require no special skill to apply. Your carpenter, roofer or slater can handle them as easily as wood shingles, tile, or any other applied roofing—and on the same weight roof rafters—because these shingles are light in weight.

Johns-Manville Roofing Responsibility

By an exclusive system of registration your Johns-Manville Roof is entered in our records and it is then our obligation to see that it gives you the full service promised.

Keeping Carburetors Thrifty..... 372
By Clarkson Lloyd

REMARKABLE REMARKS

EMPEROR WILLIAM—Lord God be with us.

BISHOP C. D. WILLIAMS—Why can't the Government command the wealth of the rich man?

SENATOR STONE—I cannot avoid an inborn dislike for all such human beings as princes, dukes and lords.

SENATOR REED—There are some senators who, I think, utterly disregard the Constitution at the present time.

EX-AMBASSADOR GERARD—Sometimes it is a great thing for a man in public life to get out while the going is good.

MR. GINNELL, M.P.—Bringing an action against the police in Ireland is like bringing one against Satan in hell.

PRESIDENT KENYON C. BUTTERFIELD—The state can never become completely self-supporting in its food production.

HELEN KELLER—I am inclined to believe those philosophers who declare that we know nothing but our own feelings and ideas.

COL. HENRY WATTERSON—I have written more times and at greater length against woman suffrage than any other editor.

P. CASPAR HARVEY—Mining stock is found in all safety deposit vaults and books on Esperanto in all private libraries.

SPEAKER CLARK—For six thousand years men have been trying to run the world and some people think they have made a bad mess of it.

S. E. IKEMOTO—The human family may be divided into those who wear trousers and those who wear skirts and those who wear nothing.

SECRETARY LANE—Wilson visualizes the world not as so much more land or machines or money, but as so many men, women and children.

J. EDGAR PARK—When your grandchildren climb on your knee and ask "Grandfather, what were you doing in 1917?" what are you going to say?

HENRY BRUERE—Probably no city in America has been subjected to the degree of legislative doctoring that New York has endured thruout its history.

CLARA D. THOMAS—If hoop skirts and crinolines come in style again, as prophesied, there will be an awful panic among the owners of the apartmentettes.

LAURA JEAN LIBBY—It seems wisest and best for the pair contemplating marriage to look carefully before they take together the leap into the sea of matrimony.

ROBERT GOLDSMITH—The Monroe Doctrine has made one half the world safe for democracy; a league to enforce peace would make the whole world safe for democracy.

HOMER CROY—It is rumored that the newest thing on the boardwalk at Atlantic City in the autumn will be fur anklets.

MAYOR THOMPSON OF CHICAGO—I am ready to match my patriotism with that of any man in the country, T. R. included.

CHESTER M. WRIGHT—The American Socialist Party makes bold to hurl its weight against evolution as an unsophisticated young bull might hurl itself against a locomotive.

GLENN FRANK—The industrial history of the United States from the Civil War to the recent past is the record of a nation's impatience with useless duplication.

FIELD MARSHAL VON HINDENBURG—Firmly consolidated in the interior and unshaken in all the fronts, Germany braves the exasperated thrusts of her ancient and her new enemies.

ARTHUR PONSONBY, M.P.—Gradually we have seen the very system we abominate instituted in our midst, and in studying how to destroy it in the enemy we are creating it at home.

CHARLES W. ELIOT—No inchoate international organization and no institute of religion or established church can be depended on to secure to the civilized world of today an enduring peace and to all nations a rightful liberty.

REV. W. B. BITTING—We can almost forgive the Kaiser some of his many sins when we think of the blessings God is now pouring out and will pour out when our boys in France have sacrificed for the common good.

THE FOOD FIGHT

Under this head, every week, The Independent will print some vital part of the information which is being circulated by the Department of Agriculture to aid American housekeepers in their patriotic and intensely necessary work of conserving food.

We will need beans and peas next year as well as this. The Department of Agriculture, mindful of this truth, advises every bean grower to secure good seed without delay for next year's planting, either from his own crop or from fields which he knows to be free from anthracnose and blight. Seed from plants killed by frost before the pods are dry and mature should never be used. Good seed is plump, ripe, intact and free from disease. It is possible by planting the seed in hills and by spraying with Bordeaux mixture to protect the plants from anthracnose. The grower should take care that no one moves among the seed plants while they are wet with rain or dew, when spores of the fungus causing anthracnose are most readily spread.

It is not difficult to handle and cure the vines and pods of both beans and peas. After the seed has reached full size and before the vines and pods are ripe and dry, the vines should be cut with a sickle or pulled by hand. They can be cured by merely spreading on the ground until well wilted. If the crop is large, the vines should be stacked on ground covered with rails or brush and tied against stakes driven in at intervals of a few inches. When the beans and peas are once dried they can be threshed and the seed recovered. After the seed is threshed the grower would do well to pick over his seed by hand very carefully and throw away all that is damaged and diseased or even discolored. In purchasing for planting a germination test should be made and seed that is not of the highest quality rejected.

Many market gardeners who have beans or peas which they find it unprofitable to consume or sell in the green state plow under the whole crop to use the ground for later planting. This should not be done. It is better to save the crop, provided the stock is satisfactory, as it can be used for seed next year.

The Longevity of Silverware

The life of good silverware is a matter of a lifetime, often of several lifetimes—yours and those that come after you.

It is one of the very few household effects that possesses lasting value, for it resists wear indefinitely, retains its value permanently, and like love-making, it never grows out of date.

But it must be *Silverware of Quality.*

It must be perfect in construction.

It must be so made, so put together, so fashioned in the fire of craftsmanship, that no inherent flaw shall mar the beauty and utility of the whole.

And that is how Gorham Silverware is made.

Quality is paramount in every production of the Gorham ateliers, and by the simple expedient of adopting Gorham as your silverware standard, you will be assured of all those essentials which make silverware worth while.

Gorham Sterling Silverware is for sale by leading jewelers everywhere and bears this trade-mark

THE KEY TO KAISERDOM

This is Helgoland, the island fortress of Germany which the Kaiser has just visited for the purpose of inspecting its defenses and encouraging its garrison and the men of the Imperial Navy. Standing guard near the mouth of the Elbe this little island prevents the British ships from approaching closely to the German coast and so greatly hampers the effectiveness of their

THE ANSWER—AS IT SHOULD BE

"YOUR Holiness, you have proposed a peace based upon the *status quo ante bellum*, mutual conciliation, and negotiation. We appreciate the spirit in which your proposals are made, and we wish we might see our way to meet them with ready acceptance. For we no less than you are eager for the return of peace. But before such acceptance will lie within the range of possibility, certain questions must be asked—and answered.

"Does the restoration of the *status quo* mean the restoration to its former position and power among the nations of the world of the Prussian oligarchy that willed this war, with all the possibilities for aggression and oppression that that implies?

"What hope can the sane and decent nations of the world have of conciliation on any basis of reasonable mutuality with the government that in the critical days of 1914 brutally thrust aside every suggestion of conciliation, arbitration and delay in order to fling its might upon the peaceful peoples that stood in the way of its selfish ambitions?

"With whom shall we negotiate? With the Hohenzollern, the aggressor, the forsworn, the violator of Belgium, the high priest of *Schreklichkeit*, the desecrator of the free seas, the blasphemous foe of democracy, the enemy of the world?

"These questions we address to Your Holiness. They can only be answered by the German people. Their answer and their answer alone will determine our course of action. If we must make peace with the Hohenzollern, with *Junkerthum*, with the apostles of the doctrine of blood and iron, we shall make peace with the sword. We will sit down at the council table only with a German people that has shown its repentance by its works."

THE QUESTION OF DISARMAMENT

AMONG the questions involved in the making of peace—whenever the time shall come for that—disarmament is always prominent. Probably too prominent, for it is not, like the other questions we have been discussing, such as Alsace-Lorraine, indemnities, freedom of the seas, and equal commercial rights, one of the issues which divide the belligerents and must be settled before a treaty of peace is signed. In fact, it is not so much an international question as it is a matter of domestic economy.

There are two reasons for disarmament. One is that a big army and navy are a waste of money and a misdirection of human energy. The other is that universal disarmament will prevent war. The former we regard as a good and valid reason. The latter we are very doubtful about. To put disarmament forward as one of the essential preliminaries to peace seems to us putting the cart before the horse. That a stable peace will bring about universal disarmament is obviously true. But that universal disarmament will bring about a stable peace is not at all certain. The evidence of history is against it, and a consideration of the problem as it presents itself today will show that there is little hope for such a happy outcome.

Let us assume, for instance, that at the congress which is to bring the present war to a close the powers agree to disarm all around. This means that either immediately or after a few years there would be no navies except a few warships to prevent a revival of piracy, and no armies except such troops as may be necessary for domestic police service. Compulsory military service would be abolished in all nations. No large battleships could be constructed. No munition factories would be openly run. Frontier forts might be razed or dismantled.

Would such a condition of things prevent war? Or to be frank and specific about it, would it prevent Germany from waging an aggressive campaign against her neighbors? Quite the contrary. Such a state of universal disarmament would give a predatory power like Germany an immense advantage over her more peaceable neighbors. Assuming that Germany remains under the control of its present military caste, or that the German people are smarting under defeat and plotting for revenge, it would be an easy matter for the nation to carry on such preparations in secret as to make it irresistible when it chose to make war. It would have no dreadnoughts, but neither would its opponents. But submarines could be constructed *sub rosa*, and merchant vessels arranged for easy convertibility into warships. Aeroplanes and dirigibles will be common and ready to start on a bomb-dropping expedition at a moment's notice. Small arms and machine guns, if not 42-centimeter howitzers, could be manufactured in considerable numbers without discovery. Gun-cotton is made in large quantities for silk and celluloid and nobody could tell with what intention it was produced and stored. Large bodies of troops could not be drilled, but no international spy system could prevent certain men whose tastes ran that way from studying Clausewitz's "Art of War" instead of Kant's "Pure Reason," or from playing *Kriegspiel* instead of chess in the privacy of their homes. Where there is a will to war there is no want of weapons. A nation that kept to the spirit and letter of the disarmament agreement would fall an easy victim to one that desired to violate it.

With a strong standing army a nation weaker numerically like France or weaker industrially like Russia can, as the war has shown, withstand an enemy like Germany superior in these respects. But if none of the three had been armed and even assuming that Germany had made no secret preparations for war, she would before this have beaten France and Russia by reason of her superior organization, her steel works and chemical factories, her railroads and ships, her ruthless overlords and her docile people.

Since as we see general disarmament would not prevent war, but would rather be putting the power to make war into the hands of any belligerent and treacherous nation, let us consider another proposal, that of partial disarmament, namely, the disarmament of Germany. It has been suggested that Germany be compelled to turn over her navy to the Allies, disband her armies and dismantle her fortresses. This plan assumes of course that Germany will be so completely conquered as to submit to such humiliating conditions, but we gladly assume that. The loss of the navy would not matter much to Germany under these circumstances, for a warship gets out of date in ten years and Germany, so thoroly whipped, would not want to fight again for ten years anyway. Meantime the Allies would have to keep up their own armies and navies, and altho these would not be so expensive as they have been under the German menace they would still be a heavy burden from which Germany would be free. Her ships could all be devoted to commerce and her young men to industry. The greater the force maintained to overawe Germany the greater her advantage so long as peace continued.

But disregarding this objection we have the best of reasons for thinking that the compulsory disarmament of Germany would not work, namely, that it has been tried. In fact, it worked the wrong way, for the national service which has made Germany a dangerous military power had its origin in just such an attempt. In 1806 Napoleon, having conquered Prussia, tried to make that kingdom forever

powerless by the requirement that the Prussian army should never exceed 42,000 men. But the Prussian Government evaded that by the simple expedient of a short term of service, and before long every man in Prussia was a soldier and Napoleon was overthrown.

But assuming that this evasion and all others conceivable were prevented still the peace of the world would not be secure, for the Allies may not always agree. They have all been at war with one another before, and not many years ago, and they may fall out again, whether they are armed or unarmed.

For peace does not depend primarily upon armament. We concede that there is something in the pacifist argument that the possession of a powerful army and navy and the existence of influential munition interests may act as an incentive to war, but on the other hand unpreparedness does not insure peace as history abundantly proves. The United States was absurdly unprepared when it made war against England a hundred years ago. Both the North and the South were unprepared when they entered upon four years of bitter warfare. We were unprepared when we attacked Spain in 1898. We had only a little army in 1889 when we defied the greatest military power in the world, Germany, over the question of Samoa. We had only a little navy in 1894 when we defied the greatest naval power in the world, England, over the question of Venezuela. Even the most peaceable people will take to arms regardless of the odds against it whenever it feels that it is being wronged or that weaker nations under its protection are endangered.

Disarmament, general or partial, is therefore no preventive of war. If men want to fight they will use their fists when no other weapon is at hand. The right to bear arms is guaranteed by the United States Constitution as among the inalienable rights of free men. Why then are we not continually fighting, state against state and man against man? Primarily because we are not fond of fighting. Secondarily because there is a national armed force, the army, and a state armed force, the militia, and a local armed force, the police, whose duty it is to maintain peace, by force if necessary. The constitution prohibits disarmament, yet very few of us carry arms. We do not want to and we do not need to. It is expensive, inconvenient, dangerous and a bad habit.

Now whenever there is an international organization to enforce peace the several nations will spontaneously lay down their arms. There will be a race for disarmament as there has been a race for armament. Until then the best we can hope for will be a gradual limitation of armament by mutual agreement, but this, even if carried to completion, will not insure peace to the world, altho it will bring prosperity. The question of armament is, then, not one that need occupy the peace congress very long.

WILFUL WOMEN

IF the women who persist in picketing the White House and in holding aloft placards intended to embarrass or insult the President were merely sincere fanatics in the cause of suffrage, it would be one thing. Their methods would still be indefensible and their behavior scandalous, but those things might be laid to unsound judgment.

There seems, however, to be good ground for believing that they are assailing the President thus not so much because they are suffragists as because they are pacifists. It is shrewdly to be suspected that they are quite as much interested in handicapping the prosecution of the war as in furthering the adoption of the Anthony amendment. If the surmise is correct, the right place for them is jail. This is a hard thing to bring oneself to say when it refers to women, but when women bring it upon themselves, there is no alternative.

We are ardent, sincere believers in woman suffrage. We strongly desire the adoption of the Anthony amendment, not only by Congress but by the states. We want to see women and men on a basis of political equality. We would sacrifice much for democracy. But unless Germany is defeated here and now, it will go hard with democracy the world over. Those who in the name of democracy strive to hamper the forces that are fighting to make the world safe for democracy are false prophets and treacherous to the convictions they profess.

This little band of wilful women are in a petty and inconsiderable way giving aid and comfort to the enemy. They deserve well neither of their country nor of the cause they misrepresent.

SAVE THE FLAG

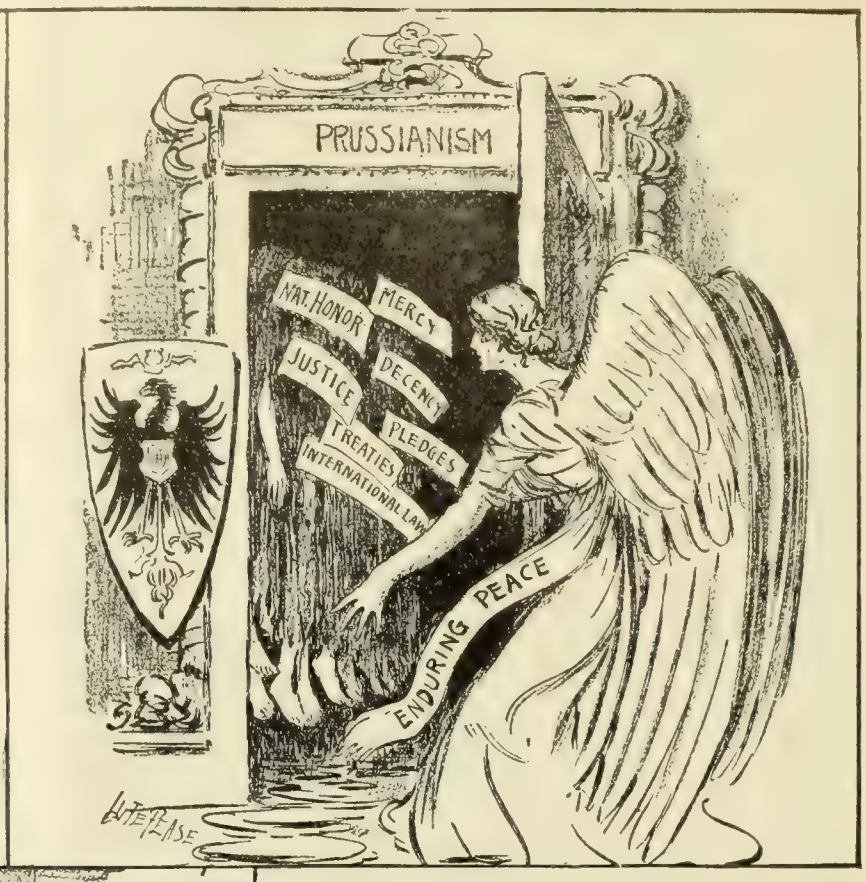
IS there any reason why the manufacture of the American flag should not be a government monopoly? The Federal Trade Commission, in its report on price manipulation, has let in the light on some of the shabbiest, meanest profiteers in the country—men who have gone into the business at this opportune time and have pushed the price of flags to a point where their gross profits have been as high as 200 per cent.

It is bad enough to watch the tawdry tricks of the little people who trade on patriotism by the promiscuous use of the national emblem to further their own business, but this is worse yet.

Government manufacture, or at least manufacture under government license with strict inspection and price-fixing, would put an end to this ruthless taxation of wholesome patriotic instincts, and would guarantee such standards of quality that the dignity of the flag would be protected. The shoddy, dreary rags which hang from thousands of flagstaffs and windows today, their color streaked and faded, would be a thing of the past; the flag would be decently made and decently sold. Save the flag!

TIME IS BLOOD

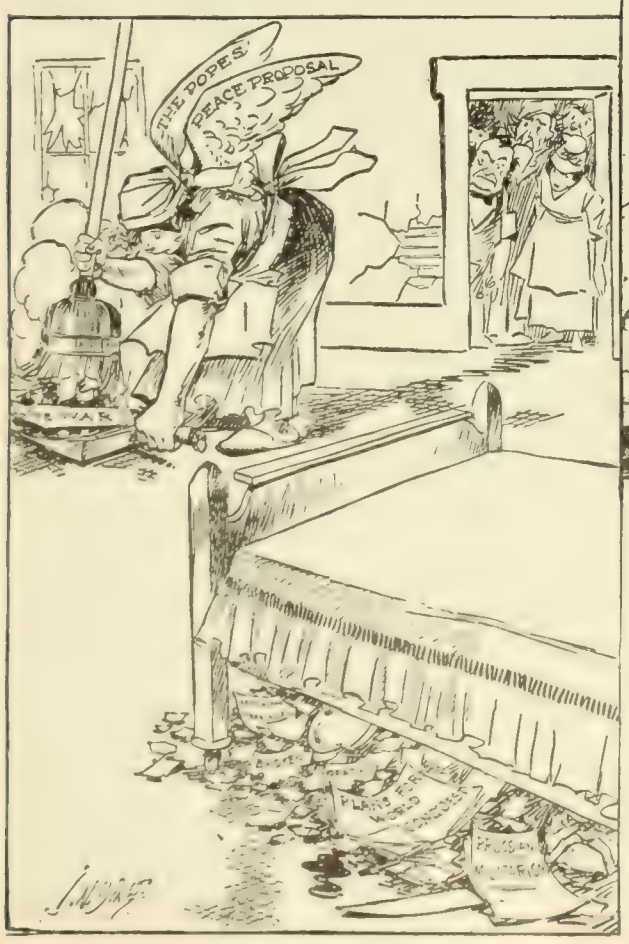
THERE is one phrase which has done more harm in this war than either "preparedness is militarism" or "business as usual" in crippling the military effectiveness of the Entente Allies. It is "time fights on our side." Like all persuasive fallacies this has its element of truth. It is true that if both groups of belligerents mobilize all their resources the Entente Allies will be stronger relatively to the Central Powers than they were at the opening of the Great War. But it is *not* true that because Germany developed her maximum strength quickly it is to the interest of her enemies to develop their strength slowly.



The mere passage of time cannot defeat Germany. It matters nothing to the Kaiser whether the calendar above his desk is dated 1914, 1917 or 1940. The German army, drawing upon the strength of seventy million trained and organized people, upon the resources and man power of Austria-Hungary, Bulgaria and Turkey, and upon the resources of the countries which German armies have occupied, can hold out indefinitely unless "time" means steady and increasing military pressure. A slow war may even mean a German victory, and this for several reasons. The submarine campaign destroys more ships than the world can build unless shipbuilding is greatly expedited or new methods of destroying the submarine introduced. If present conditions are permitted to continue England may escape famine this winter, but there will be short rations next year, and two years from now there will be neither imported food for England nor ships to carry the American army to France. A second possibility is that not all of the

CARTOON COMMENT

PEACE PROPOSALS



The dove as an emblem of peace is not quite so fashionable as it used to be. Perhaps it is because drawing doves becomes tiresome after you have done, say, twenty or thirty. Perhaps the bird has been depicted so often of late in a battered condition that there is very little left of it. Be that as it may, when the cartoonists get as good a chance as the Pope's proposal offered to represent peace as an angel they make the most of it. Just to prove the rule, however. Kirby in the New York "World" remains true to the dove and depicts the poor thing doing its best but heavily weighed down by a German helmet. The bird doesn't seem to be quite sure what is retarding its rate of speed

Rogers of the New York "Herald" declares that the millennium is certainly here when the little Peace at any Price lamb lies down beside the German lion. The expressions of the Kaiser's cubs in the background are well worth studying. Pease in the Newark "Evening News" sees the angel of Enduring Peace entering the Bluebeard's closet of Prussianism and starting back aghast at the sight of the wives hung up by their hair. Vanderhem in the "Nieuwe Amsterdammer" depicts Peace as anxious to take the world up again in her arms but saying pathetically: "I can't see where I can get hold of it!" The Dutch cartoonist has preserved his neutrality with extreme care and skill

Darling of the New York "Tribune" sees a delightful similarity between the Pope's proposal and the angel maid who attacks her work with the best will in the world and a highly commendable energy, but will have to learn, her anxious employers feel, to sweep under the bed. There are so many things there that must be cleared away before we can really have peace. Sweeping up the war is all very well, but it isn't enough. There are still a few scraps of paper which the excellent papal maid seems to have overlooked

Allies will hold out to the end. It is little less than a miracle that countries so distant from each other, so diverse in interest and civilization, and so different in their military position should have held together as long as they have. In three years there have been no desertions from the Alliance, altho the old Russian monarchy contemplated treason to the common cause and might, but for the revolution, have made a separate peace. Who can be certain that some important link in the long chain of the Alliance may not in time drop out? A third point is that Germany is now encamped on enemy territory to the east and to the west. Germany wins the war if she can hold her present line. It is the Allies who must take the initiative and drive her out.

Knowing these facts, for even a congressman must know what is patent to all the world, senators and representatives fill the weeks with such weighty matters of discussion as the definition of "elaborated news," the length of time Mr. Hoover has been away from America, the military necessity of improving Constituency Creek, and the horrible usurpations of power by the executive branch of the Federal Government. At odd times Congress puts in an afternoon hearing roll calls on the motion to adjourn or in striking from the record what the honorable gentleman from Maine said about the honorable gentleman from Oregon. Workmen building cantonments for the new army take a few days off as a protest against the employment of non-union labor. Coal barons haggle with the Government about prices. The Shipping Board and the Emergency (would that the word might sink into the American mind!) Shipbuilding Corporation hold leisurely debates while the U-boats do their work. Exemption Boards in half the states spread the work of examining drafted men over unnecessary weeks to avoid overpressure of work. But it is not time that we are spending by this delay. Pure time exists only in metaphysics. Time to us means money; at the rate of some tens of millions of dollars for each wasted day. Time means blood; at the rate of hundreds of thousands of lives for each year that the war lasts. We must not *let* the war last. Europeans believe that the most characteristic American quality is hustle. Are they wholly wrong?

CAMOUFLAGE

THE tiger would have been eliminated in the struggle for existence ages ago if its striped coat had not enabled it to hide whenever concealment was necessary.

The benevolent society which has its headquarters in Tammany Hall has come out for municipal ownership, a business administration, and the rescue of the city from the greed of predatory wealth.

There are tigers in the jungles of New York which would hardly have survived for so many years if they consistently appeared in their true colors. When their enemies approach they immediately try to look like something else.

But the fact that a tiger understands protective coloration in no way impairs its appetite.

THE RUSSIAN REFORMATION

ECCLESIASTICAL absolutism has followed close on the fall of autocracy in Russia, and political democracy has brought with it religious democracy. Nowhere, even under the most reactionary of Papal lands, has the Church ruled as rigorously as in Russia. No change of faith of any sort has been permitted except to the Orthodox Russian Church. No Moslem might become Protestant or Roman Catholic. No Armenian could join a Lutheran Church, or Lutheran a Baptist Church. Even those members of the Orthodox Church who preferred the older forms of worship were branded as Dissenters or Raskolniki. In law, at least, all this has changed.

Two questions arise: Will the change be favorable to a more intelligent and more spiritual religious life, or will it let loose such elements as characterized the French Revolution? Will the ecclesiastical authorities, finding their autocratic power slipping from their hands, join with the remnants of Czarism, in close league with Prussian intrigue, to restore the old order, undo the change and restore to themselves their privileges and perquisites? Those who know Russia best, while not ignoring the possibility of danger, are confident that the answer to each question will be favorable. The Russian people, while inclined to be mystical, and at times fantastic, in their religious conceptions, are profoundly convinced of the reality of religious life, and it is difficult to conceive of any movement that should deny that life. With reference to the second question, we must remember that the Russian Church has more than once shown itself inclined to reform. In the seventeenth century Patriarch Nikon introduced changes into the church service in the interests of greater accuracy and simplicity. It is held by some that the extreme rigor of the past régime was political, rather than ecclesiastical in its purpose. While it has not been true, as so often understood, that the Czar was the head of the church, it is true that the influence of the Procurator of the Holy Synod, who was the accredited representative of the Imperial Government, exerted a mighty power in the ecclesiastical affairs of the Empire. Pobiedonostseff, who for so many years held that office, was the very incarnation of the Prussian system, and was absolutely ruthless in the exercize of his power. He, however, became discredited, and his successor in office now is a man in full sympathy with the progressive ideas of the provisional government. It may perhaps be regarded as significant of the real spirit of the Russian hierarchy that Archbishop Evdokim, of St. Nicholas Cathedral, New York City, is quoted as saying:

> We must remember that Christ did not write the Service Book of the Orthodox Church, or of the Episcopal Church, or of any Church. We must not, therefore, insist upon unity in these. Unity must come thru love, and the vital matter is not that one should follow this or that ritual, but that he should love and believe in Christ. The vital matter is not that a man, when he prays, should kneel, or stand, or sit, or fall prostrate; the vital thing is that he shall *pray*.

If that fairly represents the spirit of the present day Russian Church, as undoubtedly it does, at least in good measure, religious liberty is assured.

A PLEDGE TO MANHOOD

TWELVE hundred young men training at San Francisco to become officers in the National Army have signed a pledge. It is not "the pledge" in the old blue ribbon sense, but a broader, more comprehensive, more positive declaration. It commits them not merely to abstention but to constructive personal effort. It reads thus:

"We undertake to maintain our part of the war free from hatred, brutality or graft, true to the American purpose and ideals.

"Aware of the temptations incidental to camp life and the moral and social wreckage involved, we covenant together to live the clean life and to seek to establish the American uniform as a symbol and guarantee of real manhood.

"We pledge our example and our influence to make these ideals dominant in the American army."

Army life, especially in time of war, is beset by grievous pitfalls. The prime protection against falling into them is personal determination, especially when it is buttressed by the power of community example.

The Y. M. C. A. is doing splendid work in thus coördinating the impulses toward decency of the young men who are to officer the new army.

THE STORY OF THE WEEK

The Isonzo Campaign

After many weeks of comparative inactivity, or rather deadlock, the Italian army has taken another stride toward Trieste. From the nineteenth to the twenty-second of August the battle raged along a thirty-seven mile front east of Gorizia. Some of the fiercest fighting lay far to the north of the Carso on the upper reaches of the Isonzo river. Artillery preparation was of the most thorogoing sort. British and French siege cannon helped the Italians to smash the Austrian defenses, and German estimates place the total number of pieces of artillery used in preparing the infantry attack at five thousand. Italian aviators took a very considerable part in the preliminary stages of the battle. Altogether 208 aviators engaged the Austrians, beat down their aeroplanes and scattered bombs over their lines of communication.

To aid in their conquest of the Isonzo valley the Italians made use of monitors, floating batteries and pontoon bridges. The length of the battle front on which the Italians advanced is more impressive than the depth to which they succeeded in penetrating it, for in mountain warfare progress is of necessity slow. However, some important positions were taken. Perhaps the chief of these was Monte Santo, a hill 2240 feet in hight, northeast of Gorizia. No other elevation in that region can compare with Monte Santo in strategic importance. The capture of more than 16,000 Austrian prisoners is an excellent indication of the extent of the Italian victory.

Like all battles, the battle on the Isonzo is chiefly important not for the direct damage done to the foe but for the enhanced possibility of military success in the future. Altho the Italians are in possession of a considerable strip of Austrian soil they have many natural and artificial barriers to overcome before they reach the really vital points of the Hapsburg dominions. Nor dare the Italians risk a drive along one narrow path because that would leave unconquered mountain strongholds on either flank to menace their advance. Progress must be made along the whole front. If the recent victories are not wiped out by Austrian counter-attacks the importance of the Isonzo campaign is considerable. It will convince the Italian people, somewhat weary of the prolonged and indecisive struggle with Austria, that peace by victory is possible and make them disinclined to listen to proposals of mediation from the Pope. It will correspondingly shake the confidence of Austria and increase the peace sentiment which is already very strong thruout the empire. It will compel the withdrawal of many Austrian regiments from the Russo-Rumanian war front. And, finally, it will have smoothed the way to other victories by giving into the hands of the Italians mountain hights that have hitherto formed part of the Austrian system of defense.

French Victories Before Verdun

The center of interest on the western battle front shifted during the past week from Flanders to Verdun. Before Ypres the British and French continued to advance but rather by meters than miles. At Lens the Canadians have slowly fought their way into the outskirts of the city, but there have been no spectacular advances or retreats on either side. The Verdun sector of the line, on the other hand, has been the scene of one of the great battles of the present Allied offensive.

Along a front of eleven miles the French attacked on both sides of the Meuse and, so they claim, gained all their immediate objectives. The attack on the morning of August 20 was preceded by three days of artillery preparation. Some of the positions captured were those most bitterly assailed and most stubbornly held during the great German drive at Verdun last year. The number of prisoners taken in a single day's action amounted to some four thousand. The German counter-attacks appear to have been quite ineffective, and by new assaults the French completed their conquest of such important strategic positions as Le Mort Homme and Hill 304. The Germans now hold no commanding elevation in the region of Verdun.

The success of the Entente Allies can be better measured by the numbers of prisoners taken than by the ground gained, for nobody makes a "strategic" surrender of unwounded soldiers. During the month of August on the western front alone over 30,000 prisoners have been taken by the French and the British, or nearly as many as the Russians made prisoner by the Germans and the Austrians during an equal length of time on the eastern front. The British War Department is responsible for the statement that since the beginning of the battle of Arras in April the British have taken 46,155 prisoners; the French, 43,723; the Italians, 40,681; the Russians, 37,221. During the whole course of the war the British took 102,218 Germans and the Germans 43,000 British and colonial troops.

THE CONQUEST OF ITALIA IRREDENTA
The shaded area indicates the land held by the Italians and the arrow the direction of the present drive

The War Tax Question

Even after the United States entered the Great War there were very few who realized the extent of the contribution we would be required to make to it from our national resources. Every few weeks the estimates of the cost of our participation have been increased and this means not only a series of national loans but a complete revision of war taxation. Two Senators of prominence, opposed in their war policy but alike believers in the taxation of wealth, have appeared as champions of the cause of increased direct taxation to finance the war. Senators Hiram Johnson, of California, and La Follette, of Wisconsin, spoke warmly in favor of progressive income tax rates and excess war profits taxes which should be so steeply graduated as to yield every possible dollar that could be taken without injury to productive industry.

Senator La Follette advocated war profits taxation rising to a maximum of 80 per cent, and he quoted European experience to justify such a rate. For the income tax he offered several amendments; one of which increased the estimated yield of the individual income tax from $490,000,000 to over $658,000,000 by gradual increases on incomes above five thousand. He declared that more than 70 per cent of the yield under his schedule would come from incomes of more than $30,000 a year. La Follette's bitter denunciation of the wealthy men of the country as a class that fomented war and then refused to share its burdens was resented by Senator Weeks, of Massachusetts, who denied that capital was disloyal. Senator Simmons protested that Senator La Follette's plan bore with peculiar severity on the moderately well to do man and would tend to make the war unpopular. Others insisted that excessive taxation now would leave too little margin for the necessary increases in the future should the war last more than a year longer, and that no European belligerent had imposed such heavy taxes so suddenly. The La Follette amendment was rejected by the votes of thirty-three Democrats and twenty-five Republicans to eleven Republicans and ten Demo-

crats, an indication that party lines were disregarded. With the exception of Senator Johnson and perhaps three or four others, all of the supporters of the La Follette plan were of the pacifist faction, and it is not improbable that La Follette's open opposition to the American cause in the Great War lost many votes for his amendment.

The Senate did, however, consent to some drastic increases in the tax schedules. It accepted the original graduated tax, running from one per cent on incomes from $5000 to $7500, to 10 per cent from $40,000 to $60,000. Then it restored the Lenroot amendment, passed by the House of Representatives but discarded by the Senate Finance Committee, providing for heavily graduated increases in the rates for incomes from $60,000 to $500,000; reaching a maximum of 37½ per cent on incomes of more than $300,000. Finally, the Senate accepted an amendment by Senator Gerry, of Rhode Island, covering rates on incomes upward of $500,000, with a maximum of 50 per cent on incomes above one million.

Forest Fires in the West Oregon, Idaho and Montana have been visited by destructive forest fires which have burned over a vast area and resulted in a number of deaths. Hundreds of volunteers were sent to the endangered districts to fight the fires. Unhappily there seem to be other enemies besides the flames to be fought, for reports have reached Portland, Oregon, that the fires were unquestionably of incendiary origin, perhaps due to enemies of the Government who wish to hamper the lumber industry. Detachments of Oregon troops were sent to the forests armed and with instructions to shoot at sight any person caught in the act of starting fires. The big Selway forest in western Montana burst into blaze two days after the fire fighters were thought to have it under control, and the Idaho forest reserve near Dixie lost twelve square miles of timber in a few hours.

The Battle for Riga The Central Powers cannot employ their troops everywhere, and therefore, in order to check the Italian blow on the Isonzo and to meet the British drive in Flanders and the French advance from Verdun, they have shifted many regiments from the eastern front. The Russians and Rumanians enjoyed for several days a partial respite from the terrible hammer strokes that broke last month's Russian offensive and transformed it into a rout. But the cessation of the great retreat in Galicia, Bukowina and Moldavia has been counterbalanced by a new German offensive in the extreme north.

At the northern end of the eastern war front is the city of Riga, with a population, in normal times, of over 330,000. Its inhabitants are largely Germans. Here Hindenburg, after his great sweep thru Courland, tried to break the Russian line and strike toward Petrograd. But he failed to enter the city and at last he was forced to give up the attempt. There has been less fighting in the Riga region than at other parts of the line for several months, and the German advance on August 22 came as something of a surprise. The material difficulties facing the Germans in this theater of war are considerable. Hindenburg's cannon that had cracked fortresses of steel and concrete with their shells were baffled here by the Russian earthworks, and the city is further protected by the rivers Düna and Aa and by the vast expanse of marshy land which extends to the west of the former river. But in spite of these obstacles the Germans succeeded in drawing their trenches much closer to the city and the Russians drew in their outposts and began to prepare for a retreat. After two or three days of German progress the battle halted with Riga still untaken.

The chief reason why the capture of Riga would be worth while from the German point of view is that it lies on the direct road to the capital. From Riga an advance on Petrograd would be possible, provided that Germany could spare the troops for an invasion of the enemy's country for more than three hundred miles. The military importance of the occupation of Petrograd would hardly justify its cost, as in Russia the strength of the nation is not dependent upon a few great cities. When Napoleon took Moscow he found that there was no "key" to Russia. But a German army in Petrograd might induce the Russians to make a separate peace in order to get the Germans out of the country and conserve the fruits of the revolution. Even if Russia continued the fight, Finland would perhaps seize the opportunity to declare full independence and thus an important province would be lost to the republic for the future. Sweden, too, could not but be influenced by German domination of the eastern coast of the Baltic and the entire removal of Russian influence from the Baltic lands. And to all such plans the taking of Riga would be the indispensable first step.

THE GREAT WAR

August 20—Italians make big forward sweep along the Isonzo. French attack before Verdun. Eighteen British ships lost during week.

August 21—French gain more ground near Verdun. Canadians approach closer to Lens.

August 22—Germans begin drive toward Riga. Italians smash Austrian lines on the Carso.

August 23—Russians retreat in the north. Ambassador Ishii presents credentials from Japanese Emperor.

August 24—Germans make counter-attack near Ypres. United States makes a hundred million dollar loan to Russia.

August 25—Italians take Monte Santo. French make fresh advances before Verdun.

August 26—Italians shell Trieste. Kerensky opens Moscow conference.

THE LAST HIKE

1200 West Point cadets have just become officers. Before graduation they went on a two weeks' hike thru the mountains and fought a big sham battle

The Moscow Meetings One result of the German attack on Riga has been to strengthen the demand of many Russians for the removal of the capital from Petrograd to Moscow. It is believed that the Germans could less easily reach the latter city and that the political effect of a possible capture of Petrograd would be less serious if the Government was no longer located there. National sentiment favors the change, since Moscow is the very heart of Russia, the capital city of ancient tradition, and a place little affected by alien influences. Petrograd, on the other hand, was founded by Peter the Great as a part of his attempt to "westernize" Russia and its population is very cosmopolitan. The most radical revolutionists are numbered among its citizens and pacifism is strong. Many fear that if the Government continues to remain in Petrograd it may fall under the domination of the city mob in the same way that the French Convention once succumbed to the influence, physical as well as moral, of the Paris Commune. The generals in the army are particularly insistent upon the establishment of the Government in loyal Moscow.

As, perhaps, a first step in this direction, Premier Kerensky has called a national conference to meet at Moscow. Already special conferences of merchants, clergy and army men have been discussing the political and military situation. The general conference is not a constitutional convention or a substitute for the existing provisional government, but simply a method for ascertaining the state of mind of Russia and for persuading the different parties to act together in harmony. As its membership will be designed to include various shades of opinion it may be compared with the advisory convention called by the British Government to reach an agreement on the Irish question. Some of the extreme radicals have threatened a protest strike against the conference on the ground that it has no mandate from the people and that it is a "counter-revolutionary" attempt which aims to establish middle class rule.

President Wilson Fixes Prices

On August 21 President Wilson issued an order establishing sales rates for bituminous coal in all the producing districts of the nation. They are based on the cost of production and are, in the opinion of the President, "not only fair and just but liberal as well." However, they are only provisional and may be reconsidered at any time. The bituminous coal fields of the United States are grouped into twenty-nine districts and each is assigned a separate maximum price. The highest price per ton for average ("run of mine") bituminous coal is $3.25 for the state of Washington, and the lowest is put at $1.90 in one of the Alabama districts. The average for the whole country is only a little over two dollars a ton, or nearly a dollar a ton less than the schedule agreed on at the June conference between coal operators and representatives of the national Government. Some of the states, especially Illinois, seem inclined to fix their own rates lower even than those established by the President.

President Wilson has made Judge Robert S. Lovett of the War Industries Board a federal agent to direct the shipment of coal. The first order of Judge Lovett to the forty-six railroads carrying bituminous coal and to water carriers on the Great Lakes directed them to give priority to shipments of coal destined to northwestern points by way of the lakes. Railroads are told to give similar preference to empty coal cars on their way to the mines. Coal is even given preference over the transportation of war munitions and perishable commodities. Operators from the soft coal producing states have organized the National Coal Operators' Association at Washington to coöperate with the Government in keeping up the greatest possible activity of the mines.

Other commodities whose prices have been or soon will be established by the Government include steel and iron, copper, oil, lumber and various foodstuffs. In each case the intention will be to reduce prices for the civilian consumer as well as for the army and navy. Food Administrator Hoover has requested the exchanges to suspend all dealings in futures on sugar. Speculation in this commodity has been particularly active.

Conscription Constitutional

Federal Judge Emory Speer of the Southern District of Georgia has passed upon the various arguments which have been offered from time to time by opponents of the draft to the effect that the compulsory service law was contrary to the provisions of the American Constitution. This puts an end to the legal controversy on the subject unless the foes of universal service are ready to carry similar test cases to the Supreme Court, whose decision, it may be guessed, would not reverse that of the Georgia court. The case grew out of the arrest of two men who failed to register under the provisions of the law, and their cause was defended by Tom Watson, whose paper, *The Jeffersonian*, is now being investigated for seditious utterances.

Paul Thompson

THE COAL CONTROLLER

President Wilson has fixed the price of coal. He has also appointed Harry A. Garfield, president of Williams College, coal administrator and head of a temporary body somewhat similar to the Hoover food organization. Dr. Garfield is already at the head of the commission to determine a price for the 1917 wheat crop

The first question before the court was whether compulsory service was "involuntary servitude" within the meaning of the Constitution. The judge made clear the distinction between slavery for private profit and the obligations of public duty resting on all citizens. "The Grand Army of the Republic and the Confederate Veterans are not maintained to preserve the traditions of slavery. Nations do not pension slaves to commemorate their valor." The second point was that the popular militia could not be compelled to serve outside the boundaries of the United States. But if this were construed to mean that Congress could not create a national army for foreign service it would run counter to the explicit provisions of the Constitution empowering the Federal Government to raise and support armies and to levy war. He cited a decision of the Supreme Court that "Among the powers assigned to the national Government is the power to raise and support armies. Its control over the subject is plenary and exclusive. It can determine without question from any state authority, how the army shall be raised, whether by voluntary enlistment or forced draft, the age at which the soldiers shall be received, and the period for which they shall be taken."

RUMANIA COMES BACK

Rumania has put herself back on the map, reorganized her army with the aid of the French and launched an attack against the Germans. This picture shows King Ferdinand decorating some of his valiant soldiers

Labor Troubles in the Shipyards

A stormy meeting of the striking shipyards men in Tammany Hall, New York, voted to support a general strike which would include all the naval construction as well as the merchant ships now building. President Wilson has decided to send a federal commission to mediate in the shipyards strike and prevent further delay in the creation of our emergency mercantile marine.

Whether the navy yards generally will join the New York strike is yet uncertain. A striking testimony of loyalty was offered to Secretary Daniels of the Navy by the workmen employed at the Philadelphia yard on League Island. A resolution signed by seven thousand men read in part:

> We desire by our example to stimulate all others to the fullest performance of their duty to the country at this time. We promise to stand by you shoulder to shoulder in carrying out measures for the development of our navy, and particularly for the betterment of this navy yard. We promise to notify our superiors of any indication of disloyalty on the part of any employee working for the Government. We promise to maintain the reputation of Philadelphia as the center of the best mechanics in America, so that the work entrusted to us cannot be bettered in any part of the world.

The resolution also praised Secretary Daniels personally for his interest in the welfare of the workingmen employed in the national shipyards. Mr. Daniels replied with a speech of thanks in which he paid a warm tribute to the patriotism of the men and emphasized their important share in carrying on the war.

Sedition and the Public Wrath

A hundred little incidents of recent days have revealed a new impatience with those who, for one reason or another, are determined to put a spoke in the wheel of the American military machine. Perhaps the most important of these was the conference of the Governors of Washington, Oregon, Idaho, Montana, Utah, Nevada and, by proxy, California, which closed at Portland, Oregon, on August 11. The general purpose of the meeting was to organize the northwestern states for effective coöperation in the work of preparedness, but one of the conditions which required con-

sideration was the internal peril from the I. W. W. Just at present this organization is devoting much of its attention to hampering the lumber industry, particularly in the state of Washington where many mills have already been shut down. The shipbuilding industry and the manufacture of aircraft are in the highest degree menaced by the shortage in the lumber supply. Senator King has introduced a bill making it a criminal offense to incite resistance to any law of the United States or to incite any one to break a contract which has to do with the supplying of commodities needed by the Government. The strikers in the copper mines of Arizona have voted to continue their strike, thus crippling another essential wartime industry.

Pro-German propagandists continue their work in the press and on the street corner in spite of the darker skies gathering above them. Elihu Root, back from his mission to Russia, said in a recent speech made in New York: "There are men walking about the streets of this city tonight who ought to be taken out at sunrise tomorrow and shot for treason." Charles Edward Russell, his Socialist colleague on the war mission, declared that every pro-German speech made in the Senate was quoted by German agents who work among the Russian people to incite them to rebellion as proof that the heart of America is not in the war. Several patriotic organizations, such as the American Defense Society, are conducting a campaign for the suppression of seditious speeches which has brought some of their members into conflict, both personal and legal, with the anti-war propagandists.

Courtesies from Cuba Our ally, the Cuban Republic, has twice within the last few days proved her gratitude toward the United States and her willingness to coöperate effectively and unselfishly in the common cause. Four German steamships which the Cuban Government seized from German owners have been transferred to the uses of the American Shipping Board to eke out the inadequate transatlantic tonnage upon which the Entente Allies must depend. The ships aggregate about twenty thousands tons and could have been sold to private owners at record prices. President Menocal has also offered the use of grounds for a mobilization and training camp for American forces. The Department of State announces that the offer has been accepted and that certain American troops will be sent "to the eastern end of Cuba for training at an early date."

Sailors and German Piracy Representatives of seamen's organizations of Great Britain, France, Italy, the United States, Canada, Australia, Holland, Belgium and the Scandinavian countries met recently at London to condemn the German submarine warfare against merchant shipping. J. H. Wilson of the British Seamen's Union, who presided, suggested that the seamen of the rest of the world should after the war boycott German ships and refuse to associate with German seamen if the Germans, after fair warning, did not abandon their naval outrages. He desired that this action might be taken independently of the decision of any government as to reparation for shipping destroyed. It will be remembered that British seamen have on more than one occasion announced their intention of refusing to work on any ship carrying Socialist or other anti-war delegates to peace conferences. However strong "stop the war" sentiment may become among other labor men of the Entente nations, the sailors at least will not easily forget the character of German warfare for the past three years.

During the week ending August 19 the British lost fifteen ships of more than 1600 tons and three of smaller type; one more in each class than the losses of the previous week but still very distinctly below the average. The French losses were fairly heavy; five vessels of more than 1600 tons and four of lesser tonnage. The sharks and their hunters seem to be maintaining an approximately equal strength from week to week.

Race Riot in Texas Negro soldiers of the Twenty-fourth United States Infantry are to be withdrawn from Texas because some of their number took part in a race riot in Houston. The city was placed under martial law as a result of the outbreak and order speedily restored. The affair has caused an outcry from the white people of the state for the removal of all negro regiments stationed in Texas except those native to the state.

The affray began with a conflict between the soldiers and the local police. The police had arrested some members of the negro regiment with what was considered unnecessary violence. In retaliation for a number of petty injustices the negroes resolved to make a raid on the city and shoot some members of the police force. The soldiers succeeded in killing several policemen and wounding others, but their shots flew wild and struck a number of bystanders as well. Before the riot was quelled at least seventeen persons were killed and a number of others seriously injured. Among the dead was Captain J. W. Mattes of the Second Illinois Field Artillery who attempted to restrain the disorderly soldiers and was murdered by them in consequence.

To Go or Not to Go? After the removal of Arthur Henderson from the British War Council because he favored the representation of the British Labor Party at the Stockholm peace conference, the party conference in London reconsidered the question of sending delegates. After a warm discussion the representatives of labor voted to stick to the plan of participation in the international conference. The majority that reaffirmed this decision was a very narrow one. Delegates representing 1,234,000 votes supported the resolution; but 1,231,000 votes were cast against it. The narrowness of the majority will probably encourage the Government in its decision not to grant passports for Stockholm, whereas it would hardly have ventured to oppose a unanimous desire for participation on the part of British labor.

Mr. Henderson vigorously defended his conduct in supporting the conference and condemned the Government for inconsistency in opposing what it had favored a few months earlier. "The Prime Minister," he said, "was in favor of this conference once and might be again, and what was right for him in May ought not to be wrong for us in August." He opposed, however, the suggestion of withdrawing the support of the Labor Party from the coalition Ministry. George Barnes, the present representative of the Labor Party on the War Council, spoke against the Stockholm conference on the ground that it was a German trap. Another topic of hot debate was the representation of other labor groups besides the

regular party. The Independent Labor Party, slightly more radical than the larger organization; the British Socialist Party, strictly Marxian in doctrine; and the Fabian Society, all sought representation in the delegation which will go to Stockholm if the Government relents and issues passports. Objection to this was made on two grounds; that these bodies were so small that they would be represented out of proportion to their importance if they sent separate delegates, and that this over-representation would increase the strength of the ultra-pacifists. The miners were so opposed to the recognition of these independent bodies that they voted against the resolution to take part in the conference at Stockholm.

Canada Under Conscription

The Canadian Government is not taking any chances of resistance to the enforcement of the draft law which will come into full operation within a few weeks. Troops stationed in Canada are being detained within the country until it can be seen whether or not there will be any forcible opposition to conscription and the sale of arms to private persons has been checked. Enforcement of the law is in the hands of the military authorities. Henri Bourassa, leader of the bitterest faction of French Canadian malcontents, declares that resistance to conscription would be in vain since it would lead to a war between French and English Canadians in which the former would be crushed by military power.

Sir Wilfrid Laurier, leader of the opposition in the Dominion Parliament, was asked by a patriotic association if he would refuse to enter a coalition ministry to put conscription into effect if voluntary enlistments should continue to yield disappointing results. In a long letter of reply, Sir Wilfrid Laurier stated his position. He strongly favors supporting and continuing the war and raising as many men as possible by voluntary enlistment. But he would continue to refuse to enter any ministry which made conscription a part of its program. He exprest his regret that the question of compulsory military service had not been referred to the people by referendum and declared that the next best way of testing the actual sentiment of the people would be to hold a general election. He pointed out that the redistribution by the latest census would give the western provinces twenty-two more members than they now have in the Canadian House of Commons and that twenty-four constituencies were now unrepresented because of the death of their occupants or their appointment to other offices. This made the present Parliament quite unrepresentative, and it was unjust for such a body to introduce so revolutionary a law as that for compulsory service. The Minister of Justice has presented a measure for including all Canadians serving in the army, no matter in what part of the world they may be stationed, in the voting lists for the next general election.

China's Share in the War

Beginning at ten o'clock on the forenoon of August 14, the Chinese Republic was in a state of war with Germany and Austria-Hungary. This formal announcement of entrance into the war was preceded by many stages of a gradual abandonment of neutrality, beginning with the breach of diplomatic relations between China and Germany. China's official explanation of her action was that the intrigues of German and Austro-Hungarian residents of the republic, who continually sought to create disorder and foment civil war, were no longer tolerable. All German banks have passed into the custody of the Chinese, Germans employed in the customs service have been paid off, and a mail and cable censorship instituted. General Chang Chun Yam, engaged in fighting insurgents against the present republican Government, is said to have petitioned the President for permission to go with thirty thousand soldiers to Europe and fight there.

One humorous element of a serious and important event in world history was the refusal of the Government of Austria-Hungary to admit that it was at war with China. Dr. Arthur von Rosthorn, Austro-Hungarian minister, replied to a notification from the Chinese Foreign Office announcing the existence of a state of war that the declaration was "unconstitutional and illegal" and quoted ex-President Li Yuan-Hung to that effect. China's decision is chiefly important for its moral effect and the probable loss to Germany in trade opportunities, altho if the republic had the wealth and sufficient political stability it could in time raise from among its four hundred million inhabitants the largest army in the world. This, however, does not concern the present situation, and it is more probable that if Allied soldiers are sent to strengthen and hearten the Russians on the eastern front they will be either American or Japanese. In some of the Entente nations there has recently developed a strong current of sentiment in favor of placing a Japanese contingent on some European battle line, but whether the Japanese Government will decide to do so or not remains to be seen.

Diplomacy in the Near East

Recent diplomatic revelations from Greek sources show an earlier understanding between the German Government and the courts at Athens and Constantinople than had previously been believed. Among the documents unearthed is a message from King Constantine, the Greek ruler since deposed, in reply to a proposal of the Kaiser that Greece should join the Central Powers. Said Constantine:

> The Emperor well knows that my personal sympathies, as well as my political opinions, attract me to his side. Nevertheless, it is impossible for me to understand in what manner I could be useful to him in mobilizing my army. The Mediterranean

is at the mercy of the united fleets of England and France, which could destroy our navy and merchant marine, occupy our islands and, above all, prevent concentration of my army. . . . I am necessarily of the opinion that neutrality is imposed upon us.

Apparently Germany accepted this explanation as satisfactory. The document, supposing it to be authentic and accurate as published, justifies in large measure the conduct of the Entente Allies in occupying Greece, overruling the Government and finally deposing the Greek King, because it proves Constantine's desire to league with Germany at the first opportunity that offered and that only the show of superior force on the part of the Entente Allies prevented this from happening.

Equally interesting, provided that it is verified, is a message from the Greek Minister at Berlin, dated August 4, 1914, the date when Great Britain entered the war: "The Emperor informs me that an alliance has this day been concluded between Germany and Turkey. Bulgaria and Rumania also are taking their stand alongside Germany. German warships in the Mediterranean are to join the Turkish fleet and act with it." Rumania in the end joined the Entente Allies and Bulgaria did not join the Central Powers for months thereafter, so the message appears to be an attempt on the part of Germany to mislead Greece as to the strength of pro-German sentiment in the Balkan countries, but the alliance with Turkey may possibly have taken place. If so, as the London *Times* points out, it is a commentary on the unsuspecting simplicity of British diplomacy that the British Foreign Office continued its attempts to keep Turkey neutral for weeks after a German-Turkish military alliance had already been established.

Welcome to Belgium and Japan

The war missions of Belgium and Japan have been visiting the East during the past week. The visit of the Belgian commissioners, headed by Baron Moncheur, was one of courtesy rather than of diplomatic importance. The city of New York gave the Belgians a most cordial reception, but, in deference to their wishes, there were fewer public festivities and demonstrations than greeted the British, French and Italian commissioners. Most of their entertainment was of a private character, including a reception at the home of ex-President Roosevelt. In a speech of welcome Roosevelt advocated the emancipation of all the minor nationalities in Austria-Hungary and Turkey.

President Wilson received Ambassador Viscount Ishii, fresh from the enthusiastic greeting accorded him by the states of the Pacific coast, accepted his credentials and conveyed a letter from the Emperor of Japan expressing his pleasure that the United States had entered the war on the same side as Japan. Ambassador Ishii reminded the President that this was not the first occasion when American and Japanese soldiers had worked together in a common cause, for the troops of both nations had taken part in the rescue of the foreign legations from the Boxers who terrorized China in 1900.

Germany and the Papal Peace

On the whole the press and people of Germany and her allies seem to have welcomed Pope Benedict's peace proposal. Chancellor Michaelis who, so long as he can keep the favor of his Imperial master, is the only man in Germany legally authorized to speak for the nation, refused to commit himself. He exprest approval of the general spirit of the Papal message, but added that he could not discuss "the material tenor of the proposals" until there had been a consultation among the Governments of the Central Powers. This was but reasonable, since there seems to be a slight divergence of opinion among the Central Powers. Turkey and Bulgaria may, perhaps, be disregarded as they would hardly be allowed to enter upon a separate peace while German armies form the backbone of their own military establishments. But Austria-Hungary is plainly eager for an early peace based upon the status quo and Germany cannot afford to run the risk of wholly disregarding the wishes of this great ally. The Chancellor repudiated the idea that the Central Powers had in any way suggested the Papal note or indorsed it in advance of its publication.

Chancellor Michaelis assured the Reichstag that the military situation was favorable and that 811,000 tons of shipping were sunk by German submarines during the month of July. He also discussed the alleged ambitions of the Entente Allies for territorial expansion.

Railroad Strike in Spain

The Northern Railroad, one of the chief Spanish lines, is tied up by a strike and other roads may suffer from similar troubles. The chief importance of the situation is that such strikes are apt to have important political consequences, especially at a time like the present when the revolutionary fever is high and the danger of a republican or Socialist outbreak considerable. The Spanish Government has undertaken to assure the continued operation of the trains by substituting military and naval engineers for the strikers. Military forces are also placed at strategic points along the railway line to prevent any forcible interference with traffic. The situation is complicated by a sympathetic strike of masons, printers, carpenters and metal workers in northern Spain. Riots in Barcelona and other towns in Catalonia were suppressed by the military.

Viscount Ishii (third from the left), head of the Japanese Mission, says that "pleased" is too conventional a word to express their attitude toward the reception they have received in the United States, they are "delighted." The reception began in Honolulu, this picture shows it being continued in San Francisco. At present it is going on in Washington

ITALY SEES IT THRU

BY F. M. UNDERWOOD

THE INDEPENDENT'S CORRESPONDENT IN ROME

"IN every European country, except perhaps Germany," the King of Italy is reported to have said during the early days of the present conflict, "when war breaks out at least a hundred things are wanting or are not prepared. With us there were a hundred and fifty!" The grave expenses of the Libyan war could be partly paid off, thought the then Premier of Italy, by economizing on the army in peace time, so when the fateful summer of 1914 dawned trained officers of reserve, uniforms for the soldiers, ammunition and above all, big guns, were all wofully lacking.

During the nine months that elapsed before Italy decided to draw her sword, the steady, strenuous preparation that went on in every department of civil and military organization enabled her, when Cadorna surprized the Austrians by the rush of his troops to the front, to plant her foot upon the enemy's soil and render it definitely an offensive instead of a defensive war.

In the settlement of 1866 Austria possest herself of a frontier which dominated some of the fairest and most productive plains of Italy and constituted a cruel and ever present menace of invasion and aggression. During the thirty years of the Triple Alliance, Austria took advantage of the exceptional assistance that Nature offered to improve her already superior situation. She blasted the rock to make trenches and galleries; she honeycombed the mountains with gun platforms and observatories; she built forts and prepared magnificent long distance cannon till she believed that her position was absolutely impregnable and disdained the Italians, whom she chose to despise as a nation of mandolin players and mountebanks.

During the two years and a half that have elapsed since then the Italian armies have held a front five hundred miles long and of unparalleled difficulty. They have advanced, inch by inch, fighting not only against a strong and well trained foe, but also against Nature in her sternest and most implacable aspect. Not only their Alpine regiments, recruited from the mountainous regions, but the sons of Sicily and the sunny South have lived and fought at altitudes usually visited only by intrepid climbers. Cannon, munitions and men have been conveyed to inaccessible peaks among the eternal snows, while the hights have been linked together by more than three hundred aerial cableways, or "teleferics," as they are called here, along whose dizzy, fantastic tracks are swung not only men, and even wounded men, but also guns, munitions and supplies.

For two winters Italy has fought in parts of her front at altitudes of from 9000 to nearly 11,000 feet. During the campaign of 1916-17 the weather was so severe that in less than four months there were nearly fifty days of snowfall, which reached a depth of from fifteen to thirty-three feet, while in some of the higher mountain positions there were nearly fifty degrees (Fahrenheit) of frost, and in one day no less than 105 avalanches were reported, one of the immense volume of 5,359,375 cubic feet. History offers no other example of an army that has fought permanently and successfully in such a position.

IN addition to a brave and enterprizing body of fighters, such a frontier requires an exceptional body of workers behind the front to support it. The engineering, commissariat, stores and hospital services organized by the Italians have been marvelous in their competence and thoroness. From the beginning of the war over 300,000 men have been employed behind the fighting front, some even working under fire, some at hights of from five to seven thousand feet. Over 3000 miles of roads have been laid to give access to newly conquered positions or to cope with the enormous amount of material required for the needs of the army. Half of these roads are entirely new, about half were already existent but have been mended and enlarged, and for this the labor of 20,000 workmen and 90,000 cubic feet of gravel is required daily. More than one hundred bridges, in all two and a half miles long, have been erected over rivers and torrents, besides several hundred movable ones, and many temporary ones set up by the soldiers themselves, while a number of bridges destroyed by the retreating Austrians have been repaired.

The organization of the Italian commissariat has been remarkable, and no soldier, except perhaps the British Tommy, has been so plenteously, wholesomely, almost luxuriously fed as the Italian. The Italian army alone eats as much beef as the entire nation consumed before the war, and it disposes of 1500 tons of bread daily, which requires 350 wagons or 17,000 mules to transport it, while some of the 1000 ovens which bake it are situated in spots 6000 feet high. Besides the liberal allowance of vegetables, jam, sugar and wine which forms part of the ration of the ordinary soldier, those in the first line or in specially cold and trying positions get fresh and dried fruit, brandy, liqueurs, condensed milk and chocolate. Two thousand tons of wood and 600 tons of straw pass over the army roads daily, while the fodder for the horses, mules, donkeys and other animals amount to 4000 tons a day.

Before the war, Germany, with her state-aided industries and dumping had conquered the Italian market and Italian capital was timid of competing against her pervasive influence, but now machines which used to be entirely supplied by Germany, England or Switzerland, are made in Italy. The capital of the great Italian companies such as Ansaldo and Fiat has been largely increased, tho more will have to be done after the war. This would offer a splendid field for American investment.

The greatest development in Italy since the war has occurred in mechanical and chemical manufactures, the latter in the past having been almost entirely obtained from Germany. The factories which now produce explosives are well adapted for supplying, when peace comes, medicines, disinfectants and coloring materials.

An enormous increase has taken place in the making of aeroplanes, all of which Italy provides for herself. From Milan come the great Capronis which have given such good results in the present conflict, and the huge Fiat works at Turin are now producing, besides aeroplanes, about sixty-five motor-lorries every day, and an immense number of other machines, automobiles, cannon carriages, traction engines and machine guns.

BEFORE the war the south of Italy was almost entirely agricultural, but now the Partenopea Company turns out 10,000 projectiles a day, and the Ilva and Bagnoli companies work in steel and pig iron, and in the neighborhood of Naples, warships, torpedoes, cannon and munitions are produced. Many minor industries have sprung up having a considerable number of employees. In the past, no lenses or field-glasses were produced in Italy; now the San Giorgio factory at Sestri Ponente and that of Galileo at Florence produce glasses that admirably replace those of Zeiss and Goerz, since Italians have been found specially capable at such work. Before the war no high speed steel for tools was worked in Italy, all was taken from Austria, Germany, or the English Cutler's Company of Sheffield. Now more than two tons of such work is produced daily and the quantity is always increasing, 400 operatives being engaged. In the early days of the war only 80,000 men were employed in mechanical production, now there are 650,000.

Italy, however, not only works for

herself but is making 400 automobiles a month for France and also supplies the latter with a quantity of electric wires. Italy has been sending over 600 automobiles a month to Russia, for whom she has also provided aeroplane engines, batteries of cannon and 400,000 rifles, for which she has been producing every month 8,000,000 cartridges.

Many details of Italy's production of munitions of war cannot now be published, but the increase has been almost incredible. At the Terni works, where in the early days of the war only 200 rifles were produced every day, the output is now 2200.

ITALY flung herself into the conflict at the moment when Russia's army was in seemingly hopeless retreat and the fortunes of the Allies looked blackest. When France was disputing inch by inch the ground before Verdun, Italy prevented the diversion of Austrian troops to the assistance of their German ally; and when the Russian revolution temporarily relieved the pressure on the Austro-German armies at that frontier, Italian soldiers, together with the English and French, supported the resultant strain on the lines.

Since she entered the war Italy has held in check from thirty to forty divisions of Austria's best soldiers, has succeeded to a great extent in rectifying the injustice of her frontier, and incidentally, has reduced the front she has to hold from nearly 500 miles to less than 400. Italy has possest herself of

Underwood & Underwood

General Cadorna, leader of Italy's army

considerably over 1225 square miles of the enemy's territory, which before the war contained nearly 200,000 inhabitants. Italy captured with a magnificent rush the town of Gorizia, which, both from natural and artificial protection, was said to be invulnerable. Her soldiers in the taking of the Col di Lana, the Adamello, Monte Kuk and the Vodice, accomplished feats of arms unsurpassed during this struggle. Italy's navy, after provisioning thru months of stress and scarcity both Montenegro and Serbia, achieved the transportation of the remnants of the Serbian army, 300,000 men, 50,000 Austrian prisoners and many thousands of animals without the loss of a single Serbian soldier, altho exposed to constant attack from the neighboring Austrian base of Cattaro, actually having to repulse during the transit nineteen submarine attacks.

Italy has achieved much in the war, but her greatest achievement is the awakening of her Italian people. Before 1914 Italy did not realize her capacities and powers, but this terrible ordeal has obliged her to develop the immense resources which lay dormant both in the country and the nation. One result will be a great increase in the value of Italian labor, as the war employments are being organized in such a way that they can be easily evolved into those of peace. Besides glass and chemical industries, steel works like the Ansaldo or the Cantieri Metallurgici Italiani of Castellamare di Stabia, which now make cannon, aeroplanes, submarines and munitions, will be able in future to produce ships for Italy's merchant marine twenty at a time. Italy herself will thus be able to employ the hands that formerly labored for the advantage of others in foreign lands. Freed from the German infiltration, with an army of trained and organized workers, with thousands of factories and workshops already started and provided with excellent machinery, when peace comes a new era of prosperity and enterprize will develop in agriculture, industry and commerce, and Italy's sons may look forward to playing a great European rôle and to a future worthy of their glorious ancestors.

More than 3000 miles of road have been laid to give access to newly conquered positions. The Italian is better fed than any other soldier

THE GAP BETWEEN TWO GENERATIONS

BY HARRIET ORNE

"Perhaps the story of my struggles may help others" is apt to be the introduction to lurid revelations too morbid and self-centered to be helpful to anyone. But when a record of intimate experience is sane and typical of many similar experiences it is well worth while. Both mothers and daughters will be interested and helped by this clear presentation of the "gap" between them. The discussion will be continued next week.—THE EDITOR.

WHENEVER the world's intellectual progress is accelerated by a period of peace, prosperity or discovery, the thought of each generation tends to grow away from the thought of the generation which preceded it. A gulf of intellectual change is fixed between father and son, between mother and daughter. And I believe that the gap between the thinking of the women of my mother's generation, and the thinking of the women of my own generation is a greater gap than has existed between any two other generations of women in the history that we know. My own personal experiences with my own mother and her friends would not be a sufficient warrant for the soundness of this opinion. And in my school days I rarely spoke to my friends of the differences between my mother's opinions and my own, for I would not seem disloyal to one of the bravest and most unselfish women in the world. But I know now that what I used to think of as my own private problem—the difference between her opinions and mine—is really a large social problem in which most mothers and daughters of today have a share, if they are doing any real thinking at all. And perhaps the little that I can tell of my own difficulties as a girl growing up, of my questions and of my answers to life, may enable a few other women, mothers and daughters in actuality or mothers and daughters in their relative places in the world, to understand each other better. For natural affection and sympathy can bridge any gulf, but misunderstanding may sometimes become a menace to natural affection.

In fundamentals my mother and I are much alike. We are both strong women physically and mentally. We are both proud of our good inheritance and equally proud of it, I think, altho mother calls it "family" and "blue blood" and I call it "racial excellence." We are both women of the racial type, not individualists. By that I mean that we love the ancient, beautiful things of the race, the things of proven value, better than we love our own personal profit and pleasure. Or perhaps I should say that we find our personal profit and pleasure in these things. We are women who have demanded mates, who have need of the lips of children at the breast, who love our homes savagely, in spite of the bother of taking care of them, who are never content unless we can be hospitable. We find pleasure in the blest labor of preparing food. We find an inarticulate delight in handling piles of linen freshly ironed and immaculate. We are strangely gratified by the faint aroma of soap and linseed oil in a perfectly clean house. We like to rake and weed and turn the hose on the flowers and pick them and arrange them indoors. We believe in plenty of cold water inside and outside. We eat and work and love heartily. We are very real.

But when that has been said we realize that we are not alike after all. Nor are the differences between us purely personal and individual. My emotions belong to the world of my mother but my mind lives in a new world which she has never entered; perhaps would not enter if she could. It is a world which my experience has made for me, an intellectual world where those ideas rule which have had most force in the world during my lifetime and have been a part of my education. Between my mother's intellectual world and my own a gulf is fixed and we look across wistfully at one another and strive tactfully to protect each other from our own opinions.

MY mother and I began to grow apart intellectually in childhood. Mother was educated by governesses for society. She was taught elegant accomplishments and was grounded in the English classics. She was taught irreproachable French and many kinds of fine needlework. When she was naughty, as a little girl, she was made to memorize passages from the Bible or bits of poetry. She had a talent for music which amounted almost to genius. She was allowed to take music lessons, but her family would never have approved of any professional use of this gift which would have given her a place in the world. She was taught absolute mental obedience to accepted authorities and fidelity to the conventions and beliefs of her class. She was told that questions were indiscreet and doubts vulgar. She was given to understand that vigorous thinking about life's problems was a social crime punishable by loss of prestige and popularity. And unfortunately, in many circles, that is still true! She was made what she has always remained, a *grande dame* with a sense of *noblesse oblige*, a faint fragrance of violets and a love of real lace. But she is more than that. And I love her best when the native vigor and power of her character and personality will not be balked of human expression and assert themselves honestly, impulsively, directly, showing that no training could ever have thrust them down into utter passivity. My mother is a very fine lady.

But I was not educated by governesses for society. My mother allowed my education to begin with a governess because when I was a little girl we lived in a town where the schools were not very good. But when I was twelve years old we moved to a larger town where the schools were excellent and mother (not without misgivings) placed me in the public school which children of her friends attended. Life really began for me then. I knew that I was being educated. The lonely and insipid tasks which I had performed dully for my governess, who was an admirable woman but by no means a trained intellect or a good teacher, had hitherto seemed quite purposeless and futile to me. My imagination and my social instincts had not been fed and trained by those solitary, perfunctory exercizes called "lessons." But in school I had good teachers—to whom some day I shall offer the tribute due them—plenty of friends and enough social and intellectual activity. I began to feel that I was being prepared to do something or to be something. It was all vague at first. I could not have explained how I felt. But I was made aware that two things of great importance lay ahead of me—womanhood and life. And I knew that I was growing on the inside as I had never grown before and that for me this school life was healthier than the life that had preceded it. When I was told that solving problems in arithmetic would teach me to think and help me to be ready to solve bigger problems later on—O hackneyed pedagogical reason!—I actually believed it. And because I had been furnished with a reason for doing so I struggled manfully with a subject naturally distasteful. Whatever my teachers told me I took in good faith and I began to dream dreams of what I would be and do, dreams that might never have come to life alone with a governess. I was one of a large group of boys and girls. I was learning the ways of boys and girls. I was playing tennis and riding a wheel and learning to skate and dance. I was getting ready to take what might come in life. I was "in things" and beginning to love life. More than that I was getting ready to make things happen. When my teacher talked to us one day about Napoleon and told us how he bent circumstances to his will, told us that great persons triumph over circumstances and small persons are governed by them I was profoundly imprest. I never forgot it and the idea took hold upon me and grew in my life. I would be a person to triumph over circumstances, but I did not want to be like Napoleon, of course, and with such confidence growing in me and with this new interest in life very dear and close my childish heart would often ache with pity for my mother who had never gone to school!

One day I went home from school flushed with enthusiasm about a current topics class that one of my teachers had planned. She had asked us to read articles on public questions, think about them, and be prepared to tell in class what we thought. She told us not to ask our fathers and mothers what to say but to be prepared to give our very own ideas. I was delighted. It was the first time that the school had ever pointed out the world to me, the big, booming, outside world [*Continued on page 355*

HOW IT FEELS

Personal Experiences with Shell Fragment and Gas

WHEN THE LIGHT GOES OUT

BY A FRENCH SOLDIER

TRANSLATED FROM THE "BRAILLE" BY HARRY KURZ

ONE morning in the month of July, 1915, I was returning from a horseback ride during which I had covered about thirty kilometers. I was a bit tired. I walked over to the kitchen to ask for my porridge which the cook had set aside for me, and then I ate it, not too much at ease, for the Boches had not failed to discover our promptness at meal time. Very often during these hours they would send off a few shells in our direction and at different intervals to catch us off our guard. That afternoon their bombardment did not amount to much, and so I spent my time peacefully repairing telegraph wire that had been damaged shortly before. I had been working for about an hour while my comrades were tending to their various duties, when a terrific explosion occurred right next to me.

I was stunned by the shock, but my dizziness lasted only a few seconds and I did not lose consciousness.

I realized at once that I had been wounded and I felt a terrible pain in my head as well as a smarting wound in my right arm. My arm suddenly seemed very light to me and I had to stop trying to move it because each effort became more and more painful. A shell fragment had severed it a little above my wrist. I had been hit in the head also by numerous bits of shell. I felt a dry crack in my eyes accompanied by a red vision which lasted a tenth of a second. At the very instant that this peculiar dry snap came I had the notion that I was blind.

From now on the things I tell are going to happen in my brain at lightning speed and quite beyond the control of the mind, yet directed by something similar and a hundred times more rapid, something I shall call the instinct of self-preservation.

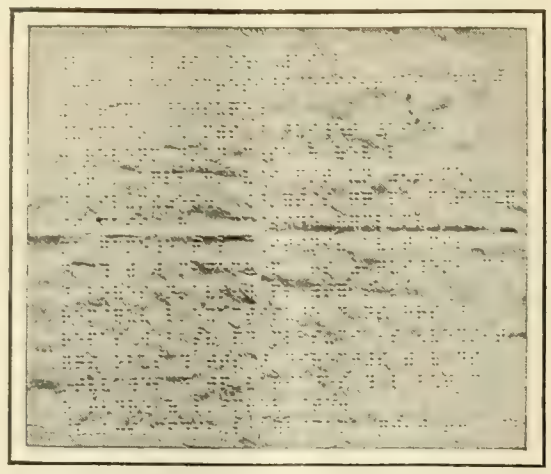
Such instinct is evident in the chauffeur who at the moment of a collision suddenly twists his lever to the right, and thus, at the very last second, avoids an accident, in spite of the fact that he has not had time enough to realize the exact position of his vehicle and to think of what to do. If you should ask him why he turned to the right, he will not be able to tell you; nevertheless there was something that guided him, and that I call instinct. There is another experience besides this one. A person realizes it when under the influence of chloroform, just before relapsing into stupor. He feels that he is passing on to another world. It seems to him that he is falling down an immense void and that he can see himself in his tumble, with smooth, glistening walls all around him, to which there is no possible hope of hanging on. This second experience is extremely quick and I should consider as its maximum duration half a minute, in spite of the fact that during these instants all notion of time disappears completely.

These two phenomena occurred simultaneously and it is difficult for me to tell them in order. I must have been lifted and thrown by the explosion, and after several seconds, which permitted my dizziness to wear off, I found myself seated on the ground. I then began to realize that my hand was gone and I supposed also that the part of my face between my forehead and my chin had been carried away. Thus I sat and in my pain I thought.

I understood my terrible condition and how it involved henceforth a useless existence upon earth. I then looked for a revolver, for I always carried two of them, one in my regular case and another of which I was more sure, attached to my belt underneath my jacket. Both were very heavy and I had laid them aside in order to rest better after dismounting. A horrible despair seized me, for I had no other way, and I foresaw that I was going to suffer agony in the midst of my comrades, who would probably soon come to me without being able to end or shorten my suffering. I saw myself on the stretcher with my comrades around me lavishing words of consolation, for there is nothing more hateful to a wounded man than to feel that people about him are pitying his fate. To pity is not to console; let people remember that.

Hideous detail. I lived over again the scene which had taken place the day before at about the same hour. I had borne away one of my comrades who had been caught in his observation post by a shell and whom I consoled as best I could, all the time thinking that he was lost. I told him that the shells which fell near us and bits of which sometimes reached us from above came from very far.

I foresaw that the same thing was going to happen to me, and I shivered at the thought of it. Blood was running freely from my whole face, thru my two eyes, my nose, thru a wound from cheek to jaw, thru a thousand little cuts with which my face was covered. The blood was dripping heavily on my legs and gradually I felt that I was growing weaker. I felt the warm liquid flowing down my legs and an immense happiness took possession of me. I had the dim realization that by losing so much blood the minutes of life left to me were numbered.



MY whole career passed before me in my mind. I saw myself a small boy with my toys, I remembered the slightest incidents which had occurred in my youth, things that happened to my parents; I saw myself going to school, my last years of study, the girl I loved, my military service, my comrades who had been wounded before me, graves, a bit of earth shoveled fresh, a high cross made of two small tree branches fastened together, then, after a week, disappearing under the grass without leaving any trace. I then thought of the terrible anguish of my parents at not receiving any more news. The horror of it drove me wild and I gathered the little strength that was still left in me and I raised myself on my legs and cried: "Save me!" Comrades came and uttered sounds of fright at seeing me, and they did not dare to approach. I cried louder: "Save me!" and I tried to go toward the first-aid station, but at the second step I struck against a tree. It was there for the first time that I understood what it meant to be blind.

I held on and waited. I felt myself taken under the arms and someone said, "The stretcher is right here."

I took two or three steps, astonished at being able to keep up, but at the same moment I sank down. My comrades placed me on the stretcher where I was very uncomfortable, because it was neither long nor wide enough.

My comrades carried me, but after a few steps I told them to stop, for I was so weakened that my boots seemed to weigh 100 pounds on each leg in spite of the fact that I was lying on a stretcher. They took off my spurs and my boots, two things which a cavalry-

man is not accustomed to part with, and then they started again on their way. We were passing underneath the trees, and at the touch of the cool air of the woods I felt terrific pain as if red-hot coals had been placed on each of my wounds. And I said: "I am cold—cover me—cover me." There was nothing with which to cover me. I then asked them to cover just my face. One of my comrades who was coming along with me said: "I have my handkerchief, but it is dirty." I answered him, "Put it on just the same." There were about 1500 meters to go. The lieutenant who was with us also and whom I respected highly tried to encourage me. I answered him: "Let me alone; I said the same things yesterday to Van de Cruz." Exhaustion was coming over me; I felt my last moment approaching. I asked them to halt the stretcher, and they answered "We're almost there." I answered, "Do as I tell you; it is the last time I shall ask you for anything." There was a deep silence; then the lieutenant said: "Stop." I said to them: "Take paper and write." I gave them the address of my father and of my sister, and I turned over my wallet to one of my comrades, and a few other things that I wished to send to my parents. Then I said "You may go on, now," and the stretcher continued its way. My suffering became worse, for it

A bit of the article in the original Braille

was getting colder. I asked if we would soon arrive at the station. They answered "Yes," but I didn't believe it at all, because yesterday I had answered "Yes" all along the way with my wounded comrade, and as I guessed what their answer would be, it only served to irritate me further.

We finally reached the first-aid station. They took me off the stretcher and I recognized the doctor who had taken care of my comrade the day before. They daubed all my wounds with tincture of iodine and they gave me an anti-tetanus injection.

The tincture of iodine almost made me faint, and I asked for something to drink. They had me drink thru a rubber, for I could no longer open my mouth, which was paralyzed by the wound in my jaw. An auto-truck was brought around, my stretcher was hung on it together with those of two other wounded men.

I said au revoir to the lieutenant, begging him to pardon me for what I had said before; that it was because of my suffering. A priest who was also quartermaster and who had accompanied me, mounted the truck and offered me profuse words of encouragement. I said au revoir to my other comrades and the auto started.

During this journey my sufferings reached their hight; I had nothing over my head and I lay on the wood of the stretcher. During the ten kilometers from the forest of C—— to Houdain I was obliged to hold up my head. The stretcher was too small; I had to keep my arm up, and it gave me a fearful twinge at every jerk of the vehicle. The chauffeur put on full speed, for I wore fastened on to me the label: "To be amputated immediately." With my left hand, which I could still use, I hung on to the walls of the truck in order not to fall out of my stretcher during the jerks or the turnings.

A few moments later I was laid on the operating table of the hospital. When the doctor had examined me I received from him the confirmation of what I already knew but too well.

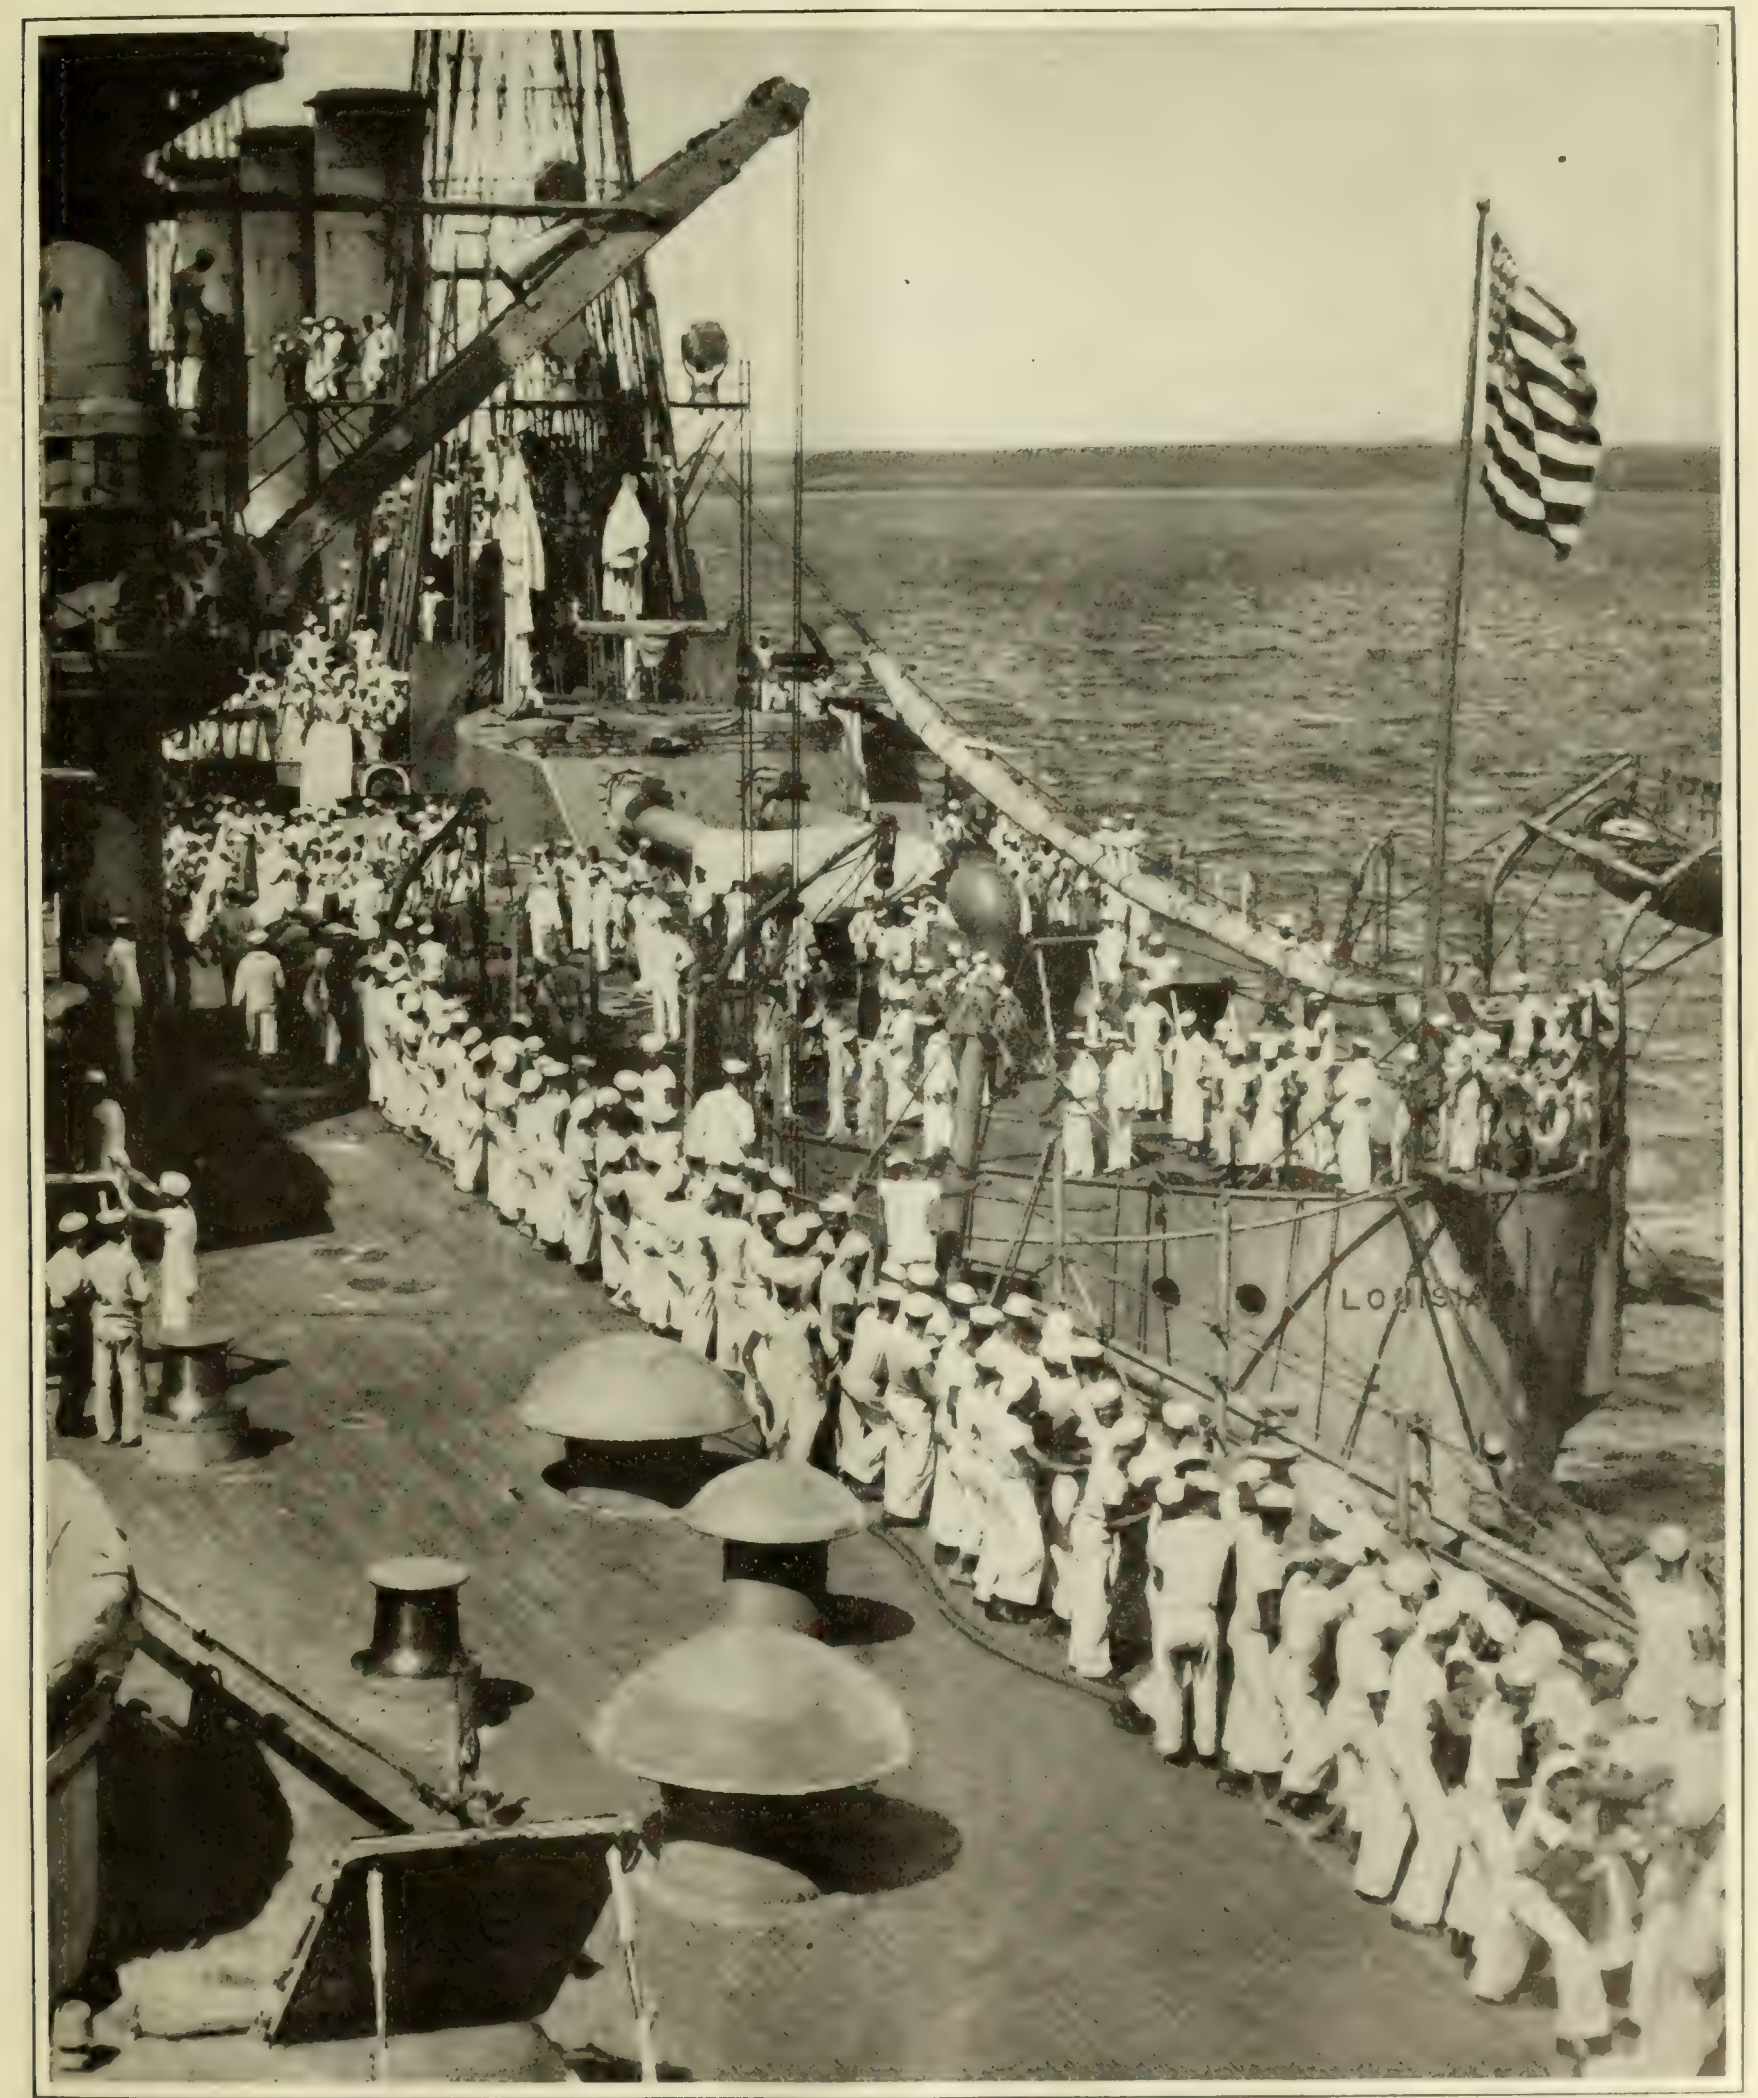
WHEN THE GAS FLOWS

BY AN AMERICAN AMBULANCE DRIVER

PEOPLE in America are generally mentally conscious of the fact that the Germans use asphyxiating gas. More than that they do not know. Neither did I until recently. For weeks I carried a gas mask hung over my shoulder. I considered it as a sort of point of formality like the *Carnet Rouge* which I always carry in my pocket and no one ever looks at, a thing which every one possest but no one ever used. It sometimes got in my way and I curst it as a sort of useless appendage, until one evening I suddenly came into an intense realization of its value.

Three other drivers and I were on duty at the *point de secour*. It was a very quiet evening—quiet in the sense of little action and few wounded. There was the ceaseless sound of shells passing over, both ways, mingled with the dull, methodical rumble of the guns, which formed a sort of background to the sharper, clearer sounds. These sounds were less frequent, but more irritating, and were made by the arrival of shells, large and small, which struck comparatively close to us. We could hear them coming—the small ones with a shrill whistle, followed by a sudden sharp report; the large ones with a low, ominous scream, followed by a heavy, deep-toned explosion. Once in a while a few spent pieces of shell, still hot, would fall in the courtyard outside. Seated in safety in the *abri*



The trench hound in his gas mask

far below the ground we could listen to a heavy shelling undisturbed. We could sit calm and calculating, estimating the size of each shell and the distance of the explosion. After a few hours one may sleep thru a bombardment, dreaming dreams untainted by war. The guns were unusually active that night, shelling the roads and country surrounding our post every two hours for about half an hour at a stretch.

DURING the first few hours we listened wakefully, interestedly, to the sound, drinking coffee and toasting bread over the smoldering, smoking fire all the while. But one by one the brancardiers (there were about twelve altogether) dropt off in varying attitudes and in various keys. Soon the room was vibrant with their snoring. The fire, too, soon died out and we were left alone, seated around the rough center table, under the flickering, guttering candle, which swung gently by a wire from the beams above. We talked intermittently for a while on general topics. The war was far away and concerned us little. At about twelve the others drew away and I dropt asleep on the table, my head on my arms.

When I awoke the two o'clock bombardment was just beginning. I had slept restlessly in an uncomfortable position, so I turned to seek a softer bed. All around the walls the brancardiers and my companions reclined in the most ridiculous attitudes, snoring peacefully. A great trench hound, a wonderful dog, dozed under the table, and on a box a cat slept soundly. At last I found a corner and settled myself to sleep again. The two o'clock bombardment was in full swing. I listened half awake to its weirdness. Suddenly there came a short tearing sound, the most vicious I had ever heard, and then a terrific explosion. My eyes were on the vaulted ceiling at the time, I saw the thing quiver as if alive, and I expected the next moment to see it give way. Instead there was a sudden rush of air followed by the clattering of stones and débris down the steps. It was all in an instant, and in that same instant we found ourselves, saucer-eyed, all standing in the cen- [*Continued on page 365*

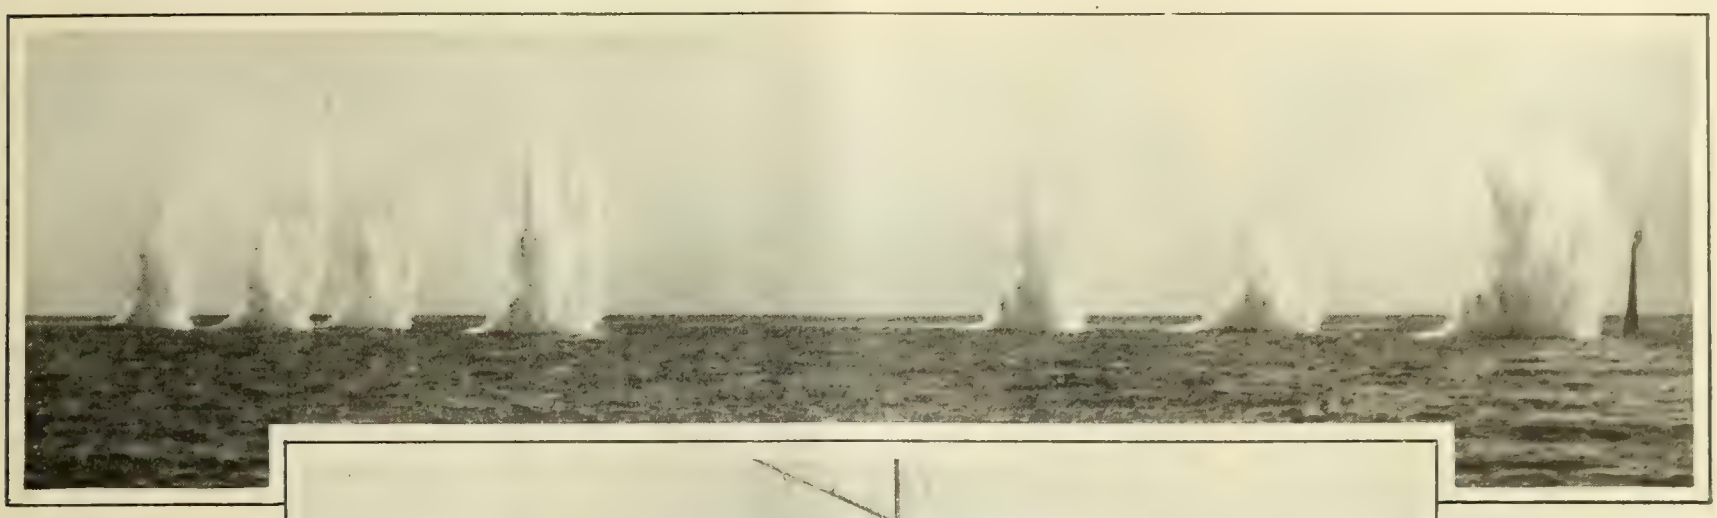
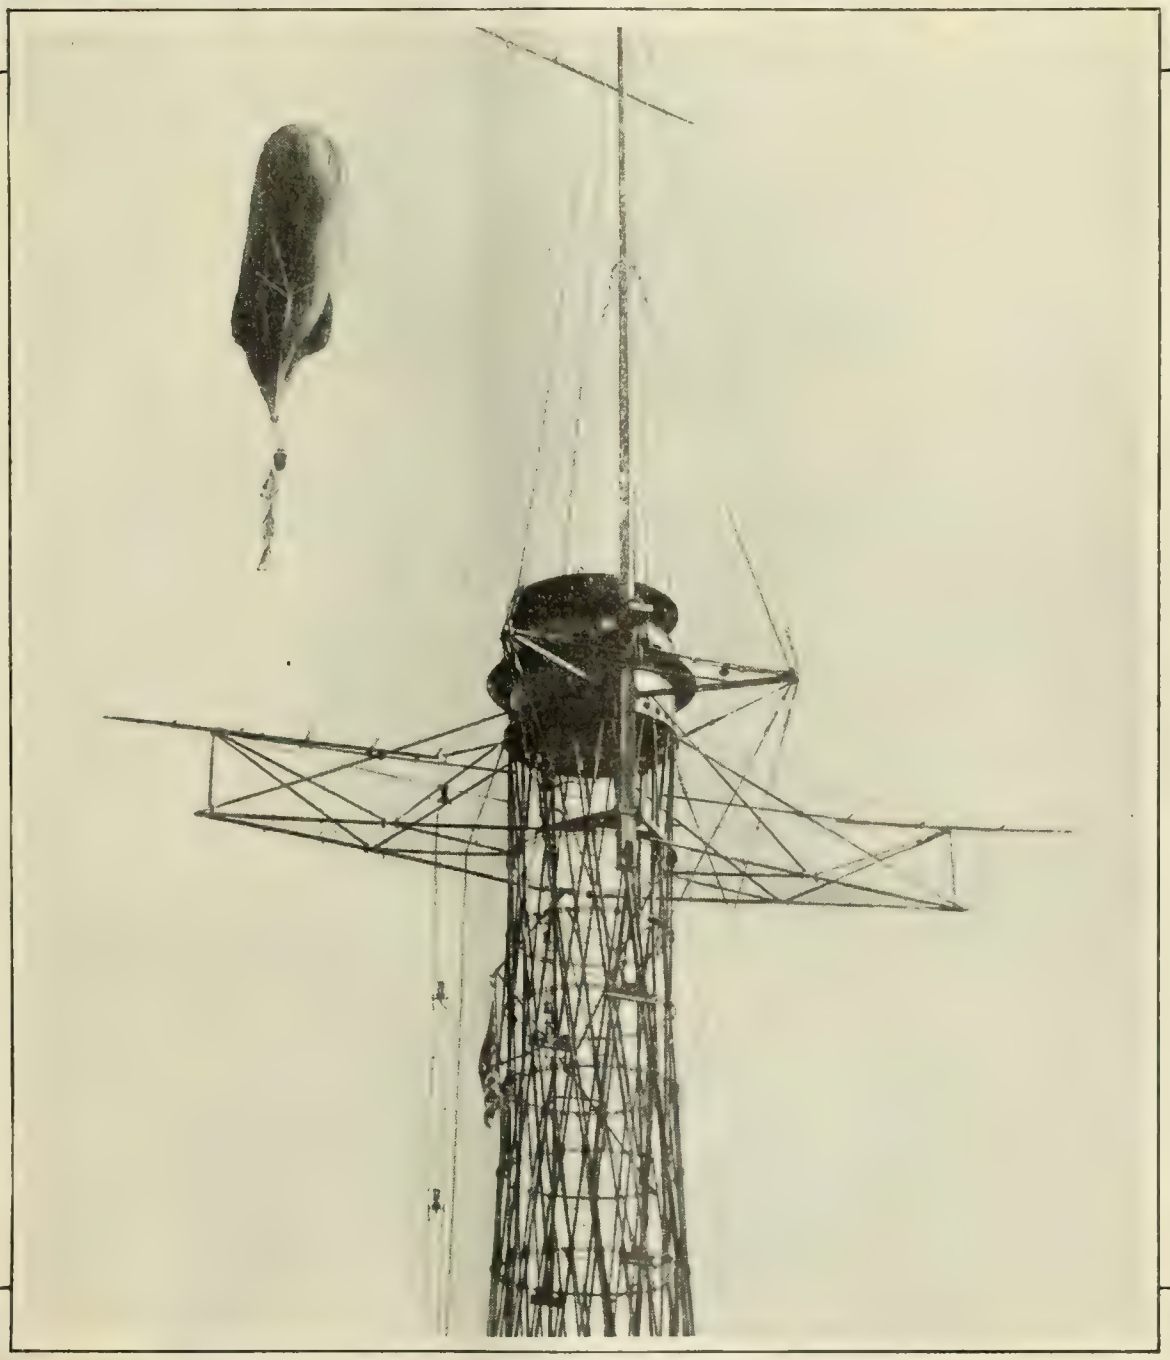
Repairing a battleship's propeller in mid-ocean is not an every day occurrence. It has probably happened only once; certainly it has been photographed only once. This is the way it was done. When the "Louisiana" broke down somewhere in the Atlantic the "Michigan" came alongside and with the aid of a crane, ropes and the whole crew lifted her stern out of water and made the repairs

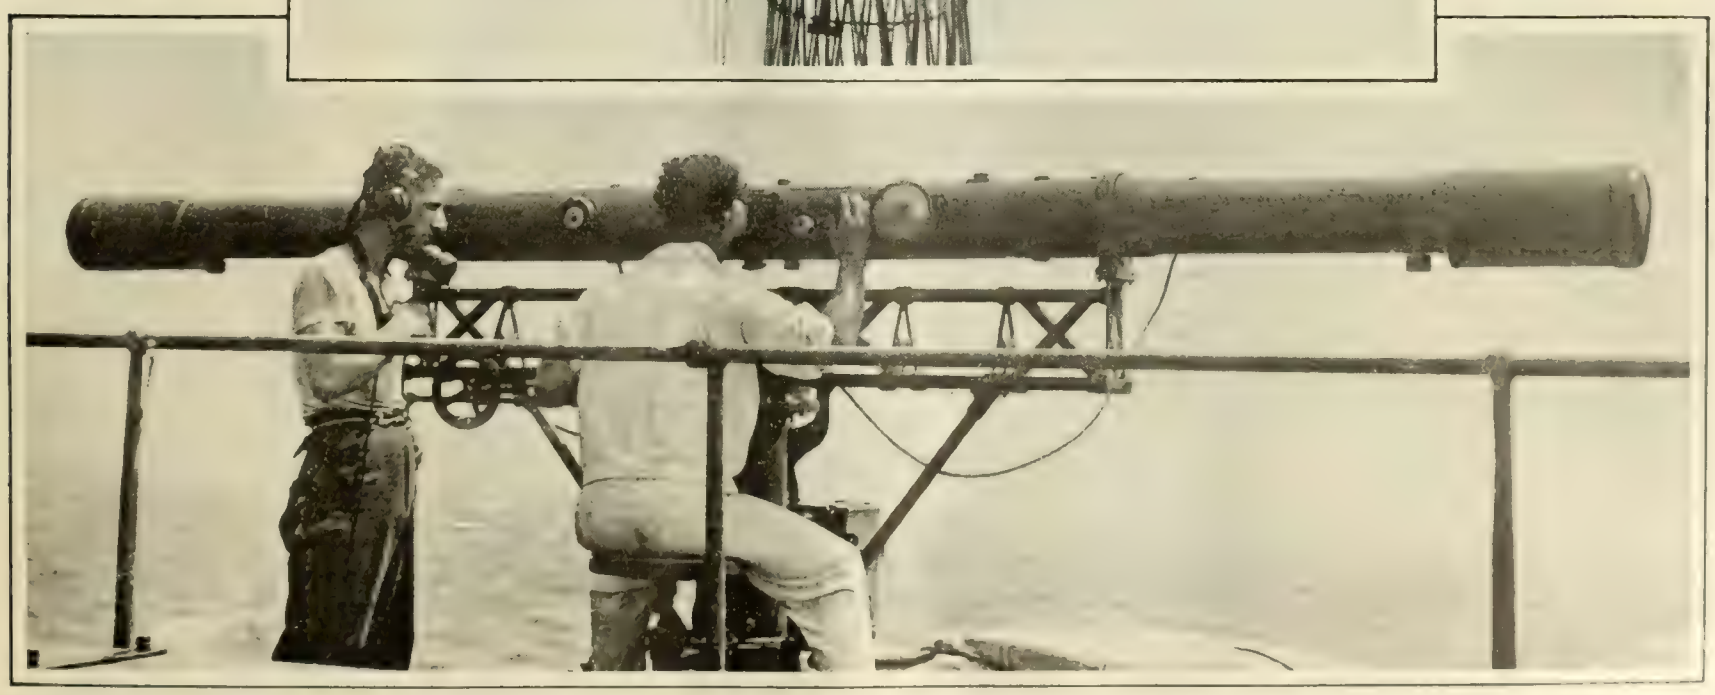
International Film



This is only practise but it looks like the real thing because Great Britain makes a point of having the conditions in her training camps as nearly as possible like those which the men are going to encounter at the front. These official British photographs were taken in an English training camp last month. Our men in France are going thru very much the same sort of thing. The soldiers above are having instruction in outpost duty and are learning the proper way to bring in a prisoner. One of them is temporarily "being a German" but he doesn't seem to mind. The man on the right is practising bomb throwing with a practise bomb in a practise trench, which is quite an amusing, tho strenuous, sport, unless you have too lively an imagination. The American troops, thanks to our national game, are particularly good at bomb throwing

There are various and sundry phases of bayonet practise. The one below is a little less exciting, perhaps, than jabbing straw Germans but it develops accuracy and a quick eye. The man who holds the ring thru which the bayonet is thrust has a not altogether enviable job. If you ever went to boarding school you will be sorry for the men on the right—they are getting their kits ready for inspection. But it is far worse than the weekly inspection of closets or desks that you probably look back upon with horror. The soldiers say that it is a much smaller misdemeanor to lose a leg or an arm than it is to lose even one small portion of your kit. And it must not only be all there but all in perfect condition. The army has an incentive to neatness, however. A bit of rust on a gun or a mislaid gas mask may be a matter of really vital importance





The United States navy is proud of a good many things, but it is proudest of all, perhaps, of its marksmanship. These pictures show the way they do it with the fourteen inch guns on the "Oklahoma." The narrow black thing at the extreme right of the picture at the top of the page is a target. The shell went right thru it, and ricocheted. because shells don't sink at once, along the water just the way a stone does if you skip it well. It is a pretty piece of marksmanship and makes a very pretty picture. Part of its charm, tho, is the pleasant sense of security it gives one to look at it. That target might have been the periscope of a submarine and when you are shooting at submarines it is just as well to shoot straight.

International Film

The observation balloon might be called "the eye of the navy." It isn't quite as exciting to go up in as an aeroplane but don't imagine that it's easy. When a balloon is attached to the fighting mast of a ship it pitches and tosses and sways so that it takes an observer a long time to get accustomed to the motion—even tho he may be a good sailor. The men below are operating one of the big range finders which are very important factors in good marksmanship. That distances on the water are very deceptive and strong sunlight often very dazzling are facts that should add just a bit to our admiration for the navy—if it needs to be added to. And good gunnery isn't the only good thing about the United States Navy!

THE MEETING HOUSE MARKET

BROOKLINE'S COMMUNITY PRODUCE EXCHANGE

BY SARAH POMEROY RUGG

WOULD any community except a Boston suburb ever have thought of establishing a market in a Sunday school building that looks like a Greek temple? The old Bethany Sunday school, endeared to many residents of Brookline, Massachusetts, the former home of the Harvard Congressional Society, has sheltered many throngs of citizens in its day, but never before have its walls witnessed such unusual scenes as now occur there twice a week when the community market is held beneath its roof. The trustees of the property with a sense of the fitness of things realized that it could be of use to the people in a material way now that the spiritual activities with which it had long been associated had been transferred elsewhere and patriotically offered the building for the purpose. So it happened that early on the morning of August 8 the streets leading to it were thronged with housewives going to market in true Southern style. Some came on foot with market-baskets on arm and others in motor cars with servants to carry the parcels, for rich and poor alike were interested.

Everybody in town shops at the Brookline Produce Exchange. It took just an hour and a half to sell out all the stock on the first day. Next day it was just the same

THE opening of this community produce exchange marked an interesting epoch in the campaign for food conservation which Brookline has been waging since early spring. With characteristic enthusiasm this famous village responded to President Wilson's first call for food conservation and a subdivision of the public safety committee was delegated to the task of food production and conservation. Many great estates were placed at the town's disposal and land for the landless soon became a reality for apartment dwellers. The land was prepared by the town at the expense of the war-gardeners and then apportioned by lot. During the planting season, demonstrations of planting and gardening were made on nine different estates located in various districts and expert supervision of amateurs was furnished by experienced gardeners. All thru the summer these professionals have visited the plots twice a week, instructing and encouraging as needed.

The largest number of small plots in any one place included 150 gardens of family size, planted on four acres of the Blake estate back of the High School, which were allotted to teachers and pupils. When it became evident a short time ago that the output of these gardens as well as of others in the town far exceeded the demands of immediate consumption a community market was proposed for the mutual benefit of gardeners and gardenless. The suggestion was carefully considered by the committee in conference with the produce dealers of the town, who were patriotic enough to agree to the experiment, altho they knew it would affect their business. Some of them predicted that the experiment would fail, but the success of the market has exceeded all expectations.

On the first morning the market floor was crowded with hundreds of shoppers and the truck loads of vegetables from the big estates, together with the modest baskets of produce from the school gardens, disappeared with lightning rapidity. It took just an hour and a half to clear the market of all supplies. On the second day, when the stock was larger, the story was just the same. And this happened in Brookline, a town which two years ago rejected the proposition of the formation of a coöperative grocery store, largely on the grounds voiced by several citizens, who declared that "Brookline always had been willing to pay for service and always would."

The committee had also decided to establish a canning kitchen in a school near the market and a competent woman had been engaged to preserve all produce not sold at the exchange to prevent any possibility of waste. At first, however, her services were not needed, as the demand so far exceeded the supply.

THE market is open for business between the hours of seven and eleven on Wednesday and Saturday mornings. A small rental is charged for tables. where producers sell their own produce at prices which each individual states. Table holders are not allowed to regulate prices between themselves. All produce is sold by weight in accordance with the statutes. A small commission is charged at one table, where the committee disposes of produce entrusted to it for sale. The town committee assumes no responsibility whatsoever for the quality or price of goods or for any incident or accident that may happen on the market grounds.

Mr. Daniel G. Lacy of the Forestry Department is supervisor of food production and conservation and manager of the produce exchange, and Selectman Ernest B. Dane, president of the Brookline National Bank and vice-chairman of the committee on public safety, has ben largely responsible for its establishment.

Brookline is a typical suburban community. The fact that it has had such marked success with its produce exchange is a strong argument in favor of the adoption of the scheme by others. The community market is the logical companion of the community garden.

Photographs by Francis A. Rugg

The Brookline Community Market is open on Wednesdays and Saturdays. "Bring your surplus vegetables here" is the invitation to the gardeners. "Buy your vegetables here" the gardenless are urged. And both accept. They come in cars and on foot and business hums

ALL THE KING'S MEN

BY THE AMERICAN WIFE OF A TITLED GERMAN

WHEN Americans feel that something is usurping the function of common sense among Germans, something besides militarism, what puzzles them is the old and orthodox ideal of Prussia. The "Prussianizing of Germans" has meant largely propaganda of this ideal, since it serves among other things as the basis of militarism. Under their several princes the German people had always been more or less familiar with the doctrine, but the intenser propaganda has brought them to holding toward it an inward attitude of reverent relationship, its authority having been made to seem identical with the safety and the highest good of the nation. The ideal is that of order.

The German army, the great industrial, commercial and social organizations of Germany, are from one point of view merely large and salient manifestations of zeal for order, for regulating, grading and coördinating things, in accordance with the behests of the Prussian ideal.

We pity Germans because they are under such numberless restrictions. They all the while are criticizing us, on their side, in the spirit of members of religious orders, contrasting what they take to be our democratic license with the trim and circumscribed gradations prevailing in every branch of their own national household, and feeling convinced that their minutely regulated world is far superior. Those among us who translate German devotion to their ideal of conduct as blind docility, and think of the docility as something that can be done away with by the simple act, for instance, of liberalizing the political form of their government, overlook the fanaticism inherent in the true situation, which covers much more than their political life.

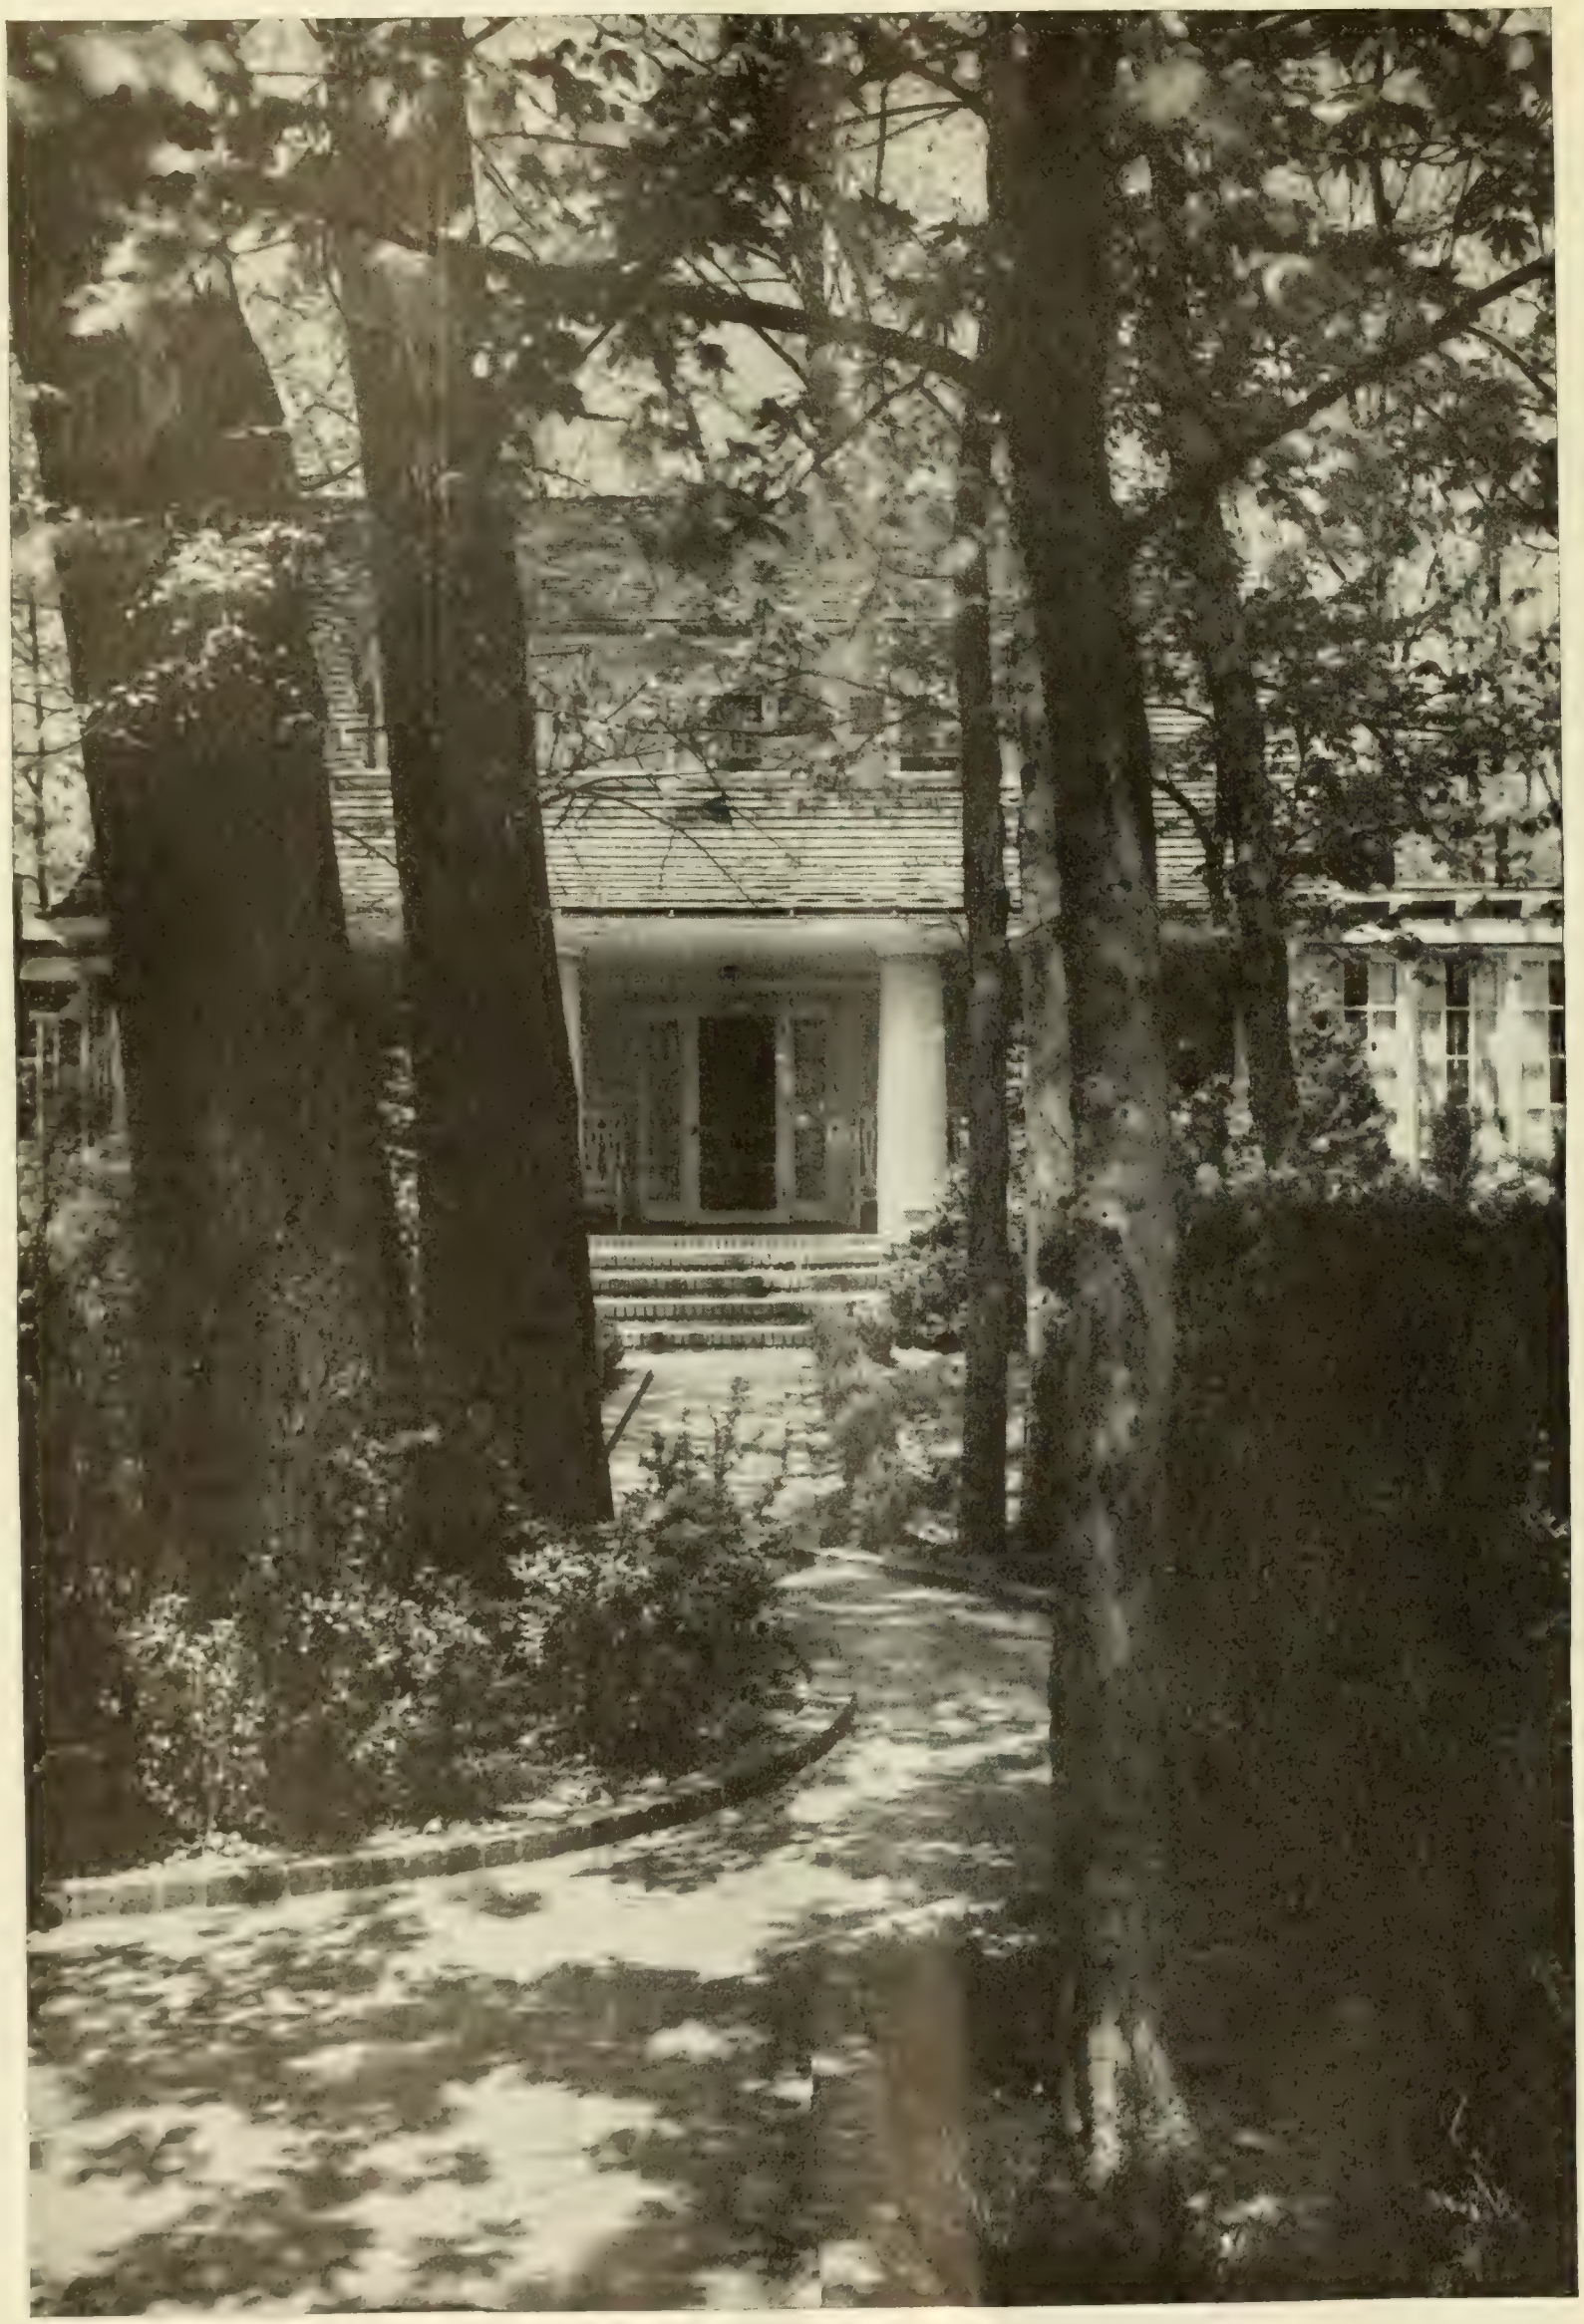
The high born and the low partake together in a sentiment of respect that amounts to a passion for subserviency. Bismarck in summing up his inmost feelings found that he was "the King's man from the crown of his head to the calves of his legs." The Emperor keeps repeating "I am God's anointed." And the people, thru their intellectuals, declare themselves devoted to the state. Every German patriot, in other words, feels himself to be virtuous in so far as he is subordinate. To many of the strange things you see in practical life among Germans this devotion is the key.

Let an officer, for instance, give way to personal consideration and *not* hew down with his saber a man that affronts him, and that officer's career or his very life becomes forfeit, his coat symbolizing the fount of order. The man who insulted him may have been drunk, may have been a cripple, may have been a benefactor of the officer, and the insult slight; what alone is considered is the infraction of a rule. By exalting the idea of the absolute nature of order, the army's dignity, the king's majesty, the nobleman's prestige, all these old romantic conceptions that dwindle elsewhere are kept vitalized.

"COMFORT him," whispered Frau von W., as she parted the portieres in front of the doors of her husband's den. "Your visit is a mercy."

And she whispered, as I understood perfectly, to the end that the Pastor and the Frau Inspector, whose consultation with her my call had interrupted, might not overhear. They belonged to a lower social order, and consequently were not to get an inkling into the fact that an overwhelming grief was afflicting the family. Society knew that the favorite son of the house had been disgraced, and was an exile on his way to America; that to save his father from the further need of paying his gambling and racing debts, he had written to a matrimonial agent offering twenty thousand thalers for a millionaire bride; that the letter had fallen into the hands of the secret police; that the police had handed it to the military authorities; that the military authorities had dismissed the lieutenant from the service (correspondence with marriage bureaus being prohibited to officers) and that he was become in consequence of the dismissal a social outlaw. But outsiders were to think he was taking a furlough for the sake of his health.

"Carl had no inclination for military service," remarked his father in retrospective sadness. "That was why he took to the distractions of play and racing. He is not a profligate by nature. If he could have lived a country life—but I am not rich enough to have bought an estate for him. And I have had more than sufficient experiences with mortgages. He begged me to let him have some of the estate to farm, if it were only a thousand acres. But that was impossible."



"But why?" I asked. "Bunow Court is still free. Emmy says its entail is not yet accomplished. Wouldn't Bernard consent?"

"Bernard, as the elder brother, would have felt bound to demur," he replied. "But there would have rested on me no obligation to heed his objections particularly, Bunow Court, as you say, being still a *freie allodial.* What decided the matter against Carl were practical considerations. Look"—and he pointed to the pages of an open letter lying on the desk table before which he was sitting—a pathetic revelation of the fact that his torment of heart over the lad's disgrace had driven him to review this episode of the past. "The notes and figures are summaries I made at the time to show to Carl. You are a witness of the truth: I *could not* have saved him." And the irrepressible sob that escaped from his breast as he sank back into his chair so embarrassed me, for his sake, that I remained bent over the pages for a long while. He must be left time to recover reserve and self control. A single item only of the many recorded on the pages could arrest the attention of my flurried mind. When at last I resumed my seat, I mentioned it.

"You were allowing Carl three thousand thalers a year, I see. I suppose there are reasons I don't know of why he couldn't have lived in the country on that sum, as well as in Berlin." My remark was tentative, and as gentle in tone as I was able to make it. When he replied with crustiness it was a relief to me.

WHAT are you thinking of—a country gentleman living as cheaply as an officer? A young officer can live in quarters. He has his valet (orderly) free, and free keep, fodder and stabling for his necessary mounts. All his outlays can go for keeping up with his rank. A gentleman in the country must not only expend for personal representation, but also provide himself with a residence and the residence with furniture and domestics. He has got all the fundamentals of life to find including his own mounts and stabling." And as the Freiherr proceeded in his double enterprize of enlightening my ignorance and freeing his own heart, he marshalled forth the many various reasons why two sons may not live off of five thousand acres of land, if those acres are farmed separately.

I reflected as he talked that there were four daughters in the house and money had to [*Continued on page 344*]

THE HOUSE LIVABLE: WOOD AND STUCCO

BY AYMAR EMBURY II

IT is interesting to see how the attitude of the general public has sometimes been influenced by factors other than personal experience; in the field of the House Livable, the great advertising campaigns conducted by the manufacturers of building materials are a pertinent example. It may be acknowledged at once that the effect of these campaigns has been far reaching and of great educational value, both as to materials and design, but a confusion of mind as to the relative merits of the several materials available for exterior walls is an inevitable consequence of this partizan literature, so it may be well to examine them as impartially as possible. Wood and stucco will be discussed in this article; brick and stone in the one to follow.

Frame walls are beginning to pass out of use. I venture to say that fifty years from today very few of them will be constructed. Nevertheless, the frame house has its advantages. It is by no means doomed to early decay, nor is it liable to be cold because of the passage of air. As a matter of fact, wood is one of the best non-conductors of heat which we have, a thing which can be most easily demonstrated by calling attention to the fact that one can hold one end of a burning stick without feeling heat, while if one end of a piece of stone or metal is heated the whole body of the material becomes hot. A wooden house is, therefore, cool in summer and warm in winter if even halfway reasonable precautions are taken to prevent leakage of air between the pieces of which it is built. If the outside sheathing is tongued and grooved and covered with paper before the shingles, clapboards or brick veneer are applied one generally has a satisfactory house.

The use of clapboards is practically confined to this continent. Owing to the scarcity of lumber we never find them employed in Europe, except in Scandinavia, and few old buildings were surfaced with them because of the difficulties attending their manufacture by hand. In this country they became the usual material for outside walls about 1810 or 1820, when sawmills began to be common. Tho many Colonial houses are now surfaced with them, it is a matter of some doubt in most cases as to whether this was their original wall-covering. When good white pine lumber was plentiful and was air-dried, it was easy to select logs for sawing which would yield wide clapboards free from knots and cracks. As nails at that time were mostly hand-made and very dear, wide clapboards were the cheapest and were used on most of the older clapboarded houses. Later, as lumber became more scarce and nails cheaper, the six inch clapboards came into general favor, and most of the houses built during the period of the Greek revival, from 1820 to 1845, were covered with them. Because of these facts the current tendency in designing Colonial houses is to use the wider clapboards, altho there is no particular quality which they possess which renders them more suitable to Colonial design or more durable and weather proof than the smaller ones.

The material of which old clapboards were generally made was white pine, and altho the increase in price of this excellent wood has caused architects to search for available substitutes, nothing as good has been found. Cedar is durable and light and seems in most ways to be as good as white pine; it is also cheaper. Cypress has likewise many good qualities but is more liable to warp or split in wide boards. Most other woods are not recommended by their manufacturers for use as clapboards altho some other varieties of pine will serve.

CLAPBOARDS do not offer a great number of opportunities for varied treatment; in fact there is only one way in which they can properly be used—the old-fashioned way in which the thick lower edge of each clapboard laps over the thin upper edge of the one below it, so that the clapboards are not vertical but tip out slightly. The so-called "novelty siding" can never be made to look well, altho the method of laying clapboards flush, pursued in certain old houses and illustrated in the house on the next page, has advantages at times. It was not uncommon in Colonial times to change to some extent the general treatment of material around the entrance doorway to one which was considered more highly finished with results of pleasant quaintness. When this was done in wood-covered houses, whether of clapboard or shingles, it was customary to make the front of boards laid tightly together so as to show the joints as little as possible.

To sum up: clapboards are cheap, durable, weatherproof and well suited to certain styles of house; their disadvantages are that they require frequent painting and are not fireproof. In time, here, as in Europe, the increasing scarcity of lumber will eliminate them from consideration, together with shingles.

SHINGLES, like clapboards, are rarely used except in America, but were, for many years, the most common of all materials and when well made were practically indestructible. The oldest frame house now standing in the United States still bears some of its original shingles, altho deep ruts have been worn in their surfaces by the action of wind and rain. These old shingles, however, were of a better quality than most which we can obtain today when the maximum life of a shingle wall allowed to weather without paint is probably twenty-five years. This is due in part to the nails now used. The old hand-made nails rusted on the surface only, and this surface coat of rust protected the body of the nail, while the modern steel nails will keep on rusting until the steel is all gone and the shingles in consequence fall off. The lack of durability in shingles cannot, however, be attributed entirely to the nails used. Most modern shingles are of red or white cedar, and under the bad weather conditions prevailing in the greater part of this country they rot pretty badly. The hand-split cypress shingles will probably last much longer, but as most of those in the market are made in even widths they do not make as interesting a wall as those of Colonial times.

It is an artistic axiom that the absolutely perfect thing is not as beautiful as that which has some slight irregularity and a wall made up of small similar units of absolutely equal sizes is never so happy as one in which the units are substantially similar, but not uniform. Thus the shingled walls of Colonial times were made of shingles of various widths, laid at slightly different intervals, so that the whole surface is of constant variety, unnoticed until looked for. Today our machine-made shingles are uniform in size and our careful workmen lay them so regularly that much of the interest is gone. That this is true will be realized by any one who, driving up

An unusual use of wood. Residence of Mr. Egerton L. Winthrop at Syosset, Long Island. Delano and Aldrich, architects. A particularly livable house

the New England coast, has passed cottage after cottage, each one charming and each one interesting, altho they are substantially repetitions of the same motive, with slightly different treatments around the doors, windows and cornices. Their interest is due almost entirely to the surface texture of the shingles. and while it is not possible to reproduce in new shingles exactly the same delightful quality which old shingles attain after years of erosion by dust-laden winds, it is still possible to produce shingle surfaces which have real artistic quality.

It must not be thought that any portion of the house can be slighted without impairing the effect of the whole. Altho many good things will pass completely unnoticed, when a thing is not right the observer will feel that there is something missing from the ensemble, altho he may not be able to explain what it is that troubles him. It is for this reason that architects spend so much time, patience and trouble in the study of the exact proportions of the moldings which are to go on the cornices, around the doors and windows, etc. Probably no one but another architect ever appreciates that these moldings have been carefully studied, and yet, other features being identical, it is the difference between good moldings and bad moldings which made a perfect house or a commonplace one.

STUCCO is an old material which has long been used in all countries, including the American colonies. The name is of Italian origin but was Anglicized long ago and means simply exterior plaster. Stucco, unlike brick or stone, is merely a material for furnishing a surface and not a material of which a wall may be built. It may be applied to almost any sort of construction with varying degrees of success. It was originally composed of lime and sand and was used to give a neat finish to cheap, rough mason work behind it and, incidentally, to protect stone or brick, laid up in clay instead of mortar, from washing down.

Modern stucco, made with cement, is of different composition from the old, but the field of its usefulness is about the same and, because it is as plastic as the old, it is applied in the same manner and with even better results, both artistic and practical. At the same time it must be admitted that no other material in common use as a wall-covering has given so much trouble or has failed in so many cases. It has come to be regarded with some disfavor, unjustly so, because the faults are due to improper use of the material and not to the material itself. Care must be used, both in its mixing and application, if it is to be durable, and the material to which it is applied cannot be selected in haphazard fashion. Stucco is used over both frame and masonry walls, and probably eighty per cent of the cases where it has gone bad have been over frame walls.

As the material is practically a high grade of plaster it must, in wooden buildings, be applied on lath of some sort. The writer's belief is that wood lath should never be used. If ever so little moisture reaches wood lath it will swell and shrink, inevitably cracking the stucco, leaving a place for more moisture to enter, until with repetition of the process the stucco is loosened and falls off. The mere shrinking and swelling of a wood frame at different temperatures may cause cracks big enough to admit moisture and consequent failure. On frame buildings metal lath only should be used as a base on which to plaster, and this lath should be of such form and size as to permit it to be completely imbedded in the stucco so that it will not rust out and let the stucco fall. Troubles arising in stucco houses of masonry construction are of a different character and are usually due to the penetration of moisture thru the stucco coating, for, unfortunately, not all stucco work is waterproof. The adhesion of stucco to mason work is different with different materials and, curiously enough, appears to be less with brick walls than with walls of terra cotta or stone. Its adhesion is hard to predicate and is probably dependent upon weather conditions, being greater if applied in damp weather than in dry.

A popular misconception of a stucco wall is that it is entirely composed of concrete. Sometimes, tho not often, walls of country houses are so constructed, but they are not desirable unless a vertical air-space is formed in the wall to stop moisture, an expensive and difficult piece of construction. Since the durability of concrete is dependent upon the skill of the makers and the use thruout of good materials, the chances of failure somewhere in so delicate a piece of construction are too great to be taken in most cases. In all parts of house-building, where one has not complete knowledge of the builder's skill and ability, only methods of construction should be used which are so simple that the chance of error is reduced to a minimum, and concrete work above the foundation is not one of them.

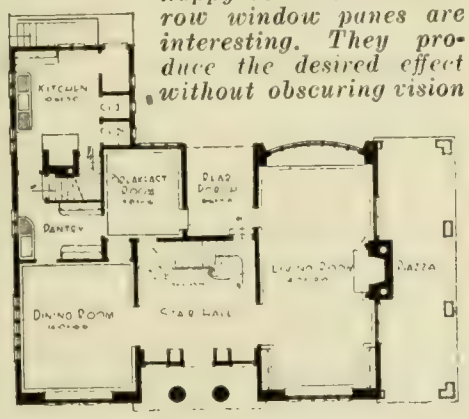
THE variety of surfaces which may be produced in stucco is very considerable, and the colors which may be permanently introduced into it are numerous; but in considering any particular method of surfacing one should not forget that stucco must be waterproof, and that not all ways of applying it will produce this result. It should, as a rule, be applied in two coats or, where a very rough surface is desired, in three, for if it is to be waterproof it must be dense, and density can be produced only by pressure or by the introduction of some material which will fill up the pores in the mortar. Lime in the first coat has this effect.

Coloring for stucco walls is often applied like paint and, applied in this way, is satisfactory as a waterproofing but smooths the apparent surface to such an extent that the stonelike surface, which is the chief reason for using stucco, is lost. The best way to color the wall is to introduce the pigments into the last coat. Numerous colors have been manufactured for this purpose but without any generally satisfactory results. The only ones which can be safely recommended are the natural earth colors—red and yellow ochre and one or two others—but these, with different colors of sand and cement, afford a wide variety of buffs, grays, browns and reds from which to choose, and, in fact, include all the colors which a wall should have. Nobody wants a bright green or blue stucco wall, altho in some southern cities pink and yellow have been used and look very well in their native surroundings.

The cost of stucco is considerably less than that of brick facing, and the cost of a stuccoed wall, either on terra cotta or on frame and metal lath, is considerably less than that of brick or stone walls; still it is not a cheap material, and when well applied is durable and sightly.

HALF timber has but one excuse for its employment; the delightful way in which a wall surface may be decorated with it. It is expensive, difficult to make weathertight and a sham, as customarily built; but, considered as a purely decorative treatment, it is worth using when an especially picturesque wall surface is desired. The origin of half timber was the old English and Continental way of building a thin wall. They built a wooden framework and filled in between the timbers forming the frame with brick or stone laid in lime-mortar, with the exterior faces of the mason work sometimes plastered or stuccoed and sometimes left natural. Now as long as the timber was seasoned oak the result was pretty satisfactory, because oak does not shrink or swell very much, but as soon as other woods were employed the results became disastrous; the houses leaked at every joint between the masonry filling and the wooden frame. To be practically successful, the joints between the wood and stucco must be so made that they lap over, and especial care must be taken to keep any water from running into joints on top of the horizontal wood pieces; this is the greatest danger, since water behind the plaster will freeze and rip off the surface.

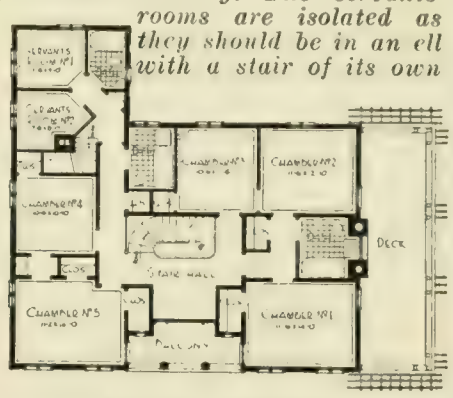
Much half-timber work loses in artistic effect because it is improperly designed. The pattern which it makes should appear to be a proper framing for the wall, both as to size of members and as to their disposition, and the wood pieces should probably never be less than six inches wide. The human mind works in a curious way when it comes to things artistic, yet it will be found that most features in architecture that have survived the critical survey of ages are soundly structural before they are beautiful or are decorative treatments borrowed from or based upon structural forms. So with half timber: while we know it to be a sham, we unconsciously require it to appear structural.



An old house at Ridgefield, Connecticut, which illustrates the use of clapboards and also shows the New England treatment of the gambrel roof

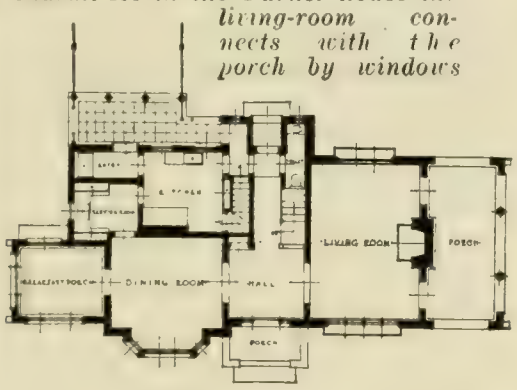
The Stucco House

The Turner house, which shows a distinct Italian influence, stands close to the ground and fits into its surroundings as if it had grown naturally with the trees and the particularly attractive garden, which the pictures only just suggest. The steps, in the smaller picture, lead from the garden into a small conservatory. Sleeping porches are one of the most difficult of the modern architect's problems. To set a porch in without spoiling the line of the house or to add it on without making it an excrescence is by no means an easy task. Both methods have been employed here, with particularly happy results. The narrow window panes are interesting. They produce the desired effect without obscuring vision



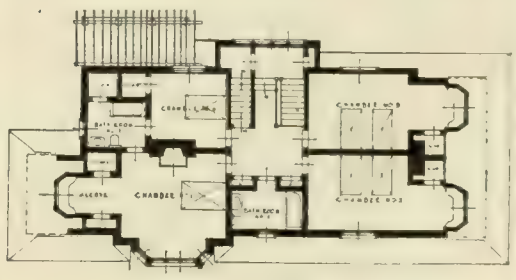
RESIDENCE OF MISS JESSIE TURNER, HARTSDALE, NEW YORK
EUGENE J. LANG, ARCHITECT

FIRST FLOOR PLAN



The interior plan of the Turner house is particularly good. Everything has been fitted into two stories and yet the rooms are of generous size. The first floor has a long, large living-room which nearly doubles its size in summer by opening, thru two wide windows, onto the side piazza. The breakfast room is cleverly arranged to connect with both kitchen and garden. There is a circular staircase in the wide hospitable hall. A surprizingly large number of bedrooms have been fitted into the second floor, five beside the servants' rooms and three baths. There is plenty of closet room, too. The second story hall, tho in the center of the house, gets plenty of light from the balcony. The servants' rooms are isolated as they should be in an ell with a stair of its own

SECOND FLOOR PLAN



Perhaps the most interesting thing about the Field house is the unusual treatment of the windows above the glassed-in breakfast porch. The small picture shows it more clearly than the other. The plan of the house is simple but it has marked individuality and charm. As in the Turner house the living-room connects with the porch by windows

FIRST FLOOR PLAN

Stucco is one of the best of all possible materials for house building. It lends itself to an infinite variety of styles and colors and settings and shapes and sizes. It is less expensive than brick or stone and it is fireproof. It is increasing almost daily in popularity as a material for suburban houses. A fact which is to be rejoiced in as it seems to be harder to build a very bad stucco house than almost any other kind.

SECOND FLOOR PLAN

The breakfast room is well placed. The bedrooms are large and full of interesting "possibilities" with their bays and alcoves. The interesting window treatment already mentioned is not a purely external feature. It entirely does away with what would otherwise be an uncomfortable and inconvenient slanting ceiling and makes the two big double chambers into unusually charming rooms. A bedroom fireplace is always desirable, the only opportunity which this plan offered has been seized. Servants rooms are in the third story

RESIDENCE OF MR. RUSSELL A. FIELD, GREAT NECK, LONG ISLAND
OSWALD G. HERING, ARCHITECT

On the other hand there is danger of settling down to a permissible but uninteresting type and therefore it is well worth while to consider carefully distinctive and well planned stucco houses like the two on this page. Their likeness lies in the care with which each one has been made, first of all livable and convenient. They are very distinctly homes. But they prove that it is possible to be comfortable and architecturally correct at the same time. They illustrate also the adaptibility of stucco to a wide variety of types

HOUSE BUILDING ON A BUDGET

BY R. F. WHITEHEAD

WHEN one speaks of a home as costing a certain amount, one may mean either of two things: first, that the house itself including only the part generally furnished by a contractor, cost this amount, or, second, that the whole enterprize, including the purchase of the property, the construction of the building, the architect's fee, the grading and the decoration are included. In this article the latter point of view will be the only one considered since after all it is not the bare cost of the house itself which interests most of us; but what we will have to spend to get a complete "plant" for the most important of our activities—our daily life.

The first item to be considered is, I think, the proportion which should properly exist between the cost of the property and the cost of the "improvements" as the real estate people say. Of course no proportion can ever be formulated which will apply to all cases, since one man may want a country estate or a farm, while the next desires merely a house on a suburban lot, but as the vast proportion of houses are built on suburban lots and not on farms, it is this case which we will consider.

Roughly speaking the cost of the lot should not be over forty per cent of the total investment, nor should it be under twenty per cent. As regards the lower limit, it is only necessary to say that the large lending companies do not look with favor upon applications for loans when the value of the house and improvements is over eighty per cent of the value of the property. When the value of the land is less than twenty per cent they think that the neighborhood is probably not sufficiently well established to make the investment safe. In our schedule we will assume the property to be about one-third of the total cost.

BEFORE we dismiss the question of property, there should be the other question borne in mind. The property which appears to be cheap may not actually be cheap since the expense of sewer, water, gas and electric connections may be quite heavy. Before purchasing these things should be inquired into. A simple sewage disposal plant will cost from three hundred to four hundred dollars. If a well has to be driven and the water supply installed, the expense will probably run to a thousand dollars, while the expense of private electric light and gas plants is almost prohibitive and should be considered only for large estates.

After the property is bought and the house begun, the first man who is consulted is the architect, and his fee has to be considered as a portion of the expense of the building. Even when no architect is employed the drawings have to be made by some one and, tho the owner generally does not know it, are included in the builder's cost. Contrary to the generally conceived opinion, an architect's fee is by no means money wasted, nor does he make any very extraordinary profit. Especially in the house which costs less than twelve thousand dollars a competent architect who furnishes all required drawings will probably make nothing at all for his own time. Architects' fees vary somewhat in the several localities, but for residence work may be assumed to average seven and one half per cent of the cost of the building. This, of course, is based on the cost of the building and not on the cost of the improvements of grounds, or the property or anything of that sort.

Let us assume that the house itself costs ten thousand dollars. This includes to the

BUDGET FOR A TEN THOUSAND DOLLAR HOUSE

	Cost		Per Cent of Total Cost
House		$10,000	59.7
Lot		5,000	30
Mason work	$3,200	19.6	
Carpenter work	3,800	22.4	
Tile work	260	1.4	
Plumbing	800	4.6	
Heating	750	4.3	
Electric work	250	1.3	
Tin work	240	1.2	
Painting	700	4.2	
Architect's fee		750	4.4
Wall paper, etc.		250	1.3
Fixtures		300	1.7
Grounds		500	2.9
		16,900	99.3

mind of the architect or builder, the excavation and foundation work, all carpenter work, all plastering, mason work, tiling (if there is any), the tin work, the painting, the plumbing, including all plumbing fixtures, the heating, including the radiators, and the electric work except for the electric fixtures. The different trades employed in the construction of a building fall naturally into certain divisions, of which the first—the mason work—generally includes the excavation, the foundation, the chimneys and the incidental masonry work, such as piers for the piazza and masonry piers in the cellar. For a ten thousand dollar house these items would cost in the neighborhood of thirty-two hundred dollars, of course assuming that the house was built of frame; for a brick or masonry house, the item would be greatly enlarged and there would be a reduction in the amount of the next item, the carpenter work. The carpenter work on a frame house which costs ten thousand dollars would be about thirty-eight hundred dollars, assuming that the exterior was clapboarded or shingled and that the interior trim was not excessive in character. This, like every item given in the schedule, is subject to variation within almost any limits, depending upon the type of materials and the amount of detail in proportion to the balance of the house, but for the purpose of this discussion we are assuming the average conditions where size rather than a perfection of finish in any one part is the desideratum. Of this thirty-eight hundred dollars for the carpenter work, probably fourteen hundred would be spent in the rough frame, four hundred for flooring, six hundred to nine hundred for the finish of the walls and roofs and the balance on the interior and exterior trim.

TILE work in a house of this kind would be necessarily limited to tile floors and base in the bathrooms and perhaps a little tile in the vestibule or back of the kitchen range. An allowance of two hundred and sixty dollars is made for this work and would just about cover the items above mentioned, altho in a larger house, were the same proportion of the total expense assigned to the tile work, it would cover wainscot in the baths as well. The painting in a house of this kind could hardly be enameled paint, rubbed several times; probably three coats of white paint or stained and waxed wood work for the main part of the house would be all that could be expected, and three coats on the exterior with a coat of stain on the shingle roof would be sufficient to make a sightly and durable job. The cost of this would be about seven hundred dollars. A similar proportion in a larger house would give a little better quality as well as taking care of the additional size. The tin work in any house consists of the leaders, the gutters, the tin work necessary to make the roof tight around the chimneys and in the valleys where the roofs join each other, together with perhaps one or two tin roofs on porches or piazzas. In the ten thousand dollar house, two hundred and forty dollars should probably cover these items. The electric work costs roughly about four dollars and fifty cents for each outlet besides the expense of the electric connection, the meter, the switchboard and the heavy cable for the service, etc. Two hundred and fifty dollars would be sufficient to provide the house with forty electric light outlets, ten or twelve base plugs and four or five electric bells. This is about the equipment for the usual ten thousand dollar house and the same proportion would hold for larger work. For the plumbing we have assumed eight hundred dollars and for the heating seven hundred and fifty. This means that the plumbing fixtures must all be of the simplest possible variety and that the heating is one of the less expensive types. Under present conditions with the cost of all metals so far beyond what they have ever been before, it is necessary to economize on the finish of plumbing while preserving the quality of piping, if we are to get a complete house for what seems to be a reasonable sum. Were the heating to be hot air instead of steam or vapor system, the cost would perhaps be two hundred and fifty dollars less and this extra amount could be put into better finish for the plumbing fixtures and a better range, etc., for the plumbing figure is assumed to include bath room fixtures for two baths, besides laundry tubs and pantry sinks, the range and a hot water boiler.

THESE are the several items which are, as a rule, included in the general contract, and while they have been worked out on a basis of the cost of a ten thousand dollar house, the proportion will hold for larger or smaller houses, providing that each portion of the house is finished in about the same relation to the whole. Of course, as suggested above, the figure for mason work would be very greatly expanded were the house of masonry construction; and wainscot beam ceilings and elaborate detail of exterior or interior cornices and trim would raise the price of the carpenter work. In a similar way, if copper is desired for metal work instead of tin, the price would be about tripled, since copper, while perhaps more durable than tin, is at the present time almost prohibitive in cost. Likewise almost any amount you like can be spent in plumbing. Brass water piping would add four hundred dollars to the cost of the plumbing, and built-in bathtubs and heavy lavatories would add two hundred dollars a bath room.

To the amounts above given must be added certain other items which people as a rule do not think of. These are wall paper, electric fixtures and the grading and planting of the lot. The wall paper applied for a two thousand dollar house would probably amount to two hundred or two hundred and fifty dollars. The electric fixtures could hardly be less than three hundred. The cost of the grading is of all the items which enter into the construction of a house perhaps the most difficult to determine for there is no "typical" lot. Let us call it five hundred for the case we are considering, and with these things as a basis make up a schodule which will roughly apply to suburban houses of all kinds.

EVERYBODY'S FLOWER—THE PEONY

BY GEORGE H. PETERSON

Aurore is one of the very newest peonies

IT used to be that one could hardly think of a June garden without seeing the rose as the dominant flower, but things have been gradually changing, until today in the wisely planted and up-to-date garden the modern peony, by sheer force of its majestic blooms, demands and receives the homage rightly its due.

One does not have to be an enthusiast to grow good peonies—their culture is so simple. It need not be said of this flower as the late Dean Hole said of the rose, "To have beautiful roses in one's garden one must have beautiful roses in one's heart. He must woo them as Jacob wooed Laban's daughter." On the contrary, the peony reminds me of Dickens' Mark Tapley, who delighted in adverse conditions so that he might "come out strong." No winter is too cold for the peony, a great comfort when you begin to count the degrees below zero. In fact, I have often observed that the flowers are better after a severe winter than after a mild one. Neither, as a rule, need one worry about bugs nor blight.

Obviously, within the space of a magazine page I cannot give cultural directions in detail; for these I would refer the interested reader to the various growers' catalogs, and particularly to Mrs. Harding's "The Book of the Peony," published last spring. I shall, however, endeavor to help the would-be planter by mentioning a few of the cardinal points of peony culture. But do not be unduly alarmed or confused by "directions," for if you can grow geraniums or sunflowers, you surely can grow peonies, and good ones, too.

In the first place, the peony should be planted in the fall. Planting *may* be safely done in the spring also, but the growth then will be more or less checked, since this flower makes its entire top growth for the year by early June, beginning it as soon as the frost is out of the ground. The location for the planting is not particularly important so long as it is not under trees or large shrubbery, or up against the walls of buildings.

The soil should be deep and rather heavy if exhibition blooms are wanted. If the soil is fairly good, little if any manure is desirable. If it is used it should be well rotted and thoroly mixt thru the soil before the planting is done. Too free use of manure may cause scabby or "black rot" roots. Bone meal and wood ashes may be used to advantage, but whatever is used be sure to incorporate it thoroly in the soil.

You will get the peony from your grower in the form of a root, from which in the fall you will find protruding, fleshy or pinkish eyes. It is from these eyes, or buds as they are variously called, that next season's growths will spring. The roots should be set in the ground so that the main eyes are about two (not deeper than three) inches beneath the surface of the soil. Place the roots from three to three and a half feet apart.

The first winter after planting a light

This snow white variety is called Avalanche

mulch, an inch or so, of coarse manure or other material, will be beneficial in preventing the loose roots from being heaved by the frost.

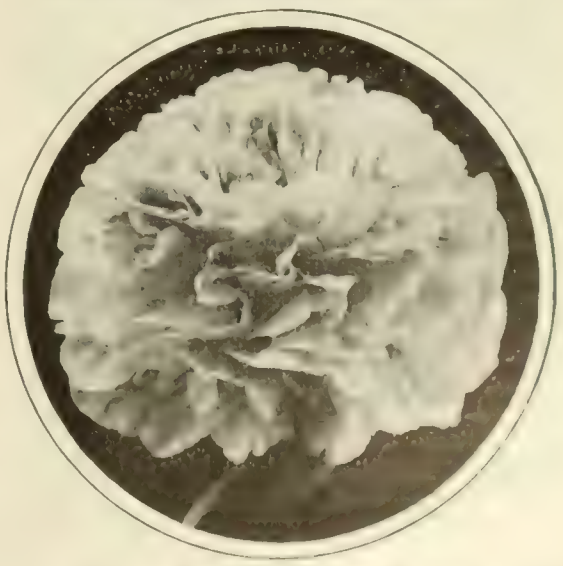
In May, as soon as the buds form, pinch off all but the central one on each stem.

When cutting peonies leave at least two leaf stalks on each stem, and under no circumstances cut away the foliage as soon as the plants are thru blooming, as I have known people to do. During the summer the eyes are forming beneath the surface of the soil at the base of each foliage stem, and the foliage is necessary to develop these eyes. All foliage may, however, be cut away to the ground as soon as it begins to turn brown in the autumn.

Do not leave grass or weeds to grow about the plant, but keep ground stirred and mellow thruout the summer.

During the pre-blooming season, if rains are infrequent, apply water copiously to the roots. At this time the plants are growing rapidly and require considerable moisture to produce exhibition blooms. After the blooming season is over, no attention will be required other than cultivating the ground occasionally about the plants. Watering will then be necessary only in case of drought.

Do not plant peonies in soil where peony roots have been planted before. This is important.



The beautiful Festiva Maxima is white

There are numerous varieties of peonies. In submitting the following list I do not claim that it is the "best" thirty. You could not get two people to agree on any list of thirty and I doubt if I could agree with myself two years in succession on any one "best" list. The varieties mentioned are, however, very good and represent a wide range of color as well as a long season of bloom.

Adolphe Rousseau—Deep red.
Asa Gray—Light pink.
Avalanche—White.
Duchess de Nemours—White and yellow.
Edulis Superba—Pink.
Eugenie Verdier—Blush.
Felix Crousse—Red.
Festiva Maxima—White.
Jeanne d'Arc—Tri-color.
Mme. Barillet-Deschamps—Pink.
Mme. Calot—Blush.
Mme. de Galhau—Pink.
Mme. de Verneville—Blush white.
Mme. Ducel—Pink.
Mme. Emile Lemoine—Blush white.
Mme. Lemonier—Lavender and white.
Marguerite Gerard—Blush.
Marie Lemoine—White.
Milton Hill—Pink.
Modele de Perfection—Pink.
M. Dupont—White.
M. Martin Cahuzac—Darkest red.
Octavie Demay—Blush.
Philomele—Pink and yellow.
Pierre Duchartre—Pink.
Reine Hortense—Pink.
Solfatare—White and yellow.
Souveraine de l'Exposition Universelle—Pink.
Triomphe de l'Exposition de Lille—Pink.
Umbellata Rosea—Pink and straw.

Asa Gray is an exquisite pink

Mme. de Galhau is pink. Its

WINDING UP THE CAMPAIGN

BY F. F. ROCKWELL

WITH the approach of fall weather comes the time when the thousands of this year's new gardeners have to stop thinking in terms of what they will plant next and make their plans for winding up the campaign.

I say "make their plans" advisedly, for while it may be the general practise to simply let the garden wind itself up or to speak more accurately, run itself down, the efficient gardener will plan his last few weeks of garden work just as carefully as he did the first. The work that remains to be done is no less important even tho on the surface it may seem less enticing than that of the budding months of April and May.

The fact of the matter is that the new gardener should get out of the habit of looking upon the late fall work as closing the garden campaign and see it in the truer aspect of beginning next year's campaign. Much of the work still to be done, of course, is in the nature of turning to best account the results of the efforts of the last few months. If it is no more than that, however, it means that the gardener is failing to take advantage of the many opportunities which exist for laying solid foundations for next year's spring drive.

Whether the peace discussion started by the Pope's message comes to any definite head or not, there will be just as much reason for and just as much patriotism in every gardener's doing his bit next year as there has been this. War or no war we shall need all the food that can be produced.

On this basis the first and one of the most important jobs to be undertaken in winding up this year's campaign is to start to lay in supplies for next year's campaign by sowing winter or "cover" crops on every square foot of ground as fast as it can be cleared. In many cases they can be sown *before* the ground is cleared. For instance, the soil between your rows of late corn, between tomato and bean poles, among and under many of the vine crops where fall cabbage and lettuce are being cut, etc., may be raked up or loosened up with a hoe now without in the least disturbing the growing crops and made ready to receive the seed of winter rye, winter vetch, crimson clover and other quick-growing plants that will make growth enough before winter sets in to keep the ground covered and furnish a thick covering of green material to be plowed or spaded under in the spring. And yet it is hard to find one garden in ten where these things could be used in which they are made use of. The great importance of having material of this kind to plow under or spade under in the spring is not half realized. Everyone recognizes the value of manure in increasing crop yields but comparatively few persons, even among gardeners of some experience, seem to recognize the fact that these beneficial results are due as much, if not more, to the "humus" and to the stimulation of bacterial action in the soil as to the actual plant foods contained in the manure. With green crops of this kind to turn under you will be starting your year's gardening right, therefore make the first objective in your fall garden campaign the covering of every bare spot with something to grow thru the winter.

Perhaps the next most important point to be aimed at in your fall work is to prevent the serious waste which almost always occurs from not gathering crops as soon as they are ready to harvest. With all the things which will be maturing from now on in the home garden, it is a very easy matter to lose twenty-five to fifty per

To save the best green fruit on your tomato vines hang them up in a sheltered place

cent of many crops thru neglect in this respect. You have been informed thru the pages of this magazine and thru many other sources how to save your garden products after they are harvested by canning and preserving and drying in all the latest and most efficient ways. All of this information, however, will be of little avail to the careless gardener who allows his garden products to spoil *in the garden* before they have a chance to spoil in the kitchen. Keep everything pickled! If you can't can it or dry it all yourself, sell it; if you can't sell it, give it away. There are a few things, such as some of the beans and squash, which will be good for winter use after they "go by" as summer or fall vegetables. By far the bigger part of them, however, will be wasted if they are not taken promptly when ready, and that is not all; in many cases allowing them to mature on the plant will mean the cutting down to a considerable extent of the total yield which might have been obtained.

NEXT, be on your guard against the first fall frosts. Every year a very considerable per cent of the total yield of the average small garden is lost thru the fact that its owner has neglected to be prepared on this point. Remember that your beans, cucumbers, melons, squash, sweet corn, sweet potatoes, eggplants, peppers, okra and tomatoes are likely to be spoiled by the very first frost if it happens to be a severe one, as is frequently the case. Even lettuce and cauliflower, which are a little more hardy than the vegetables above, may be rendered useless if steps are not taken in advance to prepare to save them. Beans, lettuce and other things which may easily be covered, can be carried thru the first frost or two by giving them slight protection with marsh hay or some old bags, sheets or some other similar covering. With the plants that bear fruits, such as tomatoes, squash, peppers, eggplants, etc., all the full-grown specimens may be taken off when frost threatens and ripened up afterward by keeping them in a suitable place, packed in leaves or in good clean straw in a cold-frame, for instance, where they will get plenty of air but may be covered readily with the sash to protect them from cold rains or the succeeding frosty nights. In the case of tomatoes I have often saved even fruits which had reached their full size by taking the whole plant and after cutting off all suckers and immature growth, hanging them up by the roots in a place where they were safe from frosts. This will keep many fruits, that would otherwise shrink and decay, plump and firm until they have time to ripen. Cauliflower and lettuce may be carried on for some weeks by taking the plants up with a good ball of roots and soil and transplanting them into moist soil in a cold-frame, where they can be shaded from bright sun for a few days until the roots reëstablish their contact with the soil and continue to supply them with enough moisture to keep them from wilting. Of course the frame should not be covered except when necessary to prevent their freezing.

A little later you will have a lot of harvesting to do in a hurry. The longer the taking up or cutting of such things as beets, carrots, rutabagas, turnips, winter radishes and winter cabbage can be put off the better. Nevertheless, provision should be made in advance to attend to each one of these things as expeditiously as possible when the time comes. With this end in view do not delay any longer preparing your winter quarters for them, whether the quarters are to be in the cellar or store-room, and obtaining an ample supply of "containers" in which to keep them. While tight staved barrels will answer for some purposes, such as keeping potatoes, winter apples, vegetables to be packed in sand, etc., the open stave or vegetable barrels are much better for such things as onions and cabbage. In fact, as a general rule, the more air that can be had the better. Boxes and baskets of all kinds and shapes will come in handy and there is very little risk of getting too many of them.

ANOTHER item not to be overlooked now if you have any frames in which to continue gardening after old General Jack Frost has put a stop to your efforts out-of-doors, is the sowing of seeds for your winter garden. If you have no frames there is ample time to build them now before freezing weather. The seeds can be sown in them and the plants half grown while you are ordering or getting your glass sash or covers for them. A cold-frame on the sheltered side of your house with one or two double-glazed sash will prove to be one of the best garden investments you ever made. Lettuce, radish, spinach, chard, may be grown easily thruout the winter at very cool temperatures, and beets, carrots, cucumbers, tomatoes, etc. may be planted several weeks earlier than you could put them out-of-doors in the spring.

Last, but by no means least, *clean up now*. The usual practise is to let the garden rubbish of all kinds remain until spring, thus leaving the best sort of a harboring place for the carrying over of insects and disease spores of all varieties, while the gardener spends his good time in burning up clean, harmless leaves which may have fallen on his front lawn and walks instead of saving them for the humus they could supply if put into a compost heap or into a pile to rot. Clean the garden up from end to end—*and burn the cleanings*. This is not only an ounce of prevention so far as insects and diseases are concerned, but will save many hours' work in the busy days of next spring when you undertake to start the new season's work which should be based on the winding up of this year's campaign.

REFURBISHING THE HOUSE FOR WINTER

BY AGNES FOSTER WRIGHT

John Wallace Gillies

In summer the big couch backs up to the fireplace but in winter it faces it, making an intimate grouping. A winter living-room should compose around a fireplace

TIME was when summer furnishing meant holland slip covers and odoriferous mattings; and when winter refurbishing meant the rehanging of lined, interlined, befringed and betasseled woolen rep or velour curtains, and the emerging of many tufted sofas and chairs from their holland coverings, like so many humpy caterpillars.

The summer's dust was whacked out of books, and they were evened out on their respective shelves for their long winter's sleep, or this duty was avoided by keeping the books in cases with locked glass doors, the key to which had been mislaid seasons ago by a house-cleaner who had been taught the trick by a New England woman. Mosquito netting came off gilt frames and chandeliers, bric-a-brac descended from the closet shelves to its accustomed niches and tired wives and irritable husbands lived again amidst spotless stuffy surroundings.

The spotlessness still prevails, let us hope, but nowadays stuffiness is a crime in furnishing. A decorator can win any woman away from the most desired possession by dilating upon its stuffiness—and any man by accusing his choice of stodginess, with the suggestion that his taste is a little middle-aged. In choosing furnishings for the winter these are the pitfalls most to be avoided—stuffiness and stodginess. The same rule applies to furniture, hangings, papers, upholstery and all the accessories—the lamp-shades, pillows and covers. One does not have to go to the other extreme and put dotted muslin curtains at the windows, or fill the library with light-toned wicker.

How, by the way, is one to dispose of summer wicker? After its season on the porch it is dusty and shabby, particularly if it is unstained or stained in a light tone. The cushioning, too, is frequently faded, and is probably of a pattern unsuitable for indoors. But there are tremendous possibilities for transforming it into very presentable furniture for the living room.

It should be thoroly beaten with a cane rug beater, and then brushed with a long-haired furniture brush. After the accumulation of dust has been removed, a color appropriate to the room where it will be placed must be chosen. For instance, if the living room is in tan, a deep greenish blue might be selected; if gray, a mulberry tone would look well, or a deep yellow. Green seems too summery to be desirable, altho it is always much the prettiest color for wicker.

The furniture should then be carefully painted, the last coat being of enamel to prevent finger-marks from showing. The braided edges of the wicker may be painted a contrasting color or a contrasting tone of the same color, but one tone all over is preferable. The note of variety may be introduced in the cushions, if desired. The color of the wicker may be enriched by putting a thin coat of antique glaze over the entire piece, and then rubbing it off, so that the antique appears in the grooves and the pure color on the high spots. Antiquing is done by mixing Prussian blue, burnt sienna and raw umber with turpentine. It gives the tone of the furniture a certain richness and depth.

THE cushions for this converted porch furniture may be either entirely recovered, or provided with winter slip covers of velour, linen or some other material. It is always better to remove the summer coverings. In case these are tacked down, the winter fabric may, of course, be tacked over them, but a piece of very closely woven cotton could be first attached, in order to prevent the dirt and dust from sifting thru. The colors of the material are, naturally, very important. If the wicker is greenish blue, the coverings might be striped linen damask in green-blue and deep yellow. A deep warm tan material, repeating the tone of the walls, would be excellent if one wishes to be "safe," tho it is less smart and distinguished than the striped linen. If the furniture is painted mulberry, upholstery of a two-toned gray and mulberry linen could be had, accented by two deep mulberry cushions on the sofa. The combination of mulberry and two-toned grays simply cries out for a touch of lemon yellow, which could be introduced in a lamp-base or two jars on the mantel.

For winter furnishings unstained or light-stained wicker should be avoided. The texture of wicker is light and summery, but the use of paint and enamel minimizes this quality and transfers attention to the color and line. There are many charming new shapes in the pieces on the market; for example, a low stool about twenty by ten inches, with two side arms and a two inch thick cushion, which makes a nice footstool or seat before the fire.

Wicker combines very well with walnut, oak or painted furniture, but not so well with mahogany. Mahogany is never a good mixer, unless it is stained so like walnut as to be mistaken for it. In case one has to select some new furniture for the winter home, it is wise to heed the modern tendency toward walnut of Italian and French design, rather than to choose mahogany from force of habit. Put what mahogany pieces you have in the bedrooms, and build up the living room or library or hall or dining room with English and Italian furnishings. The day of Colonial mahogany is passing. It is suitable for a Colonial house, but not particularly adapted to houses of other style. It has been done to death. People have treasured an ugly piece of purple mahogany, heavy in design, without subtlety of line or decoration, simply because it possest the merit (or claim to merit) of being Colonial. There is a current idea that all Priscillas were sweet, winsome and graceful, but I have no doubt there were some awfully ugly frumps named Priscilla—and the same is true of furniture. So in refurnishing for the winter, try to get into the new trend.

For instance, select for the living room a large walnut table—say, six feet

Johnston Hewitt Studio

The day bed is an asset in a small room, presentable by day and comfortable by night

In winter these fireplace seats are warm-toned velvet, in summer, rose colored linen

by two feet -of simple Italian design. Repeat the walnut in a desk and rush-seated chair with Italian carving. Have one or two of the low tables or benches which come in such attractive shapes, at such moderate prices. It is always true that a few pieces of distinct individuality determine the character of a room, and make it seem livable and homelike—not like a New Hampshire best parlor or the "creation" of a decorator who knows more of period than of personality. To supplement the Italian furniture in the living room, there might be a long, roomy davenport and two chairs, all upholstered alike, perhaps in a narrow striped blue velour. The hangings could be of figured linen, bound with taffeta of the lighter shade of blue in the velour.

A particularly well arranged room which is cool enough for summer and warm enough for winter and pleasant at all times

Of course, one seldom has a chance to buy so many pieces of furniture at once, but such a general scheme could be kept in mind and gradually worked out. It is always possible to substitute furniture on hand while the scheme is being evolved. One may have, for example, an ugly American walnut table with many scrolls and knobs and pendants, which can be substituted for the Italian table. Saw off all the "obtrudendences," remove the varnished finish, and paint the entire piece a deep, neutral blue. While the paint is still moist, go over it with a stipple brush, patting it to give an uneven finish. Then put on an antique glaze, and lastly stripe it in dull yellow or sage green, or a black or bronze tone. If you are uncertain as to the striping, simply touch up the edges and the grooves in the turning of the legs and so on.

To provide a couch to stretch out on, where space is limited, an excellent contrivance is the sofa with one arm on a rachet. The latter lets down, forming a horizontal rest for the feet, and is upholstered at the joining of the sofa, so that it looks all right either up or down. This is a splendid sofa for an apartment where an extra bed for an overnight guest must occasionally be provided.

By the end of a long summer, the walls are very grimy and dusty and the paper frequently much faded. In refurbishing one can get a very rich effect at small cost by paneling the walls with molding. The walls should be given several coats of paint, the last being stipple finish, and the woodwork and molding should receive a plain flat finish of the same tone. This treatment tends to make the room larger and more restful, and the shadows formed by the grooves of the molding will give two tones to the paneling. A very good method of renovating a papered wall, where the paper is faded but intact, is to apply a water tint, making the wall fresh and clean. This is a very economical treatment. The tints come in powdered form, and are easily mixt with water and put on with a whitewash brush.

It is possible, incidentally, to obtain marvelous shades by dyeing rugs and carpets. There is a wonderful shade of rich mulberry, for example, which comes from dyeing a red carpet black—and can be had in no other way. Carpets are so expensive these days that one welcomes a new substitute—floor felting. This is fifty inches wide, and comes in many attractive colorings. It makes a soft floor covering, and acts as an excellent foil for Orientals. The rug *par excellence* for winter is the deep-napped Chenille, with a plain center and a one-band border. These are generally made to order.

Covering the walls with deep linen-colored damask, like a very cheap table cloth, produces an unusual effect. The damask comes by the yard, and is wide. The weave is very coarse and the surface is glazed. It is very smart for a bedroom or dining room, if divided into panels by moldings painted the same tone and lined with black. The furniture should correspond in color, with lines of black, and the floor could be painted a tone darker and marked off in diamonds with a narrow black line.

A black glazed chintz with baskets of brilliant fruits will be wonderfully effective in curtaining a dining room, if put on shade rollers with a shaped narrow valance to hide the roller. The dining room chair seats might be covered with the same design. For curtain pulls a pair of long black linen tassels with a brilliant bead at the end will add a nice little touch. By the window, place a wrought iron plant or goldfish stand. In nothing has there been such a revival as in wrought iron in the past six months. Copied from old bits and old designs, the foliage and flowers wrought out by hand and painted and antiqued, these modern wrought iron pieces are the greatest boon to the decorator searching for something new and attractive. So it is well in renovating for the winter to be abreast of the times and get at least one piece of wrought iron.

ONE of the freshest and most agreeable papers for a bedroom is an inexpensive narrow green and white stripe. The woodwork should be white, and the carpet a green or gray. For undercurtains I would use dotted Swiss with ruffles edged with green rick-rack braid; the overcurtains should be of green to match the braid. With this use furniture of mahogany with one over-upholstered chair in green changeable rep. If you have an old white bedroom set, paint it green and stripe it in a darker tone, and use it in place of the mahogany.

A chaise longue is an addition to the bedroom which is being more and more appreciated. They may be had in wicker, cane or in semi-upholstered form. By far the nicest, however, is the luxurious all-over upholstered sort, where one "sinks never to rise again." Considering how inexpensive they are, it is curious that they are not more used. The daybed, of course, is found everywhere, and is a wonderful asset in a small room, being presentable by day and comfortable by night. With great suitability the chaise longue takes the place of that horror of horrors, the brass bedstead. Long may it reign! In winter smartening up one is sure to count this article of furniture among the blest novelties of the season.

Charles O'Conor

The same room in summer and in winter. The transformation is wrought by rearranging the furniture and interchanging slip covers and velvet upholstery. Changing the atmosphere of a room without actually changing its furnishings is a fascinating game

FROM GARDEN TO TABLE

BY ANNA BARROWS

INSTRUCTOR IN FOODS AND COOKERY IN TEACHERS COLLEGE

FOR the rest of the season our chief work in the garden will be to see that nothing is lost. By canning, pickling and drying every bit of useful food material may be saved. Since a shortage of self-sealing receptacles seems probable this fall, all methods of evaporating or condensing watery foods should be studied. Any wide-mouthed bottles may be used for fruit butters, etc., if the cork is covered with paraffin or a mixture of rosin and beeswax. If a cork fitting the bottle is placed in the middle of a small square of thin white cloth and the corners brought up to meet on the top of the cork, it may be dipped in hot paraffin and then crowded into the bottle, forming a close seal yet readily removed, when needed, by pulling the ends of the cloth.

Relishes Watermelon rind, citron melons, half grown canteloupes, green tomatoes, indeed almost any fruit or vegetable undeveloped when overtaken by the frost, may be of service as a relish in the form of preserve or sweet pickle. Frequently housekeepers have laid too great stress upon this type of food. It is not sustaining like the grains or legumes or even the potato, but by giving flavor or relish it does enable us to enjoy a monotonous diet.

Fruit butters were an important article of diet and commerce among the early settlers. They can be made from almost any available combination of fruits. The pulp of ripe tomatoes is sometimes separated from seeds and skin, as for making catsup, and then, instead of adding vinegar and salt, sugar and some flavors are put with it and the whole evaporated to the consistency of other fruit butters or marmalades.

Squash Summer squashes if constantly picked will continue to fruit until the frosts come, but for variety you may like to try the larger Hubbard or Turbans, early in the fall. Look over the plot and select any that are misshapen or imperfect and hence would not keep till midwinter. As a rule the harder the shell the better the squash will keep.
